If there are facts alleged of a nature to indicate misconduct on the part of the judge during the first trial, surely such facts can be equally well developed after the conclusion of the second trial. Surely, too, any attempt to inquire into any such facts on the part of a congressional committee would be prejudicial to the conduct of the second trial—the judge in that trial would be put on notice of the views of a congressional committee as to conduct properly to be observed in this particular case. Such a course of investigation and report on the part of any congressional committee would be a reflection upon the ability of the judge of the second trial to properly regulate his own conduct and would if known to the jury—and it would doubtless become known to the jury—have a prejudicial effect upon their attitude to the case.

I want strongly to impress upon the Members of the House the fact that the conduct of an investigation at this time may so prejudice the second trial as to enable the defendant, if convicted, to obtain a reversal, on that ground, upon appeal to the higher courts. Surely that is a result no Member of the House desires. Surely it is better for the judicial proceedings to take their normal course and to consider at a later stage whether or not any facts exist requiring investigation by a committee of Congress.

As stated by the Supreme Court in 1880—*Kilbourn* v. *Thompson* (103 U. S. 168, 194):

The case being one of a judicial nature, for which the power of the courts usually afford the only remedy, it may well be supposed that those powers were more appropriate and more efficient in aid of such relief than the powers which belong to a body whose function is exclusively legislative.

The Senate Committee on the Judiciary has concerned itself with the precise problem of investigations involving matters already before the courts and had a study of that subject made for it by the Legislative Reference Service—Senate Committee Print, printed for the use of the Committee on the Judiciary, January 6, 1947. With respect to this subject, the memorandum states, pages 10–11:

IV. INVESTIGATIONS INVOLVING MATTERS ALREADY BEFORE THE COURTS

Two Supreme Court cases, *Kilbourn* v. *Thompson* ((1880) 103 U. S. 168), and *Marshall* v. *Gordon* ,(1917) 243 U. S. 521), furnish some indication of the attitude of the judicial branch where an investigation by a committee of Congress cuts across or involves matters pending before the courts.

The power of congressional committees to invade the judicial field is an undecided question. The courts will not permit a committee to sit in judgment over people or issues when the identical case or controversy is pending before a court of competent jurisdiction. The rule has been laid down that the implied power of legislative assemblies to deal with contempt is the least possible power adequate to the end proposed. The courts

seem disposed to apply this rule when a congressional inquiry becomes enmeshed with the judicial machinery.

The question is open as to what the congressional power is after the legal processes have been exhausted. There seems to be no reason or precedent against investigations involving matters which have been finally decided by the courts. It is the interference with the court systems while operating that is abhorrent to our theory of jurisprudence.

At this point I think I should state that inquiries of either character—rulings on the law and the nature of the conduct of the trial—must inevitably have as their purpose the question of impeachment or nonimpeachment of the judge. Such inquiries are properly matters for the Judiciary Committee of the House of Representatives. I frankly state that I do not believe that that committee should start an investigation at this stage. For the reasons I have just given, I believe that it would be highly prejudicial to the proper conduct of the second trial to have these issues publicly aired at this time. At any rate, that is a matter to be considered by the Judiciary Committee rather than the Committee on Un-American Activities.

Biweekly Report by Hon. Francis J. Myers, of Pennsylvania, to People of Pennsylvania

---

EXTENSION OF REMARKS
OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 12 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD transcription No. 1 in the biweekly 1949 series of reports by myself to the people of Pennsylvania. This transcription was prepared for radio broadcasting.

There being no objection, the transcription was ordered to be printed in the RECORD, as follows:

I am indeed grateful to this radio station for making possible this series of regular radio reports to the people back home, a series of which this is the first broadcast.

Ever since I have been in the Senate, I have felt the need for some method of regular communication with the voters, with the people in the cities and towns and on the farms of Pennsylvania. Nearly every matter which comes before the Senate of the United States vitally affects some segment of Pennsylvania, either geographically or economically.

My mail is extremely heavy and is extremely interesting and informative, and helps to keep me abreast of what is going on back home, what people are concerned about, what they want their Government to do. And it opens up an avenue of communication in reply.

It was one of my boasts during my early years in the Senate that I answered all of my mail promptly and as fully as possible. My office staff, which is a very faithful and hard-working one, worked week ends, holidays, and long into the night almost every night in an effort to help me keep up that reputation for prompt answering of my mail. But we have reluctantly come to the conclusion these last few years that it is virtually impossible to give everyone who writes in to me in Washington a prompt and comprehensive reply.

Since I cannot write to each individual in the State and carry on a steady correspondence, and since I cannot even meet and talk with each representative group in the State, I have felt very strongly the need for a direct method of communication through which I can keep you informed on what I am doing and why, and thus perhaps make the process of government a little more personal to you. I issue news releases to the press from time to time, but these must of necessity be brief and to the point, covering only bare essentials, or otherwise most newspapers cannot use them.

How, then, does one who represents 10,000,000 Pennsylvanians in the Senate of the United States keep in contact with his constituents, keep them informed, and thus keep faith with them?

Radio is the obvious answer. Public-spirited radio stations, such as this one, which provide the time in which these broadcasts can be heard, are making it possible for me to tell you something of the problems which I face in the Senate of the United States, which are vitally important problems to you, and on which my vote is an important matter to you personally and individually.

The Government of the United States is a mighty complex—almost frighteningly complex—thing. It is literally impossible for any one man—be he the President or the head of the most elaborate news-gathering syndicate, or a Senator—to know all there is to know, and all which should be known, about how this Government operates. Certainly I am not an infallible expert on all things involving the Government, even though it is my business as your Senator to devote my time to the study of Government, and to the shaping of Government policy through congressional action.

That being so, I shall not attempt to pose in these broadcasts as the great expert on everything, the fount of all knowledge, the only oracle of the truth. Since we humans are subject to our limitations, there is not much sense in our trying to fool each other with pretenses of all-inclusive wisdom. I'm going to try to make these broadcasts factual and objective, but I'm not going to try to duplicate the efforts of the newscasters and commentators.

As your Senator, as one of two voices which you have among the 96 Senators who decide how this Government of ours should operate, and what policies it should follow, I feel it my obligation to keep you, as my constituents, fully informed on what I do, and why. Since the Congress cannot act on anything unless the House and the Senate agree down to the last word and punctuation mark on the legislation they pass, the actions of each Senator take on inescapable significance.

Let me sketch briefly what some of the current problems are. I shall go into them a little more thoroughly perhaps in subsequent broadcasts in this series, but for now, and in an effort to establish what might be called the tone of subsequent broadcasts in this series, I will merely outline the general picture.

President Truman, and the Eighty-first Congress which was elected with him last November, came into office on platforms containing a variety of rather specific promises. This applies to Republican Members of Congress as well as to Democratic Members. There were significant areas of disagreement between the Republican and Democratic platforms of 1948, but there were substantial areas of agreement, too. Much of what this Congress does will of necessity be based on legislation involving the area of agreement between the two parties. Depending upon the degree of fidelity with which individual Members of Congress from each party adhere to their platform promises, legislation covering these broad fields of agreement can be passed readily. And that constitutes a major portion of all legislation.

Therefore, when you hear of Congress falling apart at the seams in bitter disagreement, you can rest assured that a great deal of important legislation is still getting through in almost routine fashion, despite the fact that very little attention seems to be paid to it by the press. It is often in the realm of this obscure legislation that decisions are made by Congress of vital importance to you. You should know about them.

The big issues of Taft-Hartley repeal, higher taxes, or lower Government expenditures, housing, expansion of social-security benefits, health insurance, reciprocal trade—these and many more of that nature—are being thoroughly discussed in the newspapers, and public understanding of them is rather general. I shall of course touch upon these things from time to time, for they are important national issues in which I will have to participate, and on which I have to make decisions which affect every American.

At the same time it is one of my obligations, and a very important one, to pay particular attention to the Pennsylvania angle of all the legislation which comes up here. That can be a full-time job in itself, because there is hardly a national issue, with the exception, say, of irrigation and reclamation, which does not have its Pennsylvania aspect.

A good example of this is the annual civil functions appropriations bill of the Army Department, which recently passed the Senate, after first having passed the House of Representatives, where all appropriations bills must originate.

This bill was bitterly attacked in both the House and the Senate as a "pork barrel" bill, as a logical place at which to start in cutting millions, and hundreds of millions of dollars out of our $42,000,000,000 budget for the coming year. It is traditional to refer to these annual appropriations for flood control and river and harbor maintenance and improvement work as "pork." There was an effort in the Senate to cut the amount of the bill by as much as 40 percent, or $300,000,000, out of about $751,000,000. Fortunately, the effort was defeated.

I say fortunately, because such a reduction would have been a devastating set-back to flood-control projects now under way in Williamsport, Sunbury, and in Elk County around Ridgway, Johnsonburg, and St. Mary's. It would have delayed seriously progress on the huge Conemaugh Reservoir for the protection of Pittsburgh. It would have prevented the completion in the coming year of the Wilkes-Barre and Punxsutawney dikes. It would have set back planning work on the Prompton Reservoir in Wayne County, on the Shenango Reservoir in Mercer County, and the Bear Creek Reservoir for the protection of Allentown and Bethlehem.

It would have meant sharp curtailment in maintenance work in Erie Harbor, and in the Delaware River channel at Philadelphia, which is one of our main arteries of maritime commerce. Improvement work on the Monongahela River at Pittsburgh, and at Morgantown, W. Va., to speed the flow of vital commodities in river transportation, particularly coal, would also have been drastically affected. The start of Federal work on the long-range State-Federal "clean-up" of the foul-smelling Schuylkill River would have been made impossible in the coming year.

The question is, of course, how important are these things? Can we delay on them? Well, of course we could—and during the war, we did. And one of the reasons it takes $8,000,000 now to restore the shipping channel in the Delaware River to the authorized

depth sufficient to accommodate the newer type oil tankers, is the fact that we had to curtail the normal maintenance dredging work on the channel during the war. And by delaying on flood-control projects which are already under construction, reducing the construction pace to a snail's pace, the big investments we already have made in these projects will not give us any return whatsoever in terms of flood protection and will remain useless until completed. There is no economy in that sort of thing.

The issue of economy in Government is one of the most important before us. We face a possible deficit. We are reluctant to raise taxes. It is truly a dilemma. But we must make sure that the economies we do make are sensible economies, and not merely bookkeeping economies, which in the long run may be very expensive economies.

When you talk about a $750,000,000 appropriation bill, you are, of course, talking about a whale of a lot of money. Undoubtedly, as some Senators maintained during the debate, there is probably some "fat" in this appropriation, and the cry was to "fry out the fat." Yet in each instance in this particular bill of an appropriation involving a Pennsylvania project, I was able to satisfy myself thoroughly on several counts: first, that it involved work absolutely essential to the protection of life and of property, of industry and of jobs in those industries; second, that the work was of great, long-range economic value, in that the savings resulting from flood protection, and efficient river transportation more than made up in a few years for the entire cost of each of these projects; third, that the appropriations contemplated in the bill for this forthcoming fiscal year were conservative and fully justified. I know that most Senators were thoroughly satisfied that the projects in their own States were just as essential, and just as warranted.

As I have said, in this initial broadcast in this series I am trying merely to sketch out in rather rough outline the plans I have for future broadcasts which will be devoted to more detailed discussion of specific bills and situations. I hope you will listen to them. I shall try to make them on an informal basis, on what you might call a conversational basis, rather than seize this rostrum of radio time for the purpose of making political orations. Politics, of course, will have to enter into the discussions, because politics—the science of government—is fundamental in the democratic process of government.

I will invite and welcome your comments, your advice and suggestions and yes, even your criticisms. I cannot always promise to answer every communication immediately and in great detail, because, as I said, there are literally thousands of them pouring in here all the time, but I want to assure you that the mail is read, and read carefully, and whenever any letter contains information which is useful to me in presenting the issues in committee and on the floor of the Senate, I make use of it.

In one of these subsequent broadcasts, I shall tell you how letters from constituents, from rank-and-file voters, have helped to shape important legislation, just by providing me with information which they had accumulated out of their own personal experiences, and which they had taken the trouble to send on to me. I think I should also tell you how your letters can be most effective in achieving the purposes you seek to achieve, how to make sure that your letters are not only read by Members of Congress, but are acted upon. Some letters are more effective than others, and some are completely ineffective.

I have outlined here a rather ambitious project for myself in connection with these subsequent broadcasts, and I sincerely hope that I can carry through on it. If I can at all help the people of Pennsylvania to be better informed on what we are doing down here, I know that they can certainly help me in turn to do a better job. An informed electorate is a real challenge to any Member of Congress to do his best.

Warning in the Housing Bill

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from New Orleans States for July 9, 1949:

WARNING IN THE HOUSE BILL

We bow to no one as a stauncher advocate of States' rights and individual freedom.

Because we believe that we would rather have seen private capital and industry provide the housing needed by thousands right here in New Orleans.

But thy did not do it. As long as 3 years ago they were warned, not only by newspapers, but by action in the Congress, that if private capital did not provide housing the Government would do it at the expense of every one of the taxpayers.

Well, it's here, now, and we welcome it.

We welcome it because it is needed.

Right here in New Orleans, you can go from any point you choose and walk 10 blocks and you'll see slums that are a disgrace to us as citizens, to us as landlords, and also to us as occupants. How can a city expect to raise decent law-abiding citizens in some of these rat traps and hovels? We have our own "tobacco roads" right here.

The Senate and the House both passed the multi-billion-dollar housing bill to provide 810,000 public housing units. It was passed over some of the greatest lobbying by private interests ever seen in Washington.

This is just another instance of our surrendering our rights to a centralized Government. But the point is that the job had to be done. And in the last instance it was Washington that had to do it.

Good housing has been provided in other towns. We had here a few attempts to put them up too. But on the whole, not only New Orleans' but the Nation's private enterprise failed to do so. Costs of materials, of course, were one main reason. Another was feather bedding and job languishment. Masons used to lay 1,000 bricks a day; now 400 is tops. A lot of folks are to blame.

But the housing was still needed, no matter who was to blame. And it was up to the Government, when all others had failed, to do what it could for those in need.

There is a warning, too, in this housing bill, for those who will see it. There is much outcry over the attempts of the Congress to pass antilynch and anti-poll-tax measures, and we make our share of the noise. But unless we do something about it, they are going to pass those laws, sooner or later. The States ought to meet these issues themselves. Texas passed an antilynch law just this week. Louisiana ought to follow. The same goes for equal recreational and educational facilities. If we don't do these things, somebody will do them eventually for us.

Operation of United Air Lines at Salem, Oreg.

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith another editorial from the Salem (Oreg.) Capitol Journal in protest to any attempt by the Civil Aeronautics Board to remove the operations of United Air Lines at Salem, Oreg.

The size and growth of this operation is attested to in the within editorial, and the facts cited make it clear that this air service at Salem should be continued.

WHAT'S WRONG WITH UNITED'S BUSINESS HERE?

Somebody is trying to treat United Air Lines' stop at Salem as they would an unwanted stepchild. This is evidenced by the hearing coming up before the Civil Aeronautics board on the possibility of substituting West Coast Airlines for United here.

But a look at the facts make such a substitution without real reason. And this is stated with no attempt to belittle the good feeder-line service offered by West Coast.

Salem is a profitable stop for United. The figures indicate that, or else many, many other stops on the mainliner route are worse than the capital of Oregon.

For instance, Salem had almost as much passenger revenue during the first 4 months of this year as did Baltimore, Md., a city seventeen times the size of Salem. Ogden, Utah, which is about the same size as Salem, did less than half as much business during the same period. Fort Wayne, Ind., with a population of over 100,000 persons, did about two-thirds the passenger business of Salem.

Even Providence, R. I., which boasts a population of five times that of salem, didn't do as well in that 4-month period. The list goes on and on, including South Bend, Ind.; Stockton, Calif.; and Cheyenne, Wyo.

What about air freight? Few cities on the United route, close to the metropolitan areas, can touch Salem in this. The airport here handled 63,314 pounds of air freight in the first 4 months of 1949. In this connection it should be noted that West Coast, suggested as a substitute, does not carry air freight.

United Air Lines' top officials might well take another look at the figures for the Salem stop and then judge for themselves that the stepchild here isn't bad at all. As a matter of fact, the Salem stop looks good on paper. And with a new field administration office coming up, the control tower in operation, and Oregon's second city's growth, the outlook should be worth more than casual consideration.

Salem means to fight to keep United service here. United ought to join the fight—on Salem's side.

Judge Kaufman

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. MACY. Mr. Speaker, questions have been raised during the past few

days about the conduct of Judge Kaufman who presided in the recent trial of Alger Hiss. One of my Democrat colleagues told this House that his conduct reflected discredit upon the bench. I think that the situation warrants an investigation by Congress.

Exercising their right under the Constitution, Members of Congress have expressed criticism of the judge's rulings and his attitude in connection with the defense.

Now I want to inform the House just who and what has come to the defense of Judge Kaufman. The New York Daily Worker, the official mouthpiece of the Communist Party prints a long editorial today defending the judge and attacking the Congress. And another left-wing publication, the New York Compass, follows suit.

Here Mr. Speaker is the irony of the situation: A Federal court judge under criticism by Members of Congress being defended by the Communist Party.

Under leave to extend my remarks, I include the editorials from the Daily Worker and the Daily Compass in the RECORD for the benefit of all Members so the Members may know the make-up of the forces alined with Judge Kaufman.

[From the Daily Worker of July 12, 1949]

CONVICT—OR BE CONVICTED

The failure of the FBI and Un-American Committee mob to get a conviction in the case of Alger Hiss has brought a yelp of rage from these frame-up artists.

Two members of the Un-American Committee demand an investigation of Judge Kaufman, who presided in the Hiss trial.

Kaufman's crime, in their eyes, is that he did not guarantee a conviction in a case involving the mythology and hysteria of the Red scare.

The "red-scare" terrorism can only work if every accusation is a conviction, if every indictment is automatically viewed as too dangerous to dispute. In such a set-up the existing system of legality, of proof, of constitutional guaranties must be ignored or swept aside. The "red scare" leads to lynch law. That is why Representative NIXON, Republican of California, of the Un-American Committee now shouts that there was "too much" observance of "technicalities" in the Hiss trial. These technicalities happen to be the constitutional guaranties and legal procedures of traditional law.

Law in a capital society is rigged to protect the system of private capitalist property. Judges are the instrument of that system. But within this system there is a traditional series of legal protections which, though limited, was achieved by the people when the capitalist class needed partial democracy against its feudal enemies.

In preparing the red-scare frame-ups, the Government must violate these traditional legal rights. It loads the dice from the start. The press deluges the Nation with hysteria. The juries are filtered through a controlled system of picking. The victims are called traitors to their country, and anyone who will not agree to hang them is in danger of being hanged, too.

But even this elaborate system of frame-up was, for the moment, punctured in the Hiss case where four jurors refused to abandon the traditional concepts of legality, proof, and decency. The rage of the Un-Americans against Judge Kaufman is the expression of their determination to guarantee convictions in advance in all cases involving the red scare and the spy hunt. They are now out to wipe out even the legalities which are rigged in their favor, but which are still an obstacle to their naked terrorism.

The Un-American Committee's threat against Judge Kaufman is not that he is a Communist, but that he failed to follow the model of Judge Medina in the heresy trial of the 12 Communist leaders at Foley Square. From this spectacle the unprejudiced people can get some idea of the kind of indictment and the kind of trial which the Communists face, with jail sentences of 10 to 20 years hanging over their heads.

The effort to hang the judge who refused to hang Hiss on the say-so of the FBI's secret police shows how timely indeed is the coming July 16 and 17 bill-of-rights conference called in New York.

Americans of all creeds will gather here to stand up for the United States Constitution against the police-state plotters who so gravely menace America behind the shoddy flag of anticommunism.

[From the Daily Compass of July 12, 1949]

SMEARING JUDGE KAUFMAN

The portion of the press and Congress—an uncomfortably large portion—which was eager to see Alger Hiss convicted of perjury—or something—is so disappointed over the verdict that it is turning its vengeful weapons now toward Federal Judge Kaufman.

The muttering is akin to that of members of a mob frustrated at a prospective lynching that failed to result fatally to the victim, who turns out merely to be permanently disabled but alive.

Somebody must be guilty of something and, of course, it can't be the mob to whom the lying Whittaker Chambers has become a White Knight leading a charge against the Red Dragons.

Ergo, the judge is guilty.

Guilty of what?

Guilty of presiding over a jury which failed to agree that Hiss was a perjured conspirator fitting into the lurid and dramatic roles Chambers' tortured imagination had assigned to him.

Guilty, according to portions of the press and Congress, of frustrating the Government's determined effort to justify the perjured Chambers' tales by getting a conviction of a once-trusted State and Justice Department functionary; so that the wild and extra-legal raiding, oppression, and Red-baiting of Tom Clark's Justice Department and the House Un-American Activities Committee could find some presumptive justification in the shout:

"We've caught one. We actually caught one. A subversive."

The judge is charged baldly with having refused to dismiss a juror accused of bias in favor of Hiss, despite vigorous Government demands that he be dismissed.

The accusation is a gross perversion of the truth.

1. Pretrial bias toward Hiss was not established.

2. The Government (the prosecutor) did not demand the dismissal of the juror. In fact, it was explicit on the point of not demanding such a dismissal.

The accusations centered around Hubert James, jury foreman.

It is being alleged that Judge Kaufman "refused a governmental demand" that James be dismissed.

The facts are so clear in the court record itself that the Daily Compass reproduces herewith, from the official transcript, what did transpire:

"Judge KAUFMAN. Well, if the defendant's counsel are willing, and if I should follow your suggestion and dismiss this juror, you may have a mistrial.

"Prosecutor MURPHY. Well, so we can understand each other right now, the Government is not moving for a mistrial in words, substance, effect, or inference.

"Judge KAUFMAN. Are you moving that this juror be disqualified?

"Prosecutor MURPHY. No, sir; I am not. I am merely calling the court's attention to some facts that have been told to the Government, and am asking the court to do what it thinks is proper under the circumstances."

This is an end to the portion of the transcript, which has been reproduced above in the exact language of the record.

Following are the headlines from several local evening newspapers relating to the story:

"Juror's pro-Hiss bias charged; United States effort to unseat him failed," World-Telegram. "Hiss judge kept juror United States protested on June 2," Journal-American. "United States objected to Hiss foreman but judge refused to oust James, said to have expressed belief in innocence," New York Sun.

That should dispose of the matter of Judge Kaufman's bias, although it is doubtful if it will do so.

The need for a record of actually having proved somebody somewhere guilty of something is becoming more of a necessity to the witch hunters. The great, vast public, consistently badgered with misinformation and exaggeration by organizations and individuals seeking permanent power to destroy democracy in the name of defending it, is beginning to sense that we are being driven toward war, and that fear, hate, suspicion, and apprehension over every demand for broadening our democracy are being built up in a persistent effort to link it all up with communism and some dire plot by the Soviet Union.

Incidentally, perjured testimony cannot, and should not, be condoned.

What kind of a deal, if any, did the Government make with Whittaker Chambers in exchange for his services as the star witness against Alger Hiss?

And if, as is protested, no deal was made, when is Chambers to be prosecuted for admitted perjury—repeated perjury—seven confessed instances of it being on the record of this trial?

There is more than a slight suspicion that the furore artificially created over Judge Kaufman is merely another diversionary tactic intended to draw public attention away from Chambers' freedom from Government action on the same charge it feels impelled to press against Hiss.

America, Land of Political Freedom

EXTENSION OF REMARKS

OF

HON. ROBERT L. RAMSAY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. RAMSAY. Mr. Speaker, under leave to extend my remarks, I include the speech given by Admiral Louis E. Denfeld, Chief of Naval Operations, before the American Legion convention, Department of West Virginia, Sunday July 3, at Wheeling, W. Va.:

It is an honor and a privilege to join you in this hour of solemn tribute to our fallen legions. To those heroic men, named and nameless, we give our humble thanks. And when we meet, as we meet here now, we do so in dedication to those who have made free assembly possible.

The eve of the Fourth—this is an eve of lasting significance. Historically, it marks a night long ago when only a few more hours of darkness remained before a new light

burst forth over an old world—a guiding star of political freedom.

The men assembled in Philadelphia on the evening of July 3 were few—a small "legion"—and they had come from all points, from all stations of life in the Colonies. But they possessed a singleness of purpose—the clear determination to assert the dignity of man. And to effect this principle, to make it a workable instrument of everyday national life, they bound themselves in common cause, pledging to that cause their fortunes and their lives.

This was, indeed, a bold resolve—one that had long smouldered in the oppressed hearts and minds of men everywhere.

For centuries there had been a code to guide men spiritually. The way of life expounded by Christ had spread beyond borders and oceans—but it wasn't until the Declaration of Independence was signed in Philadelphia that Christian principles were incorporated in a nation's political destiny.

Noble as that resolution was, its enactment was at a great cost. In its wake came revolution—but once caught in the turmoil of war, the struggling Colonies gave unsparingly of their goods and of their men.

We were not yet a rich nation—several generations had to pass before the new land would yield a bountiful harvest of material wealth—and more often than not, our forces on land and sea were poorly armed and worn by hunger. The days were grimly dark, and even the strongest, General Washington, struggled with the tribulations and privations, such as try men's souls.

But officer and man alike remained steadfast to the cause, although each knew full well that victory would bring neither ease nor riches. Rather that bright day of triumph meant only the time when men could go home and begin living the way of life for which they had fought so desperately.

That victory came—and the news of it quickly spread to other nations of the earth. Here in this new land, and under a new flag, were to be found not only treasures of material worth, but that which men's souls craved even more.

America was the land of political freedom. Soon a tide of migrating peoples rolled toward our shores. They came from all lands, seeking the benefits offered by this new concept of man's duty toward man. To some the end of the voyage meant freedom of religious expression—others came to escape Old World militarism, political persecution—for many reasons and from many lands they came in ever swelling numbers. And from this generous fusion of peoples was distilled an elixir which has never failed to strengthen and sustain us in the trials which the subsequent years brought to our country.

In peace we have labored side by side, molding a Nation of which we are justly proud. In war we have answered the drum's beat together, each to his task, each to his talents—Americans all.

As a nation we mark tomorrow our one hundred and seventy-third year. For 173 years, the light kindled by that small band of men in Philadelphia has never ceased to shine. It is the same light that hovered over Chateau-Thierry, the Argonne, the beaches of Anzio and Normandy—that pierced the murk and stench of Belsen—of Dachau. It guided our men on Bataan, and beckoned the Marines at Iwo Jima. To realize how far this light of freedom has penetrated the corners of the earth, one has only to read the roster of our so recent war dead—the men from Irish, German, Jewish, Japanese, and countless other extractions.

Not so long ago we believed that we had fought our last war, that the list of honored dead was closed for all time. We believed that we and our allies, men of all races and creeds, standing shoulder to shoulder in common endeavor in war, would turn our mutual talents toward the establishment of an enduring peace.

But our men were hardly home, the soil of the battlefields dried of the blood that had won them, before that ideal was shattered. And today another ominous rumble rolls over the land. It is a tumult conceived in deceit and born of frustration, yet it would have us believe that ours is not the better way of life, that our efforts have been misguided, that our sacrifices have been made for base materialistic gains.

The physical abundance we employ for the betterment of our people is too well known to need further exposition. Socially, we have made and are making long and certain strides. We have accomplished much to banish old hatred and prejudices; much more is yet to be done in this direction, but our progress is heartening. And spiritually, it is clear that we have never deviated from the principle of religious freedom as first set down by our founding fathers.

These attributes of the national character have not been used selfishly, for the benefit of our people alone. After each war we have helped our allies and the vanquished alike. But until our time in history, plunder was the inevitable companion of the victor. They rode the same horse, and that which they could not devour, they trampled.

Today, by means of the Marshall plan, and other agencies both Federal and private, we are seeking to restore those nations and peoples so cruelly ravaged by war. To share with them the fortunes of all kinds which we have been able to amass under the doctrines established that first Independence Day has been our objective.

How could such a fullness of life be achieved by a people misguided for nearly 2 centuries. And if ours is not the better way of life, why is it that the roads leading to it are still swollen? For the hungry, the homeless, and the downtrodden, ours is the light that shines in darkness. To them we hold, still, the hope of refuge.

In all life we see side by side the positive and the negative, the builder and the destroyer. Our role on this earth has been from the first that of the builder. If we are to continue to play this preeminent part, great care and even greater vigilance must be taken. If we should fail, if this stately structure we have labored over so long and so lovingly were to crumble, the destruction will be borne by us all—and the fault will be our own.

It is not enough to guard the fortress from without; more important, we must protect it from within. To each of us, therefore, falls a task which can be performed by no other. The fate of our Nation depends not upon a handful of diplomats, but upon how well each one of us individually plays his part.

Equal opportunity entails equal responsibility. To this we have been committed down the years. Since the day of commitment to this and other truths, the world which then seemed so wide has steadily diminished until now each nation is ready witness to our deeds. The commemoration of our birth date has outgrown its original significance. Tomorrow, as we stand or march together, the eyes and the ears of the world will be upon us. It will not, therefore, be enough for us to pay homage to the past, to meet to honor our dead. We must give our sacred pledge to the future.

Thus far, the generations of our people have kept the beacon burning brightly. Our will and our strength are still equal to the task. And we shall go forward, ever onward, no matter what form the opposition may assume.

We shall advance calmly, without panic, our way illuminated by the light entrusted to our keeping.

Biweekly Report by Hon. Francis J. Myers, of Pennsylvania, to People of Pennsylvania

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, July 12 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD transcription No. 2 in the biweekly 1949 series of reports by myself to the people of Pennsylvania. This transcription was prepared for radio broadcasting.

There being no objection, the transcription was ordered to be printed in the RECORD, as follows:

The news out of Washington these days reflects a Capital and Congress in an advanced stage of conflict and turmoil. Spy trials and investigations, loyalty inquiries into the explosive issue of atomic-energy administration, a probe into innuendoes of graft or corruption in military procurement matters, and, of course, the big issue of Taft-Hartley repeal, all command the headlines and the attention of nervous-sounding news commentators. And now the Atlantic security pact is out of committee, awaiting Senate consideration.

Of course, all of these things are vitally important to the country, and it is only proper that they receive the headline attention they deserve. But it is my feeling that in setting forth these extremely important developments as separate and unrelated sensations the public gets a misleading impression of the actual atmosphere of their Nation's Capital, which is not at all the demoralized and chaotic place the news would indicate it to be.

Some of the investigations under way are in the nature of side shows to the main spectacle. The news stories might indicate that practically all the Members of Congress are devoting most of their time to those side shows, whereas actually only the members of the particular committees involved are taking part in these well-publicized investigations.

Those of us who are not on the Joint Atomic Energy Committee or the House Armed Services Committee, or one or another of the investigation-minded appropriations subcommittees, are, nevertheless, extremely occupied in our own committees and on the House or Senate floor with important legislation which does not always attract headline attention, but whose influence on the activities of the people of America and on business or industry or labor or the consumer is of a very strong character.

I think I can point this up merely by giving a few items out of my own diary of committee hearings, policy meetings, conferences, and floor activities in recent days.

For the past few weeks I have been attending hearings of a subcommittee of the Senate Committee on Interstate and Foreign Commerce on the subject of natural gas. We are trying to decide, on the basis of expert advice from the Federal Power Commission and from the gas industry and from representatives of States and municipalities, whether or not the Congress should waive away all jurisdiction of the Federal Power Commission over independent producers and gatherers of natural gas who do not have their own pipe lines into consumer markets in other States.

On the surface it sounds like an easy question to decide. The original Natural Gas Act passed in 1938 specifically exempted from Federal control the "production and gathering" of natural gas. The Federal Power Commission has never exercised jurisdiction over the rates the independent producers and gatherers charge to the pipe lines which transport this gas to the distant markets. The Supreme Court, however, declared in a decision a few years ago that the Federal Power Commission could set rates charged by these independents engaged in interstate commerce.

In the intervening years we had in the Congress a determined drive on the part of the entire natural-gas industry, including the pipe lines, to get legislation through which would pretty much have crippled all effective Federal regulation of natural-gas rates. We blocked that in the Senate Interstate Commerce Committee in 1947 by a very narrow margin of 7 to 6—the six Democrats on the committee and one Republican, Senator TOBEY, of New Hampshire, joining together to kill the Rizley bill. We also killed a similar bill last year by a somewhat larger margin.

The current fight is not over the Rizley bill or over any bill remotely resembling it. The bill now before the committee seeks to guarantee by legislation the same results which those of us who last year and the year before opposed the Rizley bill said at that time we were willing to allow, that was to exempt specifically the rates charged by independent producers to the pipe lines.

In the last year, however, so many new pipe lines have been established or certified, particularly to take gas from Texas and bring it up to northern and eastern cities, that there is now, according to the Federal Power Commission, a strong sellers' market in natural gas. As a result, some of the big independents, primarily oil companies who develop natural gas as a byproduct of their oil production, are said to be raising the prices of their gas to the pipe lines arbitrarily and capriciously. And these increases will of necessity be reflected in the price for natural gas in Pittsburgh and in other cities of Pennsylvania where natural gas has been a fuel long in use and highly important to industrial processes.

This is just one of the issues which have commanded not only a good deal of my time, but a tremendous amount of study on my part.

On the subject of natural-gas rates and of utility rates generally, I think it appropriate here to mention the importance of the fact that Thomas C. Buchanan, of Beaver, Pa., has finally been confirmed by the Senate for a place on the Federal Power Commission. Mr. Buchanan, a former member of the Pennsylvania Public Utility Commission, where he distinguished himself by his energy in behalf of the consumers of utility services in the State, has been serving since last summer on the Federal Power Commission under recess appointments made by President Truman. The Senate Interstate Commerce Committee in the Eightieth Congress has pigeonholed his nomination following hearings in which he was accused of lacking, and I quote, "judicial temperament." The charges came largely from representatives of utility interests and from some of Mr. Buchanan's former colleagues on the Pennsylvania commission.

What these charges came down to actually was that Mr. Buchanan insisted, while a member of the Pennsylvania commission, that utility rates be set on a basis of fair return on investment—on actual investment—rather than on the basis which is still followed by the Pennsylvania Public Utility Commission of return on reproduction cost. Under this theory of rate making in utilities regulation, inflation inevitably brings higher gas and electric rates regardless of whether the utility has had to buy new equipment at higher prices.

Mr. Buchanan has always supported the theory which has been approved by the Supreme Court of the United States and which is followed by the Federal Power Commission of keeping rates down to a point where they reflect an eminently fair—but only a fair—return on the actual invested capital of the utility.

Is all this important to you people in Pennsylvania? It certainly is. With the present division in the Federal Power Commission of three to two on fundamental issues of rate making, particularly in the natural gas field, Mr. Buchanan's membership on the Commission on a permanent basis as a result of his confirmation by the Senate insures a fair break for the consumers of gas and in some areas, electricity, in Pennsylvania and for Pennsylvania industry, particularly in the western part of the State, which requires natural gas for certain of its operational techniques.

My own committee responsibilities and also my responsibilities as majority whip in the Senate have been so heavy lately that I had to forego an opportunity to sit in recently with the Senate Labor Committee when hearings were held on a bill I have cosponsored with Senator NEELY and others to enable the Federal Government to take action against unsafe coal mines. I wanted very much to hear John L. Lewis when he testified in favor of the Neely-Myers bill. His testimony, as always, was I understood, extremely dramatic. Probably no one can speak as eloquently as Mr. Lewis on the subject of the horrible toll of deaths and injuries to our coal miners as the result of unsafe conditions in the mines. The Neely-Myers bill would permit Federal mine inspectors to close down any unsafe mine until conditions considered imminently dangerous to human lives are corrected.

All of these committee hearings, important as they are in the process of shaping legislation and of uncovering facts, are, of course, secondary to the main show—to action on the House and Senate floors where legislation is actually enacted.

The Senate, as everyone knows, has before it as pending business the administration's bill to repeal the Taft-Hartley Act and to replace it with legislation in the spirit of the Wagner Act, but with certain changes recommended by President Truman as a result of our experience over the years with the Wagner Act.

Just what our bill will look like when it passes the Senate—probably not for several weeks at least—is anyone's guess—and everyone seems to be guessing. It will, I hope, not be a Taft-Hartley Act by another name. I think every reasonable business man has come to the conclusion by now, as did Business Week magazine last December, that the Taft-Hartley Act was bad legislation. The whole theory of the Taft-Hartley Act was that strong labor unions constituted a menace to the country's economy and safety. Individual provisions of the act by themselves have merit in many cases, but as part of a pattern of direction on legislation, those provisions formed a jig-saw puzzle which, when put together, reflected outright and deliberate anti-labor bias.

The fact that the main architect of the Taft-Hartley Act, Senator TAFT, has come forward with an amazing compromise bill which would remove from the law many of the original features which he had defended so strongly when the bill was passed 2 years ago, shows the trend of thinking—a sensible trend. In the 2 years or so since Taft-Hartley became law, much of the hysteria resulting from the post-war bread and butter strikes of labor has disappeared. I think both sides of this issue are trying to look at the problem a little more objectively than was true 2 years ago.

That does not mean that we are in virtually unanimous agreement on a new bill. Obviously that is not true. These issues of labor legislation are going to be fought over vigorously, almost bitterly, but this time in an atmosphere much closer to reason and common sense.

While seeking to remove some of the strait-jacket provisions of Taft-Hartley from labor's back, from the back of respectable labor unions which, in some cases, like the printers' union, have had management-labor traditions and customs and practices of 50 years standing outlawed overnight by an act of Congress, the Senate has just recently completed action on a bill with which I was closely identified which would give to industry, particularly to Pennsylvania industry, some assurances on the legality of legitimate competitive practices involving freight absorption, practices which have recently come into question as a result, first, of a Supreme Court opinion in a case last year involving the cement industry and second of a case iinvolving manufacturers of rigid steel conduit on which the Supreme Court divided evenly, 4 to 4, with one justice not participating. In this instance the Supreme Court was unable to tell us just what the law was in regard to certain types of independent, noncollusive freight-absorption practices.

This is rather a technical subject, so technical in fact that the committees of Congress have been struggling with it for several years, failing in all that time to come forward with legislative language which would outline clearly the narrow dividing line between legal methods of doing business on a competitive basis and violations of the antitrust laws.

Since it is a technical subject, I do not intend to go into it here and now. I shall be glad to send full information on this to any manufacturer to whom the issue of delivered pricing is important or to anyone who is interested. What I want to point out here is that through the vehicle of a bill introduced by me, S. 1008, amended first in the Senate Judiciary Committee and then completely changed on the Senate floor following conferences between the notable Senate expert on antitrust matters, Senator O'MAHONEY, and spokesmen for both the Senate Commerce Committee and the Senate Judiciary Committee, we were able to work out language which we think and we hope will remove the cloud of possible antitrust prosecution from legitimate businessmen following what everybody seems to agree today are legitimate methods of competition but which the Supreme Court next month or next year may suddenly pronounce to be illegal.

Everyone who works for a manufacturing plant in Pennsylvania has a stake in this issue because if our plants cannot absorb freight, that is pay part of the cost or all of the cost of shipping their products to distant markets, they may not be able to compete in those markets with firms located closer to the market areas. Since many of Pennsylvania's plants serve the whole Nation, it is important that they can compete legitimately and effectively.

I mention this as an indication of the fact that this Eighty-first Congress is a Congress seeking to serve all the people—business, industry, the consumer, the public, labor—to serve them fairly and to enact fair legislation.

The New Senator From New York

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. KEATING. Mr. Speaker, the editorial comment from the New York

Times, which follows under leave to extend my remarks, is typical of the universal approval which has greeted the appointment by Governor Dewey of JOHN FOSTER DULLES to service in the United States Senate. His presence there will benefit not alone the State of New York, but the entire Nation. His distinguished and patriotic service to his country in the field of international affairs has already won for him a unique position of honor and admiration among his fellow Americans of both political parties.

The editorial follows:

NEW YORK'S NEW SENATOR

Governor Dewey did not have to search hard or to think long in order to find an admirably qualified successor to Robert F. Wagner as a Member of the Senate. The name of JOHN FOSTER DULLES must have come to his mind promptly, logically, and with gratitude that the services of so able and experienced a nominee were available to the people of New York. The issues of chief importance still awaiting action at the present session of Congress lie primarily in the field of foreign affairs. They are ratification of the North Atlantic Treaty, action on the pact of military assistance which is an essential supplement to it, implementation of the Marshall plan and extension of the Reciprocal Trade Agreements Act—which assumes increasing importance in the light of the "dollar shortage" that now troubles our democratic allies. In all these and other closely related matters Mr. DULLES has acquired a great wealth of first-hand knowledge and experience.

In his announcement of this appointment Governor Dewey suggests that Mr. DULLES may serve in the Senate only until December, and Mr. DULLES himself says that he does not expect to be a candidate in the November election. These are matters which may be left to another day. For the present it is enough to note that the appointment comes in sufficient time to enable Mr. DULLES to make a contribution to the discussion of important questions still on the agenda of this session and that it confers a well-earned honor on a citizen of this community who has served the whole American public faithfully and with distinction. For more than 4 years Mr. DULLES has willingly put aside his own affairs at the drop of the hat and rushed from one important commission and one critical international conference to another at the call of the White House. The title of "Senator" well rewards and excellently befits him.

What About the 25,000,000 American Children?

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. McDONOUGH. Mr. Speaker, the American people are always ready to rush to the aid of children in distress, children who are hungry, ill clothed, sick. The picture of a child on a poster brings a sympathetic response in donations from Americans. Relief packages flow across the sea to ease the suffering of children in Europe and in Asia. Many Americans even adopt war orphans and contribute monthly donations for the support of these unfortunate children.

But what of the 25,000,000 American children who are growing up in our own Nation? What are we doing to guarantee to them the most important of all their possessions, their heritage of personal freedom and liberty, the right to be self-dependent, the freedom to decide their own future?

Unless we act now to protect our American principles of individual freedom and defeat the growth of a socialist state which will guarantee a measure of planned security for the individual in one hand while it directs, orders, and decides each step in the life of the individual, our 25,000,000 children, the American citizens of tomorrow, will have lost their birthright.

In the June issue of the Tax Digest, the following article forcibly directs our attention to this dangerous trend. It should receive consideration, and I commend it to all members of Congress who still believe that our first duty is "to secure the blessings of liberty to ourselves and our posterity."

WHAT ABOUT 25,000,000 AMERICAN CHILDREN?

One little woe-begotten child on a poster can evoke the sympathy and generous outpouring of millions of dollars on the part of the American people. We're quick to rise to help the poor little children of China, or of Greece, or, in years gone by, of Armenia. Once in a while we even go to war to protect their freedom.

But what are we doing today to protect the freedom of the 25,000,000 little children in the United States who will be the men and women of the next generation?

Sure, their little stomachs are full. Their fathers and mothers are guaranteed unemployment insurance. We take them into school almost at the cradle—and apparently we plan to take care of them clear to the grave.

But what about their freedom? While we are guaranteeing them security, and jobs, and parity prices, and old-age insurance, and all the other things that our Government is holding out to them—what are we doing to their American birthright of freedom?

That American birthright is not freedom from fear, or want, or any other bad thing.

It is freedom of opportunity, freedom to make the most of themselves, freedom to be self-dependent, freedom to earn, to save, to invest—freedom to pursue happiness in their own way and at their own speed, be it slow or fast. In the end, it is freedom to decide what they will do with their own lives.

Today the American people are paying about 30 percent of their income to Government in taxes. And a big part of that 30 percent comes out of their pay checks before they get them. Any such enormous contribution for only one phase in the complexity that makes up our way of life seriously jeopardizes all the other parts.

Where an average of 30 cents out of every dollar of income goes for a mandatory cost of government, the home is left only 70 cents out of the dollar of income for all the essentials that have traditionally been the responsibility of the home and family in the United States of America.

Private charity, another American institution, has a hard row to hoe in the United States today—evidenced by the lack of success of many Community Chest drives this past year.

Few churches are rolling in wealth either—few indeed are there who can give a twentieth, let alone a tithe of their income to the glory of God.

The public schools, far from continuing as a grass roots institution, are clamoring to become Federal dependents.

We hear much in the newspapers about the "dearth of venture capital." What does that mean? It simply means that fewer and fewer Americans are able to save much and that the urge for security has so great a hold on the thoughtless that only a relatively small number are willing to invest their hard-won savings in enterprises where there is an element of risk.

Today the Federal Government is operating under a $250,000,000,000 debt. Talk of a $500,000,000,000 Federal debt is starting in Washington. Certainly there is little indication of much effort to cut Federal expenditures so that next year's Federal budget may be in balance—much less to cut Federal expenditures so that the people of this country may have some tax reduction. Senator BYRD has estimated that, without any more commitments such as socialized medicine, we will be $11,000,000,000 along the road to our second quarter trillion of national debt by the end of fiscal 1951.

California is due for a billion-dollar State budget for 1 year. It begs the question to point to all that goes into the State budget—all the local governments get out of it. The State must raise $1,000,000,000 next year, and that means increased and new taxes.

Local property taxes are mounting higher and higher, going up faster than the increase in population or in taxable valuation.

And local governments are invading other sources of revenue—notably cities going after the sales tax, as well as pressing for greater support from the State and Federal Governments. Most striking example, perhaps, is the public schools, which are promoting Federal aid for education, and in California, at least, demanding more out of the State treasury, as well as levying increasing property taxes.

There's good reason to expect that Californians will be paying higher taxes per person this coming year than they did in the peak year of war spending. And if the income of the people goes down, it means that an even greater proportion will go to government—and the other side of the equation, even less will be left for the personal use of the people.

But with all the danger flags flying there are those who, with their eyes wide open, promote bigger and greater invasion into the private lives of the people—more government paternalism, more spending, more control. And there are those who blindly follow, trading a little government service for a big slice of their freedom.

The parable about the man who traded his birthright for a mess of pottage has been repeated over and over. Seems like people don't learn from history, from the experience of the past.

Any American past 40 who isn't blinding himself to the past can remember when he was free to save, free to provide his own security, free to build a business and to compete for success—free to make his own life, liberty, and happiness.

What about the 25,000,000 children of the coming generation?

Biweekly Report by Hon. Francis J. Myers, of Pennsylvania, to the People of Pennsylvania

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 12 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in

the RECORD transcription No. 3 in the biweekly 1949 series of reports by myself to the people of Pennsylvania. This transcription was prepared for radio broadcasting.

There being no objection, the transcription was ordered to be printed in the RECORD, as follows:

When summer comes to Washington, the feeling begins to spread that adjournment of Congress can't be far away. Summer came to Washington a few days ago with all the fury of mid-August, and you will be reading repeatedly in the columns originating here in Washington about the congressional intention to go home and escape the heat.

I would discount that inside information if I were you, particularly if you are taking a real interest in your Congress and in what it is doing, and what it should do. We are not going to quit until we have accomplished a lot more than we already have.

Those of us in the leadership of the Congress have no expectation that we can in this first session of the Eighty-first Congress enact into law every provision and every broad promise of the 1948 Democratic platform.

As the chairman of the committee which drafted that platform at Philadelphia last July, I can tell you that we knew that the actual mechanics of writing that list of promises into law constituted a very difficult technical job for Congress. This is true the more so because despite what you sometimes hear about slipshod methods and hasty action by Congress, I can say to you honestly that this Congress is really trying to legislate with caution and with care. We have not used blitz tactics on any measure, even those on which the entire Democratic representation in Congress is almost unanimous, and on which we also have strong and influential bipartisan support among Republicans. The chairmen of the various committees of the Congress are giving all sides a full opportunity to be heard in the committee hearings. In connection with the North Atlantic security pact, for instance, Chairman CONNALLY and the members of the Senate Foreign Relations Committee—who have since unanimously approved the treaty—permitted Senators who were not members of the committee and who opposed the treaty to attend the hearings and to participate in the questioning of witnesses.

That may have delayed committee action on the treaty, but I think the delay was worth while in establishing clearly a determination on the part of our congressional leaders on foreign policy that blitz tactics would not be used, and that all questions about the treaty would be fully and openly explored.

In the meantime, the Senate is still hard at work on the new labor bill to replace the Taft-Hartley Act, and the debate is continuing into the third week. We have, of course, interrupted labor-law discussion from time to time to allow appropriation bills and other urgent measures which have deadlines attached to them to go through.

On the whole, although progress has been slow, I think this Congress is proceeding on the right track, and I am convinced that we will keep at the job here until a substantial portion of our program is enacted.

Of great interest to everyone who is concerned about the steadily mounting cost of Government, the numerous overlappings and duplications of Government functions by different agencies, and the need to make this Government of ours as efficient as it can possibly be without at the same time eliminating important work that the Government should do, was the passage a week or so ago of the Reorganization Act of 1949.

Under this law, the President will once again have the authority to recommend sweeping reforms in the way this simply tremendous Government of ours carries on its work. The Commission on Organization of the Executive Branch of the Government, which was headed by former President Hoover with the present Secretary of State, Dean Acheson, as vice chairman, did an outstanding job in analyzing the functions of the hundreds of Government agencies and showing how many of these agencies could be abolished and their work consolidated with that of other agencies in a more efficient set-up.

Ever since the Hoover Commission started to make its reports to Congress—and they have made them, one at a time, over a long period of time—I have received hundreds of letters from people all over Pennsylvania who wanted to know why these recommendations were not being put into effect immediately. The answer to that is quite simple.

Before the President could shake up the executive departments, and consolidate bureaus, and eliminate agencies, and transfer functions—nearly all of which are specifically provided for by law—he needed a special law to provide him with such authority. That was step number one. And such a law has now been enacted.

The law itself does not give the President blanket authority to do these things on his own. Either House of the Congress can prevent him from carrying out any of his reorganization plans simply by voting against it.

On the same day that he signed the reorganization bill, the President sent up to Congress seven reorganization plans which have already been worked out, all of them designed to help him improve Government housekeeping and bookkeeping and operations. The consensus is that all of them will go into effect, that neither the House nor the Senate will disapprove any of them. I am informed that other reorganization plans affecting nearly every department of the Government will be sent up to Congress from time to time.

In other words, the Congress is sincere, and the President is sincere, about the need for increasing efficiency in Government, and thus reducing expenditures. There are bound to be fights over particular reorganization suggestions, however, because nearly every agency of the Government has its own strong supporters both in Congress and among the general public, particularly among various types of businesses which deal with those agencies.

On another front, the housing front, Congress is also making real progress. Thanks to a change in the rules of the House of Representatives earlier this year, a very important change, the House was finally able to take up for debate and passage the long-range housing bill which all of our cities in Pennsylvania regard as essential to their growth and health through the removal of slums and the provision of decent housing for low-income groups. Every city in Pennsylvania which has a housing authority is supporting the low-rent public-housing program, which this administration is pushing so hard.

Speaking of legislation important to Pennsylvania, you may have read in recent days about the testimony I gave to the Senate Appropriations Committee in behalf of adequate appropriations for the Bureau of Mines. Everyone in the anthracite area of Pennsylvania knows how important this matter is to them, not only from the standpoint of the health and safety of the miners, but for the future of the whole anthracite region. The Bureau of Mines is building a research laboratory at Schuylkill Haven, which will have the job of finding new uses and new markets for anthracite, and also of developing new and better methods of mining it. I am very proud of the fact that the Senate Appropriations Committee 2 years ago at my request restored the funds for this laboratory, after the House had cut them out completely as the result of a squabble between individual Congressmen over its location.

The bituminous-coal industry of Pennsylvania also has a big stake in the work of the Bureau of Mines, particularly in the development of synthetic oil and gas from coal. This work is progressing largely at Pittsburgh.

Bureau of Mines experts are taking over the fighting of a stubborn underground mine fire at Mount Carmel, Pa., under a plan drawn up by the Bureau at my request, and funds for this work and for fighting other underground mine fires, including one at Latrobe, which are dangerous to the communities involved, are also provided in the bill.

Pennsylvania's crude-oil industry, which produces the finest crude oil in the world, has been given a new lease on life by research conducted by the Bureau of Mines in secondary oil-recovery methods, particularly around Franklin and Bradford.

And our steel and metallurgical industries benefit from the discoveries and the research of the Bureau of Mines all over the country, in connection with new sources of iron ore, tin, coking coals, manganese, and many other essential raw materials of industrial products which we make in Pennsylvania. Some of this research is done in our State, but all of it is vital to Pennsylvania, no matter where it is done.

To my mind, this sort of research, designed mainly to help private enterprise do a better job, is one of the essential functions of government. Naturally, I believe in doing my utmost to keep those programs going as effectively as possible. My concern was that in seeking means of cutting government expenditures, the Senate committee might mistakenly slash funds for this kind of research. The Eightieth Congress did that in 1947 and the following year learned to its horror what a bad mistake that had been. It restored in 1948 just about all the cuts it made in Bureau of Mines activities the previous year, but by then the Bureau had been forced to discharge many of its career technical experts who found much better-paying jobs in private enterprise and could not be enticed back to their old jobs in the Government. The whole program suffered as a result.

Now I want to tell you about a letter I received from a Pennsylvania veteran. Hundreds of letters pour in here in every mail, sometimes thousands. Nearly all those who write to me either want the Government to do something it isn't doing, or to stop doing something it is doing. Nearly everyone who writes to me is distressed about something. That the bulk of my mail should be of that nature is understandable because when people write to me as their Senator, it is usually to ask me to support or oppose a particular bill which affects them in one way or another. This letter was altogether different.

It came from Joseph A. Meyers, of 825 South Manor Street, in York. I thought so much of this letter that I inserted it in the CONGRESSIONAL RECORD. It was really a pleasure to find in my mail a letter from someone who at the moment wasn't angry at anyone, or distressed about anything particularly; who felt so good about an expe-

rience of his that he wanted me, and all Members of Congress who had anything to do with making that experience possible, to know how grateful he was. His letter reflects unshakable faith in the strength and future of America, and I want to read it to you now.

Here is what Joseph Meyers, a 24-year-old Navy veteran wrote to me:

"DEAR SENATOR MYERS: On June 6, 1949, I fulfilled an ambition I had held since my early high school days—to graduate from college. Like many thousands of men who entered the service earlier in the war, I had no idea that I would realize the ambition to enter college. Through the generous aid of the United States Government, I was given the opportunity to learn more of the American ideals and democratic ways of life which I had so wholeheartedly fought for in the Navy for 3½ years.

"When I had finished high school, my funds were not nearly enough to continue on in higher education, but you, and others in your capacity, as representatives of the people, enabled me to receive my diploma at Syracuse University on June 6, 1949.

"I cannot adequately express my appreciation and gratitude by a few written words, but I know you will understand when I say I sincerely thank you and the American Congress most humbly.

"I know that the GI bill of rights has promoted greater unity and understanding among our diverse peoples and that the money invested by the Government will be repaid tenfold through a more educated and a better adjusted veteran."

Joseph Meyers, of York, Pa., then added this in his letter to me, and I think it is worth public attention. He wrote:

"I believe I speak for most of the veterans when I say that we will not be daunted by talk of hard times in the future; nor discouraged over the slowness of peace movements. The tradition of the freedom of the individual has carried us through many hard times in our history, and each time has made our Government stronger and more united than ever before. I am not afraid of Russia because I know it can never destroy this faith in the freedom of the individual. It is as strong as the pyramids.

"I hope," this young veteran continued, "you will express my gratitude and extend my thanks to your fellow Senators and Congressmen for the aid you have given me toward improving my education.

"Very truly yours,

"JOSEPH A. MEYERS."

That was the letter which impressed me so that I inserted it in the CONGRESSIONAL RECORD for the attention of all Members of Congress. The faith demonstrated by this veteran in our Nation—a faith shared, I am sure, by all of us—certainly makes me proud of the fact that I had the opportunity as a Congressman to vote for the GI bill in 1944, even though my vote was just one of hundreds in the House in favor of the bill. That was before I was elected to the Senate.

This young Navy veteran from York, who has completed a prelaw course at Syracuse University under the GI bill, now intends to work his way through law school since his GI educational benefits are used up. I am sure that with his faith in the essential soundess of America he will make good on his ambition.

He speaks of the fact that he will not be daunted by talk of hard times in the future. That brings me to another subject which I see I do not have time to discuss on this broadcast, but which I certainly want to take up in my next one over this station 2 weeks from today at this same time—that is, the spreading picture of spotty unemployment in Pennsylvania and elsewhere.

S. 1008

EXTENSION OF REMARKS
OF
HON. RAYMOND W. KARST
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. KARST. Mr. Speaker, I take this opportunity to include in this RECORD my reply to the letter of explanation of S. 1008 discussed in the House just recently. This letter sent to me by Mr. Rankin Peck was to me and I believe to my colleagues a masterpiece of explanation of S. 1008. I herewith submit my appreciation for all of us:

HOUSE OF REPRESENTATIVES,
Washington, D. C., July 11, 1949.

Mr. RANKIN PECK,
President, National Congress of Petroleum Retailers, Detroit, Mich.

DEAR MR. PECK: I want to thank you for sending to me your organization's analysis of bill S. 1008, which I inserted in the CONGRESSIONAL RECORD on June 27.

I sent a copy of this analysis to every Member of the House. Many of my colleagues either thanked me by letter or personally for having brought this analysis to their attention. In the House debate on S. 1008 on July 6 and 7, a number of members made specific reference to your organization's analysis of the bill, and I feel that it was a very important contribution to the victory which the supporters of small business achieved when they succeeded in materially amending the bill so as to safeguard the interests of the small manufacturer, retailer, and distributor.

Sincerely yours,

RAYMOND W. KARST.

What Shall Be Our Farm Program?

EXTENSION OF REMARKS
OF
HON. CHARLES R. HOWELL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. HOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Newsletter on Economic Problems, of Friends' General Conference, Philadelphia, Pa. This newsletter, authored by Mr. Charles A. Collins, a successful fruit and truck farmer of Moorestown, N. J., comments in a very interesting and thoughtful way on the new farm program proposed by Secretary Brannan. I have taken no firm stand on this proposal, but believe many of its recommendations should be seriously considered for inclusion in any new farm program which Congress should adopt. The article follows:

WHAT SHALL BE OUR FARM PROGRAM?

Secretary of Agriculture Brannan's farm program or any other economic proposal should be evaluated in the light of fundamental economic facts as they exist today. What are some of these facts?

1. This country emerged from the war the most powerful country in the world. With great power goes a corresponding responsibility. Many of the peoples are looking to us for help and guidance to a better way of life. We cannot do our most effective job in that respect unless we remain strong and sound internally. We should approach our economic problems with all the intelligence at our command.

2. We have a national debt of some $250,000,000,000, on which the interest amounts to over five and a half billion dollars.

3. We have a national budget of about $42,000,000,000. Add to that State and local budgets of twenty to thirty billion dollars and we have a total tax burden of perhaps $70,000,000,000, or about one out of three dollars of our national income going for taxes. That is almost as much as our national income in 1939. If our national income should drop so that these taxes should be expected from one hundred and fifty to one hundred and sixty billion dollars national income, the burden would be terrific and our economy would suffer. Therefore it becomes quite obvious that our national income must be maintained at a high level.

HOW DO WE MAINTAIN A HIGH NATIONAL INCOME?

We should have full employment with fair incomes for all our people.

HOW DO WE MAINTAIN FULL EMPLOYMENT?

We must maintain a balance of purchasing power between industry, labor, and agriculture so that we can all buy the products of other folk's efforts. I would underline and repeat this fundamental economic principle. We might illustrate it by saying we have a three-legged stool—industry, labor, and agriculture. So long as the three legs remain the same length, the stool stands. When one leg gets too long or too short the stool upsets. Therefore, it seems that much thought should be given to the method or means of maintaining the balance of purchasing power between groups. Five years ago I suggested in a "Postwar Economic Report for Agriculture" that this country would be wise if it set up what I called an economic supreme court to watch this balance and suggest ways and means to Congress to maintain it.

IF THIS ECONOMIC PRINCIPLE IS FUNDAMENTAL WHICH GROUP, IF ANY, IS MOST LIABLE TO UPSET THAT BALANCE?

During World War I farmers stepped up production tremendously and continued producing to the same extent even after the wartime demand dropped away. In an 8-month period in 1920–21 farm prices fell almost 50 percent. Agricultural surpluses continued to develop. Farm prices as well as incomes and purchasing power were depressed. Certainly that fact was one of the potent influences leading to the depression of the thirties.

During World War II farmers again increased production about 40 percent over prewar and are still producing to the same extent while demand for agriculture products is beginning to drop off. Prices of grains fell 30 percent in 1948 and would have dropped more perhaps had there not been support prices. Prices of other farm commodities are also falling. At the same time prices of things that farmers buy have fallen practically none—some have gone up. Farmers have already become concerned and cautious and are only buying what they must have. It follows we will have a reduced purchasing power from the farm partly because of what has already happened and partly from fear on part of the farmer of what will happen. The farmer was a $31,000,000,000 customer of labor and industry in 1948.

Therefore, it seems we can well ask ourselves a few pertinent questions in light of this very brief statement of economic facts.

1. Did farm surpluses develop after the First World War and ruin farm prices, incomes and purchasing power and eventually largely cause the depression of the thirties?

2. Will the same thing happen again this time if we do nothing about it?

3. Is the farm group more susceptible to the effect of surpluses than other groups at this time, because in a period of falling prices the prices of industrial products and wage rates tend to stick while farm prices drop fast and severely?

4. Is it important to maintain farm income and purchasing power in order to maintain the balance between the groups?

There are many farm and nonfarm people who believe the answer to these questions is "Yes."

Therefore, let us explore the Brannan plan a bit and see how it proposes to help the agricultural situation and the rest of the economy.

If it is fair to the farmer to help to maintain farm income and if it is important to the rest of the economy that farm purchasing power be maintained and if the Brannan plan helps to do this without excessive cost to Government and gives the consumer abundant supply of food at reasonable prices, then perhaps the plan has merit.

HOW DOES A GOOD SOUND FARM PROGRAM SERVE ALL THE PEOPLE?

Mr. Brannan lists several ways:

1. It can help prevent depression. Most depressions have been farm-led and farm-fed. Shrinking farm prices shrink their income and purchasing power.

2. Farm production and price adjustment programs can help build markets for industrial goods and help maintain employment for labor.

3. Stable farm prices and incomes encourage high-level production with greatest assurance of reasonable prices to consumers.

4. A program that helps maintain farm income helps to maintain agricultural resources and conserve our soil. Hard times make poor farmers and poor land. Remember the Dust Bowl.

5. An effective farm program is essential to our national security and builds food reserves to protect us when crops fail. Our full granary served us well during the war. Who can measure the beneficial effect of support prices to the farmer during the war and since? The farmer had some assurance he would not suffer unduly if he produced to the limit.

6. A price-support program stabilizes the rural economy, stabilizes jobs in the city, and stabilizes the cost of living for everybody. It is the equivalent to labor's minimum wage, social security, and collective bargaining and to industry's tariff, Interstate Commerce, and Public Utility Commissions.

THE PROGRAM METHODS

1. The program sets up a minimum income standard below which it is not in the interest of farmers and general public to allow farm income to fall.

2. Next step sets up a formula to arrive at that income standard. Farm income and purchasing power would be maintained at a level equal to the average of the first 10 years of the last 12 years. That average cash income figure is $18,218,000,000 for the current base period. To calculate the income support figure of 1949 multiply the above figure by the index figure of prices paid by farmers in 1949 compared to base period (which is 144) and you have an income figure for 1949 of $26,218,000,000 as a minimum. It takes that many dollars to stabilize farm purchasing power at present-day costs.

3. After arriving at the total income standard figure the next step is to determine the prices for various commodities which in total will obtain the over-all standard. Support prices for 1950 would be computed as follows:

(1) Average cash receipts 1940–49 equals $20,980,000,000.

(2) Income support standard equals $26,234,000,000.

(3) Ratio between (1) and (2) equals 125.

(4) Price adjustment factor (125) is multiplied by 10-year average price of given commodity to give support price for the given commodity. Example: Ten-year average price of wheat was $1.50; $1.50×125=$1.88 the support price of wheat for 1950.

Next Mr. Brannan suggests that a list of commodities be designated to get first priority on funds available.

Group I: Includes corn, cotton, wheat, tobacco, whole milk, eggs, chickens, meat animals—hogs, beef cattle, and lambs.

Group II: Perishable products including all other commodities should be supported in line with group I taking into account available funds and authorities and ability of producers to keep supplies in line with demand and other relevant factors.

METHODS OF PRICE SUPPORT

Commodity loans and purchase agreements (as at present) are adapted to storable commodities which account for about 25 percent of our annual cash receipts of farm products.

For nonstorable and comparatively perishable commodities, which comprise about three-fourths of cash farm income, a new approach is suggested, i. e., "Production payments." This means the farmer would be paid in cash by the Government the difference between the support price and the average selling price in the market. This method of supports encourages farmers to produce abundantly and also gives the consumers a lower priced product when surpluses develop because the supply and demand creates the price in the market place. Production payments are authorized for 1950 under the Agriculture Act of 1948. This method would encourage consumption of many food products because of lower price at consumer level.

Another method of supporting perishables and nonstorable commodities is the direct purchase which would help the seasonable glut situation in perishables. These products would be distributed, as at present, to school-lunch program and to institutions. only about one-quarter of the country's school children have an opportunity to participate in the program at present.

CONDITIONS OF PRICE SUPPORT

It is recommended that full benefit of price supports should not be extended to farmers who produce without regard to general welfare and of their fellow farmers.

Eligibility for participation in any price-support program should be conditioned upon compliance with all applicable programs of production adjustment, marketing quotas and agreements and the carrying out of reasonable soil-conservation practices.

Farmers should always have the opportunity to vote on the question of invoking production regulation on themselves. That provision is now available for producers of "basics" before marketing quotas become effective. If two-thirds of producers vote favorably the quotas become effective on all producers of that commodity.

It should be remembered that this plan of Secretary Brannan, like those of the past, is a program which helps to close the gap between farm and nonfarm income. Last year, for instance, even with the help of some farm programs the net farm income per capita was $909 compared with the nonfarm average of $1,569 per capita.

In conclusion I would emphasize that:

1. A good farm program will help to stabilize our entire economy.

2. It will help to bring about the balance of purchasing power between industry, labor, and agriculture.

3. A program using production payments will be less costly to consumers.

4. To be eligible for supports farmers must comply with planned production efforts to fit supply with demand.

I personally believe that if we approach the farm-surplus problem with intelligence and a genuine concern we need not go into another depression. We must develop an awareness of the fundamental economic facts and then proceed on our economic path with faith and confidence. This will keep this country strong and we can help to bring about a better world in which to live.

CHARLES A. COLLINS,
Fruit and truck farmer.

MOORESTOWN, N. J.

America at the Crossroads—Future Depends on Fiscal Policies

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. McDONOUGH. Mr. Speaker, the United States has reached the crossroads where a stand must be taken against further socialization of the state or we will follow in the footsteps of Britain and other nations toward the relinquishment of our individual freedom in return for the planned economy of state socialism.

In the following address before the 1949 convention of the California Bankers' Association, N. Bradford Trenham, general manager of the California Taxpayers' Association, analyzed our situation and emphasized the urgent need for appropriate measures to turn the tide against socialism and back toward the restoration of the procedures that made this country great and provided more human growth and development than any other system.

The facts which Mr. Trenham presents and his conclusions based on these facts are worthy of your attention:

AMERICA AT THE CROSSROADS—FUTURE DEPENDS ON FISCAL POLICIES

(By N. Bradford Trenham, general manager, California Taxpayers' Association)

This year, 1949, during which the spending programs for 1950 are being planned, may well be a turning point in American history.

From all indications this year is either the jumping-off place for what may be a fatal dive into state socialism and the end of the American dream, or it may be the year which starts the retreat and the defeat of the collectivists—the high-water mark of the social planners—the year in which free enterprise reasserts its validity and starts up the long comeback trail toward restoration of the procedures that made this country great and provided more human growth and development than any system that our ancestors tried.

In appraising prospects for 1950 it is well that we take a quick, but rather careful look at our recent history. How did we get where we are and what can bankers do about it?

In 1933, the total California tax bill was $449,400,000; the Federal Government received $94,700,000, the State $90,900,000, and property taxes provided the local governments with $263,800,000. Put another way, Uncle Sam took about 20 cents of the tax dollar, the State about 20 cents, and local governments 60 cents.

Eight years later, fiscal 1941—the last fiscal year before Pearl Harbor—the total tax bill

had risen to $1,075,000,000, of which $405,000,000 was Federal, $361,000,000 State, and $309,000,000 local. By that year the distribution of the California tax dollar had changed considerably from 1933. For 1941, it was about 38 cents Federal, 34 cents State, and 28 cents local.

By fiscal 1945, the total tax bill on Californians was $4,625,000,000, of which $3,722,000,000 or about 80 percent was Federal, $557,000,000 or 12 percent was State and $346,000,000 or 8 percent was property taxes for local governments.

In the 12-year period, the situation had been completely reversed. In 1933, 20 percent of the tax bill went to the Federal Government and 80 percent to the State and the local governments. In 1945, 80 percent was for the Federal Government and 20 percent for State and the local governments.

By fiscal 1948, Federal tax collections had dropped $600,000,000, while State and local taxes continued to climb, absorbing most of the Federal reductions. The total tax bill in 1948 was $4,517,000,000. The relative distribution had changed again to Federal 69 percent, State 19 percent, and local 12 percent.

During the war and postwar periods, the State and local governments in California were not cramped for funds. The State, particularly, was able to lay away hundreds of millions of dollars in State reserves. Many local governments were able to accumulate substantial balances.

The reason that the percentage standings, so far as Government levels is concerned, changed so drastically was, of course, the tremendous increase in Federal tax collections. During the period 1933 to 1945, Federal tax collections in California increased just about 40 times. In each of the last 4 or 5 years, California's tax bill has been more than twice as much as the Federal Government was able to collect in all of the 48 States from all sources at the bottom of the depression in 1932.

What about fiscal 1949?

After 3 years of declining Federal tax collections in California, it will be interesting to see if fiscal 1949 will shown an increase. State tax collections will approximate a billion dollars and local governments will take about $750,000,000 in property taxes and supplementary revenues. Thus, California taxpayers will be paying about $5,000,000,000 in taxes for all purposes for the year ending June 30, 1949, if there is only a small Federal increase.

If the 1948–49 tax bill on Californians were equally spread over the more than 10,000,000 people in the State, it would amount to a tax bill of about $500 per capita, $2,000 per family of 4, or approximately $40 per family of 4 for each week. Of course, relatively few families pay anything like $40 per week directly in taxes.

This emphasizes the point that it is somebody's business to remind the public constantly that they do not see all their tax payments.

A large part of the bill for government is paid by the taxpayer through withholding taxes, through taxes on business—which must be passed along to the ultimate consumer—and through taxes on corporations, which reduce their capacity to pay dividends, to pay wages, to replace or expand their facilities, or to reduce the price of their products.

In addition to the direct taxes they pay, the people pay taxes in the price of everything they buy.

For fiscal 1950, the tax bill on Californians threatens to be even greater.

Should the Federal budget be adopted as presented by the President in January, and should his request for $4,000,000,000 in additional taxes be granted by the Congress, Californians could expect substantially increased Federal taxes.

But there appears to be more danger of a Federal deficit than of increased Federal taxes. And this adds up to a very dangerous situation.

The House of Representatives has already passed all the major appropriation bills for fiscal 1950. This has been done with little more than lip service to sincere efforts at budget reduction. The 10 major supply bills for 1950 involve Presidential requests totaling $31,134,000,000. The House cut these by a net of only $299,000,000—and the $30,835,000,000 which the House approved was $4,216,000,000 more than the House approved last year in its consideration of the fiscal 1949 budget.

The reductions the House has made in these bills are only token reductions. And the Senate traditionally has been the one to allow funds somewhat more than those allowed in the House.

Perhaps we can take a little encouragement from the Senate vote on April 28 of 44 to 37 to recommit the Labor-Federal Security bill to the Appropriations Committee with instructions to cut 5 percent from the measure—an instruction limited to administrative funds and not related to the huge sums for matching and outright grants under various welfare and aid programs. Maybe a pattern of resistance is forming—maybe the Senate will do the job which the House has failed to do.

With tax revenues generally expected to decline, with spending obviously headed toward a record peacetime level, and with Congress apparently afraid either to vote new taxes or to effect real economies, we are apparently going straight toward another rash of deficit spending. Senator BYRD has predicted a defict of $815,000,000 for fiscal 1949, $3,200,000,000 for fiscal 1950, and $7,000,000,000 for fiscal 1951—a $11,000,000,000 total in 3 years.

Distasteful as higher taxation would be, there does not seem to be sufficient courage to cut spending enough to avoid the need for higher taxes.

Today we are spending about 30 percent of our national income for government. Great Britain, deep in the throes of state socialism, spends 40 percent. Great Britain recognizes the danger of its situation, for Sir Stafford Cripps recently said in the House of Commons that there could be no further increase in the social services except out of increased national production.

If we don't call a halt to mounting Government expenditures, we will soon find ourselves in the precarious position of Great Britain—where, the London economist warns, "* * * Unless the price of government is reduced, the British economy will strangle itself."

There seem to be forces at work, unfortunately for the most part with bipartisan support—or perhaps apathy—which ignore the seriousness of the situation.

We can, in all seriousness, say that we are at the crossroads of national fiscal policy. The spending decisions which will be made in the next 3 months will set a pattern.

Those legislative stalwarts who have fought long and hard for balanced budgets and economical Government are today pessimistic and frustrated. They must have encouragement from people like us if they are to go on with their uphill battle.

While the people of California constitute almost 7 percent of the American population, they provide nearly 9 percent of the revenues of the Federal Treasury. Nine percent of the proposed $4,000,000,000 increase in Federal taxes would mean a $360,000,000 addition to our present $3,000,000,000-plus Federal tax bill in this State.

The proposed $1,060,000,000 State budget also calls for increases in existing State taxes and a new tax on cigarettes.

Local governments generally are seeking more revenues for expansion of facilities, capital outlays, further employee salary increases, and so forth.

When we talk about the dollars and cents of taxation, we are not talking about money alone. We are talking about human endeavor, the sweat and tears and toil of the mental and physical producers of our Nation. It was old Cal Coolidge who said: "I am not interested in cutting taxes to save dollars but to save people." Dollars are the only common denominator with which 148,000,000 people can evaluate their operations and their efforts, and compare them with other times, other places, and alternative methods.

Our late "hot" war with one set of collectivist totalitarians and our present hot and cold "cold" war with another set, have brought responsible and thoughtful Americans face to face with fundamental realities that few of us have met squarely before. When thousands of miles of ocean protected us from foreign foes and nearly 2,000,000,000 acres of virgin soil made us a happy, carefree people, there was not the need to face realities that there is today.

Now it becomes increasingly necessary that each citizen ask himself: "What do I expect to get out of life and what types of social, political, and economic organizations are most likely to give me and mine the greatest satisfaction?"

Diverse as we Americans are, we are all activated in more or less the some way by similar basic urges. Leaving out the controversial aspects of mankind's yearning after something divine, our struggling arises from the desire to satisfy four basic urges.

First, there is the urge for survival, for life must go on.

Second, there is the urge for experience—to use our senses, to go places, and do things.

Third, there is the urge for recognition or prestige—to be looked up to, to be regarded as a worthy member of any group to which we belong.

And lastly, there is the urge for participation in life's activities—for response to our creative impulses.

From birth to death people are seeking to satisfy these urges, or pressures, or motivations, or whatever you want to call them. Some of them are satisfied individually, some in voluntary groups, others by governmental arrangements. Civilized people do most of their living in groups. One's life pattern is something like a series of concentric circles. One has a definite set of relationships in each of those circles, close and intimate with the inner circles of family and friends, neighbors, and close associates, and more remote and less intimate as the people in the group recede in time, or space, or intimacy of contact. Among the voluntary circles around the individual are the family, the neighborhood, the church, the job, the club, the lodge, and many such.

But superimposed on all these voluntary groups, we have another set of circles that are harder and sterner and that are becoming increasingly costly—our many governments. You may define government as an institution based on contract or in any other way you wish, but there cannot be government without the element of force and compulsion—the forcing of the individual to conform to laws and restrictions.

A typical citizen of California, and I would like to be so classed, is concerned with several of these concentric governmental rings. In the case of a citizen of Los Angeles, for instance, there are five of them close at home: the county, the city, the school district, the metropolitan water district, and the flood-control district. Practically every Californian has at least this many local governments with which to contend and to support by way of taxes. Then we have the State of California and the United States, each of which exacts taxes from us. A new ring has been added to the circle in the form

of the United Nations, but we don't yet pay direct taxes to that. There is a persistent rumor that Buck Rogers, of funny-paper fame, is setting up an interplanetary council which may become a definite issue before long. We have, then, at least seven circles of government helping us to be civilized, providing services for us, and, all too frequently, pushing to do things for us that we could do better for ourselves or could get along without.

The point I am trying to develop here is that, in this human pursuit of satisfaction for the basic urges, we use three agencies: Our individual selves, our voluntary group associations, and our governmental agencies.

The question that confronts every thoughtful American today is: Are these three agencies in balance?

We cannot have lived in our country this past half century and know anything of the history of mankind's struggle for order and liberty, without coming to the conclusion that we definitely are out of balance.

We have put too much of our life's health, safety, and happiness in the hands of government. We have yielded to herd instincts. We have weakened our independence and endangered our liberties.

I have not been developing this point as an academic exercise in philosophy but as background for the observation that if these four basic human urges are not satisfied by individual or voluntary action, there are those who will look to government for their satisfaction. There will always be those who will point out imperfections in persons, in businesses, and in other voluntary enterprises, and say: "Ah, this is a job for government." Bankers have a vital concern in this situation, for banking is one of the principal voluntary institutions for building security against old age and the hazards of living.

Taxwise, bankers should be far more concerned with the taxes on their customers than on the banks, for the prosperity of banking depends directly on the prosperity of the people. If the people's substance is wasted with excessive government, or ill-conceived projects, there will be no prosperity for banks—or anyone.

Bankers play a very important part in this country as advisers to individuals and businesses on everything from building a house or having a baby to starting a factory or developing a farm.

Is it possible that some bankers have abdicated some of their rightful position as community leaders and as sound advisers to the public?

Much of the recent governmental development in today's semisocial welfare state is in part attributable to inadequate business leadership—to lack of enough hard work—by all of us disciples of the free-enterprise system.

We cannot combat collectivism simply by inveighing against it. If freedom and liberty are to prevail in this country, we must do those things in the free-enterprise system which satisfy human wants without resorting to social and political collectivism.

The year ahead will be an even tougher one for taxpayers. There is little prospect of substantial reduction in Federal spending. But what prospect there is must be grasped and developed through the implementation of the Hoover Commission recommendations—by constant action on Congressmen. Thus some of the worst features of Federal waste and inefficiency can be eliminated or reduced.

In the State of California, some increase in State taxes appears inevitable. But here there are hopeful prospects also. The $112,000,000 gap between the proposed general fund budget and the anticipated revenues from existing sources can be narrowed, even if not entirely closed, by repealing proposition No. 4; by seeing to it that the economy recommendations of the legislative auditor to the joint legislative budget committee are adopted; by firm resistance to the $800,000,000 of special appropriation bills in the legislative hopper, and by neither asking nor permitting our State government to undertake new ventures, such as prepaid health insurance, at this time. Most of you had personal experience with California State finance when our State ran a deficit from 1933 to 1941. That can happen again and it will happen if the rate of expenditure increase exceeds the rate of revenue increase. And the rate of revenue increase cannot be allowed to go up much more without bringing the law of diminishing returns into play and actually throwing our economy for a loss.

In our 4,500 local governments in California, the problem is largely one of catching up with delayed construction, servicing 3,500,000 new people, and providing for the education of unprecedented large numbers of children. Some of these things must be done, but if they are to be done and done properly, then every penny of unnecessary expenditure must be squeezed out of ordinary operations and every unnecessary project must be stopped.

Certainly, so far as Government is concerned:

1. Rigorous economy should be the order of the day.
2. There should be no more deficit financing.
3. Personnel policies should be tightened.
4. Government invasion of the American competitive system should be vigorously resisted.
5. Every level of government should stand on its own feet.
6. The Hoover Commission recommendations should ge given most careful and prayerful attention.
7. The drive to "squeeze the water" out of operations should be intensified.
8. The fact that the preservation of a free people requires citizen action at the grass roots should be emphasized.

The challenge to bankers is even greater than it is to other businessmen, for bankers touch the economy at every point and the breadth of their vision and understanding is expected to be greater than that of ordinary mortals.

The job upon you is inescapable. If California is to absorb, digest, and assimilate all its new population and the millions who are planning to come, its business and its governmental affairs must be run at higher levels of efficiency.

Let the year 1949 be the year in which the bankers of California resolve to pick up their share of the burden—yes, more than their share, if necessary—to clarify the thinking of our people, to preserve our substance, to take those actions which lead to increase in our substance, and to guarantee that Americans, and especially Californians, shall have the opportunity of progressing as free beings.

Biweekly Report by Hon. Francis J. Myers, of Pennsylvania, to People of Pennsylvania

---

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 12 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD transcription No. 4 in the biweekly series of reports by myself to the people of Pennsylvania. This transcription was prepared for radio broadcasting.

There being no objection, the transcription was ordered to be printed in the RECORD, as follows:

Depending upon how you look at it, it's perhaps a shame that so many of the top radio comedians have gone off the air for the summer, for they would probably be having a field day right now over the new, temporary location of the United States Senate.

We had to move, you know, so that the roof over the Senate Chamber could be replaced.

Well, it's not true that the old roof was lifted off by an accumulation of senatorial hot air. We didn't blow our top, either—in case you may have heard that. The historic glass-paneled ceiling, decorated with the seals of the original States, became unsafe some years ago but could not be replaced because of the almost continuous sessions of Congress during and after the war.

The Congressional Reorganization Act passed in 1946 provided that under normal circumstances, Congress should adjourn early in the summer in order to provide Members with more time back home in their States and districts, and so in expectation of an early adjournment this year, contracts were let for a start of the roof-replacement work on July 1.

Consequently, when we returned from the Fourth of July holiday, the House of Representatives was forced out of its Chamber into the Ways and Means Committee room in the House Office Building, while the Senators' chairs, but not our desks, were moved into the tiny semicircle down the corridor which had for many years been the home of the Supreme Court and which was, for years before that, the original Senate Chamber in the Capitol.

When you remember that that room became too small for the Senate 90 years ago, after 32 States had been admitted and there were only 64 Senators, it is obvious, I'm sure, how crowded our conditions really are today.

The most unfortunate thing about the new temporary Chambers of both Houses of Congress is that they provide no space whatsoever for visitors' galleries. Even the accommodations for newspapermen who cover the proceedings are very limited.

The thought has been expressed that the absence of a visitors' gallery may cramp the style of some orators in the House and Senate and lead to a speed-up of proceedings because there is no gallery to impress. Personally, I believe that as long as the full proceedings of the Congress are printed verbatim in the CONGRESSIONAL RECORD, most Senators and Congressman will be just as inclined as ever to make the same sort of speeches they would otherwise make.

But I do think it is too bad that, for awhile, anyway, visitors to Washington will be denied the chance to sit in on the congressional debates because the sessions of Congress are great tourist attractions for the thousands of visitors who come to their Nation's Capital at this time of year.

Frequently, I know, the gallery visitor has been very disappointed by the apparent inactivity on the Senate floor, the seemingly endless talk, the obviously poor attendance except under special circumstances, such as the actual voting on bills or amendments. But whether a Senator is talking to full attendance or just to the Vice President and a few scattered Members—who may or may not be paying very close attention—I have found that most visitors really find the sessions of the Senate interesting and sometimes even historic.

It is rather significant that the first order of business of the Senate when we convened in our new Chambers was the North Atlantic security pact. In the little room where the

Monroe Doctrine was first proclaimed by a struggling little Nation far from secure in its independence, in the same room where profound questions of constitutionality were argued and reargued before the justices of the highest courts in the land, the Senate took up on Tuesday the fateful question of the extent to which we shall commit this Nation in concert with other nations to the principle of collective international security against war.

Most of us had hoped about 4 years ago that the issue had been met and settled at San Francisco in the drafting of the United Nations Charter. But the United Nations 4 years later still has no effective police force to guard the peace against aggressive war. The refusal of the Soviet Union to allow the United Nations to establish the police force which we all envisioned 4 years ago as an integral part of the United Nations has made the North Atlantic Pact imperative to the defense of free men and free nations.

The North Atlantic Pact, of course, cannot by itself guarantee peace, just as the United Nations Charter, by itself, could not guarantee peace. But this defensive pact against aggression, a treaty which says that those nations adhering to it regard aggressive war against any of them as an aggressive act against all of them, will stand as effective notice to any future aggressor that he can no longer anticipate an opportunity to knock off the free nations of free peoples one at a time as Hitler did, and as Russia had hoped to do.

But powerful as it is as a deterrent against aggression, the North Atlantic Pact is no defense against communism if it becomes merely a mutual assistance agreement among impoverished and bankrupt nations. Since the end of the war, it has been not only the armed strength of the United States which has bolstered the courage of free Europe; it has been the industrial and economic strength of our country, unselfishly and enlightenedly used to help other nations revive from the depths of wartime destruction and despair.

Thanks to the Marshall plan and to the various assistance programs which this Nation sponsored in Europe, the free nations have made remarkable strides in improving their economies, and thereby rebuilding their strength and their influence for peace. If, however, the United States were to be plunged into recession or depression, the whole structure of world peace could topple overnight by the removal of the keystone of world recovery which our country has been.

And that brings me to some comments I would like to make about the spreading unemployment in various parts of our State and in the Nation, which are danger signals we must heed. There is a tendency to look on every isolated shut-down of a plant as the start of recession. There is a tendency among Americans who have become familiar with full-production and full-employment economy to regard anything less than this as disaster itself.

There is always the danger that the crepe hangers and the pessimists and the viewers with alarm might talk us into a recession merely by instilling fear in the hearts of wage earners and businessmen that they had better retrench, hold off on expected purchases, cut all expenses to the bone, and wait and see what might happen.

Once a philosophy of that sort becomes ingrained, workers and businessmen alike would soon be retrenching themselves out of their jobs or their businesses for fear psychology can be disastrous to a high-production, mass-production, mass-distribution economic system such as ours.

So let's not scare ourselves into an economic tailspin.

On the whole, the statistics on employment and unemployment have many reassuring aspects. It must not for a moment be forgotten that we have more people gainfully at work in the United States this year than during any year in our history, with the exception of inflation-booming 1948. As Senator LUCAS, of Illinois, the majority leader, said at the White House the other day when we visited the President for a conference with the congressional leadership, if this is a recession, it is the most prosperous one we have ever had. There is no recession or depression in America when more than 58,000,000 Americans are at work.

Nevertheless, although we can find all sorts of reassurance in such factors as these—that a substantial percentage of our current unemployment represents students just coming into the labor market, housewives and farmers looking for part-time jobs, other persons already holding part-time employment but looking for full-time jobs, and so on—the fact remains that we do not at this moment, at this time, have sufficient job opportunities for all those willing and able to work.

And that is the problem we have got to solve.

Of course it can truthfully be said that, except for the war years and immediately thereafter when there were severe shortages of all kinds of workers, we never did in modern times have such a full-employment economy.

But this Nation officially decided in 1946, in enacting the so-called Full Employment bill, that it shall be the goal of this country of ours to achieve such an economy insofar as it is possible to do so, within the limits of constitutional government and constitutional restrictions and within the framework of a private-enterprise society.

The Employment Act of 1946 established a special joint committee of Congress, composed of an equal number of Senators and Congressmen, to review the economic reports made periodically to Congress and the people by the President and his Council of Economic Advisers, and, in effect, to keep its eye on our economic health and recommend congressional actions consistent with the achievement of a full-employment economy.

I am extremely proud of my membership on the Joint Committee on the Economic Report, which I regard as potentially one of the most important of all congressional committees. This committee, by the way, has been authorized to make a thorough investigation this summer into the factors and causes of unemployment in order, first, to find out exactly what are the basic causes of the trouble and second, to recommend corrective national policies. I asked to be placed on the subcommittee which is making that study and my request was granted by the chairman, Senator O'MAHONEY.

We are going to try to find out, if possible, to what extent slow-downs in purchases of consumer goods—reflected promptly in declines in employment in those industries—is the result of a wait-and-see attitude on possible price decreases.

The evidence available to us in preliminary form so far indicates that where business has the courage and foresight to bring prices down to the level of mass purchasing power, goods are moving and production is reviving.

On the whole, I think we have all recognized by now the fallacy of 1946 in taking the wraps off controls prematurely, letting loose an inflationary spiral which has drained off the savings of millions of our people, put other millions deeply into debt, and which has cut into consumer purchasing power for all except essential needs. Nevertheless, we do not have to and we do not intend to allow this inflation we have just experienced to end in the customary fashion of all previous periods of inflation—and that is in a big collapse.

With 58,000,000 or more Americans gainfully employed, generally at good wages, we have a simply gigantic buying power potential—and it will be felt in a healthy impact on our economy as prices come down to levels folks can afford.

In the meantime, however, we know very well that our railroad equipment building firms in McKees Rocks and Butler and Greenville and elsewhere in Pennsylvania are running into difficulties because the railroads aren't ordering new freight cars. The railroads aren't buying cars because their business is down. Their business is down for a variety of reasons, rates being one, lower industrial activity another. Steel mills supplying the freight-car builders are feeling the cut-backs in orders for steel. And so it goes.

A warm winter, a blessing to some, was a natural disaster for the coal industry. Radio, electrical, and other consumer goods manufacturers felt the cold breath of buyer resistance at high prices.

In my opinion, it is unfortunate that many businessmen, intent on skimming off top-dollar profits, refused to cut prices on their goods until the market turned sluggish for their products. By the time prices are cut to restore consumer demand, thousands of workers in those factories have experienced lay-offs and discharges.

I hope that our Subcommittee on Unemployment will have the opportunity to come into various parts of Pennsylvania for on-the-spot hearings, at which business, labor, and the public would be invited to present their views on our current economic situation, particularly with reference to employment. I want the committee to go into the hard-coal region of eastern Pennsylvania to study employment and unemployment in our mines and other industries there, to determine, if possible, if the coal industry itself is giving sufficient and effective effort to the promotion of anthracite in competition with other fuels. Far too few new homes being built today are designed to burn coal, and yet I think the anthracite industry could demonstrate far better than it has the competitive advantages of that fuel.

The steel industry seemingly only a few months ago was so beset with orders which it could not fill that a flourishing gray market operated in steel supply and steel prices. And now blast furnaces and open hearths are shutting down for lack of orders.

These things are real to us in Pennsylvania. Statistics which paint a rosy picture of future industrial needs and present industrial production cannot hide the localized distress of individual plant shut-downs and slow-downs and lay-offs.

Obviously, with a steadily increasing labor force—increasing at the rate of a million or more annually—we cannot have full employment unless we have a steadily expanding productive economy. And we can do that in this country—we must.

I hope to discuss some similar threats to our Pennsylvania industrial well-being in my next broadcast in 2 weeks.

Eightieth or Eighty-first Congress, Which Is Worse?—Here Is the Record

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, Peter Edson, in his column which appeared in the Washington News July 11, 1949, stated that the Eighty-first Congress' batting average is low, as of this date. I insert the score at this

point, so all may read, including Mr. Truman:

EIGHTY-FIRST CONGRESS' BATTING AVERAGE LOW

Batting average of the Eighty-first Congress fell way below the record of the Eightieth Congress last year, when July 1 tabulations were made. Here are the comparative box scores:

	81st Cong.	80th Cong.
Public bills enacted into law	154	505
Private bills enacted into law	137	327
Appropriation bills passed	9	22
Total measures passed by Senate	522	1,048
Total measures passed by House	821	1,169

Last year the Eightieth Congress polished off its business by June 20 and adjourned to attend the Philadelphia political conventions. President Truman called it "the worst" Congress, summoned it back for special session.

This year's Congress has one, possibly 2 months of hard going still ahead. So far it has surpassed the record of the Eightieth Congress in only one respect. That is in number of bills introduced—8,605. Last year's total was only 3,871.

Old-Age Assistance

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1949

Mr. MARSHALL. Mr. Speaker, I have received an impressive petition from the people of Staples, Minn., urging the Congress to give immediate and full consideration to H. R. 2135 and H. R. 2136 to provide some measure of security for the aged of our country. This petition was signed by 1,048 persons in a community of 3,000. In circulating this petition, the members of the local Townsend club found that less than 10 persons chose not to sign their statement.

The members of this club are to be commended for their efforts to inform the people of their community of one of the most serious problems facing our Nation. We know that an informed and active citizenry is essential to the promotion of wise legislation and the zealous efforts of this organization might well furnish an example to others less aware of the important measures awaiting action.

The problem of the aged in the United States is a growing one. While only 76,000,000 persons, or 4.1 percent of our population, were 65 years of age or older in 1900, today we have 11,000,000 persons over 65, or 7.7 percent of our population. And it is estimated that the 22,000,000 aged in 1980 will constitute 12 percent of our people. The time to meet this problem is now. As we have been urged by the people of Staples, we ought to give full and honest consideration to a grave national problem.

Statistics will never present the mass of human tragedies among those men and women who have worked to make our country a great, wealthy nation, and who now must face the prospect of poverty in old age. Certainly this country can devise a realistic system to provide self-respecting security to those whose productive effort has contributed to our well-being.

We need a reasonable system of public old-age security that will meet the needs of our aged and still fit the bounds of our economy. We have made a notable beginning in the Social Security Act, but it alone cannot meet the present and future problem unless we conscientiously attempt to improve upon our efforts.

The problem of old-age dependency in an industrial nation is an unavoidable one and we must face it squarely. Certainly those people who have spent their productive years creating our national wealth should not be left to the relief rolls simply because we have not given thought to a realistic plan for real social security.

The people of Staples represent only one American community, but I am sure that all over the United States our people are becoming increasingly aware of the problem already existing. And like the people of Staples, they are looking to the Congress for an honest, forthright attack on the problem.

The Farm Problem

EXTENSION OF REMARKS
OF
HON. CHARLES H. ELSTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1949

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Louis Bromfield from the Cincinnati Enquirer of Sunday, July 10, 1949:

SEEDS OF OWN DESTRUCTION

(By Louis Bromfield)

It has been said that the democracy carries within itself the seeds of its own destruction and that the price of liberty is eternal vigilance. The two sayings go together as we are finding out more and more clearly every day. The seeds of destruction include the failure of the ordinary citizen to accept and practice his responsibility, the gradual tendency of the shiftless to vote to be taken care of, and the tendency of Government itself to turn emergency measures into permanent policies. When this happens, the democratic state becomes weakened and decays.

Evidence of all three of these evils is very strong in our modern world and seems to be embodied in such proposals as the Brannan plan and other proposals which encourage irresponsibility and existence by planless day-by-day, hand-to-mouth improvisation.

Farm subsidies, supports, and bribes began as temporary measures conceived to meet an emergency and under the New and the Fair Deal have become permanent policies. A temporary measure never solves any grave problem and its transmogrification into permanent policy merely serves to deepen and increase and make permanent the problem itself.

The Farm problem during the depression years was not entirely economic. It was also the foreshadowing of what happens to an agriculture when it becomes wasteful, expensive, destructive, and nonproductive. The good farmer during those years had a bad time but no worse and indeed a better time than most of his compatriots in other businesses and professions. The farmers who suffered were those who had the misfortune to be living on poor land, or land which they had helped to ruin. Another group of distressed farmers were those who overexpanded by buying more and more land at high prices when they could have increased the yields of the original home farm, sometimes as much as 50 percent, simply by farming it in a better fashion without increasing taxes and taking on heavy mortgages.

The truth is that farm supports and bribes become convenient for two principal reasons (1) because we have on the whole a very poor agriculture with low yields per acre and consequent high-production costs per acre for any given commodity, (2) overproduction of certain crops and resulting surpluses which run down the prices.

None of the Government support plans from the beginning have operated to correct either of these destructive factors except in the most superficial and transient fashion. The original triple A set-up did operate on the principle that if the farmer was to be subsidized, he should in turn make an effort to be a better farmer and adopt better practices, but this purpose has long been lost sight of in a wallow of bureaucratic and political hogwash. The effort to control planting and avoid surpluses has degenerated into a maze of bureaucratic and political controls operating to favor the bad farmer and penalize the good one. (This is one of the elements in the Brannan plan designed to appeal politically to the majority of farmers and the majority are bad farmers. In one sense it is the rankest class legislation.)

Most people do not realize that 50 percent of the Nation is fed by 10 percent of the farmers. These are the good farmers and consequently the prosperous ones. The remaining 50 percent of the population is fed by about 30 percent of our farmers who are pretty good. The remaining 60 percent of our agricultural population produces little more than it consumes. (These figures of course exclude the cotton, tobacco, and soybean farmers but among their ranks are some of the worst farmers in the Nation.)

Elaborate subsidies and support programs do not tend to improve our agriculture, check soil erosion or induce higher yields at lower costs and consequently lower prices to the consumer. They work in exactly the opposite fashion, to maintain and encourage the bad farmer and the absentee landlord to farm badly in a slipshod, inefficient manner and to go on ruining our good land. For no matter how little he produces per acre or how inefficiently he operates, he is guaranteed a profit paid by the taxpayers of the rest of the Nation.

In the case of surpluses, the price supports serve only to maintain and encourage overproduction. They guarantee the wheat, cotton, and potato farmer a nice profit to raise wheat, that must be piled outside on the ground, or cotton, left for years in the warehouse, or potatoes, to be covered with kerosene so that they will not find their way to market as food and lessen the living cost of the rest of the population.

Pull the support prices from under wheat or potatoes and you will not need any expensive bureaucracy to allot the acreage a farmer is permitted to plant. The acres of potatoes will diminish overnight and in the case of wheat, two or three millions of acres of land, unsuited by nature to cultivation, will be turned back into grazing land to produce more beef at low cost and bring down the price of meat to the consumer.

The whole price-support system operates to preserve a destructive agriculture and to

maintain high prices for the consumer either in prices, taxes, or both. Moreover, it serves to maintain on the land, at the expense to the taxpayer, some thousands of farmers who dislike farming to the point of hating their own soil but have not the energy to move off and make their land available to other men who could cherish it and build it up. In a country where there is no more land to be had for free, there are thousands of energetic young men, longing for farms now owned and occupied by farmers who in England would not be permitted to farm them. Their inertia and inefficiency are subsidized by agricultural price supports.

Mr. Truman is using the Brannan plan as a two-edged political weapon to buy farm votes and secure the support of labor at the same time. It is a dangerous plot not only to our economy but to our freedom, but it is not new. In essence, it is the same old plot cooked up by Henry Wallace when, as Secretary of Agriculture, he filled his department, not with agricultural experts or friends of the farmer but with fellow-travelers, Communists and men like Lee Pressman and Beany Baldwin, his present campaign manager.

Let me repeat. Democracy carries within itself the seeds of its own destruction and the price of liberty is eternal vigilance. There are enough people in the United States to defeat such demagogic destructive plans, if they go to the polls and do their duty and let their Congressman know how they feel. You do not make a prosperous agriculture by bribing farmers to plant what nobody wants and by subsidizing the man who is actually destroying our most fundamental natural resources, and the greatest renewable source of our real wealth.

The Housing Program

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1949

Mr. TOLLEFSON. Mr. Speaker, during the debate on the housing bill and prior thereto, Congressmen and the public generally were subjected to a great amount of propaganda both supporting and opposing the bill. Now that the battle has subsided somewhat, we should take a more calm look at the legislation which was enacted. The following editorial in the Evening Star impresses me as a fair and unbiased appraisal of the measure:

THE HOUSING PROGRAM

If it lives up to the claims of its supporters, the compromise housing bill—which now awaits the President's signature—will have an economically and socially wholesome effect on the future life of the Nation. A large number of builders and real-estate men have bitterly opposed it, but their arguments, according to its advocates, have been based on false premises. If that is so, then the program authorized by the measure is likely to result in a good deal of healthy progress, during the next few decades, in a field where there is certainly a very clear need for construction on an extensive scale.

The two most important features of the bill have to do with slum clearance and low-cost housing. As far as slum clearance is concerned, Congress has authorized the Federal Government to extend $500,000,000 in direct grants and $1,000,000,000 in interest-bearing loans to help communities get rid of blighted areas, the communities themselves paying two-thirds of whatever the total outlay may be. As for low-cost housing, the bill is aimed at enabling local authorities to build 810,000 units within the next 6 years. To that end, it provides for Federal subsidies—up to a maximum of $308,000,000 a year for 40 years—to cover the difference between what the projects cost and the amount of rent the tenants can afford to pay.

Critics of the bill hold that it will ultimately cost the country anywhere from $16,000,000,000 to $20,000,000,000; that it will lead to far-reaching Federal intervention in local affairs; that private industry can meet the current demand without Government help; that the program will endanger free enterprise in the field, and that it is not only economically unsound but also socialistic. In reply, its supporters insist that it will actually cost in the neighborhood of $10,000,000,000; that the law carefully assigns the dominant role to the localities; that private industry is definitely unable to do the job all by itself, and that the whole undertaking, far from being socialistic or a menace to free enterprise, represents a wise long-range investment promising to pay rich dividends in terms of contracts for independent builders, economy-bolstering employment in construction activities, and enduring social betterment for a large segment of the population.

The fact that thoughtful legislators like Senator TAFT have voted for the measure, after helping to shape it on the basis of a careful study of the situation, may be taken as evidence that its critics have exaggerated its potential weaknesses and overlooked the strong points in its favor. The strongest of these points is the simple fact that during the past decade blighted areas have grown more blighted and the construction of new low-cost housing has lagged far behind our population increase of 17,000,000 since 1940. In the circumstances, there certainly would seem to be ample justification for the program just enacted by Congress.

Deficit Financing Is Dangerous

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1949

Mr. JENKINS. Mr. Speaker, the editor of the Athens Messenger is a capable and well-informed gentleman. He writes on public matters with great facility and shows a remarkable knowledge of public matters.

The following editorial is typical of his efforts:

DEFICIT IS SHOCKING

The Federal Government's deficit of nearly $2,000,000,000 on June 30, the end of a year's spending, is a forceful reminder that the price of weakness and failure in handling the taxpayers' money is high. It is especially shocking in time of peace.

The deficit is three times as large as the President said it would be. It is the result of both declining revenues and rising expenditures. The Democrats say that the cutting of taxes by the GOP Congress is to blame, while naturally advocates of greater Federal economy say that excessive spending and declining revenues are at the bottom of the woodpile.

While we are spending billions each year in a cold war with Russia, it is a poor time to keep adding to the Federal domestic expenses just to maintain party power. It seems we must spend to halt Russia all over the world, and perhaps this money is well spent. Therefore, it is up to the administration, no matter what party is in control, to cut down on the home front.

Some Members of Congress are now demanding a general cut in Federal spending, but their pleas are greeted with jeers by the President. Congress votes the money and finds the spending habit easier to follow than the saving habit. There are all sorts of taxes which have become so oppressive that reduced spending by the public is at once reflected in Government income. As business activity drops, Federal taxes drop, and yet the President insists that the present spending level by the Government must be maintained.

The attitude of the public toward Government economy should be heeded by the President. If it had been taken as his guide, there would have been no deficit. It requires lots of nerve to reduce spending after moving for two decades toward a socialized state, but Members of Congress should be more responsive to the sentiment on the home front.

Peace Has Been Lost Politically, Economically, and Morally—United States Diplomacy Has Failed Our People

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, American lives and American property were invested in the last war for the purpose of securing a just and lasting peace. As in the First World War, so in the second war the politicians sold the American public on fancy slogans and with the same identical result, namely, that we actually did not win either war. There is more real fear in the world today than ever before and injustice, hatred, and intolerance are rampant. In addition the world approaches economic disaster because of war.

At this point, Mr. Speaker, I include an article from the Christian Century of July 13, 1949, which is of timely interest:

HAVE WE LOST THE PEACE?

An amazing thing happened in Washington the other day. Six months ago (on December 20) Justice William O. Douglas joined with five of his brethren on the Supreme Court of the United States to deny the right of Japanese convicted in the Tokyo war crime trials to appeal to that Court. Two days later seven of these Japanese were hanged. Eighteen are serving prison sentences, some of them for life. Now Justice Douglas has handed down a written opinion on that decision in which he shared. (Justice Rutledge refused to vote on December 20, but stated that he would do so, and likewise render a separate opinion, later. To date, he has done neither.) He defends the decision, but not on the grounds on which it was rendered.

In December the Supreme Court held that it had no jurisdiction over the decisions of international military tribunals. Today Justice Douglas says it had jurisdiction, but the trouble was that the Japanese appealed directly to the Supreme Court. If they had made their appeal to the United States District Court for the District of Columbia, so that it had come up to the Supreme Court through regular channels, everything would

have been all right. The press sees Justice Douglas' opinion as a virtual invitation to the Japanese in prison to seek a rehearing. The impression which the opinion will make on the widows and families of the Japanese already hanged can be imagined.

The reasons which Justice Douglas gives for arriving at this senational opinion 6 months after the men most concerned have been hanged deserve the most thoughtful consideration. The war crime trials, in Germany and in Japan, were conceived as a means of lifting international justice to a new and higher level. Men in positions of power were to be held personally responsible for the acts of governments in breaking the solemn pledges of the Kellogg-Briand Pact by making or plotting war. They were to pay the penalty for their acts of international violence just as local law would require them to pay the penalty for acts of domestic violence. Thus international law was to be rescued from its amorphous state and given real majesty and authority.

That was the theory. It was given its clearest, most persuasive exposition by Justice Robert H. Jackson in his opening address as prosecutor to the Nuremberg court. But as the war-crime trials developed, legal and moral misgivings grew. Senator ROBERT A. TAFT early—while the Nuremberg trials were still in progress—denied their legal claims to justification. More important has been the growth of the moral misgivings which finally moved Justice Pal of India, in dissenting from the Tokyo verdicts, to call the tribunal on which he had served "solely an instrument of political power." Justice Douglas now agrees with Justice Pal as to this, but argues that there is nothing in the United States Constitution against an international court's being such a political agent. Naturally there isn't. The issue, as Mr. Douglas knows, is not constitutional, but moral.

It seems to us that, in this acknowledgment of misgiving by a Justice of the Supreme Court, there is something deeper involved than the justice of the war-crime trials. That has been under suspicion ever since the courts were constituted with only the victor nations, and no justices from nonbelligerent states, on the bench. Justice Douglas' belated opinion reflects, we believe, the fear now growing among thoughtful people throughout the Allied nations that they have lost the peace. Lost it politically—that was the ghost behind the recent Paris Conference of Foreign Ministers. Lost it economically—that is the ghost behind the current frantic negotiations between the ERP and the OEEC. Lost it morally—that is the fear most terrible of all to contemplate.

This growing fear that the nations which beat Hitler, Mussolini, and Tojo have morally lost the peace began to take root before the end of the fighting. It first stirred consciences when the realities of saturation bombing slowly began to slip through wartime censorship. Hiroshima brought the admission from the commission of theologians appointed by the Federal Council of Churches: "We have sinned grievously against the laws of God, and against the people of Japan." Potsdam, with its Morgenthauism, its final rejection of the letter and spirit of the Atlantic Charter, constituted an almost intolerable assault on the Christian conscience.

When all is said, however, we believe that it has been the revulsion against the postwar trials, national and international, which has most clearly reflected the sense of a morally lost peace. We reported last week (Can Europe recover a conscience? p. 813) the rising protest by Catholic and Protestant Christians in Holland and Belgium against the treatment given many accused of collaboration in those countries. The reaction is said to be as strong, or stronger, in France and Italy. On the international level, the way in which the United States Senate has stepped in to hold up the execution of German soldiers convicted of participation in the Malmedy massacre is enough to show the moral misgivings with which war crime trials are now regarded.

Here is a matter of the most profound importance, for this revulsion is growing in regard to the matter concerning which, as our nations turned from victory to win the peace, their moral pretensions and confidence were highest. They knew something of the difficulties they faced in winning the political or the economic peace, and consequently acted with a caution that was almost at times timidity. But they had no doubt of their ability to convict men of the responsibility for their evil deeds, and thus to enthrone an international justice. Consequently, they plunged into the war trials, domestic and international. Today, the moral standing of those trials is dropping down, down, down.

After World War I there came a period of revisionism which led to widespread repudiation of the moral claims of that crusade. But the reaction in that case was largely against the moral pretensions of the war origin myths, or against the devil theory of war responsibility as it placed all blame on the Kaiser. Today, despite the self-righteousness which permeates all documents of the victor nations, the heart-searching is deeper and concerned with other issues. On the matter of the war's origin, no one challenges the truth of the charges laid against the Nazis. As early as October 1945 the Council of the Protestant Churches of Germany, meeting at Stuttgart, was ready to say: "Through us [the German people in a great solidarity of guilt] has endless suffering been brought to many peoples and countries."

But the question which the conscience-smitten in the western democracies are asking after World War II is, What have we done with victory? Have we used it in a way to satisfy the demands of righteous moral judgment? Or have we degraded it for purposes of vengeance and the pursuit of power and to prepare the battle lines for another war? If the moral misgivings inspired by such questions continue to grow, it will not be long before the churches find their most devoted members raising the issue of the possibility of a just war—in the light of modern war's moral outcome and aftermath—with an intensity unknown since the days before Constantine.

At first glance there may seem no justification for connecting this growing moral distress with that felt by Justice Douglas. The misgivings which caused the Justice to render his belated opinion on the Tokyo trials on the surface appear to be legal or political, not moral. If the verdict rendered last December is not changed, he declared, it will leave international military tribunals beyond judicial scrutiny. Prisoners will be without appeal, except to the conscience or mercy of an executive. And thus the military will gain a new and alarming hold on us. Accordingly, Mr. Douglas now finds that such prisoners, if held by American officers, may seek writs of habeas corpus in American courts. No matter what the international status claimed for the military court, if the jailer is an American, sworn to support and defend the Constitution of the United States, he must answer to American court for the persons of his prisoners.

Here, it will perhaps be contended, is simply the anxiety of an eminent jurist for the protection of the majesty and impartiality of our law. Or here is simply the anxiety of a respected political leader for the preservation of our political institutions. But beneath this there can be discerned the anxiety of a thoughtful American lest, in the acts of this postwar period, the moral foundations of our law, our politics, and all our communal life be undermined. The anxiety felt by Justice Douglas takes a legal and a political expression, but at bottom it is a moral anxiety. Morally, are we losing, have we lost the peace?

It is no light thing to see a Justice of the Supreme Court acknowledge that there is something terribly wrong about at least one use we have made of victory. But if misgiving can so quickly and deeply penetrate that supposed source of judicial certainty, what can reasonably be concluded is happening to the thinking of the commonality of thoughtful men?

World Federation Resolutions

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 6, 1949

Mr. JAVITS. Mr. Speaker, the widespread support being received by these resolutions introduced by 91 Members, shows the urging of all our people for peace, and the recognition that the way to find it is through world law and the means for enforcing it. The support of the Liberal Party of New York State, shown by the following letter, is most welcome:

LIBERAL PARTY OF NEW YORK STATE,
New York, N. Y., July 7, 1949.

Hon. JACOB K. JAVITS,
Foreign Affairs Committee,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN JAVITS: On June 7, 1949, a resolution on world federation (H. Con. Res. 64) was introduced in the House by 91 Representatives concurrently. If, to the very size of this group, is added the fact that 34 States were represented in the sponsorship, it becomes evident that the resolution is an expression of widespread approval of its aims.

The broad character of the representation behind the resolution makes it especially fitting—in fact, obligatory—that all segments of opinion be heard on the bill. The Liberal Party therefore urges you to use your good offices toward assuring that hearings on House Concurrent Resolution 64 be held as soon as possible in this session.

In giving its wholehearted approval to House Concurrent Resolution 64, the Liberal Party also wishes to reaffirm its endorsement of the Atlantic Pact. We believe that the pact, by its evidence of the cohesion of the western democracies, not only makes for world peace, but demonstrates that we can move toward world federal government. The Liberal Party therefore asks for ratification of the Atlantic Pact now, as well as hearings on House Concurrent Resolution 64.

For a united and peaceful world.

Respectfully yours,

MARX LEWIS,
Chairman, National Legislative Committee.
BEN DAVIDSON,
Executive Director.

Judge Kaufman and the Hiss Case

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1949

Mr. NIXON. Mr. Speaker, a handful of administration apologists, who find

themselves unable to defend Judge Kaufman's conduct in the Hiss case on the facts, are attempting to turn the case into a political issue—which it is not. In seeking to block an inquiry by Congress, they are employing an old device that has served such attempts well in the past. They have set up a straw man and are now diligently engaged in knocking it down. The straw man is the false statement that any Member of Congress, publicly or privately, has advocated that the inquiry into Judge Kaufman's conduct be conducted by the House Committee on Un-American Activities. From the first moment I, and, as near as I can determine, all other Members of Congress similarly interested, have said that it is a matter for the Judiciary Committee of the House. By no stretch of the imagination does the judge's case come within the purview of the Un-American Activities Committee. What the committee should properly consider is the calling of witnesses who were either, first, not permitted to testify by Judge Kaufman, or, second, were not called by the Government, apparently because this testimony did not bear directly on the technical charge of perjury. This testimony should of course, as suggested by my colleague the gentleman from South Dakota, Representative FRANCIS CASE, be taken in secret session and should not be made public until after final disposal of the Hiss case in the courts. But it should be taken: the record of the most treasonable conspiracy in American history should be completed. I think it was most unfortunate that this proposal was turned down today by the Un-American Activities Committee, and I hope, and believe, that eventually the committee will reconsider its action.

Waterpower

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Advertiser, Boston, Mass., Sunday, July 10, 1949:

AUTHORIZED WATERPOWER PROJECTS WILL HELP REVIVE NEW ENGLAND INDUSTRY, BREAK COAL GRIP

(By George Brady)

Increasingly disturbed by the cost and scarcity of imported coal, New England is slowly developing her sadly neglected waterpower resources and breaking away from the clutches of Mine Czar John L. Lewis.

Although the six States which comprise New England still give Uncle Sam many millions of tax dollars every year for construction of mighty dams in the South and West and receive little or nothing from him for their own streams, they are waking up and facing the fact that electricity, produced cheaply and abundantly from rivers, is the only thing capable of saving dying mills and factories and rehabilitating doomed industrial centers.

Accordingly, New England is forging ahead—literally on her own—and the following projects are proof of her progress:

The New England Power Co. is spending $16,000,000 for an ultra-modern hydroelectric dam on the Connecticut River a mile and a half above White River Junction, Vt.

The Holyoke Water Power Co. has received permission from the Federal Power Commission to replace its obsolete facilities with an up-to-date installation costing $4,162,000 and will rush the redevelopment.

The Central Maine Power Co. is damming the almost-forgotten Dead River and creating a 26-mile-long lake to make electricity more plentiful and reliable in the Pine Tree State.

The New England division of the United States Army engineers is building a similar reservoir on the Natchaug River at Mansfield Hollow, Conn.

With congressional authorization, the Army engineers are completing plans for a $32,000,000 dam at Enfield Rapids on the Connecticut River, a $20,000,000 dam at Livermore Falls on the Pemigewasset River near Plymouth, N. H., and a number of smaller but equally important and necessary flood control and hydroelectric power installations on the Connecticut, Merrimack, Thames, and Housatonic Rivers.

The go-ahead signal for the revival of the mammoth tidal plant at Passamaquoddy, Maine, has been given by both the United States and Canadian Governments which have made a joint appropriation for blueprints and preliminary studies.

The New England Power Co.'s $16,000,000 dam in Vermont, currently called the Wilder redevelopment, represents a great forward step by this utility not only because it provides work for 500 men, but also because it replaces a 23-year-old dam, which has already become obsolete and inadequate, with a bigger, higher, and longer one yielding vastly more power.

SETS EXAMPLE

Our six States are littered with scores of these out-dated dams, many of which were built early in the last century, decades before the invention of the electric motor and incandescent lamp. The owners of all these antiques can rebuild and adapt them to the needs of the times, and they will do so if they follow the good example of the New England Power Co.'s Wilder experiment.

As a matter of fact, this is precisely what the Holyoke Water Power Co. is undertaking in the case of the site which it has occupied since 1849, and the people of that thriving industrial city, reaping the benefits of the investment, will have more than five times as much electricity as they now have for their homes, farms, and factories.

Comparable expansions are not only possible but essential in Lawrence, Lowell, Haverhill, Manchester, and Nashua, N. H. The Federal Power Commission has repeatedly expressed its willingness to assist in the modernization of the old-fashioned and wasteful power facilities in these languishing industrial centers and the members of the commission will support and sustain the present owners of the dams, as they did in the Holyoke instance, if the owners show the same enterprise and ingenuity.

Ten years ago it would have been impossible to flood an area a tenth as large as the Central Maine Power Co.'s 26-mile, man-made lake. Hundreds of persons would have protested the destruction of their homes and farm lands, and their legal and legislative representatives would surely have blocked the project.

Now all New England, wiser because of sad experience, realizes that the elimination of a few communities is both warranted and necessary when the economic life of hundreds of communities and thousands of people is at stake.

The Passamaquoddy plant, located at Eastport, Maine, where the land-locked tides rise higher than anywhere else in the world, will be one of the largest and most dependable sources of low-cost electricity on the North American Continent, superior to the TVA and a rival of the West's huge Herbert Hoover Dam.

Power from Passamaquoddy will bring the steel and aluminum industries to Maine and New Brunswick, Canada, and, at the same time, will encourage Maine to repeal its controversial Fernald Act and share its surplus power with New Hampshire and Massachusetts.

TWO HUNDRED THOUSAND JOBS

The companies which are ready to move into Maine as soon as Quoddy becomes a reality, will provide employment for at least 200,000 persons and contribute millions of dollars in taxes to the State and municipal governments.

And since more than 50 percent of New England's underveloped water power is in Maine, the exportation of electricity to cities like Portsmouth, N. H., Lynn, Salem, and Boston will be a veritable godsend, for it will mean an immediate reduction in their lighting rates which are currently among the highest in the country.

United States Senator MARGARET CHASE SMITH is sponsoring legislation in Washington for the immediate appropriation of $100,000,000 for Quoddy, and she will press for action on it before Congress adjourns.

Five Jurors Confirm Charges of Prejudice in Hiss Trial

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein a newspaper article from the New York Herald Tribune of July 12, 1949, giving the views of five of the jurors in the Hiss trial who believe that Judge Kaufman was biased for the defense.

This statement comes from those who had occasion to see the actions of the judge, note his entire demeanor on the bench, hear what he had to say and the inflections of his voice.

I am amazed that so many of the members of the jury believe the judge was biased and unfair.

This confirms charges made by Congressman NIXON, of California, and by Congressman CASE of South Dakota.

The article follows:

FIVE HISS JURORS EXPRESS BELIEF KAUFMAN WAS BIASED FOR DEFENSE—TWO OTHERS DOUBT PREJUDICE AND THE REST AVOID COMMENT OR TAKE NO STAND ON JUDGE

(By Mac R. Johnson)

Five members of the jury which tried Alger Hiss on perjury charges said yesterday that they received the definite impression during the course of the trial that Judge Samuel H. Kaufman was biased for the defense. On the other hand, two jurymen said they did not believe that Judge Kaufman was prejudiced for the defense and against the prosecution as charged by Representative RICHARD M. NIXON, Republican, of California.

Mr. NIXON called for an investigation of Judge Kaufman's conduct after the trial ended Friday night with eight jurors voting for conviction and four for acquittal. Mr.

NIXON said the judge's favoritism was obvious and apparent.

Three other jurors had no comment whatsoever, one declined to take any definite stand and the twelfth, Mrs. Louise A. Torian, a dressmaker, of 666 West One Hundred and Eighty-eighth Street, was visiting on Long Island and could not be reached. She voted for acquittal.

Meanwhile, Judge Kaufman reiterated that he had decided to stand on the record in regard to accusations made against his handling of the trial.

His one-sentence statement said: "After conferring with some of the judges in this court (United States district court) I have decided to stand on the record and not enter into any controversy."

The comments of the jury members, with the manner in which they voted during deliberations noted in parentheses, follows:

JUDGE BIASED

Mrs. Helen G. Sweatt, real-estate broker for Beechwood Lake, Inc., 70 West Fortieth Street (guilty): "I feel there was a great deal of bias against the prosecution. I tried not to take too much notice as I tried to be fair to both sides. But it was difficult due to Judge Kaufman's decisions. He should have permitted the witnesses and testimony that the prosecution wanted. I was interested in hearing Mrs. Hede Massing and the Cherner Motor Co. executive.

"After all, that Ford car and what became of it seemed to be important testimony, but the judge wouldn't permit the testimony. And it wasn't right for the judge to allow that psychiatrist, Dr. Carl Binger, to sit there all the while that Mr. Chambers was on the witness stand. At the same time he was watching the jurors and it made some of us nervous.

"Then I recall that the judge let them ask questions about a suicide in Mr. Chambers' family but would not permit the same kind of questions about suicides in Mr. Hiss' family. Then the judge didn't let the prosecution identify the Communists Harold Ware and Jay Peters. Their names were brought into the testimony by Mr. Chambers as friends of Mr. Hiss but it was stricken from the record. Mrs. Chambers' testimony opened my mind. It was the best and most fruitful. When she described the interior of the Hiss home and told of her visits, I knew she couldn't be making it up."

John S. Adrian, office manager for Walter B. Cooke, Inc., funeral home, 165 East Tremont Avenue, the Bronx (guilty): "The judge favored the defense as far as the admission of witnesses was concerned. I did notice such things. However, I didn't let it influence me. I paid particular attention to the evidence that was admitted."

Frederick W. Gaffney, delivery superintendent for Esso Standard Oil Co., 320 Freeman Street, Brooklyn (guilty): "Here's the way I'd explain it. Some of the judge's decisions were—well, let's call them one-sided. But again, that could have been made according to law. I did give thought to the fact that the judge seemed to be turning down a lot of prosecution requests.

"In the case of Mrs. Massing, I can understand why she was not allowed to testify as it was a perjury case we were trying—not a question of communism. If she had been allowed to testify, it might have influenced other people on the jury. If it had been proved that Hiss was a Communist, the other four might have swung the other way. All in all, none of the judge's decisions influenced me, although some of them were strange."

Robert W. Pitman, credit analyst for Dun & Bradstreet, Inc., 290 Broadway (guilty): "It's pretty difficult to decide if Judge Kaufman was biased. If we were lawyers we wouldn't have been on the jury. There were times when he showed a little preference to the defense. And I think it was poor taste to show so much deference to the two Supreme Court Justices, Felix Frankfurter and Stanley Reed. However, I can't say he did it deliberately to impress the jury one way or the other."

Mr. Pitman also accused some of the jurors who voted for acquittal of not weighing the evidence. He said that one of the persons voting for acquittal declared during deliberations that "you can't believe a word from an ex-Communist," meaning Mr. Chambers. "I told him that if that's the way he felt about it, then he should not have been on the jury. During the selection of the jury, one of the questions covered that exact situation," Mr. Pitman said.

Vincent H. Shaw, clerk for Penick & Ford, Ltd., Inc., 420 Lexington Avenue (guilty): "I'm surprised that Congress might investigate the case, but the judge did appear to favor the defense."

FAIR TRIAL

Arthur L. Pawlinger, employee of Advertising Distributors of America, Inc., 400 Madison Avenue (not guilty): "The judge was not prejudiced. I don't think he favored one side or the other."

Alen M. Blake, production manager for Cutler-Hammer, Inc., 430 Southern Boulevard, the Bronx (guilty): "Judge Kaufman's attitude toward the defense witnesses seemed to be different than toward the others. However, I don't think he was really biased in favor of Mr. Hiss. In fact, if all this hadn't been in the newspapers after the trial, I wouldn't have thought about it at all."

NO STAND

James Hanrahan, marine accountant, Overseas Tankship Corp., 551 Fifth Avenue (guilty): "I'm not versed in legal matters so I can't say the judge was right or wrong in barring certain testimony and witnesses. The judge's name was never mentioned in the closed room where we considered the case. There was no talk about whether he was biased or not. I'd go to Washington and testify if I was called, but I have no opinion now."

NO COMMENT

Hubert Edgar James, foreman, of 1067 Madison Avenue, a junior executive with General Motors Acceptance Corp., 1775 Broadway (not guilty): "I have no comment at all."

Louis Hill, secretary of the Manhattan Bargain House, Inc., 637 Broadway (not guilty): "I have no comment."

Thomas O. Bryan, of 126 East Fifty-seventh Street, an unemployed hotel manager (guilty): "I really don't want to comment on it. The day-to-day record is in the press."

Memorial Coal Stamp

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. VURSELL. Mr. Speaker, since 1946, over 500,000 coal miners in the United States have been asking that the Government memorialize the contribution the owners of this great industry and the miners have made to the Nation with a Memorial Coal Stamp.

The year 1946 was the two hundredth anniversary of this industry. For some reason at that time the stamp was not issued, even though the effort had the joint cooperation of the mine owners of the industry and the miners.

During the past few months hundreds of letters have come to me from miners in support of a recent resolution asking for a Memorial Coal Stamp. Because of the number of organizations desiring memorial stamps, the authority for the issuance of these stamps in the future has been placed on the Postmaster General.

Mr. Speaker, I have had this matter up urging issuance of such a Memorial Coal Stamp with the Postmaster General several times within the past few months and up to the present time without definite success.

I know the Postmaster General has given the matter very careful and earnest consideration and what I have to say is not in any way a condemnation of his action. I have been informed by him that it is possible that further memorial stamps, out of the many requests before him, may be issued during this calendar year. If so why not the miners' stamp?

I raise this question in the hope that attention may be focused in behalf of this laudable cause, and with the further hope that the Postmaster General will decide to authorize that a memorial coal stamp be issued during this calendar year.

Mr. Speaker, I cannot conceive that the application for any stamp now pending before the Postmaster General should be given preference over the application asking for this stamp. What force is holding this matter up and why?

Over 500,000 miners feel that the Government should so honor their past sacrifices and the contribution they and the industry have made to the Nation. The issuance of this stamp is asked for as a memorial to the over 50,000 miners who in the past number of years have been killed on active duty in the mines of this Nation.

The authentic figures show that from 1930 to 1947, in 17 short years, 23,295 miners were killed in the mines; that 1,145,786 were injured.

In all fairness, can it be argued on any premise that any application for a stamp now on file should have priority over the memorial coal stamp?

Can those in charge of the administration of the Government today justify their continuous neglect and refusal in withholding this simple honor and memorial that would cost the Government not an additional 1 cent?

Governors, United States Senators, and Members of the House of Representatives have joined in this general appeal that during this year such a memorial coal stamp be issued.

I hope that speedy and favorable action will be taken in the issuance of such a stamp.

Mr. Speaker, in closing may I say that I hope the miner's safety bill, H. R. 3023, may come before the Congress for consideration and action before this session closes.

This bill as I understand it provides that the Federal mine inspectors will have the power to withdraw men from the mines where imminent danger exists. It would seem to me when one reads of

the mine explosions, the great loss of lives and a greater record of injuries in the mines, that it is the duty of the Congress to provide for greater safety in the mines and this is what H. R. 3023 seeks to do.

Certainly someone should have this power, and if it is lodged in the Government it will equally protect all of the miners of all of the States in the Union.

I think we, as Members of Congress, and the people generally, sometimes overlook the extremely hazardous occupation in coal mining. Certainly it is not too much for the Congress to attempt to provide greater safety to reduce so far as is possible deaths and accidents occurring in the mines of this Nation.

Italian-American World War Veterans

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address which I delivered at the fourteenth annual convention banquet, Italian-American World War Veterans of the United States, Inc., Department of Massachusetts, Hotel Manger, Boston, on Sunday, July 10, 1949:

Mr. Chairman, distinguished guests, men and women of Italian extraction from Massachusetts who have served in the armed forces of our country, coming from the city of Lawrence, which has a larger proportion of citizens who trace their heritage to Italy than any other community in Massachusetts, I feel like a pisano when I am with you.

Friendly, generous, with a love of nature and a love of family, the Italian is a very human person, the inheritor of the artistic glory of the Renaissance and the civilization of ancient Rome. It is this wealth of ripening wisdom that makes him a good neighbor and a good citizen.

All of us were deeply impressed a year or more ago when we read of the humble man who gave $1,000,000 to the Boston Public Library, and who is going to contribute further large sums during his own lifetime. It was not the gift as such but the history of the man himself that caught and held our admiration. As I remember, he started his life in this land of opportunity as a peddler. He had no family to help him, no formal education, no political influence, no position of power in finance or business. He was an average American who taught himself through the facilities afforded by the Boston Public Library. Through the knowledge gained, he amassed a fortune, but he spent next to nothing on himself. His was the satisfaction of developing and exercising his mind productively. His greatest joy came in turning this money over to the source which helped him to make it so that others may enjoy even greater opportunities. He was not a slave to a dictatorial state. Neither was he one to exploit others for his own selfish indulgence. In our country he grew and prospered because he made the most of this climate which offers to every person the most favorable conditions under which to develop his talents. And then, out of his fulfillment, he is increasing the opportunities available to the younger generations. He is an American of Italian extraction.

In this man's life we find a unique success, the realization of one man's ambition, bringing not only personal satisfaction but the benefits which flow to others from individual accomplishment. In this day when too many people, confused and fearful before the problems which beset us, are tempted to surrender all responsibility to Government, this man reminds us that freedom's way is the best way. In no other country in the world can a man become what he is capable of becoming as in the United States. This, and this alone, explains the high standard of living which the average American enjoys. It is because he has earned it by his own efforts, and by voluntary association with others in those matters where group action is necessary.

Association?

Yes. Our first regard is for the individual, allowing him the fullest opportunity for the expression of his special talents. But we also live together in communities, States, and nations. Sometimes it is necessary for individuals to make sacrifices in order to save their democratic institutions from those who would destroy them.

In my home city there is one family, the Campagnones, who gave three sons on the field of battle during World War II, the heaviest sacrifice of any family in the community. Before this solemn fact we are conscious of the evolution that is taking place in our American society. When the various waves of emigration landed on our shores there was a strangeness among the groups, and there was some intolerance born of ignorance. But as we learned to work together, to intermarry, there came the blessings of respect and friendship which is the core of our unity.

Yours is an organization which perpetuates the unselfish fellowship which you experienced as comrades in time of national emergency. You have formed an association to preserve those values, and to help those veterans who were disabled in the struggle. You work to teach the young who have not learned and, as we hope, may never have to learn through the grim ordeal of war the full meaning of Americanism, love, and devotion to those duties which each man owes to himself and to others.

The veteran knows that the overwhelming issue is that of the state versus the individual. In war and in peace the fight goes on. The veteran gave up his liberty because the regimentation of war requires it. He gave up his liberty, temporarily, to beat back those who sought to impose the iron hand of the state on democratic peoples. He and many other citizen-soldiers defeated the Axis, but this is not the end of the struggle. Other ideologies, wearing different uniforms, and shouting different slogans, pose a threat to his freedoms. He is determined that his Government shall contain this menace by every peaceful means, but he realizes that the final battle in this cold war will be won or lost in the minds of men. American veterans, through their organizations, are resolved that the American people shall be fully informed and on their guard against every device of propaganda and infiltration intended to confuse and divide us.

We face this issue frankly.

We know that in the past a few individuals, and a few groups of individuals, have used absence of authority as a justification for exploiting the people. We have done much to correct this situation and we shall do more but not at the expense of going to the other extreme.

By the Declaration of Independence we threw off the shackles of Old World absolutism. Our progress since then is shining proof that our forefathers decided wisely and well. We, in the years between, have conquered every challenge and have made every reasonable adjustment without sacrificing the basic principles of the Bill of Rights and the Constitution.

Today science and invention are transforming the world. The ability to earn a living is no longer under the control of the individual, as it was in the last century. A man works in a mill or factory whose operations in turn are decided by other economic factors beyond his personal reach. Only by joining with other men in voluntary compacts and through representatives of his choice can he have a voice in those decisions which affect his work and his income.

As Americans, we are taking the middle course in adjusting our lives to new realities.

In some countries, however, the people have become the victims of their own despair. Instead of trying to solve their problems through democratic processes, they have surrendered mind and body to an all-devouring state. In return for promises of food, shelter, education, and recreation they have abandoned their responsibilities. And now it is too late. They have become the prisoners of their own failures.

We shall not make that mistake.

We shall not be misled.

Thinking the problem out, we have come to the conclusion that we must have a social-welfare program only as a form of insurance, while accenting individual productiveness and enterprise as the mainsprings of our economy. In time, we shall extend adequate social-security coverage to all to protect our people against the hazards of unemployment and old age. We shall conserve our natural resources and develop atomic power in the public interest. We shall, by law, prevent any group from acquiring monopoly control. We must streamline government for a dual purpose, to improve its service and to hold its costs at a level we can afford to pay.

But at no time will we give blanket authority to any one man or group of men to do these things for us. By the sweat of our brains, informing ourselves on every public problem, and by participating as adult citizens in the shaping of policy, we shall continue to hold the reins of government in our hands—and by "our" I mean that of 148,000,000 people.

We believe in social insurance, but not in the nationalization of industry. Government without check or balance can grow like a weed, smothering initiative. It, too, can become a monopoly, and, like all monopolies, dangerous. The American philosophy is that government shall be the servant and not the master of the people. Although the area of its operations in this complex age is on the increase, its authority must ever be subordinate to those basic rights guaranteed to the individual.

For the protection of these, we rely upon the vigilance of our people. Conspicuous in the character of American thought and action is the individualism which those of Italian origin are contributing to our national life.

The immigrants who came from Italy to Lawrence at the turn of the century wanted a chance to work and to save. They had a goal in mind, and that was independence beyond the reach of any feudal overlord. That they have succeeded in such large numbers is a tribute to their sturdy qualities. Many of them own their own homes and their own small farms, won by their own efforts, and above trespass or control by any agency of government.

As long as we have such people we are insured against extreme or supergovernment in the United States. They and their fellow Americans who have minds of their own assure us that no problem is too difficult to solve if every one of us employs the creative faculties which God gave us to use. No people driven like slaves under the lash of a dictator can ever hope to match another people who, with a firm floor of security under them, have the confidence to climb higher on their own.

We have many problems, but the important fact is that we are working on them.

As we solved them in the past, we shall do so in the future. My message to you is: The middle road on which we travel is the main highway to the future. Nothing can conquer us except our own laziness or carelessness.

We are prepared to resist aggression. Spending $15,000,000,000 a year for the military budget alone is some indication that we do not intend to be caught napping. While necessary for some time at least, it is, nevertheless, merely defensive and places a real burden on our economy.

It is encouraging to note that we are also prepared in a more positive way. Despite temporary adjustments, still in process, our system is fundamentally sound.

We have the two good hands of freedom and productivity. The two work together. You cannot have one without the other. This is our answer to all Communist propaganda, past, present, and yet to be hatched. It is there for all to see in the material help we are giving to the free nations of Europe. It is heard in the Voice of America, which is as consistent as truth, without verbal acrobatics.

After all, it was the millions of letters which you sent to friends and relatives in Italy telling the facts about the United States which helped to turn the tide against communism in the land of your forefathers.

It is this same faith, open and above board, part and parcel of our everyday lives, that is the successful formula for meeting every domestic problem. To speak without fear, pro and con, brings out all the facts. It leads eventually to fair compromise.

I am glad to be with you at your fourteenth annual convention. It is a pleasure to meet old friends and to be given this opportunity to state in public my admiration for the work that your organization is doing.

Help our people to become better citizens; from your experience, constantly remind them that they must never take for granted the precious opportunities won for them at great cost by the men and women who have served in the armed forces of our Nation.

Continue to be the guardians of America's destiny.

Unbelievable But True

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1949

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from the Miami Typographical Union, No. 430, from the office of their public relations committee setting forth the distress that exists in the newspaper field in Miami, Fla., as the result of the iniquitous Taft-Hartley law. The letter follows:

MIAMI TYPOGRAPHICAL UNION, No. 430,
PUBLIC RELATIONS COMMITTEE,
Miami, Fla., July 6, 1949.

Hon. LOUIS C. RABAUT,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: This is an appeal from Miami Typographical Union, No. 430, to you, as a fair-minded statesman, to not permit the Eighty-first Congress to adjourn without the repeal of the Taft-Hartley law. That law which was so accurately described on the floor of the Senate recently by a worthy Senator as being a heads-I-win, tails-you-lose proposition for labor.

Had there been no Taft-Hartley law we feel certain there would have been no strike and lock-out on the two large daily newspapers in Miami. Over 300 men and their families would not now be struggling to maintain their homes here while out of employment.

Previous to the Taft-Hartley law, the typographical union and the publishers always had been able to sit around a table and formulate a contract acceptable to both management and labor. This is the first strike ever to take place in Miami in the 40 years' existence of the Miami Typographical Union. The publishers saw in the Taft-Hartley law the opportunity to break the typographical union; bring labor to its knees, if you will, and still be within the law.

It is unbelievable that a fair-minded body of legislators would, knowingly, uphold management and shackle labor to the extent of passing such a bill. It is the beginning of the abridgement of all liberties.

Newspapers always have been conceded a necessity—a necessity which keeps the public informed of the true facts of what is transpiring around them. Thomas Jefferson once wrote, while describing newspapers, "The basis of our government being the opinion of the people, the first object should be to keep that opinion right; were it left to me to decide whether we should have a government without newspapers, or newspapers without government, I should not hesitate to prefer the latter." How can newspapers reflect the true opinion of the people if the ones who produce them have no respect for each other? Labor must produce—management must direct. The two must go hand in hand if newspapers are to prosper and justify their being.

Once again, we implore you to see that the Eighty-first Congress does not adjourn until a fair labor law is on the books to take the place of the iniquitous Taft-Hartley law.

Sincerely,

LILLIAN M. YERKES,
Chairman, Correspondence.

Stevedore Strike in Hawaii Wrecking Economy of the Islands

EXTENSION OF REMARKS
OF
HON. THOMAS H. WERDEL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1949

Mr. WERDEL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a portion of a letter received from Mr. A. G. Marcus, president and general manager of the Honolulu Dairymen's Association, transmitted to me by Mr. A. S. Goode, president and general manager, Peacock Dairies, Inc., Bakersfield, Calif., on July 6, 1949, wherein he has attempted to describe the devastating effect the existing stevedores' strike in Honolulu is exerting on the economy of the Hawaiian Islands, and the resulting suffering and hardship to the more than a half million Americans residing there. The excerpt is as follows:

We are now in the fifty-ninth day of the maritime strike. Really, it's a blockade, something the enemy could not do in 4 years of war. It isn't necessary to tell you how dependent we are on ocean shipping, yet 2,000 striking stevedores, led by a few powerful left-wingers, have brought Hawaii to its knees. This is true literally, for we have had to plead with them to load and unload relief ships hauling only the most essential foods and feed. This will keep us from starving, but all business and investments will be ruined. Five hundred and forty thousand Americans are subjected to the iron will of a few men, three of whom (Bridges, Schmidt, and Robertson) are presently under indictment on charges growing out of alleged Communist activities—at least on the part of Harry Bridges. The President has stated he has no powers of intervention, and that it is "our baby," anyhow. We have no votes in Congress, no influence except such as can be generated through others.

Truman's Prescription

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1949

Mr. KEATING. Mr. Speaker, in conjunction with my remarks on the floor today with reference to the President's message on the economic picture, under leave to extend my remarks, I include an editorial from today's Washington Post.

The editorial follows:

TRUMAN'S PRESCRIPTION

In his midyear economic report to Congress President Truman admits that the country is in the throes of a business recession that makes his anti-inflation program obsolete. Having belatedly recognized the economic facts of life, he accordingly emphasizes the present need for business stimuli instead of restrictive controls. Well and good, though there will be a difference of opinion as to whether the particular stimuli he recommends will really stimulate.

Withdrawal of the President's earlier demands for tax increases was inevitable. In view of the changed outlook, it was evident some time ago that they were totally out of place, and Congress would certainly have rejected them. Sound arguments can be advanced, too, in support of the recommendation to eliminate taxes on transportation of goods, and to liberalize the loss carryover provisions of the corporate income-tax laws. These changes, limited though they are, would provide some spur to business activity without any great loss of revenue. However, when the President declares that any cut in essential budget expenditures (meaning outlays that he himself considers essential) would drag down the whole economy he is no longer on firm ground. On top of the withdrawal of demands for new taxes needed to balance the budget, this proposition commits him to advocacy of deficit financing as a method of overcoming the downturn in economic activity.

We wonder whether Government spending as a panacea accords with the economic counsel of Dr. Nourse. In his recent testimony in public, at any rate, Dr. Nourse seems to have been sympathetic to the thesis that Government economy is the best impetus during the present period of readjustment—that the main object should be to encourage business incentive. Certainly he cannot agree with the Presidential argument in favor of deficit financing. Government spending is necessary, Mr. Truman says, in order to enlarge consumer purchasing power—as if there has been a curtailment of it.

The fact is, as Mr. Truman inconsistently notes, that the personal incomes of con-

sumers after taxes have decreased only 1 percent since the last half of 1948 while real consumer income has risen slightly owing to interim declines in prices. Here is clear evidence that consumer purchasing power does not need bolstering. Nor, for that matter, does consumer spending need stimulation. What is needed, rather, is a revival of business and banker enterprise. A Government spending program that will add to the size of an already huge Federal debt and tend to shake confidence in the credit standing of the Government is not the way to provide investment initiative. It is the way, on the contrary, to retard it. We do not believe that Congress, or for that matter the American people, can be converted to a belief in deficit financing as an easy road to future prosperity and full employment.

We agree that it is desirable, even urgent, for the Government to make systematic studies of investment and developmental needs and market opportunities both in domestic and foreign fields. There is also need for a reform of procurement and construction activities with a view to improved selection and timing of antislump public projects, as the President requests. Preparedness is necessary in the event that the recession turns into a slump, which, emphatically, far from describes the present situation that the President seeks to correct.

Most of Mr. Truman's other specific recommendations for counteracting recession are a repetition of demands made when he was still worrying about inflation, such as increasing the minimum wage to 75 cents an hour, broadening and liberalizing social insurance payments, and restoring the Reciprocal Trade Agreements Act. To sum up: the President has no startling plans to offer for arresting the business decline. And what is good about them is marred by his wholehearted acceptance of the pernicious doctrine that budget balancing is neither attainable nor desirable during a period which is still to be interpreted by the term used by Dr. Nourse as "disinflation," or a transition between a sellers' and a buyers' market.

Hawaiian Solution

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1949

Mr. HORAN. Mr. Speaker, all of us on the west coast feel that the time is here when real action should be forthcoming with regard to the Hawaiian shipping strike. Because of that reason, I am glad to include, under permission granted me to extend my own remarks in the Appendix of the RECORD, an editorial from this morning's Washington Post:

HAWAII SOLUTION

It is hard to have much patience with President Truman's contention that he is powerless to act in the Hawaiian shipping strike. Nevertheless, whether or not he actually has the power now to intervene, apparently he is not going to do anything about the paralysis in Hawaii. That is the essential reason calling for immediate passage of the Knowland-Farrington bill which has been introduced in both Houses of Congress. This bill would specifically authorize Mr. Truman to appoint a Presidential board of inquiry as a means of bringing agreement in the tie-up that has isolated Hawaii since May 1.

Actually, the board of inquiry probably can do little that has not already been done by the Territorial fact-finding board. Hawaiian stevedoring companies reluctantly accepted the recommendation of that board for a 14-cent hourly wage increase, but the report was rejected by the International Longshoremen's Union, which held out for arbitration. Now the ILWU has announced that it will abide by the findings of a Presidential board of inquiry, but the employers are balking on the contention that this will amount to arbitration.

Such heming and hawing amounts to a prima donna act with tragic overtones for the people of Hawaii. There is no reason to believe that a Presidential board would be unfair, or, indeed, that its findings would be materially different from those of the Territorial board. The important thing is to end the jockeying for position and get on with the settlement machinery. Surely it should not require a week of hearings before action can be taken on this simple bill to relieve the emergency.

This Changing World

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1949

Mr. SHORT. Mr. Speaker, when economic aid was first voted by the Congress for foreign nations, under the Marshall plan, many of us predicted at the time that much of this money would go down a rat hole. We stated at the beginning it was our firm belief that we should not bleed America white by financing the utopian schemes of other nations and their noble experiments in state socialism.

Mr. Speaker, we also prognosticated, without any superpowers of prophecy, that by building up the trade and industry of other countries we would soon find them as serious competitors of the United States.

Rapidly changing events in Europe, and particularly in Great Britain, have proved the accuracy of these prophecies and the truth of these predictions.

Under leave to extend my remarks, I include two timely articles by one of our best analysts and commentators on foreign affairs and international relations, Mr. Constantine Brown, which appeared in the Evening Star, Washington, D. C., on July 6, 1949, and on July 11, 1949:

[From the Washington (D. C.) Evening Star of July 6, 1949]

BRITAIN SENDS FINANCIAL S O S TO UNITED STATES TO SAVE FAILING STATE SOCIALISM

(By Constantine Brown)

The British Government has sent an S O S to Washington for immediate financial assistance to save state socialism, the great experiment of the British Labor Party, which has proved a dismal failure.

Sir Stafford Cripps, its chief advocate, who was given more extensive powers by the Government and Parliament than any other peacetime administrator, realizes that this failure may deal a deathblow to the cherished utopian doctrines of those who insist that the only solution to our troubles lies in government paternalism. He is stubbornly fighting on, but his only hope of surviving, even temporarily, lies in assistance from the American Government.

Since 1946 the British Government has received more help from America than has any other western nation. We have financed the Labor government to the tune of more than $4,750,000,000 within a period of 3 years. Britain got a $3,750,000,000 loan from us in 1946 and has received more than $1,000,000,000 under the European recovery program.

LAGS IN RECOVERY

Yet, compared to continental European countries, like Belgium, France, Holland, and Norway, Britain is a long way behind in its recovery.

According to economic reports, Belgium not only has recovered but is enjoying a small wave of prosperity. The reason is to be found in the fact that while Paul-Henri Spaak, Belgium's former Premier, was a Socialist, he practiced political rather than economic socialism.

Although Belgium has the densest population in Europe, and although she has suffered from the war, she has managed her affairs so well with modest help from the United States that today she is probably the most prosperous country in Europe. Socialists did not attempt to nationalize anything, but adopted a policy of live and let live in its economic affairs.

Holland, which suffered from Nazi invasion of her home territory and Japanese occupation of her colonies, also is on a fair way to recovery, in spite of serious set-backs from Indonesian political troubles. The Dutch Government, realizing that socialism is still some time away, has refused to experiment with any form of state paternalism, and today, in spite of the Nazi devastation, is in a far better way than the British Isles.

Even France, where the political turmoil always has interfered with its economies, the situation is much better than in Britain. After the fall of the De Gaulle regime the frequently changing government was composed of a mixture of Socialists and Communists, with Maurice Thorez, Moscow's principal stooge in France, as Vice Premier. Under such administrations nationalization of some important industries and financial establishments was undertaken with devastating effects on the public finances.

NEW GROUPS IN POWER

Since the spring of 1947 a new administration, composed of political—not economic—Socialists has been in power, with the Communists excluded. As is usual in France, the administration changed three times in 2 years, but the drive toward nationalization and paternalism received a serious set-back. The result has been that France, while still in serious political difficulties, is better off and less dependent on immediate American financial help than Britain.

A similar situation exists in Italy, where the Christian Socialists, headed by Premier Alcide de Gasperi, who also removed the Communists from the Government, are doing a good recovery job. Italy, much poorer in raw materials and food than Britain, is far better off today than the United Kingdom is. State socialism and paternalism have not been seriously attempted in Italy.

Much of the $4,750,000,000 received by the British Government from the United States was wasted in admirable ideological experiments such as nationalization of industries, state medicine, and other measures still considered utopian, with the result that Britain today is on the verge of bankruptcy. Bankruptcy will become a fact unless additional and immediate support is received from the United States at once.

In the last 4 years, during which Britain's Labor government has had every opportunity to prove that socialism in our time is not a

mere dream, it has managed to place the most powerful industrial and financial country in Europe behind all other countries on that continent.

[From the Washington (D. C.) Evening Star of July 11, 1949]

COLLISION BETWEEN BRITISH TRADE POLICY AND UNITED STATES INTERESTS NOT SURPRISING

(By Constantine Brown)

Economic experts in Washington are not getting the pleasure out of Britain's revival as a competitor in the markets of the world which they expected when the Marshall plan was launched with the aim of restoring Europe's trade as a means toward the Continent's self-support.

The present collision between British trade policy and American interests was not altogether a surprise. It was freely predicted, when we began appropriating large sums for Marshall-plan aid, that, if we succeeded in reviving Britain's trade to the point where she could live by it, she would again become a serious competitor of the United States in world markets. In other words, we were creating a monster which would turn on us later.

The answer given at that time was that competition was the lifeblood of healthy trade, whether it be domestic or foreign, and that even though Britain did cut into some of our markets abroad, it would be better to have her supporting herself than feeding constantly at the American-dollar trough.

ARGENTINE PACT CITED

There is little disavowal of this basic view to be heard now among the experts, but there is remorse over the course British trade revival has taken, resulting as it has in British measures which discriminate against the United States—even if the discrimination has some valid reason—and public reaction in the United States which pays more attention to the fact of discrimination than it does to the reasons behind those measures.

The recent Argentine-British barter-trade agreement, which virtually freezes American trade out of the Argentine market, coupled with the more recent stoppages of new purchases from dollar countries, adds up to economically hostile action against the United States and repudiation of the principle of multilateral trade toward which we have tried to draw the British.

In perspective it is difficult to see why it was necessary for the British to preempt the Argentine market completely for themselves, at least in some commodities. It would have been good politics to leave some loophole for American trade, thus placating American public opinion.

In perspective it is also somewhat incomprehensible that Britain could not find a less antagonistic way of meeting her dollar shortage than to shut off practically all new purchases from the United States.

WILL HAVE TO MAKE CHOICE

Of the two recent actions there appears to be more sound justification for the latter than for the former, although it is not entirely clear that the British were unable to ease their dollar and gold crisis by returning to multilateral trade and full currency convertibility with a revalued pound which would permit British goods to compete on a par with the rest of the world's goods.

Such action, no doubt, would have involved domestic effects which are not entirely desirable, but if production costs would increase—with higher raw material prices due to a cheapened pound—then savings would have to be made in other factors of production, perhaps at a sacrifice of some of the Labor government's social program.

The British Government is going to have to choose between the pursuance of its socialistic program, and a resulting bitter struggle against those who have helped Britain back to her feet, or the rebuilding of foreign trade on a basis of cooperation with the rest of the world, and a resulting "standstill" in further social improvements until a more propitious moment.

As a matter of fact, the Socialist British Government is endangering its own life with its too-rapid program of nationalization and socialization. The Conservatives are fighting to return to power at the next election and dump overboard practically all that the Labor government has done. Continued economic chaos will speed a Tory victory.

The Plight of the Gold Miner

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. ENGLE of California. Mr. Speaker, I desire to insert in the appendix of the RECORD an editorial from the June 30, 1949, issue of the Feather River Bulletin, Quincy, Calif., commenting on the inconsistency of our Government agencies demanding a revaluation of the $100 assessment work requirement on mining claims and at the same time refusing to permit a revaluation of domestically newly mined gold. The same facts which make one figure inadequate make the other inadequate also. The gold miners are required to sell their product to the Government at a price fixed by the Government which is below the cost of production. If it makes good sense to change the amount required to be spent on assessment work in the light of the fact that it now represents far less work than it did when this figure was adopted, then it makes just as good sense to permit gold miners to get a better price for their product. At least, the gold miners should be permitted to sell domestically newly mined gold freely on the market in the same manner as any other producer in the country. The editorial referred to is as follows:

MAKING IT OFFICIAL

President Truman in reluctantly signing the bill to grant another moratorium in assessment work for miners issued a memorandum in which he pointed to what he called "the desirability of reevaluting the adequacy of the $100 figure at which this requirement has been set for so long, in the light of the fact that it now represents far less work than it did when it was adopted in 1872."

Stating the idea in different words: Value of the dollar has gone down; therefore assessment work in terms of dollars should go up.

Nobody can quarrel with the basic truth of this statement. The exasperatingly stupid feature of the administration's attitude is its stubborn refusal to recognize the same basic fact of a dollar being worth less when it comes to fixing the price of gold.

True, the price of gold in terms of dollars has gone up since 1872, the year when the assessment work requirement was inaugurated. The fact remains that in the past few years while the actual value of the dollar was going down, and drastically, our beloved bureaucrats have persistently taken the attitude the trend shouldn't mean anything to the miner: The price of gold must remain the same in terms of dollars. Now these same bureaucrats—bless 'em—suddenly decide that the known devaluation of the dollar should be taken into account in dealing with the miner—that is, in what is required of the miner, not what is paid him for his product.

For what the miner takes in, the value of the dollar remains unchanged. For what he has to put out, the value of the dollar is reduced. All this in the same relationship between the same miners and the same government run by the same bureaucrats.

The dollar is worth less. The dollar is worth the same. The bureaucrat sets up both these assumptions at the same time and takes his choice, using the one where it will hurt the miner and then switching to the other where that will hurt the miner. The only consistent feature about the whole deal is this: The bureaucrats go for whatever hurts the miner. One moment they ignore fact in favor of theory and say the price of gold must stay unchanged. The next moment they desert theory and take up fact to say miners are doing less assessment work than they once did.

Heads, the bureaucrats win; tails, the miners lose.

For a long time the miner has been ground between the upper millstone of the Government's fixed price for gold and the nether millstone of rising costs of everything he must buy. Until now, though, it hasn't been official. Now the administration's official policy, as fixed by the bureaucrats and dutifully voiced by the President, is that more and more dollars shall be demanded of the miner, but no more shall be paid him for his gold. The laws of economics are in full force and effect all along the line—including the official attitude of the miner's own government—until it comes time for the miner to sell the gold he produces. Then immediately by Government edict the whole picture changes. The miner can't sell except to the Government (unless perchance he happens to have untreated gold) and the price is fixed by the buyer.

In the horse and buggy days blinders were sometimes used—on horses—to prevent the animal from seeing in certain directions. Today our bureaucrats manifestly have perfected a device which when used—on themselves—will enable them to look at an object and see both that object and something entirely different, all at the same time. Thus, they see the dollar worth less and the dollar worth the same—the same dollar, mind you, at the same moment.

These stupid gymnastics by which the miner is victimized remind one of Lewis Carroll's well-known lines:

"You are old, Father William," the young man said,
"And your hair has become very white,
"And yet you incessantly stand on your head.
"Do you think, at your age, it is right?"
"In my youth," Father William replied to his son,
"I feared it might injure the brain.
"But now that I'm perfectly sure I have none.
"I do it again and again."

They will, too. The tragic thing is that we American citizens so far have permitted them to take our country's economy right along with them.

Vince Caruso

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. MILLER of California. Mr. Speaker, from time to time small insignificant articles find their way into the

press that reaffirm our faith in our friends and neighbors. Too few of such little stories come to light. Here is one:

Vince Caruso is not a rich man. He does a good business as a mortician in a thriving community. He gets his share of business, but he gives in money, time, and energy to community security and welfare. It is men like Vince that make Pittsburg a thriving town and a good place in which to live.

Perhaps the fact that Vince Caruso spent his own money to hire equipment to level a lot for no other reason than that the kids could have a place to play is too trivial a thing to put into the CONGRESSIONAL RECORD, but it is at least interesting to note the reason he gives for doing it.

I am sure the youngsters who signed the letter of thanks feel it is important.

It would be nice to have a letter like his. I would highly prize it.

Here is the story from the Pittsburg Post-Dispatch:

SCRAPING OF LOT BY CARUSO WINS YOUTH THANKS

A letter, signed by 10 neighborhood children, today had been forwarded to Vincent R. Caruso, local mortician, expressing appreciation for leveling and scraping of a vacant lot which is used by the children as a playground area.

Located in the rear of Caruso's Funeral Home, the scraped and leveled lot will mean that there will be "no more applying first aid to cuts and bruises from the broken glass hidden in the tall weeds," the children said in their letter.

"If there were more generous-hearted men like you, there would be fewer children playing in the streets and less accidents. Thank you again," the letter concluded. Signing it were Marlene, Madelyn, Louis and Rose Marie Salvetti, Norman Jean Russo, Roseann Russo, Loretta DaValle, Walter and Noel Nellis, and Mary Jean Nobile.

Help for Stranded Chinese Students

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 5, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of July 4, 1949:

HELP FOR CHINESE STUDENTS

Representative JUDD's bill to use $4,000,000 of already appropriated Foreign Economic Cooperation Administration funds to assist Chinese students in this country should have strong support and prompt approval. The need is there and the money is there. What is required now is congressional action.

Much of the United States program of foreign assistance is rightly considered as something of an investment. We are investing in stability and recovery, progress and friendship. Certainly we have reason to believe that there are few if any fields for investment more inviting than the Chinese students. One of the outstanding landmarks in our relation to the Far East was the return of the Boxer Indemnity to China for use in the support of Chinese students in this country. It was a gesture of friendship and interest that has had far-reaching results. A substantial number of China's democratic leaders have been educated either in the United States or under American influence. The result has been not merely that they could make a valuable contribution to their own country but also that we could have in China a large number of warm and faithful friends. There is an old saying in the Far East that "when you're in a jam a Chinese friend is the best man to have in your corner."

We are now in something of a jam in respect to the whole of east Asia.. We need our old Chinese friends and we need to make new ones. There is no better place to make them than in the field of education. The plight of the Chinese students in this country who have been stranded by the effects of the civil war should elicit our quick compassion and our prompt relief. That in itself is the type of action that we should be eager to take on its merits. But beyond that plea there is this additional reason for taking action now. We need Chinese good will more than ever, since we are coming under a drumfire of attack on our own motives and attitudes from the Chinese Communists. We can gain some of that good will by taking an action that is manifestly unselfish, obviously moved by no design more sinister than the wish to help those who are in need.

Gen. Douglas MacArthur

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Post, Boston, Mass., July 10, 1949:

URGES ALL SUPPORT MACARTHUR—O'MALLEY SAYS GENERAL DOING GREAT JOB IN JAPAN

(By Charles J. O'Malley)

I had the great pleasure of visiting Gen. Douglas MacArthur on my recent trip to Japan. The general is one of the most remarkable men I have ever had the pleasure of meeting. I have met hundreds of leading men all over the world, but I think MacArthur stands out, combining the qualities which we admire in a decent, honest and upright gentleman.

GREETED PROFUSELY

When I visited him a week ago Wednesday at his office in Tokyo, I was ushered in by his aide, Col. Larry Bunker, of whom I wrote a short while ago. As I entered, General MacArthur came to the door and greeted me most profusely.

He said: "I am very glad to see you, Charlie, for you are partly responsible for my becoming an officer of affairs in Japan."

I looked at him amazedly and said: "Why, General, this is an unexpected pleasure, to think that I had anything to do with your wonderful career."

IMPRESSED BY BOOK

Then he told me that when he was a student at college he read the famous novel by Lever entitled "Charles O'Malley, the Irish Dragoon." It had to do with the great wars of Napoleon, Wellington, and other notables of the last century. It dealt with Waterloo and other great battles. It so impressed General MacArthur that he decided to join the Army, his father, of course, being a general in the Federal forces when Douglas was a student at college.

Instead of sitting at his desk, the general suggested that we sit by the window, and for 2 hours I listened to the most enthralling exposition of common sense and decency and determination to advance humanity according to the standards of the United States. MacArthur is the man to do it.

STRONG FOR BOSTON

I asked him where his lineage started, knowing, of course, that it was in Scotland.

Then he remarked, casually: "I think I am as good a Bostonian as you are. In fact, my people came from New England. My father was born in Chicopee Falls and my mother came from Dighton. I have been in Boston many times myself and consider it one of the loveliest cities in the world."

"I noticed," he said, "that you presented two letters introducing you to me from Mayor James M. Curley and Hon. John W. McCormack, leader of the Democratic Congress in Washington. Both of these men are very close friends of mine and I wish that you would take with you my very best wishes for their happiness and I send both of them my love."

COMMUNISM BIG PROBLEM

Then we went into the details of the problem which confronts him. The most striking one is that of communism seeping in from Russia and China. He told me that he was bound to stop it and was using every effort at his disposal to crush the racket of communism which may try to get into Japan.

"As long as I am in command here," he said, "communism will not be tolerated. It is a menace to common sense, decency, and economic development. The purpose of the Communist is to create disorder and crime among the people of this nation and I will not tolerate it."

At this point, I drew attention to the fact that we had had a visit at my daughter's home that morning of two sisters of St. Joseph from Sapporo in Hokkaido. They had come to a convention on educational development in Japan. One of the sisters was a Japanese and the other was born in Germany. They told me that they had 1,500 children in their school at Sapporo and it was the policy of the Catholic Church not to attempt to proselytize their students. This sister stated that out of the 1,500, 500 of the pupils became Christians on their own volition. This was due to the excellent treatment accorded them by the sisters and by the fact that the Christian faith meant kindness, decency, and advancement of human emotions.

OPPOSED TO PREJUDICE

General MacArthur was much interested and I gave him this information direct from the sisters. He said that there are not over 300,000 Christians in Japan in a population of 80,000,000, but that he would do everything in his power to aid Christianity according to the best judgment of everybody concerned. He said: "I am opposed to any form of prejudice, no matter where it comes from, and I trust and pray that the Christian bodies will join together in advancing the cause which we all love. We need religion in Japan. The people here are saturated with Shintoism and Buddhism, neither of which, in my estimation, is up to what we need in making better and nobler human beings.

In bidding good-by to the general, I was impressed with the fact that I had had an interview with one of God's noblemen and a character who occupies an outstanding pinnacle, from which to advance humanity to its highest standards. MacArthur has made good in Japan and he deserves the support of every American in his efforts.

Someone suggested to me that if we wanted the best representative in the Orient for us, that we should do everything in our power to help Japan, and with that friendship to assist us, we need not fear the communism

of Russia or the feeble initiation of communism into Japan to prevent America from being the leading and most important force in helping the people of the Orient.

In order to aid in the economic development of Japan, the Foreign Investment Council, a subordinate organization to the Japan Chamber of Commerce and Industry, was organized recently by the 14 major companies established jointly by the Japanese and Americans. This organization has as its chief objectives:

1. Establishment of more expeditious procedures to facilitate restoration of American interest disposed of under the enemy property-control law during the war.

2. Reestablishment of investment relationships between these companies and their former owners.

3. Effectuation of new foreign investment of the earliest practicable date. The industrial structure of Japan, because of her poor resources, lack of capital, and low level of technology, has been to a great extent dependent upon foreign capital investments both direct and indirect since the Meiji restoration in 1872. This is particularly true in the fields of direct investment where foreign participation in Japanese corporations or in the establishment of joint undertakings resulted in the introduction of technological improvements which enabled such concerns to assume leadership in their respective industries.

United States Leadership and World Freedom

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article entitled "United States Leadership and World Freedom," written by me, which appeared in the New Hampshire Morning Union of July 6, 1949, also the Manchester Evening-Leader of the same date. Both papers are published in Manchester, N. H.:

UNITED STATES LEADERSHIP AND WORLD FREEDOM

(By Chester E. Merrow, Congressman, First District)

The United States finds itself in the highly responsible position of being the foremost leader in the effort of free nations to establish a decent international society based on liberty and the fundamental principles of human justice. We have been given a chance to demonstrate wise leadership and constructive statesmanship in the preservation of freedom, in the continuation of democracy, and in laying the foundations for a warless-world society. On our conduct in international affairs hinges our survival as a leader of free nations dedicated to freedom and founded on the ideals of democracy.

Great power entails heavy responsibility for bold and decisive action. The decisions we reach in the coming months will ultimately lead to a free or an enslaved world. International communism encompassing totalitarianism and tyranny must be arrested. Unless the sinister designs of the Communist philosophy are prevented from being realized, we have no future as a free people; our most cherished aspirations and our fondest ideals will be crushed under the unfeeling and calloused juggernaut of absolutism.

COMMUNISTS REFUSE TO COOPERATE

The Soviet Union is the core and source of the inspiration motivating international communism.

For years Moscow has pursued a policy of brazen expansion which apparently knows no limits. Puppet governments under the direction of the Kremlin exist in several nations extending from the Baltic countries to the states of southeastern Europe. Thousands of square miles of territory and millions of people have been brought under the suzerainty of the hammer and the sickle.

Communist activity exists on every continent. Pressure is being exerted in western Europe, Greece, Turkey, Iran, and in Asia. All sections of the earth feel the impact of the Communist drive for domination. The Communists are trying to prevent the success of the European recovery program. They are striving by every conceivable means to undermine the attempts of the west to restore a stable and prosperous Europe. The Red tide is rapidly inundating the Republic of China and the independence and integrity of southeastern Asia is being threatened.

UNITED STATES POLICIES

The unfortunate international developments following the end of hostilities in 1945 made imperative strong American action designed to halt the advance of the Communists. We belatedly took cognizance of the realities of international life and in the spring of 1947 Congress provided American aid to Greece and Turkey. This prevented these strategic outposts on the Mediterranean from falling into the Soviet orbit. In the fall of the same year a special session of Congress voted interim aid to France and Italy. And in the spring of 1948 the European recovery program was launched. The record shows that these policies have been successful in checking the movement of international communism in the Mediterranean area and in western Europe.

The unfolding of events in the postwar period has demonstrated that the policies we have already adopted are insufficient to guarantee our security. In order to further provide for the maintenance of national security, it has been necessary to formulate the North Atlantic Treaty now in the process of being ratified by the members of the North Atlantic community.

This treaty is essential as a defense measure for ourselves and for our friends who signed the pact with us. It is most important in buttressing our security against the possibility of future aggression. To date the Atlantic Treaty is the most important pronouncement attempting to clarify the stand of free nations on the matter of aggression.

This treaty will rank with the Magna Carta, the Declaration of Independence, the Monroe Doctrine, and the Charter of the UN as a historic landmark in man's long and never-ending struggle for a free and untrammeled world.

TEETH NEEDED

To be effective, however, the treaty must be implemented by a program of arms assistance to the nations of western Europe and to other countries resisting the movement of international communism. Such implementing legislation requires a majority vote of both Houses of Congress. The treaty goes far in making our position clear and in further strengthening the foreign policy of the United States. But it may amount to little more than a scrap of paper if it is not provided with teeth by an arms program adequate to develop the military defensive strength of western Europe. In addition to helping friendly nations we need to increase our own military power to such an extent that no one will dare to precipitate an armed attack on the Atlantic community or on any other area of the world. The military-aid program goes to the heart of a firm and realistic foreign policy for the United States. I believe that we should implement the North Atlantic Treaty by an arms-assistance program before Congress adjourns. Failure to do so will be tragic and disastrous.

Article 3 of the North Atlantic Treaty provides that "in order more effectively to achieve the objectives of this treaty the parties separately and jointly, by means of continuous and effective self-help and mutual aid will maintain and develop their individual and collective capacity to resist armed attack."

The words "capacity to resist armed attack" as employed by article 3 definitely indicate that we will make available arms assistance to the signatories of this document. The defense potential of the parties would be developed in relation to the possibility of unprovoked aggression. This would mean then that the defense potential to all parties would be developed by an arms program but the military force in being at any one time would depend upon the need for training and the nearness or remoteness of the danger of aggression in a specific area.

Evidence from all over the country reveals that the American people favor this treaty and furthermore desire the implementation of the North Atlantic alliance. I have long been urging the development of a strong foreign policy to meet the menace of international communism and the possibility of aggression.

RECOVERY AND CONFIDENCE

It should be abundantly clear that recovery and confidence are closely related. The Europeans are convinced that there is serious danger in the present state of affairs. They have every reason to believe that the economic progress which has been achieved during the last year and a half could be lost if military assistance is not forthcoming. With the ever-present specter of aggression casting its long shadow across the continent, they find it difficult to exercise the foresight, the drive and the imagination that can and will produce still higher levels of recovery.

The European recovery program has reached the stage where self-confidence is vitally important in stimulating new investments, in building new industries and in developing the capacity to bring into existence military establishments sufficient to guarantee the defense of the participating countries. For the recovery program to reach and maintain its full effectiveness, the capacity to resist an armed attack must be developed. By a program of arms assistance, we will increase this capacity and in my opinion adopt a policy that will avert another war.

The military-aid program for implementing the North Atlantic Treaty as a legislative matter has been kept separate from the ratification of the treaty. A grant of funds making available military equipment is needed at an early date. This is a pressing matter and should become the first business of Congress. Such a program would be enthusiastically greeted as a token of the seriousness of the purpose of the United States in carrying out the spirit of the North Atlantic Treaty. It has been estimated that $1,450,000,000 will be needed for the fiscal year of 1950. Of this sum, $1,130,000,000 will go to the members of the North Atlantic Treaty. The total for the arms program is small in comparison with the over-all defense

budget of the United States of approximately $15,000,000,000 for the same year. It is small in comparison to the appropriations for ECA, and small in comparison to the five times greater sum the west Europeans are spending themselves for military defense purposes.

It has been further shown that as much as 30 percent of this initial grant would be supplied in terms of surplus arms material at about 10 percent of the original cost of manufacture. This would have the twofold virtue of reducing the actual cash outlay while giving the European allies more immediate and more considerable aid than was indicated by the dollar size of the appropriation. The funds actually transmitted meanwhile would assist in rehabilitating western European armament industries. A growth of these industries would enable the United States greatly to reduce arms subsidies within a few years. Stipulations must be made that no portion of the arms and equipment to be supplied would find their way to nations outside the pact countries or those not specified by the arms-assistance laws.

OUR EASTERN FRONTIERS

Without any reference to the important North Atlantic Treaty, the United States must as a matter of self-preservation be cognizant of all the military and political matters relative to the continent of Europe. It cannot be denied that our eastern frontier lies well within this continent. We cannot avoid being gravely concerned over the state of military preparedness or unpreparedness in the whole of western Europe as well as the other countries friendly to us. We must make provision for our own defense in an insecure world. The United States in the light of its own self-interest must assume a considerable measure of the responsibility for the rearmament of the states in the Atlantic community and other friendly nations.

The atomic bomb, plus a joint-defense program, will provide security for free nations. The cost of a defense program, although heavy at the outset, will diminish as strength accumulates and risks decrease. A recovered Europe better able to provide for its own military needs will become a strong bulwark for the security of free nations. A Europe, united politically and economically, can be a determining factor in the future growth and development of western civilization.

A course of inaction, delay and indecision can result only in disaster. Such a course means the loss of friends, the sacrifice of positions, the dwindling of prestige, the sacrifice of self-respect and ultimately the disappearance of a final rallying point in any future struggle against aggression.

By implementing the North Atlantic Treaty with an arms-aid program, we will have consummated a most necessary action in the development of a realistic foreign policy. The Atlantic Pact and the arms-aid program will be a notification to any potential aggressor that if necessary we propose in the future to resist aggression just as we have done on two occasions within the memory of millions who now live upon this earth.

TO PREVENT A THIRD WORLD WAR

We have an opportunity to prevent a third world war. Our position before the First and Second World Wars was never clarified. Our course was one of inaction and uncertainty. By fearless decisions we should state our position realistically. By so doing another conflict can be prevented. The United States by continuing to develop firmness and realism in foreign affairs, by adhering to the North Atlantic Treaty, and by implementing the same with an adequate military-assistance program will be strengthening not only itself but all the free nations.

Straits of Mackinac

EXTENSION OF REMARKS

OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. POTTER. Mr. Speaker, the great State of Michigan has a problem peculiar to our State alone. Michigan has two great peninsulas, separated by the Straits of Mackinac, which condition presents a serious transportation problem. Every effort must be made by our public officials to close this natural gap between our peninsulas. It is hoped that in the not too far distant future, that the Straits of Mackinac will either be bridged or tunneled, in order to bring a closer unity between the Upper and Lower Peninsulas. It would aid the entire State, both economically and culturally, if this water barrier could be overcome.

The State Legislature of Michigan passed Senate Concurrent Resolution No. 44, requesting the Civil Aeronautics Board to give favorable consideration to the application of Nationwide Airlines in recognition of its service between the Upper and Lower Peninsulas of Michigan. This air-line service is an aid in uniting our people. Below is inserted the resolution I just mentioned:

Senate Concurrent Resolution 44

Concurrent resolution in recognition of the services rendered by Nationwide Airlines between the Lower and Upper Peninsulas of Michigan, and requesting the Civil Aeronautics Board to give favorable consideration to the application of Nationwide Airlines

Whereas Nationwide Airlines, Inc., is giving satisfactory service between Detroit and the Upper Peninsula and Lansing and the Upper Peninsula, serving the cities of Menominee, Escanaba, Marquette, Iron Mountain, and Houghton, which service is not rendered by any other air lines; and

Whereas it is the understanding of the Michigan Legislature that Nationwide Airlines, Inc., has filed an application with the Civil Aeronautics Board for a certificate of public convenience and necessity under section 401 of the Civil Aeronautics Act of 1938, as amended, to authorize the air line to engage in scheduled air transportation as an air carrier of mail, property and passengers covering service between the aforesaid cities in the Lower and Upper Peninsulas of Michigan, said application being listed under Docket No. 2832: Now, therefore, be it

Resolved by the senate (the house of representatives concurring), That the members of the Michigan Legislature recognize the service rendered by Nationwide Airlines between the Lower and Upper Peninsulas of Michigan, and respectfully request the Civil Aeronautics Board to give favorable consideration to the application of Nationwide Airlines for a certificate of public convenience and necessity to authorize the engaging in scheduled air transportation as an air carrier of mail, property and passengers between the Lower and Upper Peninsulas of Michigan; and be it further

Resolved, That copies of this resolution be transmitted to the Civil Aeronautics Board and Nationwide Airlines.

Adopted by the senate, June 23, 1949.

Adopted by the house of representatives, June 23, 1949.

FRED I. CHASE,
Secretary of the Senate.
NORMAN E. PHILLEO,
Clerk of the House of Representatives.

Socialist System

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Post, Boston, Mass., Monday, July 11, 1949:

CRADLE-TO-THE-GRAVE "SECURITY" IS BRINGING ENGLAND TO HER KNEES—BRITAIN'S SOCIALISTIC ECONOMY BADLY OUT OF LINE—YET THIS CAPITALISTIC COUNTRY POURS HEAVY MONEY INTO IT

(By John Griffin)

All the financial experts and heavy thinkers are sounding off on the meaning of the British financial crisis, while experts from this country and the British Commonwealth nations are gathering in London to try to find a solution.

If they want to, they can fill their statements with all sorts of technicalities which the average person will find extremely difficult to understand. Boiled down and set forth in simple language, the situation is that British goods are not selling in America in sufficient amounts to get the dollars Britain must spend to obtain necessary supplies.

One of the principal reasons for this condition is that the cost of production and the cost of maintaining the present British economy is too high. And why is it too high? There may be many answers to that, but surely one of them is that the Socialist government is spending recklessly in all sorts of Socialist schemes that aren't working.

And when you get right down to it, the failure of the present system can be laid largely to that fact. The cradle-to-the-grave security that the British Government is promising to the people is costing a terrific amount of money, and furthermore it is destroying initiative.

SYSTEM DESTROYS INITIATIVE

The British system of socialized medicine was undertaken without any clear knowledge of what it was going to cost, and the cost has skyrocketed out of control. The unlimited and ever-expanding social security system is another extremely costly scheme. The nationalization of basic industries has resulted in further costs.

All these things enter into the cost of the goods that are produced, and bring the selling price too high to compete in the available markets. An instance of this is seen in the way the trade balance between Britain and Argentina has changed.

Argentina used to be one of the principal British markets, but with the cost of producing British goods running so high, that market is being lost, and Argentina is buying more and more from the United States.

But it is not only the cost of production that is causing trouble. Worse is the lethargy that has come over the British as a result of the Socialist sale of the theory that everybody will be taken care of and nobody need to worry about using initiative to get ahead.

Under the Socialist theory, getting ahead is not something to be admired.

The ordinary spurs that have led American workers to do their best in production are ridiculed by those who are now under the Socialist system. They no longer have an incentive. They have been told that the government will see to it that they are provided for, and being human, they are making the most of it.

The plain truth of the matter seems to be that the Socialist system won't work in Britain, and it is certain that it won't work unless the capitalistic United States comes forward with the money to support the Socialist government of Britain.

AN AMAZING FACT

It wouldn't have lasted as long as this if we hadn't contributed billions of dollars through the Marshall plan and other aids. That is an amazing fact when you study it at any length. There is a nation that is giving up in large measure its system of free enterprise and calls for help from a nation made great by free enterprise.

The help has been given, even though many people in this country have deplored the giving, and now we find that we are being blamed by some British leaders for the plight of Britain. That seems to be an old story.

The British, along with other Europeans, think that we are too materialistic. An outfit called the Common Council for American Unity has recently taken a survey in western Europe to find out how people there think of us.

It found that many Europeans think not only that we are too materialistic, but also that we are economic imperialists, and that "there is no home life and moral and cultural standards are low."

On that last item they must have been reading the divorce and remarriage antics of one or two of our leading families. As for the charge of materialism, there is a very effective answer to that, and it ought to be obvious to all of them.

If we are materialistic, doesn't it seem strange that we should tax ourselves in order to send aid to them? The average contribution of Americans to Europeans last year alone figures out as about $30 per person for every man, woman, and child in this country. And yet they think we are concerned only with materialism.

GENEROSITY ONLY MOTIVE

We are still paying high taxes in many forms 4 years after the end of the war, and a good deal of the tax money has been used to try to get those nations of western Europe back on their feet. Their plight was brought on by the war, and they can't be blamed for it; but certainly they could show some appreciation of the generous spirit of the American people.

And it has been a generous spirit. The statesmen may say that it was necessary for our own protection to give assistance to Europe, and in that sense we are considering everything from a selfish viewpoint.

But for the American people there has been no analysis along those lines. As far as the great bulk of the American people are concerned, the assistance to Europe was given because it was a help to human beings who needed help. Their approval of that assistance was, in the main, on the grounds of generosity and nothing else.

Well, now Secretary of the Treasury Snyder is in London to give advice to the British Government in its crisis. His words of advice will not be nearly as welcome as his promise of financial assistance, and it is a pretty sure bet that the "materialistic" Americans will be asked to give more and more.

There appears to be no end to it, and the way we are going now, we will be the main support of the Socialist movement in Britain. And, judging from some of the proposals for social welfare actions in this country, we are going to be following a system that isn't working in Britain, and which needs help from our own system in order to survive.

Excessive Excise Taxes Can Cause a Serious Business Recession

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1949

Mr. KEATING. Mr. Speaker, the unwillingness on the part of the Administration to consider any reduction in the Federal sales taxes, euphemistically referred to as excise taxes, may result in visiting upon us a serious business recession.

Furthermore, it is, of course, shortsighted, purely from a dollars and cents standpoint, if the amount of these sales taxes collected is less than the loss in revenue to the Government in the form of income taxes brought about through the imposition of such levies.

Specifically, a graphic illustration of the effect of these taxes on sales, income, and employment is furnished by the case of the highly discriminatory and excessive manufacturer's excise tax on photographic equipment, machinery, and supplies.

Back in 1941 photographic products, along with some other items, were made subject to a 10 percent manufacturer's excise tax. Then, in 1942, when the so-called luxury taxes were imposed, under a skill in semantics characteristic of those charged with selling an unpalatable dish, photographic products alone were singled out for a tremendous increase—photographic equipment from 10 percent to 25 percent, and sensitized goods from 10 percent to 15 percent. No other products were subjected to a comparable boost. The excuse given for this discriminatory treatment at the time was that the enactment was intended to discourage civilian consumption because of the pressing wartime necessity of diverting such equipment from civilian channels to military use. It is true, of course, that wartime shortages of materials and wartime controls practically eliminated for the next 3 years the manufacture of civilian photographic equipment, so that an excise tax of 25 percent had very little meaning to the industry.

At the present time, however, this industry is in competition not so much with the products on which there is still a wartime tax, such as jewelry and furs, but more directly with other manufactured products, such as radio, sporting goods, certain electrical appliances, musical instruments, woodworking and other hobby equipment and supplies, and other articles on which there is a substantially smaller tax burden or no tax burden at all. More important even than that is the fact that not to exceed 35 percent of the products of the photographic industry can properly be classed as recreational or luxury; 65 percent of all such manufactured good is devoted to commercial, industrial, and professional purposes.

Since these materials comprise a large part of the cost of doing business of several thousand small-business men, it is obvious that the tax rates of 25 percent and 15 percent are not only discriminatory, but are unfair and oppressive.

The tax is restricting the expansion plans of commercial photographers. The capital of thousands of small dealers throughout the country is tied up to an unwarranted extent in the tax portion of their inventory costs.

A comparison of the large volume of sales in the photographic industry with other manufactured products during the first 4 months of this year indicates a rather alarming situation for the thousands throughout the country who are dependent upon this industry for their livelihood.

Thus, in January, we find the sales volume of manufacturers generally up about 3 percent over January 1948, whereas sales of photographic products subject to a 15-percent tax were down 4 percent and those subject to a 25-percent tax down 31 percent.

In February we find manufacturers generally reporting sales up a fraction of 1 percent, whereas photographic products subject to the 15-percent tax are down 12 percent and those subject to the 25-percent tax down 41 percent.

In March, when all those manufacturers report sales volume down a fraction of 1 percent, photographic products subject to the 15-percent tax are down 15 percent and those subject to the 25-percent tax down 41 percent.

Finally, in April, when all those manufacturers report a drop in sales of about 2 percent, we find photographic products subject to the 15-percent tax down 18 percent and those subject to the 25-percent tax down 43 percent.

Although definite figures are not available to me since that time, I am informed that the trend is in the same direction since April. In other words, this discriminatory and excessive sales tax has a definite and direct bearing on sales volume. It is an important factor in the necessity which has developed for curtailment of orders, lay-offs and increases in the extent of part-time work in this important industry. I have had many letters on the subject not alone from business men who perhaps may have a nest egg laid aside to help tide them over a slack period, but also from many workers in factory and office who have either been laid off because of lack of orders or have been placed on part-time work.

There are about 366 photographic manufacturers in this country. Over 50,000 families, perhaps half of them from my congressional district, derive their livelihood from this industry. It is a line of activity vital to our Nation's present and future security and health. Business, Government, science, education, industry, possibly most important of all, the armed forces, now employ photography as an indispensable tool. The continuation of this excessive and discriminatory levy places this industry at a serious competitive disadvantage and leaves its future uncertain and in

jeopardy. Before the plight of this essential segment of our economy and the thousands who look to its success for a living becomes desperate, it is imperative that action be taken to relieve the industry of the unfair share of the tax burden which it now is forced to bear.

Apart from the unjustified suffering which will be entailed for thousands by a stubborn adherence to the policy of insistence on retaining these excise taxes, it will probably not in fact net the Government any substantial sum in the long run to pursue such a short-sighted course. Not only does it result in lowered income taxes and in some cases claims for tax refunds as the result of operating losses of those engaged in the manufacture and distribution of photographic supplies and allied lines of business, but also a loss in withholding taxes due to the widespread unemployment and reduced employment which such a policy fosters. At the same time this revenue is being lost to the Government it is being required to pay out increased amounts in unemployment benefits. If an honest analysis of the entire situation surrounding these photographic excise taxes were to be made today in terms of true net revenue to the Government, it would probably be found that already these taxes have passed the point of diminishing returns and are actually costing the Government money to continue in effect.

The success and vitality of this great industry are of paramount importance to the area which I represent. For that reason I have felt it necessary to make a particular study regarding it. Also, as I have pointed out, there is an element of discrimination present in the case of the tax on photographic products which does not exist with regard to most of the other taxes. Nevertheless, the principle of diminishing returns to which I have referred will be found true, I feel sure, with regard to many other products now subjected to these Federal sales taxes. Their prompt elimination or at least substantial reduction is essential to the prevention of a serious business recession.

Valley of the Dammed

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. LEMKE. Mr. Speaker, I include in the extension of my remarks parts 7 and 8 of the article by Bigelow Neal entitled "Valley of the Dammed." I feel the way to correct public abuse is by merciless publicity. Let the Government know what it is doing, and then the Government will reform itself.

Let the Government know when some of its servants violate any constitutional mandate. The Government is "we, the people" and we do not wish to do an injustice to individuals. Bureaucracy always become conscienceless, and in its own estimation all-wise and infallible, but bureaucrats are human.

I have heretofore put into the RECORD parts 1, 2, 3, 4, 5, and 6 of Mr. Neal's article entitled "Valley of the Dammed." All these articles are copyrighted. They are worth reading. They will make the Government conscious of its action.

Here are parts 7 and 8 of Mr. Neal's article:

VALLEY OF THE DAMMED

(By Bigelow Neal)

PART VII

"Thereupon he became entitled to have the just compensation safeguarded by the fifth amendment of the Constitution; that is the value of the land taken, and the damages inflicted by the taking—was a sum as would put him in as good a position pecuniarily as he would have been had his property not been taken."

Unanimous opinion of the Supreme Court of the United States and written by Justice Butler in a case referred to by lawyers as *Campbell* v. *United States* (266 U. S. 368, 45 Supreme Court Reporter 115).

Last week in telling you about the appraisers, I forgot one ironic touch. As I understand from them, the figures upon which they based their valuations were in a set of instructions concocted in Washington at some time in the dim past and, I imagine, by men who had never seen North Dakota and cared less.

If I am in error here and the Real Estate Division of the Army Engineers Corps cares to call my attention to it—and if I see any reason why I should believe what they say—I'll be glad to make the necessary corrections. On second thought, I believe, I'll have to have the word of Colonel Seybold that the information they give me is true.

To sum up in the matter of the appraisal then, we have found that this land was appraised by two very fine young men, following a set of rules which allowed little personal opinion and—again under orders of the Real Estate Division—refusing emphatically and point blank to tell the land owners a thing about the valuation of their lands.

Stop and think this over. The real estate division professes to be an agency of our Government. It comes to appraise our lands. It allows us nothing to say in the matter of the appraisal and then it refuses to tell us the amount of the appraisal.

The Government can take our lands. There's no question about that. But why this secrecy? If the intentions of the real estate division were honorable, what have they to hide? If they intend to carry out the mandate of the Supreme Court of the United States, why should they start out by being dark and mysterious? Why not appraise the land, total the figures, tear out a copy and leave it with the land owner and tell him he has a perfect right under a wise and beneficent law to have his case arbitrated by the United States District Court if he doesn't feel that the amount of the appraisal is "just and fair" or, "will put him in the position he occupied before."

Why this bickering? Why this dickering? I tell you, ladies and gentlemen, an option is a contract and under the common law and under every imaginable statute passed where the common law of England is recognized as a base, there can be no contact without what lawyers call a meeting of the minds of the contracting parties. There can be no meeting of the minds unless you have a willing seller. There can be no meeting of the minds when one party has the power to force another party into a contract. There can be no meeting of the minds as long as one party fears the other, no matter what the source of that fear.

Some of our people claim that they were threatened and frightened into signing the options. Some have gone into court and have sworn to this. There are many others who would be glad to do so. But even had there been no threats by the negotiators, the fact that behind him stands the whole power of the Department of Justice and the unquestioned power of the Government to condemn is enough in itself to throw fear into the heart of any man. Under such conditions no option can be morally sound and if it isn't, it must be illegal.

Right here I can imagine a lot of people asking—but were they actually threatened or did they dream it? I'll have lots more to say about threats later but right here I'm going to toss in one bomb just as a sample.

Mr. H. T. Burns was born and reared on a farm near mine. He is the owner—or was—of one of the largest farms in the country. Neither any farmer in this community nor any businessman ever heard of him doing a dishonest thing or telling a lie in a business transaction.

The negotiator tried to get Mr. Burns to sign the option. He failed. He went back to his headquarters and out came the chief of his division. Finding Mr. Burns still determined not to sign the option, the chief—in the presence of Mr. Wretling, a well-known businessman of Garrison and of a standing equal to that of Mr. Burns said, "Either you sign that option or I'll raise your rent so high it will drive you out of the country."

How about it? Remember that you, Mr. and Mrs. Taxpayer, are really the Government of the United States—was he speaking for you? Did you authorize these threats against your neighbors and friends and fellow citizens, that you might take their lands at a fraction of their value and frighten them out of their homes and scatter them like chaff across the prairies?

In the natural order of this story, I perhaps should pass now to the matter of negotiators but I'm letting that run over another week while I take up a point or two, that seems to creep in here.

Chiselers

Heretofore I have written pretty much as though there were only one side to my story. And in a large way that is true. But I should like to make it clear that I make no claim to sainthood for every man who owned or owns land along the river. Wherever men are gathered, there will always be those who would be unfair. Yes, there are men among us who, given their way, would be unfair to their Government. For all I know the word "chiselers" may be appropriate. Not only do I take no pride in their kind but I deplore them for financial reasons, because they, by their extravagant claims, have hurt all of us and have cost us a lot of money. But I do say that they are only a minority and a small one at that. Only about 1 in 15 of my neighbors has shown that unfortunate tendency.

Quick to take advantage of the presence of these unfair men among us, the Real Estate Division of the Army Engineer Corps has released story after story to the news-gathering agencies citing these extravagant claims. But here the Real Estate Division has shown that this tendency to chisel is not by any means confined to our ranks. Their propaganda has published far and wide the shortcomings of the worst of us, omitting to mention their scarcity as compared with the best of us, thus giving the impression that we were indeed one undivided group of would-be grafters. The truth is that the vast majority of us ask only that the Real Estate Division of the Army Engineer Corps make an honest attempt to carry out the provisions of the fifth amendment to the Constitution of the United States and the clear mandate of the Supreme Court of the United States as printed at the head of this article. When we receive the rights due us as above, we will fold our tents and steal silently into the night with malice and rancor toward none.

The author's status

My attention has been called to my failure to make certain facts clear as to my own

legal status with regard to these land actions in United States District Court. They are simple. My first offer was $6,000,000. The last offer was $7,000,000. A jury in that court gave me $3,500 or a total of $10,500, or as I have told you before, a total of $4,500 for refusing to sign the option.

It may amuse the reader to learn that it appears I lost some additional remuneration by being careless enough to tell the truth in court. From a letter over the signature of the United States District Attorney from Minnesota who tried the Government's side of my case I quote one line:

"Frankly, I admired your attitude but I knew it would not pay off in cold cash."

My warm thanks to him for them kind words. He's not only a great lawyer but one heck of a nice guy. And I want to repeat my pledge to him, to the Department of Justice and to every reader of the Independent: I shall follow that same policy here. I have told, am telling, and will tell the exact truth as I see it.

The negotiators again

There was a time when some of my neighbors were a little puzzled by things that, to them, didn't make sense. How I could be getting my neighbors together to make an organized effort to protect their rights under the law of the land and, at the same time, be on friendly terms with the very men who were causing the trouble was a bit difficult to digest. But the explanation was simplicity itself.

Early in the game, I realized that these men were fine men. Their appearance in a distasteful role was due to the fact that they were the heads of families whom they must support and educate. Either they did as they were told or they would be out in the cold world and someone else would do the job. Every man of them believed himself to have a clear conscience. He merely obeyed orders to the letter.

It follows then that my quarrel is with a policy and not with men. The policy is far older in their Department than any of them. Accordingly my friendship has been and is theirs. I hope that theirs remains with me as I know their hopes and best wishes have been thus far.

And so—I ask you once again, as I go on next week, please remember that what these men say is what they were told to say and not what they felt. Their words do not in any way portray their real characters and they cannot be judged by them.

VALLEY OF THE DAMMED

PART VIII

"Thereupon he became entitled to have the just compensation safeguarded by the fifth amendment of the Constitution; that is the value of the land taken, and the damages inflicted by the taking—was a sum as would put him in as good a position pecuniarily as he would have been had his property not been taken."

Unanimous opinion of the Supreme Court of the United States and written by Justice Butler in a case referred to by lawyers as *Campbell* v. *United States* (266 U. S. 368, 45 Supreme Court Reporter 115).

Coming now to one of the worst features of the land-acquisition program of our Army Engineers Real Estate Division, I want to repeat what I have said several times before. The men who appear as the villains of this drama are the Lon Chaneys of the Real Estate Division. Professionally and obeying orders, they supply the horror element in our story. But out of character and personally, they are honorable and good and kindly men. In other words, the horror that I bring to you now is not a matter of men at all. It is a policy. It is a cold, deadly, conscienceless thing, reaching out from a source long forgotten, to grip with its icy fingers at the throats of every home in the valley.

Actually the time has come when this policy is no longer human. It is incapable of kindness or of sympathy. It is a relentless machine without a conscience, speaking through the medium of men who, in order to support their families, do these things because, at the moment, they can think of no other way to make a living.

Before we plunge into the shadow, I have one more word. It's a little story of itself. The central character is, or was, perhaps the worst of all the negotiators because of his relentless energy, his extreme ability and his unquestioning obedience to the division's policy.

Knowing that I had been fighting him at every turn of the road, knowing that I spent my days and nights planning misery for him and his kind and knowing that I intended going on as long as I had anything to fight with, there came a night in the fall, when he appeared out of a blinding snowstorm. I learned that he had traveled first 200 miles to get his own car because he could not use a Government machine. Then he had made an over-Sunday dash involving another 550 miles and all of this to bring to my family the armful of packages at the opening of the Christmas season.

Now if you feel that I hate this man in any degree, you are terribly mistaken. If you feel that I would harm either him or his in any way, you are in great error. As long as I have a home, it will be open to him. But here, we talk of this man and of the others of his kind, not as men but as agents of this barbarous policy. What they do and how they do it is in obedience to orders. I might add that, while this man has been my guest many times, I hope he will be many times in the future.

He came one day as I worked with a garden tractor and a small irrigation outfit. It was windy and dusty. I was hot and pretty well plastered with grease. I had on as little as I could wear and maintain a sense of decency and what I had on was well patched. It was topped with a battered straw hat and held up by a pair of work shoes. Somehow I have a faint suspicion that he underestimated me just a wee bit. Thinking he was dealing with one of those poor cusses, cataloged by the real-estate division as least likely to offer resistance, he ran into a snag uncharted in the channel he followed. Whether that is true or not, I do know that he and all his kind have wished devoutly ever since that they never had run into me at all.

Anyway he came, not in the cheerful frame of mind in which I was afterward to know him but wearing that funereal expression of which I have spoken before. He was one of the saddest and most pessimistic men I ever met.

My garden looked to him like a total loss, the clouds were going the wrong way in the sky, the trees weren't green enough. And it seemed that he represented people who were very poor and wanted to buy some land for little or nothing so they could build one heap big dam and make a lot of other poor people rich. It seemed to me that his reasoning was a little mixed, trifle hind-side-to.

In the course of the conversation he wrote some figures on a little pad of paper. Then he shoved the pad under the steering wheel and way down between his knees. Thinking he had a bite and intended to scratch it, I gave the maneuver little attention. But he nudged me in the ribs and I looked down between his shins to read $6,000.

That made me sad too. So I shook my head and learned later I had made a thousand dollars by that first shake. As a matter of fact the four shakes I gave him were to add up to $4,500 because I found a jury in the United States district court that didn't agree with my sad-faced friend at all.

He drove away then, telling me to think it over and saying he would be back in a week. And the old saying about "death and taxes" had nothing on him. He did come back. Again he went down between his knees and now the figures were $6,500.

Please note that (knowing as we do now that the appraised valuation of my place was $7,500) he had disregarded the fifth amendment to the Constitution of the United States by actually trying to buy my land for a full $1,000 below its appraised valuation by his own department. What do you think of this? You who read this are the Government of the United States. Did he do this according to your expressed will or intent or according to your ideas of fair play?

The next week he was back and the figures were $6,800. And again he came and the figures were an even $7,000. And now a change. Evidently he had reached or approached the highest figure he could offer for his usual sadness became a trifle grim and suddenly he shot at me this question: "Do you want to live here after we take your land?" And when I said I wasn't sure he went on, "I was just going to say that—If we get this option signed up all right, I can fix it so that you can rent any part of your land you want."

How about this? What did he mean? Was he telling me that, if I didn't sign the option I would have to get off—or at least that I couldn't rent my land from the Government and that would amount to the same thing?

Is it possible that an agent of the Real Estate Division was trying to scare me into signing that option? Of course if he went into court he could swear he had never threatened me but I'm leaving it to you—what impression was he trying to make on my mind?—and in the cleverest way imaginable.

Then we got off on some other matters. I asked him what he was allowing me for my timberland. He shrugged his shoulders. "The Government isn't buying timber, we'll just have to burn it up."

"How about my irrigated garden?"

That struck him as amusing too. "Why should we pay for irrigated land when we're going to flood the whole country?"

"And about my coal mine?"

"No," he said, "we have no use for your coal mine."

"Then," I said, "I suggest we let a competent court thresh this thing out."

"Oh, well," he said, "if you want to fight a case against the Government in a Government court, I don't suppose there is anything I can do about it."

What did he mean by that? Supposing I had just come from the old country and didn't know much about United States courts, would that make me think it wasn't safe for a private citizen to risk his neck in a Government court? And later when a negotiator answered the same question from Fred E. Krueger, he said, "Try taking it into court and the Government will just clean you up in bunches."

And then the one to Mr. Burns, "If you don't sign that option, I'll raise your rent so high it will drive you out of the country."

AUTHOR'S NOTE.—Heretofore I have tried to make these installments more or less self-sustaining. But in this instance I come next to a series of extracts from court records which would make the total all too long for this week. I'll have to split it and begin next week where I left off above.

UN Is Doing A Job

EXTENSION OF REMARKS
OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 13 (legislative day of Thursday, June 2), 1949

Mr. KILGORE. Mr. President, there appeared in the July 9 issue of Collier's magazine an article on the accomplishments of the UN which I invite to the attention of those persons who think the United Nations has been a failure. I ask unanimous consent that this article, UN Is Doing a Job, be printed in the Appendix of the RECORD.

The UN record of achievement, while not as complete as many of us hoped it might be, has certainly not been as bad as the skeptics would have the world believe. All too often, it is people who are unable to settle disputes with their next-door neighbor who are quick to denounce the UN—simple because it has not solved all the complicated world problems in a very brief period of time.

If world peace is to become a reality in our generation, it will be achieved only through the encouragement of the work of the UN. Screaming denunciations do not settle problems, whether they be minor and personal or issues of conflict between nations.

Instead of the faint-hearted negative reaction of the skeptics, every success of the United Nations, no matter how small, should be met with our quick encouragement. We must expand the areas of agreement instead of pointing the finger only at the areas of conflict. In this way, we may build a spirit of cooperation which will provide a foundation for world peace.

I ask unanimous consent that this article be printed in the Appendix of the RECORD. The article exceeds in length the amount that can be printed without an estimate from the Public Printer. I have obtained such an estimate. It is estimated that the article will occupy two and two-thirds pages of the CONGRESSIONAL RECORD, at an estimated cost of $213.34.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UN IS DOING A JOB

(By A. M. Rosenthal)

In the offices of the low-lying plant at Lake Success, 3 miles from the town of Great Neck on Long Island, N. Y., they're all busy putting out the annual report to the stockholder.

As far as form goes, it will be pretty much the same as reports turned out every year by corporations all over the country—debits and credits, work done, prospects. But when this report is finished, it will be an official international document; copies will be printed by the thousands and read to millions who can get to a short-wave set; it will be debated, praised, and condemned.

And it will be examined carefully, word by word, point by point, figure by figure, by foreign-office experts in every capital in the world. The report will go by some long, properly pompous title, but it will amount to 150 or so pages of The Case for the United Nations.

Three thousand people who work at that UN plant think it is a pretty good case.

Chances are, this report will be different from all the United Nations reports that have gone before. It will certainly be different if it reflects the mood of aggressive self-defense that's been sweeping through most ranks in the Secretariat.

Ever since the UN was set up, it has been the world's favorite sitting duck. It's been blamed for what it hasn't done, blamed for what it has. It's been blamed for spending too much money, and it's been blamed for being penny-wise and stingy. It's been accused for taking too much authority on itself; it's been accused of doing nothing while the world slid into another war. It's been denounced as a sort of home base for Communist spies; it's been scolded for not having the full quota of Russians on the staff.

The pastime of let's take a crack at the UN has devoted fans in all 59 member countries. Some United Nations workers think that the worst offenders have been the people of the United States, the country that once pleaded for the United Nations to come and settle in our friendly land.

Proof is easily come by: Walk up to almost any member of the Secretariat and say in a loud clear voice, "Do you work for the United Nations?"

Watch the flinch. UN people have been through it all before and have a kind of classification of approaches:

1. "Bet you are glad to live in the good old U. S. A."
2. "Got it pretty soft." (Accompanied by a leer.)
3. "You can tell me what really goes on in that place."
4. "Don't they ever do anything but talk?"
5. "Why don't you admit the UN is the world's greatest boondoggle?"

UN people have been through them all and have taken them all. That's where the change in mood, the something different, comes in.

They just don't want to take it on the chin any more. All of them: typists and statisticians, industrial experts and translators, executives and $2,000-a-year clerks, the homesick and lonely and the contented foreigners who wouldn't go home on a bet—all are tired of taking it.

They have done a job; they know it, and they think the world should know about it before the idea of the UN is scrapped in a universal rash of petty irritability.

As they see it, these people who take the Long Island Railroad to Great Neck every day, the United Nations has not done everything it might have done, given a world of sweet good will. But the responsibility, they say, lies with the nations of the world and with their delegations. According to these staff workers, the delegates think of foreign-office chiefs back home first, of civil service lists second and of international cooperation a poor third.

But they are not singing "put the blame on Mame, or a sing of what might have been. They feel that when it was given a chance any kind of chance, the United Nations has given the stockholders more than their money's worth.

The man who deads up the works, Trygve Lie, think so too. Mr. Lie, a onetime alderman from Oslo, has been through the political mill and has had the optimism knocked out of him. But more and more these days, his friends are telling him to stop taking it and start dishing it out for the United Nations. He has been thinking about it for a long time now and, if he percolates over, this annual report should be a good one.

MOOD OF SECRETARIAT IMPROVES

While Mr. Lie and his executives are busy finishing up the report, the mood of the Secretariat lower down the ladder gets better and better. Mood is something almost tangible at Lake Success and it can be plotted on a curve. It's at a peak now, one of the highest peaks since the days of San Francisco, when the United Nations was being nailed together.

A lot of things make up that high peak.

The United States did its bit for morale when it told the world that the UN, after all, did come before the North Atlantic Pact. Dr. Herbert V. Evatt, the Australian who heads the General Assembly, gave the UN another shot in the arm by his tough determination to keep the United Nations in the middle of every major political development.

Other things pushed the mood-curve at Lake Success upward, notch by notch: Peace in Indonesia, peace in Kashmir, peace in Palestine, groping moves in the Balkans. The UN can take credit for them all. So if ar ordinary member of the Secretariat were writing Lie's introduction to The Case for the United Nations, it might read something like this:

The work of the UN falls into two general patterns: political and economic-social. The political job is to prevent wars from starting and stop them if they do. The other job is to make future wars less likely, by turning into a reality the old do-gooder's phrase: Raise the living standards of the people of the world.

A RECORD OF REAL ACHIEVEMENT

Politics comes first; there is just no way to get around it. The United Nations knows it and bases its hopes for the future on its political record. This is the score card:

World war, delayed, postponed, sidetracked or prevented: one.

Regional wars, stopped: three.

Armament races, stopped: none.

Atomic agreements reached: none.

The breakdown:

Almost from the beginning, the major influence of the United Nations has fallen into the mediation, conciliation, and negotiation fields. That's because the UN, as set up, just can't enforce its decisions. The Security Council has no army. It can issue directives, but if some country does not like them, there is no international fist to make it fall into line.

However, the facts of political life prove that as long as the United Nations stands, public opinion forces the countries in question to make an accounting to the world organization.

That's the wedge in the door for the United Nations. The idea is to keep 'em talking, keep 'em explaining.

Once things are out on the table of the Security Council, the way is open for the mediators to get their work in, for the commissions to go to the spot and see what's doing.

And while all that is going on, the eyes of the world are on the trouble area, and the events that lead toward war march slowly. Take away the Council, the commissions, and the mediators, and the tempo toward war steps up. It's not a guaranty against war but the UN budget is not much for the world to pay for the chance for peace—about the cost of a few bomb-bay loads.

That chance has been paying off, slowly, in the one UN trouble that outranks all other troubles—the east-west political line. United Nations people are realists. They know that everything comes second to what used to be called the cold war. And they feel that they have played their part in preventing that cold war from becoming red hot.

Everybody at Lake Success likes the word Berlin nowadays. It means accomplishment to them. In the summer of 1948, when Berlin was a word for headline jitters, there was talk that the whole problem would be dumped in the laps of the United Nations. Trygve Lie was asked about it. He nodded his big head, sighed, and said:

"Yes; they will give it to us when it becomes impossible to settle."

And it was given to the UN last fall when the Assembly met in Paris. It cames up before the Security Council, meeting those days in the theater of the Palais de Chaillot. Andrei Y. Vishinsky—he's the number one man now in the Kremlin Foreign Office—said loudly that the Russians would have nothing to do with the case, that it was none of the UN's business.

The Council, however, thought it was and started talking about it, talking, talking, talking, until the Berlin pot simmered down. Mr. Vishinsky, in the face of all that debate, just couldn't keep quiet and he gave way slowly and talked, talked, talked himself. Nobody gave an inch, then.

But so long as the case was before the UN, neither side would take the responsibility of causing a real flare-up in Berlin. So credit the United Nations with a damp towel, at least.

For months, that's where things stood on the Berlin situation. There was debate in Council and in committee, but it was no longer hysterical. One delegate put it this way:

"The consecutive translation system is one of the great inventions for peace. Invective gets to sound a little soggy after the second translation."

Then the break came. The United Nations is probably the world's worst place to keep a secret, but this one was kept under wraps for a long time: Philip C. Jessup and Jacob A. Malik had been meeting and talking things over. The Russians were willing to give way, the blockade would be lifted, a Council of Foreign Ministers would meet. As simple as that, almost.

And so far as the United Nations was concerned, this is what counted: The two men who ironed out the Berlin blockade were United Nations delegates, deliberately chosen because they were just that. The first break came on United Nations ground—in the delegates' lounge—and after that the UN kept its hand discreetly in the pie.

A few days before the announcement, Mr. Lie gave a dinner in his Forest Hills home. Soviet Deputy Foreign Minister Andrei A. Gromyko, Hector McNeil, of Britain, and Dean Rusk, of the State Department talked together for a long time and a very unofficial State Department communiqué said it was not about the weather.

So Secretariat people think that if it hadn't been for the physical existence of the United Nations as the only place left in the world where Russian and American officials meet together every working day in the year, if it hadn't been for the lid-on-the-pot quality of UN debate, Berlin might rank with the best in jumping-off places for new wars.

OMINOUS NEWS FROM NEW DELHI

While the Russians and Americans were looking at one another across a barricade in Berlin, the United Nations had other troubles on its hands, other troubles that could mean war. One day in January 1948, word came from New Delhi that made faces in London pale. India and Pakistan, two sister dominions, were on the verge of war.

The Indian Army, led by British-trained officers, was in battle gear. Pakistan's soldiers, who had fought together with the Indians until the Indian subcontinent was divided into Hindu and Moslem states, were being mobilized. In the camps of the tribes of the northwest frontier province, some of the best fighters in the world were preparing to march with Pakistan.

The battle cry was Kashmir.

Kashmir is one of the princely states that was left out when India was partitioned, India wanted it, Pakistan wanted it. India accused Pakistan of opening its borders to allow the tribesmen to make forays into Kashmir. Indian troops marched into the state.

Pakistan cried that India was overrunning Kashmir because it knew that the predominantly Moslem population wanted to join Pakistan. Fighting started in Kashmir.

For a few days, the United States press played the story, chiefly for the name appeal of Kashmir.

Then the story dropped. Kashmir is far away.

The British Foreign Office did not drop the story. To the men in Whitehall Street, war in Kashmir was disaster. They knew the truth: A fight between India and Pakistan could spill over into the world's bloodiest religious war. Millions upon millions of Hindus and Moslems would be butchered. In time, all Asia would be swept up in war.

The case came before the UN Security Council, and usually calm British spokesmen didn't bother with reserve and understatement. It was Philip J. Noel-Baker who looked around the Council table and told the 10 other delegates, "Gentlemen, if war breaks out in Kashmir, it may be the most terrible conflict in the history of mankind."

It has taken a long time, but the United Nations has prevented that bloodiest of all wars and has come near to settling the Kashmir dispute. It has taken dozens of meetings, meetings at which Indian and Pakistan spokesmen set new United Nations records for talkathons. It has taken the on-the-spot work of committees and commissions, experts and observers.

The job is in the hands of Adm. Chester W. Nimitz, who dropped building a new home in California in answer to a telegram from Mr. Lie asking him to be the United Nations administrator in Kashmir. It will be his duty to supervise a plebiscite that will determine whether Kashmir goes to India or Pakistan. The plebiscite awaited settlement of a formal truce, discusssions on which were prolonged by both India and Pakistan, as each jockeyed for a more favorable position. The principal point in dispute was troop withdrawal.

The admiral's explanation for taking the plebiscite job was quite simple:

"I like the United Nations, believe in it, and I want to help it."

News that the United Nations had stopped still another war—at least for the time being—reached Lake Success about noon on May 7. It came in a long cable sent from the Hotel des Indes in Batavia, where the UN Commission for Indonesia meets.

The Dutch and the Republic of Indonesia had agreed to call a halt to 5 months of jungle warfare. This 5 months was just the last stage in fighting that had gone on almost since the Japanese surrendered and the Netherlands administrators returned to the islands of the East Indies.

By the record, Indonesia is the oldest item on the agenda of the United Nations. Hundreds of hours have been given over to trying to find a way to bring the Netherlands and the Republic together. About a dozen resolutions have been passed and cease-fire orders have been ground out by the Council one after the other. Most delegates shudder and cancel evening appointments when anybody speaks the name.

After World War II, when the Dutch returned to Java, Sumatra, and Madura, they found that the independence movement had made headway during their absence. Leading the group of states that wanted out from the Dutch colonial empire was the Republic of Indonesia. Fighting began almost immediately and the Council stepped in.

With a good deal of backing and filling, the Council appointed a good-offices committee for Indonesia, while Australia represented republican interests, Belgium, the Dutch, and the United States was picked as a neutral.

The result of the committee's work was to bring both sides together one day on the U. S. S. *Renville* and get them to sign an agreement. That agreement provided for the establishment in 1950 of a United States of Indonesia, with the Republic as the most important member.

In December 1948, cables from Batavia announced that the Dutch had begun military action against the Republic, had swept over most of its territory, and imprisoned its leaders. The Republic, reduced to guerrilla fighting, seemed a dead cause. The United Nations effort in Indonesia seemed an even deader cause and with it died a lot of the Security Council's prestige.

The play shifted then to the General Assembly, the United Nations public forum, on which every member has a vote and a voice, and the veto doesn't exist. Technically, the Assembly can only make recommendations but actually it has become the most potent body in the UN. It has become a place where the small- and middle-sized nations can often outvote the larger powers. More, it has become the most powerful wielder of public opinion in the world.

Two members of the British Commonwealth that have always sided with the Republic — India and Australia — announced that they would demand full debate in the Assembly on the Indonesian case.

The colonial powers tried to put it off but were outvoted heavily. Then, a few days before Assembly debate was scheduled to begin, the dispatch from Batavia said the Dutch had given ground, had agreed to return to the Republic its one-time capital at Jokyakarta. The war was to stop, negotiations were to get under way at The Hague for the creation of the United States of Indonesia. The Republic was to get 50 percent of the seats in the new United States of Indonesia.

There was no doubt in any delegate's mind that this was a UN achievement, pure and simple. The Assembly, taking no chances, is keeping Indonesia on its agenda for September.

PEACEMAKING IN PALESTINE

The day that news of the Indonesian cease-fire came through, the Assembly was deep in a battle over the admission of Israel. The Arabs were still fighting hard to keep the new state out but by this time the knowledge of past accomplishment underlay the UN debate.

The United Nations, through its commissions and its mediator, Ralph Bunche, had brought peace to Palestine and had stopped war in the Middle East cold. It did it through the UN technique—bring them together, keep them together, dig, dig for an agreement, get kicked around, come back, and dig more.

Score: Three regional wars stopped.

The political record has not all been on the credit side of the ledger and nobody at the UN says it has. There is still trouble in the Balkans, trouble between Greece and her neighbors to the north, Yugoslavia, Albania, and Bulgaria. Dr. Evatt has held 70 meetings with the representatives of those four countries and has had tough going.

But there has been signs that there may be a break, that Russia may decide to pull out of the Balkan fight just as she dropped the Berlin fight. And for the same reason: The commitment was too deep, the returns too small.

So far as disarmament goes—atomic and just plain ordinary disarmament of old-fashioned things like air forces and navies—there has been nothing accomplished. The rift between the Soviet world and the Western World is still too large and deep.

The United States won't give up the atomic-bomb monopoly without the strictest sort of controls. The Russians think those controls mean United States domination of Soviet economy. They fought about it for a couple of years. The majority lined up with the United States, but the Russians didn't budge.

The United States wanted to drop the whole thing, said they were going around in circles. The Assembly in Paris didn't like that. It sided with the majority but announced that the United Nations Atomic Energy Commission must go on. An American said, afterward:

"We thought it was a waste of time. The Russians simply aren't having any. But if the Assembly thinks it is worth another try, okay. Maybe it is."

Politics. That's half the story of the case for the United Nations.

The men and women who don't make much news, just plug away every day in their windowless cubbyholes, can tell the rest of the story: of epidemics met, of children fed, loans made, trade agreements bargained out, food production stepped up, travel made safer, human rights set down on paper, backward regions given know-how, refugees housed and clothed, mass murder outlawed by convention, narcotics rigidly controlled. That is the do-gooders' part of the story.

Tied into the United Nations are 13 worldwide organizations who supply their own funds but are supervised by the United Nations and form an integral part of its machinery. They go by the dull name of specialized agencies.

Most Americans are scared away by the name. But, if they aren't and take the trouble to look into the specialized agencies they will find little items that may make them think twice about the world's greatest boondoggle.

Items like these:

On the island of Pakwachou in the Yangtze River, a team from the Food and Agriculture Organization showed a Chinese farmer just how a tractor worked. On Cape Cod, in the United States of America, a small girl was unhappy about a small lamb, dying from a gashed leg. Friends wrote to the FAO; the FAO took time out to send a detailed letter on the care and treatment of wounded lambs.

When it isn't attending to Chinese farmers and small girls from Cape Cod, the FAO tries to find more food for more people—the estimate is that 55,000 more people come into the world every day, all quite hungry.

All over the world FAO sets up conferences on increasing food production—in Cairo, Rome, Baguio, Terespol, Warsaw, Montevideo, Nairobi. It sends missions all over the world to teach farmers how to get more out of the land and fishermen more out of the sea.

CHINESE CATTLE INOCULATED

One went to China where subsequently more than 500,000 head of cattle and buffalo were inoculated against the black plague. Another FAO outfit fought a chestnut tree blight in Italy with blight-resistant strains from China.

Another mission spent 3 months in Siam, planning an increase in rice output. In Venezuela, FAO experts looked into the possibility of meeting a national lack of edible fats and oils by using palms and other plants.

The FAO uses international cooperation every day as a work tool. For instance, the job of dividing food stocks is one of the organization's chief tasks. A special international emergency food committee periodically goes over supplies of vital foods like rice, cocoa, fats and oils and makes suggestions on allocations. In one 12-month period, 475 allocations were recommended. In only 13 cases, did a government say no.

Paris is the headquarters for the United Nations Educational, Scientific, and Cultural Organization. So far, UNESCO has supervised the distribution of some $200,000,000 worth of supplies contributed by schools, organizations, and governments—books, microscopes, pencils, typewriters.

UNESCO has come through with $400,000 worth of its own money. On its own, UNESCO is fighting illiteracy all over the world. Test projects are going on in the Marbial Valley of Haiti and on the plains of Nyasaland in east Africa.

Then there is an organization called ICAO—the International Civil Aviation Organization, another specialized agency. Under ICAO agreements signed by member countries, part of the risk of traveling has been removed. Right now, a chain of weather ships is operating in the Atlantic, exchanging information and aiding in rescues.

ICAO cuts through red tape and sets up uniform stands for aeronautical maps and charts, rules of the air, licensing of personnel, and meteorological codes. That means that wherever a pilot flies he will face the same operating conditions.

The World Health Organization, WHO, set up in July 1948, is operating on a $5,000,000 budget and with it has declared war on malaria, tuberculosis, venereal disease. In Egypt, its doctors fought a cholera plague to a standstill.

All over Europe, millions came to know WHO through a campaign to immunize the Continent against TB. In Poland, Finland, and the Philippines, in Ethiopia and China, WHO is fighting epidemic, disease, plague, and filth.

One of its big weapons is an epidemiological intelligence station in Singapore, which receives information from 334 seaports and airports, and relays it via 12 radio stations to port authorities, aircraft, and ships at sea.

The International Refugee Organization in 1 year placed 374,000 refugees—sent them back home or found new jobs in more than 70 countries.

The International Bank lent $16,000,000 to Chile to build up its hydroelectric projects.

The UN International Emergency Fund, tied in with several other UN bodies, fed 4,500,000 children—a couple of billion meals—supplied cod-liver oil for a million German kids, in all four zones of occupation.

Up on the second floor of the UN's administration building is the office of A. H. Feller, the legal expert who untangles juridical knots for the UN. He used to be one of President Roosevelt's bright young New Dealers, and he is the man UN people go to when things get them down and they want to be told that they're not working for nothing.

As Abe Feller sees it, the UN isn't what it was designed to be at the time of the San Francisco Conference.

"The way they thought of the United Nations then," he says, "the responsibility would rest squarely on the United States, Britain, and Russia. It would be up to them to keep the peace. They would stick together and none of the little guys could start any wars."

It didn't work out that way and the Big Three became the Big Two and the Big One. To Mr. Feller that meant that the UN, the whole idea and operation, had to shift.

"Look, what we are now is a kind of lens. When something goes wrong, we can't pound any country into doing right. But we can turn the lens on the spot. It gets pretty hot under the lens. Things get done. Slowly, but done."

TALK AND VETOES IRK VISITORS

Visitors who come to the UN for a day have two main gripes—too much talk, too many vetoes. The 30 Russian vetoes in the Security Council are large in the visitor's mind. Mr. Feller tells them not to get too discouraged.

"The Council is not functioning as the big stick of the United Nations," he says. "It really never was meant to be a kind of international night stick. What is happening now is that the Security Council is emphasizing the mediation and conciliation angles of its job."

As for the long hours of talk:

"A man comes out to the UN," says Mr. Feller. "He sits through 2 or 3 hours of talk in a meeting. Nothing happens. He goes away. The UN is a talk machine he tells his friends."

Mr. Feller pointed through the window to the roof of the conference building stretched out below.

"We've got a dozen committees going every day in the work year. People come out here to tackle a problem. All right, in one room we are getting no place on housing. But next door we are hammering out a convention that every country in the world will enforce—a convention to stop the use of narcotics.

"All right, we are not getting any place on the atomic bomb. But in Geneva we've got an Economic Commission for Europe, pulling the Continent together industrially. Read the papers and you'll see they are getting someplace."

Mr. Feller leaned back and put his thoughts together for a minute.

"We've taken a lot of kicks on the pants, and we'll take more. But we have learned one thing: Peace is hard to come by. Nobody wants to lose face. It's easy to slide into war. But for peace, you've got to work at it every single day. A job and a half, believe me."

The United Nations Building is a labyrinthian place, and only an old-timer there could find his way easily through the winding corridors from Mr. Feller's office to the rooms where they deal in dollars and cents. The financial experts of the UN are preparing the 1950 budget for submission to the Assembly in September.

Last year Mr. Lie asked the 58 member nations to give him $33,469,587. For the 1950 financial year he may ask for a few hundred thousand dollars more to meet increased expenses of missions overseas. In September one of the Assembly's committees will go over the budget line by line, question every expenditure, haggle, and then decide it is worth it.

So for 1950 the United Nations will cost the world about $18,000,000 less than the department of sanitation costs New York City.

Testimonial for Francis P. Matthews

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. STEFAN. Mr. Speaker, by leave granted to me, I include in my remarks the address delivered by His Excellency, Gerald T. Bergan, Archbishop of Omaha,

on the occasion of the testimonial dinner given in Omaha, Nebr., in honor of Francis P. Matthews, the Secretary of the Navy, June 13, 1949:

Honor to whom honor is due. Never did I feel the practical aspect of that truism so much in its entirety as this evening, when old-time friends and neighbors gather round a common table and in genuine joy pay our meed of tribute to one of our own. There is a bit of selfishness too in our actions, for we of the family of Omaha, who try to share another's grief when sorrow's come, by desiring to carry our portion of the burden, so too in times of happiness secretly steal a morsel from the abundance of honest praise from him who has been so worthily recognized by the President of our beloved country, that we are honored, too, for he is one of us. And we live not unto ourselves alone and our distinguished guest would wish it so.

There are honorable positions and honorable persons. Common to all men is the respect for office, for dignity of place, for power and privilege, for the seats of the mighty. Many times from fear, place is worshipped and slaves cringe when raising their hands in forced salute as power passes by. Dangerous at times to the stability of men and nations is rampant force released unrestrained by reason, the gentle zephyr of fatherly authority, reaping the whirlwind of destruction.

Ever in the history of our country have there been persons worthy of honor. The vast majority of our citizenry, living their ordinary daily lives in loyalty, obedience, and service, walk down life's pathway, unnoticed and unsung. They are in truth America at her best, the great so-called middle class which lives only here and no place else. They ask for little and thank God for being just an American.

This evening a blending of both is the primary cause of this home-town celebration. A position of honor and dignity, filled by an honorable and dignified gentleman; a place of trust by one who can be trusted; a responsibility assumed by one who is indeed capable. The reverse of the modern order of the day—the office seeking the man in one of the most serious periods of our history. The rare phenomenon of a citizen asking nothing of his country but willing, if called, to give his all for her welfare. America owes me nothing; being ever in her debt, I will try to repay. What a lesson to those, whose numbers daily increase, that from the cradle to the grave, I shall offer nothing but be everlastingly receiving.

His mission is a peaceful one, though he now heads our first line of defense. In the mistrust and diplomatic dishonesty of today, his ships will be strong and mighty to keep the evildoer from our shores and they will be harbingers of good will and everlasting hope to the oppressed of every nation. Under his challenging leadership, his men will soon learn to respect and love him as we do at home and in his person will vision the embodiment of the Christian gentleman.

It may appear strange to some, but here is their new leader, a man of profession and business, successful according to worldly standards, who has battled his way upward from the lowest steps of the ladder from student days to a prominent place in secular affairs, who has done these things without forgetting his God. In a very worldly world, he has ever remembered that not by bread alone doth man live; that I have been made in the image and likeness of my God and must show forth in my life the principles which I have received from Him. That not only in the sanctuary of my own home nor in church on Sunday, but every hour of every day I shall as best I can show forth in poor human flesh, Him who is still the King of Kings, and the Lord of Lords and who holds the fate of nations in the hollow of His hand.

A man who knows that no nation can live long without its God, that above all ships and guns and atomic bombs, the strength of a nation lies in the integrity and sanctity of her people and that America shall fall when she forgets her God. And his days in Washington will open each morn with a private audience with his Maker, seeking light and guidance; and when weary eyes long for sleep, he will kneel down beside his bed to thank the great Navigator of his Navy for the blessings of the day. I assure you, ladies and gentlemen, the Navy and America are in safe hands.

Every honor demands its toll and sacrifice. He leaves Omaha where he was sheltered and protected by the love of his family and all of us. From the quiet shade of his front porch, he is ushered into the blazing light and piteous publicity of a cruel Capital. He knows by now that he is indeed the servant of the people, extremely exacting, demanding, the target for many an unjust blast, the gentle, patient victim of a thoughtless populace. But let him remember that B. B. shot and paper wads will never harm him. They are annoying and irritable but seldom fatal.

It will be consoling for you, Mr. Secretary, to remember that we of Omaha who knew you longest and love you best will remain steadfast in the golden ties of unbreakable friendship; that we are confident you will succeed in your most difficult and trying task; and we promise you our lasting support and a remembrance in our prayers. You will leave us for a while but you will always be our own, we who are so proud of you and from grateful souls we whisper, "Good-by," which in our hearts means "God be with you now and forever"!

Alger Hiss Trial

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Detroit Free Press of July 11, 1949:

LET CONGRESS INVESTIGATE TRIAL OF ALGER HISS

Eight of twelve jurors found Alger Hiss guilty of perjury. This means they believed he lied to save himself from being exposed as a traitor to his country.

Now there is talk of retrial. We doubt if the case is ever brought to court again.

That is, unless some congressional committee bestirs itself and demands a complete investigation of the whole mess of "le affaire Hiss," including the trial.

Representative NIXON, of the Un-American Activities Committee, pledges a complete hearing on the trial judge's "prejudice for the defense and against the prosecution." * * * Also his "fitness to serve on a Federal bench."

There are so many strange angles to the Hiss case that it will probably go down in the annals of American jurisprudence as a historical mystery to be ranked with the arcanum of The Man in the Iron Mask in the days of King Louis XIV when the infamy of political intrigues could not stand the light of day.

It should be kept in mind that Alger Hiss, the brilliant, sneering, cynical protege of Justice Felix Frankfurter, was the personal adviser of Franklin D. Roosevelt at Yalta when the sick President agreed to give Stalin just about anything he wanted—a case of befuddlement which has already cost the United States some billions of dollars and many lives and still stands as a threat to world peace.

It was at Yalta that Roosevelt was induced to turn over to Moscow the fate of 100,000,000 eastern Europeans for slavery and slaughter. But nice Mr. Hiss must not be prosecuted. Just a red herring.

It was also Alger Hiss who did organizational work in the creation of the United Nations.

To have found him guilty would have been a terrible blow to the prestige of the New Deal State Department—long pervaded by Socialists, Communists, and fellow travelers.

All the left-wing columnists, apologists for New Deal totalitarianism, sense this. At least they moved in unison as though puppets pulled by one string. The Hiss trial, they screamed, is an attack on "our great leader Franklin D. Roosevelt." Even that middle-of-the-road sympathizer with the radicals, Marquis Childs, said in his column of June 24:

"Many regard Hiss as the symbol of the Roosevelt era. If he should be convicted, they will consider it a verdict of guilt against the dead President and the men who made the New Deal."

This, no doubt explains why Justice Frankfurter made the astounding gesture of voluntarily going on the stand to testify as a character witness for Hiss. Ironically the jury by an 8-to-4 verdict (not a 5-4 opinion) preferred to ignore the Frankfurterian encomiums.

It should also be kept in mind that this case was not initiated by the United States Department of Justice but by a congressional committee investigating un-American activities. Before this committee Whittaker Chambers, a reformed Communist, sought to right the wrongs he had done his country by telling of the Red boring-from-within tactics employed in our State Department—a charge well supported by the evidence in the Judy Coplon case.

Hiss was caught at last in the net by an indictment before a New York grand jury for perjury—not for the actual charge the congressional committee was seeking to make.

It was at this time that President Truman began shouting from the housetops about "red herrings" and "hysteria." He has never deviated from that line. He has let it be known how bitter he is toward J. Edgar Hoover and the FBI for its brilliant work in uncovering so much evidence. (If that is not the reason for his anger, what is it?)

We may be forgiven, perhaps, for not going all the way with anything that Mr. Truman says about the pursuit of crime following the calm manner with which he received the news that professional safecrackers had exploded the Kansas City vaults to steal the evidence of vote frauds in the defeat of Congressman Slaughter—whom he had ordered his old Pendergast gang to "purge."

And we cannot forget those Al Capone murderers and extortionists who were mysteriously released from the penitentiary with Truman's old campaign manager—and crony—as their lawyer.

Not the least fascinating phase of the long bitter trial has been the unorthodox conduct of the judge of the case, Samuel H. Kaufman.

He is a Truman appointee.

The President sent Kaufman's name to the Senate on May 17, 1948. It was not acted upon. He sent the name in again on July 29 after the Senate had reconvened. Again, it was not acted upon. Letters of objection against the appointment had been filed by the New York Bar Association and the American Bar Association but they were not followed up. After Congress had adjourned in

the fall of 1948, President Truman gave Kaufman a recess appointment, then submitted the name for the third time to the Senate on January 3, 1949. He now had a Democratic majority and the appointment was confirmed on January 31. The Bar Association protests were withdrawn and the Judiciary Committee reported without comment. Kaufman has long been a stanch New Dealer and ardent Trumanite.

Of his conduct in court the always ethical and painstakingly accurate New York Times has carried running comment in its daily stories of the trial. Discussion of many of his rulings and his obvious quirks has become widespread. A paragraph from the current issue of the magazine Newsweek is typical of the restrained comment from the objective press:

"On Friday the Government felt it could clinch the case by placing Mrs. Hede Massing, the first wife of Kremlin agent Gerhart Eisler and herself a former Communist agent who claimed she had known Hiss in the spy underground, on the stand. But Judge Samuel H. Kaufman, already under fire for his handling of the case and accused in press accounts of being in Stryker's political debt, refused to let her take the stand.

"Frustrated and outraged, Murphy called in another witness to contradict Hiss' testimony. Again Kaufman ruled him out."

Strangest of all—and perhaps unique in the history of American jurisprudence—Judge Kaufman refused to give any reason for not letting Mrs. Massing testify for the Government.

With an insouciant arrogance he declined to explain his ruling. Yet the warrant for the prosecution of the prisoner plainly says that it is the case of the "People against Alger Hiss." This newspaper thinks the People, as sovereign, have a right to know why Judge Kaufman so ruled.

In contrast to the sheet-iron protection given by the Court to Alger Hiss no holds were barred for the prosecution in seeking to discredit the testimony of Whittaker Chambers. Even such tricks as this: Defense Counsel Stryker put a psychiatrist on the stand. Stryker took 45 minutes asking this doctor one hypothetical question as to Chambers' possible insanity. But before the doctor could answer, he was dismissed. By this means the jury got an impression without evidence. The prosecutor denounced the stunt as a "grave injustice to the Government." That was a remarkable understatement. It was a cheap shyster trick that would not have been allowed in one of our lower police courts.

Any textbook on the laws of evidence would reveal that the defense was as full of holes as a screen for cobble stones. The fact that the stolen reports were copied on the Hiss family typewriter was never refuted.

One stunning example of evasion and falsehood came from Mrs. Hiss who swore that she could not remember ever having joined the Socialist Party. The prosecution showed by the voting register that she was a Socialist and had voted the Socialist ticket.

Marquis Childs and the other bleeding hearts of the welfare state proclaim that it is not Hiss who has been on trial but the New Deal and President Roosevelt and—some even say—humanity itself.

That's the way Judy Coplon talked before it was shown that she knew the wallpaper pattern of so many hotel rooms.

No, Alger Hiss is—or was—on trial, as the prosecutor said, for doing what Benedict Arnold had done.

If that is placing the New Deal on trial then we would suggest the New Deal was conceived and carried out in very bad company.

Hiss is—or, again, was—on trial and so was the Truman administration on trial and so is the entire cast of the actors who are seeking to take from the American people their ancient liberties and make of them subjects of a welfare state—first the opium of freedom from worry, freedom from responsibility, freedom from all work, freedom from political, economic, social, and moral obligations—then the yoke of abject totalitarianism for which Moscow waits.

The descent is down three steps: The welfare state, socialism, communism—unto the police state of Hitler, Mussolini, and Stalin.

Yes! Yes! Far more than Alger Hiss has been on trial and—God grant, for the salvation of this Republic—will forever remain on trial.

Colorado River Controversy

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1949

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

The position of the California delegation in the House of Representatives, with regard to the Colorado River controversy, is made absolutely clear by the resolution attached to this statement.

California is facing a fight for the preservation of its legal share of Colorado River water that is vital to our future economy. This resolution, signed by all 23 Members of the California delegation, reaffirms our unqualified determination to safeguard and protect California's farms, industries, and homes.

Herein is expressed and demonstrated the united stand of California's Members of Congress to fight with all means at their command for an assured progress and development within the boundaries of our legal and just rights.

Whereas the central Arizona project sponsored by Arizona will require the use of water legally belonging to California; and

Whereas California has offered to negotiate, arbitrate, or litigate the legal title to said water with Arizona but all of said offers have been rejected and compromise appears impossible; and

Whereas 23 Members of the California delegation have introduced similar resolutions authorizing settlement of the controversy in the Supreme Court: Now, therefore, be it

Resolved by the California delegation at its special meeting of June 17, 1949, That this delegation affirms its unqualified opposition to the central Arizona project and reaffirms its unanimous support of the legislation designed to bring the entire question of water rights on the Colorado River to the Supreme Court of the United States for decision.

The foregoing resolution was adopted by unanimous vote of the California delegation present at said meeting.

HARRY R. SHEPPARD, Chairman, CLAIR ENGLE, Secretary, HUBERT B. SCUDDER, LEROY JOHNSON, FRANCK R. HAVENNER, GEORGE P. MILLER, CLINTON D. MCKINNON, JOHN J. ALLEN, Jr., GORDON L. MCDONOUGH, T. H. WERDEL, RICHARD J. WELCH, CECIL F. WHITE, DONALD L. JACKSON, ERNEST K. BRAMBLETT, NORRIS POULSON, JACK Z. ANDERSON, CECIL R. KING, CHET HOLIFIELD, RICHARD NIXON, CARL HINSHAW, JOHN PHILLIPS, CLYDE DOYLE, HELEN GAHAGAN DOUGLAS.

Government Financing

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 13 (legislative day of Thursday, June 2), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address which I delivered over Station WGN, Chicago, Sunday, July 10. A digest of this same address was also broadcast during the last several days over the following Indiana stations: WGBF, Evansville; WAOV, Vincennes; WTTS, Bloomington; WOWO, Fort Wayne; WBAT, Marion; WIBC, Indianapolis; WHOT, South Bend; WFML, Washington; WIMS, Michigan City, WASK, Lafayette; WIOU, Kokomo, and WTRC, Elkhart.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A few days ago the people of this great Republic were told that the Government failed to meet its expenses with the amount of revenue taken in by $1,800,000,000.

That report alone is a shameful admission by a Government that had available the tax revenues from one of the two most prosperous peacetime years in the history of the country.

But even more shameful is the fact that the same Government never tells quite all of the story of its spending.

And it hasn't told the whole story of its spending for many years.

I am going to talk to you today about a phase of our Government spending that is not generally discussed.

First of all, I want to say at this point that the amount of money spent by a Government and the purposes for which it is spent are always two separate considerations.

We have no objection to Government spending for proper purposes and providing the spending is kept within the ability of the people to pay.

We cannot be progressive as a Nation through false economies.

By the same token we cannot survive as a Nation through false progression.

It is one thing to tell the people that we are progressing and another thing to actually progress along those lines.

For example, in the matter of social security, our country is actually being retrogressive.

We are going backward.

We are going backward because our Government leaders are not being truthful about the conditions under which social security programs are being conducted.

I said a moment ago that it is shameful that our Government does not tell all the story of its spending.

Let's look into the facts supporting that statement.

In the fiscal year of 1949 the Government collected a total of $2,610,000,000 in employment taxes.

That is the money deducted from the pay rolls of the Nation.

Of that total, the President's budget for 1949 showed that $1,754,000,000 was appropriated to the trust funds in which that money is supposedly held.

The balance, or approximately $900,000,000, was required for administration of the act

and for current benefit payments under the act.

Here is where the interesting part of this story begins.

The $1,754,000,000 was deducted from the amount of Government revenue available for the cost of Government because that money supposedly went into the trust fund.

However, that many dollars did not actually go into the trust fund.

Government bonds totaling that amount were placed in the trust fund.

The money became available, through the sale of the bonds to the trust fund, for general purposes.

The bonds, at the same time, became a part of the national debt of $252,000,000,000.

Since the $1,754,000,000 collected in employment taxes above and beyond the cost of the program for fiscal 1949 was used for general purposes, then our actual deficit for fiscal 1949 was not $1,800,000,000 as reported—but was $3,500,000,000.

In fact, the deficit should be counted as greater than that because the Government must pay interest to the trust fund on the amount of bonds held in the fund.

The money collected by the Government through pay-roll taxes is not designed for general purposes.

It is raised to be placed in funds from which unemployment benefits are to be paid.

It is raised to be placed in funds from which old-age and survivor benefits are to be paid.

It is raised to be placed in funds from which railroad-retirement benefits are to be paid.

It is not raised to fill the coffers of a paternalistic government that seeks to meet every problem with funds from the Government till.

True, the Government could not possibly continue to build such tremendous funds with idle dollars.

And equally true is the wise investment of those dollars in the bonds of the Government in which we should have our greatest faith.

Certainly if our Government bonds are not worth the investment, then we have failed as a nation.

But, let us look further into this financial paradox.

At this very moment the Federal old-age and survivors insurance trust fund has a total of $10,795,800,000 in Government bonds.

The railroad-retirement account holds $1,713,000,000 in Government bonds.

The unemployment trust fund has $8,170,400,000 in Government bonds.

This is over $20,000,000,000 in Government bonds in three trust funds.

There are other Government-held trust accounts that have additional bonds.

In fact, the Treasury report for June shows that the trust accounts own a total of $37,519,000,000 in Government bonds.

This total is a part of the Government's debt of $252,000,000,000.

That means the money, which was replaced by bonds, was used for other purposes—general Government expenditures.

Being factual about this matter requires anyone to admit that such an operation is purely in keeping with good business.

Private insurance companies do the same thing.

They invest the money collected beyond the current needs in order to build the balances required in the actuarial program.

That is what our Government set out to do and rightfully so.

However, the fallacy of the Government program lies in the fact that when it comes time to replace the bonds it must do so with funds collected by general purpose taxation.

Now I want to refer to the report on the trust funds which was made to the Eightieth Congress by a special advisory council on social security.

The council says in its summary that only about three out of every five jobs are covered by the program.

That means, then, that the money used out of the trust funds was paid in by three out of every five workers in the country.

When the time comes to replace the bonds the money with which the bonds would be retired would have to come from all of the workers—not from the three who had already paid into the fund.

Of course, the three who had paid into the fund would have to pay all over again.

Based on the actuarial study of social security programs made by the advisory council, the increased benefits and expanded security plans will call for increased pay-roll payments over future years.

The study shows, too, that the surpluses from increased pay-roll payments will serve to enlarge the surpluses and working balances for the years when benefit payments will be greater due to greater coverage and more beneficiaries.

However, my discussion of what has been taking place with respect to social security funds—what is taking place right today and what probably will continue to take place until the Government has the courage to be honest about how much it is costing to run this overgrown Government—is being done in the hope of bringing to light our great financing fallacy.

Strangely, the manner in which our Government is using the money collected through pay-roll taxation is not new.

Where was it done before?

This mas be a shock to you, but Adolf Hitler used exactly the same means to build the German fascistic armed might which turned the whole world into a bloody turmoil from which we have not yet completely emerged.

I would like to refer to the book by Jurgen Kuczynski, expert on European economies.

The title of the book from which I will quote is:

Germany: Economic and Labor Conditions Under Fascism.

Mr. Kuczynski, in writing about the Fascist methods and policies of financing, said the following:

"Another way of decreasing the spending power of the people is by forced deductions from their wages or salaries, besides the usual tax deductions.

"Such deductions have been increased continuously since 1933.

"In 1939 they included, apart from taxes and social-insurance contributions, voluntary contributions to the party funds, the labor front, the N. S. welfare, the air defense league, the association for Germans abroad, the people's care, etc., and amounted to about one quarter of the worker's wages."

It is needless to explain where the money has been obtained by our Government to meet social benefit costs that are more than five times what they were just 10 years ago.

The people cannot get money from their Government unless the people put money into their Government.

But let us read further from Mr. Kuczynski's book.

"Part of this money is, of course, in some form or another, returned to the worker.

"If he falls ill he receives some benefit from the health insurance.

"But while the worker usually has to pay about 3 percent of his income on unemployment insurance, the amount paid in benefit is almost nil——

Now get this—and I am still quoting from Mr. Kuczynski's writings:

"Vast sums being used to support the Fascist war effort."

There you have an exact parallel to the manner in which we collect pay-roll taxes in this country and use the money for other purposes.

Let us proceed with more of the history of Mr. Hitler's tactics as described by Mr. Kuczynski.

Again I quote from his book:

"The amounts paid by the unemployment-insurance fund to support the Fascist war effort was about 1,880,000,000 marks from 1934 to 1937 and about 3,900,000,000 marks from 1938 to 1941."

That means that Mr. Hitler took the equivalent of nearly a billion and a half dollars from the unemployment-insurance fund to support the war effort.

He did the same thing with money paid into the famed German Krankenkasse, or health-insurance fund, and to other social-insurance funds.

You may ask by what means this parallels the experience I have cited with respect to our own method of operation of the trust funds.

Let me read again from Mr. Kuczynski's book:

"Why did fascism allow this rise in the social insurance fund to continue?

"The reason is a very simple one.

"Like everything else that fascism touches, the social insurance system was transformed into an instrument of war and oppression.

"Fascism did not reduce the contributions because this would have placed more money in the hands of the workers and this, in turn, would necessitate increased production of consumptive goods.

"The social insurance system, to a certain extent, became an auxiliary tax system, a method of taking money from the workers."

Let me repeat that—

"The social insurance system, to a certain extent, became an auxiliary tax system, a method of taking money from the workers."

Now, as I proceed to read from Mr. Kuczynski's book I want you to pay close attention to the similarity of operation of Germany's welfare funds with the manner followed by our Government.

"The funds which in this way accumulate are invested in Government bonds.

"That is, like unemployment insurance, the rest of the social insurance system was used as a means of financing the war preparations of fascism.

"During the 5 years under review the investments of the social insurance system in Reich loans rose by roughly 2,000,000,000 marks. * * *

"That is, during these 5 years the social insurance system, excluding unemployment insurance, financed armament expenditure to the extent of about 2,000,000,000 marks."

We collect our welfare funds from pay-roll taxes.

Hitler collected them from pay-roll taxes.

We have trust funds in which bonds replaced the funds.

Hitler had trust funds in which bonds replaced the funds.

We use the money, beyond immediate benefits and administrative costs, for other purposes.

Hitler used the money, beyond immediate benefits and administrative costs for other purposes.

Hitler used the money to prepare for war.

We are using much of our money to prepare for a socialist state.

As I said at the beginning of this talk, we cannot be progressive as a nation through false economies, but we cannot survive, either, through false progression.

The Government is not being fair when it fails to include the money used from the trust funds as a part of its total budget.

In his budget message to the Eighty-first Congress, President Truman submitted figures of the anticipated budget receipts for fiscal 1949 which just ended.

His message was sent to the Congress last January 3.

He listed among the budget receipts the estimate of $2,610,000,000 from employment taxes.

Then, in that same budget he deducted from the anticipated receipts the total of $1,754,000,000 which was to be appropriated to the various trust funds for which it was collected.

The truth is, of course, that bonds for that amount were credited to the trust funds.

What was done with the actual money?

It might have gone for European relief; it might have gone for reclamation projects; it might have gone for any one of the many subsidies.

No matter what it went for, it should have been included as an item of income and the expenditure shown in the budget.

We have more than $37,000,000,000 in bonds in those trust funds which some day will have to be retired.

The Government must retire them with funds collected from general taxation—it cannot do it any other way.

That money, as I said before, must come from not only those who have already paid into the funds, but also from those who get no benefits from the funds.

And to describe a wheel-within-a-wheel, I would like also to point out that the interest on the trust fund bonds is running at about $700,000,000 a year and that interest is being paid by those who have already paid and those who are not going to get anything out of the funds.

Oh, yes, and I might add that the $700,000,000 interest is also converted into bonds which also go into the trust funds to draw more interest next year.

Security is a wonderful thing—wonderful for the State and the individual and while we seem to at times meet with difficulties in hope of attaining that goal, I am sure Americans will not permit the experience of the Krankenkasse to be repeated here.

I think the social welfare advisory committee in its report t the Eighty-first Congress spelled out real security in these words:

"In the last analysis the security of the individual depends on the success of industry and agriculture in producing an increasing flow of goods and services."

In conclusion, I would like to point out that increased benefits in the unemployment compensation and social security programs can be made without considering an increase in pay-roll deductions.

The Government is now proposing increased deductions to meet increased benefits and additional benefits.

The figures and policies prove that pay-roll deductions do not form the pattern for the benefits which can be paid.

The Government has met existing benefits with current collections and replaced the balances with bonds.

If the Government is to continue this policy it must meet all payments, whether increased or not, from current revenues—either pay-roll deductions or direct taxation, or both.

Therefore it makes no difference how much the Government increases the benefits, or when it increases them.

Any increase now in pay-roll deductions will merely mean additional money for other Government expenditures and additional bonds in the trust funds.

Atlantic Pact—Atlantic Union

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, July 13 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a discussion between me and Mr. Charles Parmer, a nationally known radio commentator, on the subject of the North Atlantic Treaty, on Saturday, July 9, 1949.

There being no objection, the discussion was ordered to be printed in the RECORD, as follows:

Senator KEFAUVER. Ladies and gentlemen, today I am honored to have in the studio with me Charles Parmer, a nationally known radio commentator, whose programs you have often heard from the Nation's Capital. Mr. Parmer and I will discuss the North Atlantic Treaty which is being debated in the United States Senate, and Mr. Parmer will bring up any matters about the treaty which he thinks will be of interest.

Mr. PARMER. This past week Senator KEFAUVER and his colleagues considered an important step in the direction of world peace. I refer, of course, to the North Atlantic alliance. So that you, who sent the Senator to this office to represent your interests, may better understand the situation, I am going to ask Senator KEFAUVER some questions, and we are going to discuss just what all of this Atlantic Pact discussion is about.

First, Senator KEFAUVER, what is the purpose of the North Atlantic Pact?

Senator KEFAUVER. The lessons of history show most conclusively that if we are to have stability and peace, it is absolutely necessary that the North Atlantic democracies join together and work together. This unity was necessary 30 years ago and it is more imperative today. We are living in an age of atomic energy, supersonic planes, guided missiles, and chemical warfare. Self-protection, the first law of nature, demands that we pool our defenses to survive.

Mr. PARMER. Well, now, Senator, is it not a fact that when a war starts the democracies of the world do join together for the mutual defense and mutual waging of war?

Senator KEFAUVER. Yes; of course. After a war starts military staffs of the democracies are combined; we lend-lease munitions and materials; our varying currencies are stabilized; we remove trade barriers and enter into such other agreements to enable the democracies to fight aggression with the greatest possible effectiveness. The whole question, to my mind, is "Why don't we do these things now before hostilities break out?" If we wait until a state of war exists, then our planning is for war. If we prepare now, then we are planning for peace.

Mr. PARMER. Then do I understand that you favor getting everything in order now for World War III?

Senator KEFAUVER. That is not my intention at all. If we are unified and prepared, I have an idea that the nations of the world will find some method short of war to settle international disputes. More important, perhaps, is the fact that any present or future dictator would stop, look, and listen before striding headlong into a loaded gun.

Mr. PARMER. Of course, Senator, we have the United Nations Organization. Wouldn't the ratification of the North Atlantic Treaty by the Senate weaken its position in world affairs?

Senator KEFAUVER. On the contrary, I think it would strengthen its position. The United Nations Charter provides specifically that the member nations may enter into these regional defense alliances. At the same time it is obvious that Russia, by a wholesale use of the veto power, will not permit the United Nations Security Council to function as it was intended. Added to this is the accepted fact that if the democratic nations of the world face aggressive action at the present time, it will come from Russia. All of these factors make the Atlantic Pact not only a supplement to the United Nations Organization but a necessary regional defense measure as well.

Mr. PARMER. I wonder if you would tell us briefly, Senator, just what the Atlantic Pact would do in practical operation.

Senator KEFAUVER. It is very simple. Stripped of all its legal language, the pact provides simply that an attack on one of the nations of the North Atlantic region would be construed by the others as an attack on them.

Mr. PARMER. But, what about the provisions in our Constitution that give Congress the right to declare war?

Senator KEFAUVER. There is no conflict there. The pact merely states that an attack on one of the agreeing nations shall be considered as an attack on all. The pact doesn't specify what we would do in such a situation. Of course, the spirit of the alliance would be meaningless unless we did come to the aid of a member nation in the event of an attack. I know of no way that this country could be committed previously to declare war unless our Constitution were amended; and that isn't likely.

Mr. PARMER. In other words, we would not be in any different position than we are now, say, if an attack was made on Canada?

Senator KEFAUVER. That is correct. It would still be up to Congress to say what our action would be under the circumstances. This pact merely serves notice on would-be aggressors that it will be our policy to protect one another. That protection and assistance may take some form other than a declaration of war. It would show to the world that we intend to protect freedom and free institutions within our region.

Mr. PARMER. Senator, what has been the history of aggressor nations with regard to attacks on other nations?

Senator KEFAUVER. History shows that aggressors always attack the weak and defenseless nations first. The aggressors always gobble up these comparatively weak nations one by one, solidify their position, and then take out after the stronger ones.

Mr. PARMER. Then, as I understand it, it is your notion that the North Atlantic Pact is the best means of establishing a lasting peace?

Senator KEFAUVER. No, sir; not at all. I am all for the Atlantic Pact. I think it is a definite step in the direction we must go. But, I don't think it will solve our peace problem. We must remember that the North Atlantic Pact is an alliance. It is based on a treaty. Treaties are nothing more than mere promises, and our experience with treaties has not been good. We all remember the Treaty of Versailles, the Lacarno Pact, and so forth.

Mr. PARMER. What then, sir, do you propose as a solution?

Senator KEFAUVER. Before we have real peace in this world, we must have a system of international law under which we can conduct international affairs. France and Great Britain agreed to protect the Rhineland in the Locarno Pact, yet Hitler moved right in unmolested. The Allies and Hitler

agreed at Munich that Czechoslovakia would not be invaded, yet again Hitler broke his promise and overran Czechoslovakia. Hitler wouldn't even keep his nonaggression treaty with Russia.

No, treaties won't do the job on a permanent basis. What we need is a peace based on law.

Mr. PARMER. In other words, it takes more than mere military alliance to bring a state of peace.

Senator KEFAUVER. Very definitely, it does. Economics is equally important. I should like to see a common approach to foreign policies, stabilization, at least in the North Atlantic region of our currency; an expansion of free trade; and a general military staff. A federation for limited purposes seems to me to be the final answer. But, let me say again, I think the North Atlantic Pact is a step in the right direction and I expect to support it.

Mr. PARMER. Perhaps, this isn't a fair question, Senator KEFAUVER, but I am wondering if you are doing anything to further the suggestion you have just made?

Senator KEFAUVER. Oh, yes. I have prepared a resolution, which I expect to introduce immediately the North Atlantic Treaty is ratified. This resolution, which is cosponsored by many of my colleagues, calls on the President to convene a constitutional convention. To the convention would be invited all the freedom-loving democracies of this region. This convention would take pretty much the form of the American constitutional convention, out of which came the most nearly perfect system of laws the world hase ever known.

Mr. PARMER. Do you mean the constitutional convention where the Thirteen Original Colonies met to set up our first Federal system of laws?

Senator KEFAUVER. Exactly. The differences existing among those Thirteen Colonies were as great as the differences between the various democracies of the world today.

Mr. PARMER. How do you think Russia would receive this news?

Senator KEFAUVER. Well, she wouldn't dare attack us in meeting. War would be certain if she did. Russia isn't ready for a war, by the way. Of course, we couldn't expect and, as a matter of fact, we wouldn't want Russia to join. But the latchstring would always hang on the outside so that other nations could join when we became strong enough and successful enough and when they adopted democratic forms of government.

Mr. PARMER. You really believe in this project, don't you, Senator?

Senator KEFAUVER. I certainly do, sir. To my mind, this is the surest means of unifying the free people of the North Atlantic region for military and economic purposes. The end result, with a little luck, would be a period of peace and stability which the world cries for today.

Government Bonds and Federal Finances

EXTENSION OF REMARKS
OF
HON. CLYDE M. REED
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 13 (legislative day of Thursday, June 2), 1949

Mr. REED. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Must It Be Done?" from the Phillips County Review published at Phillipsburg, Kans.

This is a very sensible editorial appearing in one of the leading weekly newspapers of Kansas.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MUST IT BE DONE?

Who can buy the bonds when times get tough again?

You may think this question doesn't affect you, but you're wrong—so badly wrong. It affects the future of every person—the wage earner, the civil-service employee, the farmer, the individual businessman, the needy aged, the teacher—everybody.

Who can buy the bonds when times get tough again?

Government money comes from us. We're the only source there is. When times get tough again, we won't be making as much money and we'll pay less taxes of all kinds. At the same time, there will be more unemployed, and the demand for Government aid will go up.

With tax receipts going down and demand going up, the Government, to get funds, will ask us to buy bonds again, but who can buy the bonds?

The man who is out of a job?

The farmer who doesn't get a crop?

The businessman who is fighting lean years?

The public will be selling bonds to meet its needs when times get tough again.

How about the banks?

In 1941—that was a good year and most everybody made some money—in 1941, the First National Bank of Phillipsburg had $700,000 on deposit and $250,000 of that was invested in Government bonds.

In 1949, just 8 years later, there was $2,800,000 on deposit and $1,750,000 of that was invested in Government bonds.

If conditions would go back to 1941, the First National would be forced to sell at least $1,500,000 worth of Government bonds to meet the demands of its depositors and maintain its loaning service to this community.

Our bank is little different than other banks. Deposits are high everywhere, and most of the money is invested in Government bonds. Banks would be forced to sell bonds if the Nation's economy should revert to 1941. They would not be able to buy more.

If the Government cannot sell still more bonds, who will meet the civil-service pay roll? Who will pay the pensions? Where will funds come from for unemployment payments? From what source will the money come for farm price supports, reclamation projects, slum clearance, veterans' appropriations?

Printing-press money has ruined every country that ever tried it, but who can buy the bonds?

Nobody objects to the school-lunch program; farmers feel that price supports are essential to a sound agricultural economy; working men and women believe in social security; reclamation projects have their appeal in irrigated areas; an extra Government job in our town is rated a good thing—another wage earner; our aged persons in need must be cared for.

With Russia making threatening gestures throughout the world, we cannot quarrel with an adequate defense; nor with the idea of helping democratic peoples of the world become self-supporting.

We do not quarrel with worthy objectives, but some steps must be taken to insure the financial strength of our Government and protect the security of everybody.

The Government spent $3,000,000,000 more this fiscal year than last; at the same time tax receipts—for the period ending June 7—fell off nearly four billion. Every day the sun rises and sets, we are further in the red—and times are still good.

When depression hit us all in 1932, there were only a few Government bonds on the market. It was easy to sell bonds to finance Government aid. Who can buy the bonds this time?

What will your pension, your investments, and your savings plans be worth if this generation fails to find the right answer?

New programs calling for new expenditures are now advocated. The number on the Federal pay roll continues to increase. The proposed budgets for various governmental activities are higher than ever.

We will not try to pick and choose the most worthy projects. We think that nearly everybody favors one expenditure or another. But we will suggest a yardstick:

"Must it be done?"

We think that every questionable or unnecessary expenditure today is another nail in the coffin of national security. We urge you to write your Congressman or Senator and ask him:

"Must it be done?"

If every expenditure is examined with that question in mind, we believe that out of present tax receipts a little something can be laid by for a rainy day; that an emergency surplus can be acquired which will provide the means to avert financial chaos in a declining economy.

Frankly, we doubt that anybody can buy bonds when times get tough again, and a little cash on hand may save the day.

The Republican Party and the Labor Vote

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 13 (legislative day of Thursday, June 2), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article entitled "The Republican Party Doesn't Want the Labor Vote," published in the July 9 edition of the Nation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The Republican Party doesn't want the labor vote. There is some ground for wondering whether it ever again wants to win an election. That is the only political interpretation one can make of that party's approach to a revised labor law. Senator MORSE, the maverick G. O. P. Senator from Oregon, was heard to comment as he left the floor after the vote, "You just saw several Republican Senators committing suicide." And Thomas E. Coleman, a Stassen backer in 1948, resigned last week from the party's strategy committee because it had failed to develop anything like a strategy. Conversely, the administration is widely reported to be less upset over the Senate's renewal of the Taft-Hartley Act, in the spirit if not the letter, than such a reversal would lead the innocent citizen to expect. As compensation for its failure to deliver on one of its principal election promises, it hears President Green warn of the American Federation of Labor's determination to go after the preservers of the injunction, "with our sights trained on the 1950 election." It hears Philip Murray promise to submit their records to the "political judgment of the voters at the

next elections." Nobody seriously questions the contribution of organized labor to the Dewey debacle of 1948, nor the findings of Elmo Roper which we cited in the last issue of this magazine. The inescapable inference to be drawn from those findings was that the Republican Party was doomed to oblivion unless it found a way to appeal to the low-income voter. By enacting, with Dixiecrat help, what Senator PEPPER calls a bob-tailed edition of the Taft-Hartley Act, it has embarked on the search with its eyes shut tight and a long step backward.

Early Production of Iron in the United States

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Wednesday, July 13 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from J. H. Hillman, Jr., to Mr. A. L. Moredock, president of the Greene County Historical Society, Waynesburg, Pa., which contains some very interesting material relative to the early production of iron in the United States.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JULY 6, 1949.

Mr. A. L. MOREDOCK,
President, Greene County Historical Society, Waynesburg, Pa.

DEAR MR. MOREDOCK: I am in receipt of your letter of June 30.

In your letter you ask for the date of the first iron manufactured east of the mountains. I presume that what you really mean is west of the mountains, but I will endeavor to answer the question both ways.

EAST OF THE MOUNTAINS

In 1620 the Falling Creek Iron Works was set up about 7 miles below Richmond, which was the first attempt.

In 1643 a furnace, forge, and foundry were built on the Saugus River, near Lynn, Mass.

In 1652 at Taunton, Mass., near the town of Braintree, a furnace was set up to make anchors.

In 1658 a furnace was set up at New Haven, Conn.

In 1675 the first iron works was set up in Rhode Island, near Providence.

This is a geological upheaval that extends all the way from Rhode Island, across part of Massachusetts and Connecticut into the Salisbury and Lime Rock district in northwestern Connecticut and eastern New York State, and then takes a turn down through the Greenwood Lake district and northern New Jersey.

In this district there were hundreds of charcoal iron furnaces built in the old days. This extends down into Pennsylvania and then takes a turn westward and presumably the same seam appears around Cornwall, Pa., where 1,000,000 tons of ore a year are being mined by the Bethlehem Steel Co.

PENNSYLVANIA

The first iron made in Pennsylvania was made in 1692 in a furnace supported by William Penn. This came from a deposit of iron ore that crops up near Pottstown, and was quite a large development. These furnaces continued using charcoal as a fuel until about 1860, when they commenced to mix anthracite lump in the furnace and furnaces were gradually enlarged from 2½ to 3 tons a day up to 30 to 50 tons a day.

The writer himself can remember in 1896 and 1897 traveling down through the Pottstown to Bethlehem area and visiting these various furnaces and trying to induce them to use Connellsville coke made in hand-drawn, bee-hive ovens. Finally anthracite was thrown out and coke became their sole fuel.

The Cornwall Furnace, built in 1742 by Peter Grubb, operated until 1882, but the Robesonia Furnace, immediately adjoining, operated out of the same ore banks. The Robesonia Furnace had a right to use ore sufficient for one furnace, under a lease that ran as long as water runs and grass grows. We sold them a great tonnage of coke. Finally, they were purchased by Bethlehem Steel Co. in order to get their ore rights out of the Cornwall Ore Mines, which as I have stated before, are still running and are practically the only commercial ore mines in Pennsylvania now, and produce over 1,000,000 tons a year.

Southwest of Philadelphia in Maryland were the Muirkirk furnaces, which had quite a deposit of ore and made charcoal pig iron very similar to the Salisbury pig iron made in Connecticut. The writer was the Pittsburgh agent for this iron and sold a great deal of it to the rail makers.

WEST OF ALLEGHENY MOUNTAINS

You will find records of the iron masters having moved over to near Altoona, and then west. One of the furnaces was the Greenwood Furnace, near Milesburg, which made cold-blast charcoal pig iron which was very highly sought after. This furnace, if I remember correctly, was operating in 1896 and I think operated up to about 1903 or 1904, when it slipped by the wayside.

Near Bellefonte was the Curtain Iron Co., which operated, if I recall correctly, two charcoal furnaces. They had a seam of iron ore that was almost perpendicular, but was lined down about 125 to 150 feet. The miners had to go down in buckets and the ore was brought up in buckets. The writer was agent for the Curtain Furnace, but it did not operate long, as a nearby coke furnace was absorbing all the iron ore the district could supply.

I feel very positive that a more careful study of the history of iron will show that iron was made in the mountains between Altoona and Bellefonte many, many years before it was made in this district. However, there were many furnaces in Fayette County and in the mountains.

One of the first ones was the Union Furnace, about 4 miles from Connellsville, which was built in 1790. The writer once owned a large tract of timberland located in Fayette County and in the adjoining county of West Virginia—abut 15,000 acres. There were three or four abandoned charcoal furnaces on this property, as the mountains had heaved up the iron ore contained in the lower measures.

The first furnace built in Pittsburgh was in 1792 by George Anshutz. This iron furnace was used for making stoves and grates. The Anshutz family were still around when the writer went into business in 1896. This Anshutz furnace operated on charcoal pig iron, but the Pittsburgh market was flooded with pig iron sent in by barge and pack horses. The pig iron was hauled from the mountains in Fayette County and loaded on the Monongahela River and brought down to Pittsburgh on rafts and floats. The same thing happened on the Allegheny River, as there was more suitable hardwood timber for making charcoal in the mountain districts, and this made the iron more easily and cheaply obtainable.

The writer's grandfather operated charcoal furnaces in Kentucky between the Cumberland and Tennessee Rivers, and we have some old papers somewhere showing how Daniel Hillman, my grandfather, shipped pig iron to the Garrison Foundry here in Pittsburgh in 1845 and 1855 by water and took machinery, blowing engines and housings and rolls in payment for it. However, this is so very recent that it is hardly interesting.

Please give my best regards to the Senator also.

Yours very truly,

J. H. HILLMAN, Jr.

Do Identical Prices Indicate Conspiracy?

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Wednesday, July 13 (legislative day of Thursday, June 2), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the June 3 issue of the Christian Science Monitor entitled "Do Identical Prices Indicate Conspiracy?" The article was written by Mr. Harold Fleming.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DO IDENTICAL PRICES INDICATE CONSPIRACY?
(By Harold Fleming)

NEW YORK.—Business lawyers here who specialize in antitrust law assert that in the last year or so the Supreme Court has made an alarming extension of the legal concept of conspiracy as applied to business conduct.

So widely has it stretched this concept of illegal action, they say, that it can now be applied to the commonest forms of ordinary competition. The definition of conspiracy has come to have a legal meaning, as Gilbert H. Montague recently stated, "very different in law from the meaning which most businessmen ascribe to it."

The process of this broadening, which has been vastly speeded up in the last year or so, has been roughly as follows:

TRUSTS AND "GARY DINNERS" BANNED

What the Sherman Antitrust Act of 1890 originally prohibited was "any planned course of common action, understanding, agreement, combination, or conspiracy" in restraint of trade.

This was originally aimed at the trusts. Trust was no figure of speech. It was a legal device of the 1880's, now as obsolete as handlebar mustaches, by which the stock of competing companies was put in a single voting trust, the operators of which could then dictate the policies of an industry, the usual aim being to hold up prices and choke off competition.

These trusts were obliterated and became as obsolete as dodos by the Sherman Act. But they were replaced by such things as the "Gary dinners," where Judge Gary of the United States Steel Corp. would announce what Big Steel's price policy would be, and the representatives of other companies present understood what was to be their policy also—or else.

The Supreme Court long ago ruled out such transparent—though fragile—forms of conspiracy. But it still considered legal the common custom in many industries in which some company usually has price leadership, and competitors usually follow for obvious and aboveboard competitive reasons.

MERE PARALLEL ACTION NOW CONSPIRACY

Now, however, in the Gypsum, Cement, and Rigid Conduit cases the court has indicated that mere parallel action is conspiracy. In fact, in the Rigid Conduit case it found that a company need only know and use the pricing methods of its competitors to be violating the law.

Since the FTC's and the business community's interpretation of competitively matched prices is so diametrically opposite, another change in the law has proved important. Under Anglo-Saxon law if a course of conduct had two possible explanations, one innocent and one guilty, the defendant is innocent. But in antitrust law this is rapidly being changed, and in such a way that only the lawyers seem to have noticed the change.

As an instance, the Clayton and Robinson-Patman Acts forbid certain business conduct whose effect may be substantially to lessen competition. As late of 1945 the Supreme Court was still insisting that the FTC must show a reasonable probability that the conduct it attacked was such. Now, however, in the Morton Salt case the Court finds that all the FTC needs to prove is a reasonable possibility.

The difference here between probability and possibility is fundamental. Even the FTC called this a radical intepretation of the law. It is the same difference as between a judge's instructing a jury that you must find the prisoner innocent unless the evidence is overwhelming and his instructing it that you must find the prisoner guilty if you possibly can.

For the above reasons it is now impossible for anyone familiar with business customs and ethics to know, in reading a report of a firm or trade group found guilty of price fixing and conspiracy to restrain trade, whether this group had actually been guilty of such practices and aims in the commonly accepted meanings of those words or was merely found guilty technically by the new interpretations of the law of doing merely what is normally considered in business both ethical and necessary.

BUSINESS HOBBLED IN THE COURTS

The increasing proportion of nolo contenderes being pled and consent decrees being signed by businessmen in antitrust cases is faintly reminiscent of the confessions in Soviet trials. Striking also, however, is the virtual unanimity with which they afterward say in effect to newspapermen, "The practices of which we are accused are ethical and above board by business standards and have heretofore been thought entirely legal."

Two serious implications are seen.

In the first place, if to consistently match competitor's prices is now illegal, businessmen will continue to be "sitting ducks" for Government prosecutions on a scale limited only by the number of lawyers the FTC and the Antitrust Division can hire. Regardless of what system or lack of system of price quotations is used, competitors cannot do otherwise than (except for the occasions when the price level is changing) match each other's prices.

In a falling market the competitor who fails to cut will lose business; in a rising market the one who fails to go up to "the market" will lose money. The very concept of "the market" implies matched prices.

The reductio ad absurdum of the new Sherman Act view is the new idea being expressed by FTC lawyers that the one road to safety in competition is not to know what your competitors are doing. This, in fact, is implicit in official efforts to break up price systems or commonly understood methods of quoting prices, like basing-point, zone, and other delivered-price systems.

BUSINESS NOW GUILTY OF COMPETITION

And this is the other major implication of the stretching of legal "conspirary" to include prices matched in normal competition. The matching is facilitated by these systems. It is what recommends these systems to businessmen and condemns them to the economic thinkers of FTC and Antitrust. Since the latter have the intellectual inside track with the Supreme Court, these systems will have to go.

The new interpretation will leave business sales departments fumbling in the dark. This will prevent them from conspiring, according to the Government economists, but, according to the businessmen, it will prevent them from competing.

Carried to its logical conclusions, the Government doctrine could be used to ban other aids to easy price reckoning, such as the regular publication of markets by dailies and weeklies. (The FTC has already criticized the American Steel Institute for publishing a convenient list of railroad tariffs on steel.) In fact, the common use of trade terms and of a common currency makes it easier for businessmen to "conspire" to "fix prices"—i. e., to compete. The possibilities in the view of antitrust lawyers are alarming.

Two Great Delusions About the A-Bomb

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 13 (legislative day of Thursday, June 2), 1949

Mr. KILGORE. Mr. President, the July 10, 1949, issue of the New York Times magazine contains an interesting article by Mr. Hanson W. Baldwin, military editor of the Times, who recently completed an extensive tour of service installations, including atomic centers. This article, Two Great Delusions About the A-Bomb, warns the Nation of the consequences of assuming the bomb means security, and that security requires secrecy.

Mr. Baldwin states that "a mental and emotional readjustment is necessary if we are to see the atomic age as an age of challenge and not merely an age of fear."

He tears apart the mistaken idea that security is secrecy, in these words:

Security is bases and things, weapons and research, men and facilities—intangibles as well as tangibles. It is, above all, spirit and morale, and progressive, advanced, and imaginative thinking. Secrecy and the atomic jitters are the enemy of these.

Mr. President, I ask unanimous consent to have this article printed in the Appendix of the RECORD, and I express the hope that every Member of Congress will have an opportunity to read and study it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWO GREAT DELUSIONS ABOUT THE A-BOMB

(By Hanson W. Baldwin)

Americans are suffering these days from a great delusion—a delusion about the atom. We are blinding ourselves with two misconceptions—(1) that the atomic bomb insures complete security, and (2) that secrecy means security.

These fallacious conceptions have spawned many evils. The atomic-energy hearings in Washington, the spy investigations, the loyalty checks, the tendency to confer more power upon Government with less legislative control, the increased emphasis upon secrecy in nearly all fields—all these are symptoms of the atomic jitters.

The American reaction to the atomic age seems today to be compounded of one part self-congratulation upon our technical achievement in producing the bomb, of one part guilt because of the enormity of our accomplishment and our first use of the bomb, of one part fear of the Frankenstein monster we have created, and of one part anxiety lest our secret be purloined.

Our psychological and political disquiet has grown with the fading of our postwar dream of a brave new world, the failure of our international atomic-energy-control plan, and the tension induced by the cold war. Postwar revelations of Communist espionage, added to the public awe concerning the effects of the Hiroshima and Nagasaki bombings, have helped to develop in the public mind the two misconceptions about the decisive value of the bomb to our national security and the importance of secrecy about the bomb.

The first misconception—that the bomb means absolute security—stems from a notion that the bomb is the absolute weapon. The almost mystical awe with which the power of the atomic bomb has been painted by many writers, plus the dread and horror of a new unknown—radioactivity—contributes to this myth.

Bikini, carefully evaluated, should have lifted some of the curtain of mystery. For these tests—and the perspective of time—bring the bomb into proper proportion as a terrible weapon, more than just another bomb, but a finite, not an infinite, weapon. Bikini reduced the emphasis upon the power of a single atomic bomb.

A few bombs, it is clear, would not be enough to defeat a major power. Probably 500 atomic bombs would be required to produce damage equivalent to that done in Germany by conventional bombing during the past war. A well-prepared and large nation might withstand simultaneous or near-simultaneous attack by even 100 atomic bombs without defeat.

Yet the probabilities are—and probabilities are all we can deal with because of the second misconception, that secrecy is security—that the number of bombs in the United States atomic stock pile is small. Rich sources of uranium ore are few and limited; bombs are not made like Ford cars; they are produced by a difficult and lengthy process. The stock pile is too limited, probably, to provide as many bombs as, let us say, the number of major Russian industrial areas.

The atomic bomb, furthermore, is primarily a strategic weapon—an area weapon—best adapted to use against sprawling cities; of much less usefulness against dispersed land armies. The bomb, it is pretty clear, will not alone insure the defense of western Europe; it will not stop the Red Army; and the American frontier today is upon the Rhine.

But even if we had bombs unlimited in numbers—as we may some day have—the day will come when the present importance of the bomb as a deterrent to aggression and a key to strategy will be sharply reduced. When Russia acquires a stock pile of bombs our present atomic advantage will be largely neutralized.

The atomic bomb, moreover, is no proof against thoughts; it will not armor the spirit; nor will it build ramparts against an ideology. Bombs will provide no comfort

to the war-ravaged economy of the world; there can be no guns instead of butter today, if we are talking in terms of real security.

The second great misconception—that of equating absolute secrecy with absolute security—has been developed without its believers stopping to calculate whether or not the "absolutes" which make up this equation could in themselves exist. The facts are that there is not now, and never has been, any such thing as absolute security in any field—military, political, or economic—and that absolute secrecy, if it could exist, could only produce an absolute vacuum. The misconception that secrecy is security is as old as man; whenever it has triumphed, freedom has died—and security has proved illusory.

The vicious circle—that the bomb equals security equals secrecy equals the bomb—may, indeed, have weakened security instead of strengthening it. Partially because of the fetish of secrecy, Congress and the public have virtually abdicated their duties in the atomic-energy program.

The very character of the Atomic Energy Act reflects in some degree the fetish of secrecy. The greatest grant of power in the history of the Republic was given to the Atomic Energy Commission, and yet we hedged the Commission about with all sorts of secrecy restrictions which could not fail to hamper its work.

Secrecy restrictions have prevented the development of satisfactory teamwork with Great Britain and Canada on atomic energy research. Yet we stand to lose by these restrictions, for it was this teamwork and not native American genius alone that produced the bomb. Secrecy restrictions, translated into badly handled loyalty checks, rumor and innuendo campaigns, and smear investigations ad nauseam have deterred many scientists from Government service.

But above all, secrecy restrictions have blindfolded the logical development of military and foreign policy and have eliminated to a major degree the maintenance of any checkrein upon policy. The size of the United States atomic bomb stock pile, our production rate and the amount of uranium ore available are of major importance to the development of sound military, foreign and national policies. Yet, by the secrecy restrictions which Congress itself endorsed, our legislators who are called upon to pass upon policy, and most of our executives who are called upon to formulate and administer policy, have no knowledge of these vital facts.

This ignorance has led us to a dangerous dichotomy between political and military policies. On the one hand our military strategy has been tending more and more toward the one-weapon concept—the concept that a war with Russian could be won by long-range atomic bombing from bases outside Europe, even though little thought has been given as to whether or not the political aim of any war—a more stable peace—would be served by the widespread destructiveness of atomic bombing.

On the other hand our political strategy has established the Atlantic Pact, which has as its fundamental military postulate the defense of western Europe against invasion—not the reconquest of Europe after invasion. The latter—reconquest—might well be served by long-range atomic bombing; the former—defense—could be accomplished only by tactical air power and mobile land power, rather than strategic air power.

These inherent contradictions are the inevitable progeny of ignorance out of fear; we evolve policies with the atomic bomb as the keynote without knowing the size of our atomic stock pile.

How shall we escape from the vicious circle?

There is no simple answer. But Senator McMAHON'S suggestion that a group of responsible legislators, as well as a greater number of executives, ought to be briefed in the basic atomic facts—size of stock pile, rate of production, reserve of uranium—is worthy of serious consideration.

It is time, too, for Congress to reassess the whole atomic energy program and the legislation that frames it. The huge grants of power, with few strings attached, which were bestowed upon the AEC, should be reviewed; it is time for Congress to recapture some of its own authority. Major expenditures by the AEC should receive the specific approval of Congress before they are undertaken.

But Congress cannot assert authority without also exercising responsibility. The watch-dog committee must be one in more than name; if Senators and Representatives on this committee are too busy with their legislative duties to permit proper surveillance, a joint paid staff of much geater size than now exists must be established and maintained on a nonpolitical basis. And above all, the increasing tendency to interpret atomic energy—or, for that matter, national defense—in narrow terms of partisan politics must be reversed; that way lies danger.

Changes in the act itself should be considered, especially liberalization of the present provisions which dangerously dam up the interchange of information among ourselves, Britain and Canada. Publication of basic research papers must be encouraged, not discouraged, and far greater dissemination of atomic energy information must be provided for, so that the veil of ignorance and fear that now clouds our atomic perspective can be torn aside. Better administrative procedures for security and loyalty checks must be established; perhaps several members of the "watchdog committee" should participate in all reviews of doubtful loyalty cases.

But, most important, a mental and emotional readjustment is necessary if we are to see the atomic age as an age of challenge and not merely an age of fear. We must understand that security is not one weapon, it is many. It is not planes alone, not men alone, not ships alone—but all. Security is not only big battalions and not only bombs, but people. It is not only dollars, but ideas.

Security is bases and things, weapons and research, men and facilities—and intangibles as well as tangibles. It is, above all, spirit and morale and progressive, advanced and imaginative thinking. Secrecy and atomic jitters are the enemy of these.

United Air Lines Service at Salem, Oreg.

EXTENSION OF REMARKS

OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. NORBLAD. Mr. Speaker, the proposed cancelation of the United Air Lines service at Salem, Oreg., would work a hardship not only on that community but on the surrounding territory. The following editorial from the Capital Journal, of Salem, Oreg., clearly sets forth the effect this change in air lines service would have on both the business and farming people of the area:

SALEM NEEDS AN EXPLANATION

Salem's case to hold United Air Lines service has enough merit to raise questions as to why the capital of Oregon is put on the spot: Will it keep main liner service or will it get feeder line service (West Coast Air Lines) instead?

The Civil Aeronautics Board has asked United to show cause why it should not cut out service to Salem. This is a strange situation, despite the Nation-wide move of the CAB to cut out duplication of air line service so as to pare air-mail subsidies to the lines.

In the case of Salem, however, there is no duplication of service. Furthermore, Salem is the only city on the Pacific coast on United's system that doesn't have another air line also serving the city. There is no feeder-line service already here as there is in the case of Bellingham, Red Bluff and other cities where show-cause orders have been issued.

Since Salem is on the direct air route of United between Portland and San Francisco, there is no deviation from course, so as to be served by the Mainliner outfit. By no stretch of the imagination could it be said to be costly for United to maintain service here under those circumstances. As a matter of fact, United's business has been increasing here year by year, according to local records. And a comparison with other United stations shows Salem doing well for its size and position.

For that matter, Salem should have some say in the CAB hearings. How about the local shippers of perishables who use air freight? The feeder-line system, which has a good record, still does not handle air freight. And if it did, there would be the problem of transfer at points which might force present enterprises using the air-freight system to move elsewhere.

Salem merchants affected by this air freight are florists, bulb growers, turkey and poultry hatcheries, and specialities like mushrooms. These enterprises have spent considerable money and time in developing a tie with air freight fast service. It takes no effort to understand the predicament they would be in if they lost the local United outlet here.

What about State officials, businessmen and others here who need an easy system of air travel? Perhaps a feeder-line is necessary, too, but, if anything, United's service should be augmented instead of curbed. The Capital Journal has repeatedly called for better service out of here.

Under the circumstances, the Civil Aeronautics Board should explain to the people of the city and area why they propose to cut off Mainliner service instead of having United explain why it should remain here. Salem's case stands on its own.

Feasibility of an Additional Crossing of San Francisco Bay

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. WELCH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of Hon. Louis Johnson, Secretary of Defense, and a statement by Rear Adm. John J. Manning:

THE SECRETARY OF DEFENSE,
Washington, June 16, 1949.

Hon. CARL VINSON,
Chairman, Committee on Armed Services, House of Representatives.

MY DEAR MR. CHAIRMAN: The views of the National Military Establishment with respect

to H. R. 4079 have been requested by your committee.

The Army, the Navy, and the Secretary of Defense are all on record in favor of what has come to be known as the "southern crossing" of San Francisco Bay, as the preferred location from the military viewpoint.

In view of our position in favor of the southern crossing, we recommend against the enactment of H. R. 4079.

A copy of an earlier letter on this subject, addressed to the mayor of San Francisco, is attached.

The Bureau of the Budget has been consulted and advises that, while there is no objection to the submission of this report, the expression for the preference of the southern crossing should not be construed as an indication that the National Military Establishment would support a request for Federal funds to assist in construction should that route be finally decided upon.

With kindest regards, I am,

Sincerely yours,

LOUIS JOHNSON.

My name is John J. Manning, rear admiral, CEC, United States Navy, Chief of the Bureau of Yards and Docks, Navy Department, which Bureau has cognizance of all Navy real-estate matters.

Pursuant to House Resolution 529, Seventy-ninth Congress, a Joint Army-Navy Board was appointed in 1946 to determine the need and feasibility for an additional crossing of San Francisco Bay. This Board concluded, which conclusion was approved by the Secretary of the Army and the Secretary of the Navy, that as regards the national defense a second crossing of San Francisco Bay was not imperative. It was recommended that if a second crossing were to be provided it should extend from the foot of Army Street in San Francisco to the vicinity of Fifth Street in Alameda.

The National Military Establishment still is of the opinion that the location recommended by the Board referred to as the southern crossing is the more desirable.

Not being required for national defense, the problem becomes one for local determination. If the will of the local people determines on a parallel crossing the Navy Department could interpose no objection to the granting of an easement across Yerba Buena Island for the accommodation of a parallel to the present crossing, providing all existing Navy facilities, destroyed or disturbed incident to the granting of this easement and subsequent construction on the easement, be restored to their full and present capacity and usability.

Teachers' Choice

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. EVINS. Mr. Speaker, at the recent convention of the National Education Association the members of that great organization saw fit to elect as their president a most distinguished educator, Dr. Andrew D. Holt, of Tennessee.

Dr. Holt is a teacher's teacher, who has served as a rural country school teacher and as a college professor. For several years he was president of the Tennessee Education Association and has ever been the champion of the cause of the advancement of education in Tennessee and the South. This latest honor which has come to him merely broadens his field of distinguished service. The National Education Association is to be congratulated upon its choice of Dr. Holt, a strong, dynamic person—able and farsighted. It is an honor which he has truly merited.

In this connection, Mr. Speaker, I include with my remarks a copy of an editorial which appeared on Monday last in the Nashville Tennessean, and which pays deserved attention to Dr. Holt's abilities and the critical job which lies ahead for him and the field of education.

The editorial is as follows:

TEACHERS' CHOICE

Election of Dr. Andrew D. Holt to the presidency of the National Education Association will give the public school teachers of the country a quality of leadership they greatly need during the year ahead.

His top assignment for the year will be to pilot through a Congress, which has had great difficulty mustering a majority to agree on any progressive measure, the Federal aid to education bill. The bill, at the top of NEA's legislative agenda for two sessions of Congress, has thus far been stalled by a coalition of States righters, economy advocates, and Congressmen with religious objections.

Dr. Holt has proven himself a master of legislative strategy before the general assembly of his home State, where he has ably served the Tennessee Education Association and the cause of public education for many years. If any man can smooth aside congressional objections to the Federal aid bill, he is that man.

During his year in the NEA presidency Dr. Holt also will be required to steer the course of the association through perplexing problems of race on which no clear policies were fixed by the convention that elected him. The sound thinking and tactful, but realistic, approach to social problems for which he is widely known at home will stand him in good stead in such matters.

Those interested in improved standards for public education in Tennessee will miss his resourceful and energetic leadership for the year, but they will surrender him unselfishly to a wider field of service and will wish him good luck.

The Spending Panacea

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Boston Herald of July 12, 1949:

THE SPENDING PANACEA

President Truman yesterday committed the United States to a major change of economic course, a change which may rank as the greatest blunder of his administration. He established the principle of deficit financing in peacetime during a relatively high, though ebbing, prosperity.

Government spending, he says, can't be stopped now. It wasn't stopped during the inflationary boom. When, in the name of economic common sense, can it be stopped?

"When I submitted my budget for the fiscal year 1950 last January, the programs of expenditure that I then recommended were held to a minimum consistent with our basic needs in view of the inflationary strain upon materials and manpower then prevailing," the President said. "Now that this strain has been removed, it would be inconsistent with sound fiscal policy and common sense to make these programs smaller." Wherein he repeats the dictum of his economic advisers that "Government outlays have operated in the main as a salutary sustaining force, and the slashing of such expenditures at this time would aggravate deflationary trends."

The President does withdraw his demands for a $4,000,000,000 tax increase, which is well. But if spending must go on unabated, we face mounting deficits, higher than the $1,-811,000,000 we ended fiscal 1949 on.

And this red-ink financing is occurring not in a depression, but at a time when civilian employment stands at 59.6 million and the gross national product of the Nation is up around $254,000,000,000, higher than any year except 1948. Indeed the President himself states that "our economy is still operating at high levels of employment and production."

This is a revelation of the President's philosophy. When the country is prosperous, let the government spend because it has the money. When prosperity ebbs a little, keep on spending to restore prosperity. And, we may presume, if prosperity slips still further, spend still more. Spending, it seems, is good for everything.

For 16 consecutive years, from 1931 through 1946, we had annual deficits, adding a quarter of a trillion (yes, trillion) dollars to the national debt. Then, however, we were first attempting to spend our way out of a depression and later fighting a war. We are now setting off on the assumption that anything less than inflation demands deficit spending.

The use of large public funds for a useful works program during the real depression might restore the economy. But only if Federal spending has been at a reasonably low level previously.

If President Truman is called upon to contend with a real depression, his emergency spending will have to be piled on top of a Federal budget of over $40,000,000,000 and a high tax level that has already largely dried up the revenue sources on which local and State governments can undertake public works. And during the last depression the local and State governments stopped spending faster than the Federal Government increased spending, so that the program was getting nowhere.

Senator BYRD the other day said Congress must soon make the fateful decision whether to retrench drastically, impose staggering new taxes or embrace deficit spending again. New taxes, he felt, as the President does now, would be unwise. Deficit spending he declared to be the road to certain ruin. The only course left was to reduce expenditures.

The "fateful decision" that Mr. Truman made yesterday was to embark the Nation on a course of deficit spending, the end of which no man can see.

The George Rogers Clark Memorial Bridge

EXTENSION OF REMARKS

OF

HON. GARRETT L. WITHERS

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, July 13 (legislative day of Thursday, June 2), 1949

Mr. WITHERS. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article by Maurice H. Thatcher, former Member of the House of Representatives from Kentucky, which was published in the Filson Club History Quarterly. Mr. Thatcher relates the story of the George Rogers Clark Memorial Bridge and tells something about the pioneer for whom it was named.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GEORGE ROGERS CLARK MEMORIAL BRIDGE

(By Maurice H. Thatcher, Washington, D. C.)

At long last, within the city of Louisville and the Louisville region, there has been brought about a formal recognition of substantial character of the magnificent services of the city's founder, Kentucky's preserver, and the hero of the illustrious conquest of the Northwest Territory during the period of the American Revolution. Through the official action, on January 17, 1949, of Hon. GARRETT L. WITHERS, then State Highway Commissioner for Kentucky, now United States Senator, the new municipal bridge, spanning the Ohio River, and connecting the cities of Louisville, Ky., and Jeffersonville, Ind., was officially named the George Rogers Clark Memorial Bridge.

The reasons justifying this action, and accepted by the State highway commissioner, were many and altogether convincing. There had been several names proposed for the bridge, which were all worthy and given careful consideration. In behalf of the Clark proposal, some of the reasons considered were: his founding of Louisville; his identification with and residence in the Louisville, Jeffersonville, and Clarksville communities; his utilization of the Louisville site as the base of operations for his great campaigns waged in the Northwest conquest; and the inadequacy, through the years that have elapsed since his death, of any appropriate recognition by Louisville and Kentucky of his outstanding military exploits which, by eminent historians, are appraised as being second only to those of Washington himself in value to the Republic during the founding period. These considerations, it may be said, together with the further one that the Clark name has a secure and ever-enduring historical standing and is possessed of national and international significance, were of sufficient weight to influence Commissioner WITHERS in arriving at his decision. No informed man or woman—from any part of the Nation, however remote—in driving across this beautiful bridge, and reading the suspended inscription, George Rogers Clark Memorial Bridge, will fail to understand the meaning and significance thus involved. No contemporary name, of whatsoever merit, could be as widely understood and acclaimed as that bestowed by Commissioner WITHERS, and he is entitled to the highest praise for the wisdom of his action, which was reached only after the fullest and fairest study of all the arguments and factors involved.

These were the effective arguments presented through the press and to Commissioner WITHERS by proponents for the Clark name, among whom were the Louisville Courier-Journal and Times, the Filson Club, the Clark County Historical Society, and the board of trade of Jeffersonville, and other organizations and public-spirited citizens of Louisville and southern Indiana, including Lucien Beckner, Louis R. Faulkner, Miss Mary Verhoeff, Gustave A. Breaux, Joseph M. Hayse, D. B. G. Rose, John H. Chandler, and others of Louisville, who were fully familiar with the Clark history and the bridge story.

The idea of such a highway link across the Ohio River at Louisville had long been in the minds and hearts of the people of Louisville and southern Indiana. Exactly where and when it began, it is hard to determine. Undoubtedly, a vital seed was planted by the late Judge Robert Worth Bingham in an address before the Louisville Board of Trade at its New Year's reception, January 1, 1919. In February 1920, the Jeffersonville Rotary Club appointed Wilmer T. Fox chairman of its bridge committee and adopted a resolution calling attention to the need for a highway bridge between Louisville and Jeffersonville. In May 1920, Joseph Burge, president of the Louisville Board of Trade, appointed a bridge committee, headed by David B. G. Rose, to study the need for such a bridge, then referred to by Mr. Fox as the proposed wagon bridge across the Ohio River. In 1922, while Huston Quin was mayor of Louisville, a survey of the question of such a bridge was proposed by Alderman George W. Stege. Then followed action in 1923 by the Louisville Board of Trade in the appointment of a new committee, headed by Frederic M. Sackett, afterwards United States Senator for Kentucky, to make a study of the question. Mr. Sackett expended, personally, a considerable sum in the study. In September 1923, the Louisville Real Estate Board proposed a similar committee. In that month, Mayor Quin received two proposals for the building of the bridge. In the following month, the Louisville Board of Trade offered plans for the bridge; and this step, in turn, was followed by the mayor's recommendation urging specific action. These proposals involved the question of the issuance of bonds to finance the construction of the bridge and presented the issue of free bridge or toll bridge, which question and issue were debated during the following years.

It should be noted that under the constitution of Kentucky, a city of the first class, such as Louisville, cannot issue bonds based upon the faith and credit of the city unless issuance is authorized by a two-thirds majority of the votes cast in an election held for that purpose. And it should be further noted that before a bridge is built across a navigable stream in the United States, the consent of Congress must be secured; and Congress may prescribe the conditions of construction and operation, including provisions as to the tolls that may be charged.

In 1924, Mayor Quin created a bridge committee, headed by William Black, as chairman. Other members were: R. E. Filson, Alex E. Johnson, George W. Hubley, and Maj. W. H. McAlpine, of Louisville; and Wilmer T. Fox, W. Y. Fillebrown, Col. John R. R. Hannay, and Charles T. Hertzsch, of Jeffersonville. In November 1925, this committee reported in favor of a four-lane highway bridge, with the Louisville approach at some point between Third and Twelfth Streets. In January 1926, Mayor Arthur A. Will continued the "Mayor's Bridge Committee," with the same members appointed by Mayor Quin.

The matter having reached this stage, it was thought that a bond issue would have to be voted upon to provide funds for the building of the bridge. Accordingly, at the behest of the Louisville officials, the Kentucky Legislature, by act of March 20, 1926, authorized the appointment of a permanent bridge commission and the construction of a bridge across the Ohio River with a bond issue to be voted on therefor. Under the authority of this act, Mayor Will appointed as members of the commission, William Black, chairman, George M. Eady, Fred Forcht, and William Heyburn, with George W. Hubley as acting secretary.

In addition to the authority given by the Kentucky Legislature it was necessary, as noted above, to get authority from Congress. Accordingly, at the request of the officials of Louisville, I, as the representative of the Louisville and Jefferson County District in Congress, introduced in the House of Representatives a bill giving the consent of Congress to the construction of such a bridge to be begun within 1 year from date of enactment, with the power to impose tolls, over a period of 30 years from the date of completion, to defray the cost of maintaining, repairing and operating the bridge, and to provide a sinking fund to amortize the cost of construction. Through my efforts in the House, and with the cooperation of Senator Sackett in the Senate, the bill became a law April 2, 1926.

At the following November election of 1926, a bond issue proposal in the amount of $5,000,000, for the purpose of constructing a bridge across the Ohio River to be operated free of tolls, was submitted to the voters of Louisville. The proposal failed.

The city officials desiring to make another try of the bridge issue proposal, I introduced in Congress a measure extending the date of beginning construction, as provided in the act of April 2, 1926, 1 year and the date of completion of the bridge 3 years. This measure, again with Senator Sackett's aid and cooperation, was enacted, and approved by the President on March 3, 1927.

At the following November election of 1927, the citizens of Louisville voted a second time on a $5,000,000 bond issue based on a proposed collection of tolls, over a period of 30 years from completion of the bridge, sufficient to cover the cost of construction. At the end of that period the bridge was to be free. This bond issue proposal also failed.

Thus it became necessary to handle the bridge situation in such a way as to obviate the necessity of a bond issue approval by the voters.

During Mayor Will's incumbency, the suggestion was made by certain investment interests that the funds necessary for the construction of the bridge might be loaned to the city if the net tolls from the bridge might be pledged for the repaying of the loan. When William B. Harrison became mayor of Louisville, remembering the experiences of the defeated bond issues and having before him the offer of investment brokers to loan the city funds for building the bridge, based alone on the net earnings of the structure, he approved the idea of such a loan provided the necessary enabling legislation could be had. At the New Year's reception of the Louisville Board of Trade, January 1, 1928, he made an announcement to this effect.

Then it was that I, at the request of the city and the investment bankers who expected to make the loan to the city, introduced in Congress and pressed for enactment the necessary enabling measure authorizing the city, or any board of commissioners duly created for the purpose, to construct across the Ohio River to the Indiana shore a highway bridge; and providing for the fixing of tolls sufficient to care for operation and maintenance and the amortization of the

cost of the bridge, with interest charges, etc., over a period of 20 years. At the end of that period the bridge should be toll-free except to the extent that tolls would be required to operate and maintain the structure. The bill was referred to the House Committee on Interstate and Foreign Commerce. I urged a favorable report on the measure, and was aided by representations of the investment bankers who declared their willingness to make the required loan to the city of Louisville based alone on bonds of the city to be paid by net income from the operation of the bridge. The whole plan was novel but the committee saw the wisdom of such municipal bridge financing and gave its approval to the bill The House passed the bill. It was later accepted and passed by the Senate, and became a law by Presidential approval January 25, 1928.

Also the Kentucky Legislature for 1928 passed an act, approved by Governor Sampson, February 16, 1928, creating a Louisville Bridge Commission and authorizing the construction of a bridge connecting Louisville with Indiana to be financed by revenue bonds. This bill was known as the Perry Act. It was introduced in the senate by Senator William A. Perry and in the house of representatives by Charles Ryan, at the request of Mayor Harrison, and its passage was due largely to their efforts.

Under the enabling acts of Congress and the Kentucky Legislature, the Louisville Bridge Commission undertook the construction of the bridge. The provisions of these measures were of sufficient breadth to permit its construction under the indicated terms. Accordingly, the city borrowed $5,000,000 from the investment bankers, Stranahan, Harris & Otis, of Toledo, Ohio, at 4½ percent interest, with the revenue bonds of the city given therefor with net tolls as a basis of security.

On the completion of the bridge, at a cost of about $4,821,000, it was formally dedicated on October 31, 1929, and thrown open to public use.

In the meantime, on March 11, 1929, due to efforts of Froman M. Coots, of the Jeffersonville Chamber of Commerce and D. B. G. Rose, president of the Louisville Board of Trade, the Legislature of Indiana, by act approved by Gov. Harry G. Leslie, exempted from taxation the real and personal property of the bridge located in Indiana. Thus the State of Indiana made its effective contribution to the bridge enterprise, as did the city of Jeffersonville.

In addition to those already mentioned who served as chairmen on the mayor's bridge committees and the Louisville Bridge Commission, appointed at various times, were George O. Boomer, William Black, David R. Castleman, and McKay Reed. At the time the bridge was freed—November 1, 1946—the members of the bridge commission were McKay Reed, chairman, Richard W. Hardesty, T. V. Hartnett, and Lew Ullrich.

It was exactly 17 years after the bridge was completed and open to traffic that all the bridge bonds were paid and the bridge was freed. Appropriate ceremonies on October 31 and November 1, 1946, marked the freeing of the bridge and its transfer by the city of Louisville to the Commonwealth of Kentucky. The printed program for these dedication ceremonies contains the following:

"October 31, 1929: Bridge dedicated with great throng present; free to pedestrians that day, to motorists the following day. Speakers at the dedication: Kentucky United States Senator Frederick M. Sackett; Kentucky Gov. Flem D. Sampson; Indiana Lt. Gov. Edgar Bush; Louisville Congressman Maurice H. Thatcher; Indiana Congressman James Dunbar; Louisville Mayor William B. Harrison; Jeffersonville Mayor Harry Poindexter; Louisville Bridge Commission Chairman William Black; Louisville Board of Trade President D. B. G. Rose. The Reverend W. N. Briney offers an invocation and Helen West, daughter of the bridge commission secretary, Edward H. West, cuts ribbon signalizing beginning of service."

When the bridge was transferred to the State it became a part of the Kentucky highway and bridge system, to be maintained and operated by Kentucky free from tolls.

Space does not permit the naming of various others—officials, organizations, and citizens—who made fine and effective contributions to the success of the bridge enterprise. The fact that so many thus served the bridge cause made it difficult to select a single contemporaneous name for the bridge.

It may be truly said of this great highway span across La Belle Riviere that many there were who did their indispensable bits in bringing to success this splendid and long-cherished dream. In the final memorial treatment of the subject, it is to be hoped that due recognition may be given all.

To complete the appropriate memorialization of General Clark at Louisville, there should be erected there, at or near the south approach to the bridge, a large statue of heroic proportions, vital in its poise and posture; and, as I would like to see, with sword pointed to the great Northwest which his valor and statesmanship brought into the American Union. I believe that Congress may look favorably on a measure providing for the execution and erection of such a statue, and it and the great bridge bearing Clark's name, would prove inspirational, in a high degree, to the millions who will cross this structure through the years to come. Such bill should provide that the National Commission of Fine Arts approve the statue, thus assuring that it will be a work of art. I have discussed the subject with Senator WITHERS, and he approves the suggestion for the statue, and has indicated his willingness to introduce and press for enactment a bill so providing. To aid in this proposal, as well as to arrange for full and adequate recognition of the work of the individuals and organizations who have contributed to the success of the bridge enterprise, it is suggested that the State and city officials appoint an appropriate committee. The time is ripe for such action and it should not be delayed.

Tax Break—Maybe

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1949

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I append an editorial from the Medford (Mass.) Mercury of July 8, 1949:

TAX BREAK—MAYBE

Hundreds of millions of dollars in excise taxes paid by American consumers may well be kicked out the window if current moves in both branches of the United States Congress materialize.

Plan is to reduce those nuisance taxes which apply on theater tickets, furs, luggage, cosmetics, transportation fares, and telephone and telegraph usage. The public has been yelling for relief of these taxes in full; Congress is talking in terms only of reducing them. At any rate, if the movements carry through, and even survive a potential Presidential veto, your cost of living and mine will be reduced.

Everyone knows that taxes on many cosmetics are not taxes on cosmetics at all, but taxes on household and health necessaries. Transportation taxes and communications taxes fall readily into the same category. All of them were put over as wartime emergency measures, but like so many temporary and emergency taxes, once they get on the books it's almost impossible to get them off.

How effectively Congress follows through on what it has started will be watched with eagerness by millions of Americans, who would like, for a change, to get more for their dollar than they are now receiving when they pay for telephone service and all the other items now taxed at fantastically high rates.

The Women of America Are No Longer Bound by the Four Walls of Their Homes—They Now Are Taking Their Place of Responsibility, Seeking To Better the Government Under Which All Live

EXTENSION OF REMARKS
OF
HON. CECIL M. HARDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1949

Mrs. HARDEN. Mr. Speaker, I have just come upon a truly enlightening and thought-provoking article by the Honorable FRANCES P. BOLTON entitled "Women in American Politics."

The article is most timely inasmuch as Congressman BOLTON traces women's activities in politics from the early days of the suffrage movement—and it was just a century ago that in the little town of Seneca Falls, N. Y., a group of women initiated the women's rights movement.

Mrs. BOLTON tells, among other things, of the part that women played in the long, hard struggle to enact effective child-labor laws, fair labor practices, and especially so with respect to minimum wage, hours of labor, social security, industrial and occupational diseases, and the sanitary and other conditions attending their employment.

Pointing out their many accomplishments, Mrs. BOLTON goes on to say that—

They are all monuments to those ever more potent and increasing groups of indefatigable and determined women who for the last 30 years have put their shoulders to the wheel in order to build the standard of living we enjoy, and which today the world acclaims as the American way of life.

Mr. Speaker, it was truly an inspiring statement written by one of America's greatest women, and certainly one of the most able and capable Members that ever sat in our Nation's Congress.

I want every Member of this House to have an opportunity to read the frank, candid, and nonpartisan statement about the part that women have played, and are continuing to play, in American politics.

It is because of that desire that I am including as part of my remarks the article by the Honorable FRANCES P. BOLTON, as published in the Pi Lambda Theta Journal entitled "The Place of Women in American Politics."

THE PLACE OF WOMEN IN AMERICAN POLITICS

(By FRANCES P. BOLTON)

In traveling, at home and abroad, I have frequently been asked: "Just what is woman's place in the field of politics?" At times it has been asked even more challengingly and abruptly: "What have been their achievements?" or even more abruptly still, "Just what have you American women done in politics?"

There are many—men as well as women—who continue to contend that the entry of women into the political world has not brought about a single change or benefit to more economic or better government.

It has been with long and deep interest that I observed the economic, sociological, educational, and other advancements that followed the enfranchisement of women during the past three decades. Moreover, I have availed myself of the opportunity of making these observations with respect to vastly differing people—and in various countries.

It is my studied finding that the degree of social, as well as all other, advancements that directly followed that enfranchisement, have been largely local in character, although the many benefits which have accrued are now indelibly stamped upon each nation.

The 1948 election returns substantiate the fact that in some parts of the United States but a very small percentage of our women avail themselves of the franchise. Percentagewise, the vast majority who do vote are found in the great metropolitan areas, with diminishing percentages in the "rurban," and a still smaller, even negligible, percentage in the rural areas of our country. In general, women of the South take far less interest in the local, State, or national issues than do women in the North.

Unfortunately, woman's vote has done far less to better civic government in city life than in the less densely populated areas. On the other hand, the benefits that inured to city dwellers have been inestimable.

It can, in truth, be said that the enfranchisement of women where political machines are in operation has been a deterrent to good government, and moreover has held back social progress in all areas in which machine politics are dominant.

In the great metropolitan city, cities such as New York, Memphis, and Chicago, politics have long been organized on a scale whereby only local, county, city, or even State jobholders are designated to act as precinct captains. To the precinct captain is given the task of specifically delivering to the polls every last supporter who will vote for the machine candidate—regardless of the issues. In fact, in the larger cities this political subdivision finds the city-hall clerk, a fireman, a policeman, an employee of the municipal highway system, or some other municipal employee, exclusively designed to act and serve as "block captain." It has been his historic and continuing duty under machine rule to provide the political headquarters not alone with the name of every man and woman eligible to enroll in the primary—or otherwise to be registered—but to bring to the polls in person every man eligible to vote. In addition thereto he has been charged with responsibility to cultivate the friendship of all "boys" in his block—to know their ages and to see that they, too, became enrolled as voters immediately upon reaching the legal voting age.

Moreover, it was his duty to know all foreign-born residents; see that they got their first-citizenship papers; follow up and attend to their naturalization; see that subsequently they registered and voted the machine ticket. Upon his ability to get out this vote, either in his block or in his precinct, depended the tenure both of his political appointment and subsequent advance in grades and in pay.

The records established under this system make it possible in every city, county, State, and even in national elections, for the bosses of the dominant political party to forecast, within a very small percentage, the total that could and would be delivered by the machine. Under this system the block captains, the precinct captains, and the ward heelers—regardless of climate or other conditions—would "get out the vote"—snow, rain, or hail. Too often we have heard it said that this is either good or bad Democratic or Republican weather. When the ballots were counted, and all names checked off the polling list, these hirelings could count upon losing their jobs if they had failed to "get out the potential vote in their bailiwicks."

It is indeed a sad commentary on the history of American politics that with the coming of the enfranchisement of women an active block captain or precinct worker in thousands of instances was actually enabled practically to double the majority that he delivered to his local political bosses and machine.

The records in innumerable instances support the fact indisputably that, under organized machine rule, as the male member of the family voted, so did his wife. The first principle of organized machine rule is to insure that every individual on the pay roll of the municipality, the county, or the State, votes at every election. Subsequent to the time when women got the vote, not alone did the officeholder himself have to register, work for, and vote the machine ticket, but his bosses insisted, and the block captain was there to insure the fact, that every man and every woman of his family—mother, sisters, relatives, and friends—were brought to the polls under the high pressures exerted through machine practices to insure the continuation in office of that particular employee.

Racial, nationalistic, and foreign-language-speaking groups, headed by men as well as women officeholding leaders, were active in every campaign. They made sure that every last woman in their particular sphere was enrolled and brought to the polls to roll up a big majority for the machine. The voting lists at each polling place were checked each hour on election day, and as the hour for the closing of the polls approached, "runners" were sent out to bring in such as had not already voted.

To the shame of our electoral system, the election returns in many municipalities too often disclosed the fact that under the power of machine politics, many men, as well as women, were legally voted at the polls even though they did not present themselves in person to exercise the franchise—and in many instances were not legal voters. Witness the recent disclosures of the nefarious election frauds in Kansas City, disclosures which rocked the Nation from coast to coast.

It is an indisputable fact that these practices were inflicted upon the political economy of the United States in a large measure because many women felt that "the place of women is in the home"; or they preferred to "let the menfolk do the voting"; or they thought that the "smoke-filled room" atmosphere was no place for ladies. Thus, women were unwittingly surrendering their rights and the inestimable benefits that would accrue to their children, and their children's children, rather than accept the responsibility of citizenship under the evils of such a system.

But fortunately for America, not all women were to be thus bounded by the four walls of their homes. All the while these conditions obtained, a daring, courageous, vocal minority of women kept pounding the pavements, pulling the doorbells, speaking to small literary luncheons and sewing circles, urging upon their fellow women that they stand in line with the men in excercising their franchise, seeking to better the Government under which we all live.

The establishment of civil service and other reforms has done much to abate the evils of the patronage system, with its ever-attending pay-roll evils. The disappearance from election headquarters of the high pressure minority racial and nationalistic groups and leaders, who politically exploited their peoples, gave first evidence to the political leaders in America that women, and the women's movement, were at last coming into their own.

How happy many of us women are for the parts, large and small, we have been permitted to play in the long, hard struggle to enact child-labor laws and fair-labor practices, especially with respect to hours of labor, industrial and occupational diseases, and conditions of the workers attending their employment.

Even in the days of the War Between the States, in the midst of slavery, there was a growing consciousness of the evils of child labor, but a significant milestone in the long struggle was the enactment, in 1916, by our National Congress, of the first Federal child-labor law.

What, in the essence, was the extent of child labor in many parts of our country, in sweatshops, in tenements and industrial homes, in street trades, and in agricultural pursuits? Even as late as the second decade of this century, over a million girls and boys, thousands of whom were but 6 or 7 years of age, were exploited as colony labor in the mines, the textile and other mills of our country. It was not an uncommon thing for a father to sell for a stipulated weekly sum his brood of little children to work as cotton pickers at so much money per week, to be delivered to him each week end. The only contribution the father made was to see that his children—ah, yes, and sometimes his wife—were in the mills or fields each sunup.

The first Federal law achieved little. All it did was to prohibit the sale of the products of child labor that were shipped across State lines. To our shame be it said that many States actually resisted the enactment of laws forbidding the employment of children under 14 years of age. But, little by little, there has been acceptance of the principle behind the Federal law, that children in their growing years must be protected from exploitation.

The United States Department of Labor's Publication No. 197, "Child Labor Facts and Figures," reports:

"In 1900 * * * nearly 800,000 children aged 10 to 13 years, inclusive, were employed. Between 1900 and 1910 the number of such workers increased by more than 100,000. In 1920 it fell off, and was reduced still further in 1930."

It is interesting that this decrease occurred during the first 10 years of woman suffrage and in spite of the fact that in 1918 the Supreme Court of the United States had declared the first child labor law to be unconstitutional.

But the sweat and toil of the innocent children continued to be exploited within the States themselves until various decisions by the courts and general enlightenment throughout the country finally culminated in the child-labor provisions of the Fair Labor Standards Act of 1938. Today, the products of child labor are declared to be subject to interstate law if the raw materials, the fuel, or the transportation of the raw materials

were necessary to the processing and production of the finished products of child labor.

The entrance of women into industrial life in mills and factories was fraught with many dangers and hedged about with difficulties. Besides the hazards of certain occupations, working conditions themselves were unpleasant and many times exceedingly bad. The enfranchisement of women gave fresh impetus to efforts to correct these conditions and carry on the good work accomplished by such pioneer groups as the National Women's Trade Union League, organized at the turn of the century. Once women had the vote, constructive action was inevitable. Among the far-reaching improvements of this period was that of forbidding the gainful employment of minors under conditions which subjected them to immoral influences.

Prior to the enfranchisement of women nationally, concerted efforts were made to abate commercial traffic in white slavery. Here again, small but courageous groups of women by constant, persistent, and concerted action influenced State and Federal officials and responsible party leaders. This resulted in the enactment of a Federal statute banning interstate traffic in commercialized vice. While the Federal statute cannot reach the traffic within the individual States, it was the first real step forward and has done much to bring about State legislation attacking the problem at its very roots. It rests upon us all to continue this attack with unflagging effort within the separate States.

It was not a simple thing for women to find ways through which they could make themselves felt in political life. Very wisely the first efforts were within the neighborhood, the community level, which, after all, is but an extension of the home. Here organized action programs were instituted. These were followed by the establishment of national women's organizations. Through never-ending labor, women have succeeded in establishing throughout the Nation, groups, small and large, which are keenly alive to the need for women's influence in all areas of living. Quite naturally, these groups soon found themselves contending with the problems of local, State, and National Government. These national organizations so proved their value that the major political parties organized what today are the Republican and Democratic Party women's organizations.

Notable among the early national organizations, whose influences have been far reaching, are the Daughters of the American Revolution, General Federation of Women's Clubs, National Council of Jewish Women, United Daughters of the Confederacy, the original National Association of Colored Women, American Pen Woman, the National Congress of Parents and Teachers, American Nurses Association, and the YWCA—to name but a few. Equally notable, but coming some 20 or 30 years later, are the National Woman's Party, the Federated Business and Professional Women's Clubs, the Women's Service Clubs, such as Altrusa, Zonta, and Soroptimists, Women's Farm and Garden Association, and the sodalities, whose consecrated purpose is to preserve the sanctity of the home. In 1920, upon the achievement of suffrage, the League of Women Voters was organized to instruct women in political procedures and to point up the issues. All of these, and many more, have done yeoman service to bring to women not only opportunities but a very real sense of their responsibilities.

American women have become a definite part of the political as well as the economic life of the Nation—as wives and mothers, as workers and citizens. Women are found today in a variety of gainful employment, in every type of industry. Women are everywhere filling positions of importance in commerce and trade in the applied and liberal arts. They sit among the judges; they play a vital part in medicine and surgery. They are enrolled among our scientists and our doctors of divinity. Only in politics do they seem to lag behind.

I wish that space permitted me to give you my recent impressions of the tremendous impact that women have made upon the countries of Europe; particularly has their contribution been great during and since the war years. The upsurge of the women of the Near East, as they begin to assume responsibility for the future, left a deep impression upon me when I traveled there in 1947. We read daily of what the women of Asia are doing with respect to improving the educational, hygienic, social, and economic conditions in those far-flung countries.

Out of the misery and travail which had long been Mother India has come the liberation of women. It stands in that great Orient, a "pillar of cloud by day and of fire by night," pointing the way to a newer, finer, happier, more healthful, and richer life for 400,000,000 people in that vast country. In India, today, there are 53 women members of central and provincial legislatures, in a government barely 2 years old. Contrast that number with our own country, where but nine women sit in the National Congress, eight in the House of Representatives and but one in the Senate—that lone woman being the first to be elected to the Senate without having first been appointed to fill a vacancy created by the death of her husband.

This brief glimpse of the women of other lands suggests that we must not rest; there is still too much to do. True, we can take heart from the accomplishments of recent years. Our aged, our indigent, our maimed, and our sick, our veterans and our large army of workers today find themselves, in the sunset years of their lives, better able to meet the burden of life because of the beneficent influence of men and women in the social fields of this country. The poorhouses, almshouses, pesthouses, that dotted our country not many years ago are to most of us no more than a memory.

We can take heart from the elimination of sweatshops in the cities, from the pleasanter and safer working conditions in our factories, from the tremendous advances in the open attack upon venereal disease and its social causes, all monuments to those ever more potent and increasing groups of indefatigable and determined women who for the last 30 years have put their shoulders to the wheel in order to build the standard of living we enjoy and which today the world acclaims as the American way of life.

But we women are realists. We know that unsolved problems in social and other fields are growing apace for want of our energies and our inspiration. I am thinking of the conditions in many of our mental institutions which continue to throw a dark shadow across our land. I am thinking of the intolerance and discrimination which still stalk abroad in our wonderful America. Most serious of all the problems which face our country today is one peculiar to this age of increasing speed, of liberty amounting, too often, to license. It is a problem, the solution for which we women must assume a major responsibility.

We have done much to stop child labor, but what of our children?

Ask that brilliant, dynamic, heartful young Administrator of the Federal Bureau of Investigation, as I have done, about juvenile delinquency and listen as he gives you arguments you cannot dispute—that it is not our children who are to blame. Only recently, Edgar Hoover said to me:

"Congressman, the family is the first great 'training school' in behavior or misbehavior * * * the problem of juvenile delinquency must be solved in the home."

Yes, State and Federal laws, important though they be, are not enough. His statement should present a challenge to all women—in and out of politics. We women know that in the hands of woman is the power, in her heart the motive force, to maintain and sustain our homes. We women know that children learn most by absorption of what goes on around them. Therefore, we know that to the problem of juvenile delinquency must be addressed the talents not alone of parents but of teachers and instructors, of script writers for radio and television, of comic-strip artists and the producers of moving pictures. All of these, and many other special talents, must be brought to bear upon that problem which is of such major importance to every last one of us. For are not the youth of today the America of tomorrow?

American women have never yet failed to measure up to their responsibilities when they knew what they faced. Surely they will not fail now.

Americans Are Lucky

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Charles Erwin Wilson, from American magazine:

AMERICANS ARE LUCKY

(By Charles Erwin Wilson, president, General Motors Corp.)

We Americans, I sometimes fear, don't half appreciate our good fortune. I dined not long ago with an auto manufacturer from Sweden who had come to Detroit to study United States production methods.

"You know," he said, "it's extraordinary; but in my country we have no word that's an exact equivalent for 'opportunity.' In fact, I don't believe there's any such word in German or Russian, either. In Swedish the closest we can come to it is our word for 'chance'; but I realize that's not at all the same thing as you Americans mean when you speak of 'opportunity.'"

His words put me in mind of a visit I paid to England last December. I had gone there at the request of the Economic Cooperation Administration in Washington. As we were motoring through London, the British official who was acting as my host turned to me and said, "What about the motto General Motors has been using—'More and better things for more people'—is that just an advertising slogan, or do you really mean it?"

The question flabbergasted me. Stifling my natural irritation, I tried as best I could to frame an answer he would understand. Before I could speak, however, the chauffeur who was driving us broke in.

"Over here, that's frowned on," he volunteered. "The chaps who are running the country don't believe that people should have the better things you talk about."

America's wealth is proverbial. It has been pointed out many times, but it bears repeating, that whereas we possess less than 6 percent of the world's land area and only about 7 percent of the world's population, we nevertheless enjoy 45 percent of the world's electric power, 50 percent of its radios, 55 percent of its steel output, 58 percent of its telephones, 63 percent of its life insurance, and 78 percent of its passenger automobiles.

Last January our company introduced its 1949 model cars to the public by a 2-week showing at a leading New York hotel. More than 300,000 people attended the display. Virtually every man and woman among them was at least a potential customer for some make of car. Nor did any of them think that to own one of those fine cars some day was a dream impossible of fulfillment.

I understand that about the same time that we were putting on this auto show the United States Government's information office in the capital of Yugoslavia placed on exhibit a single copy of an American mail-order catalog. The result was a near riot. Belgrade's traffic was disrupted as crowds blocks long stormed the office for a chance to examine a book written in a tongue they couldn't understand, gawp at illustrations of shoes and silverware and electric toasters they had absolutely no chance of buying.

These two incidents vividly depict the contrast between what Americans have to live on and what the rest of the world has to do without.

Folks in other countries likewise yearn for the sort of freedom you and I are all too prone to take for granted. Every so often you read in your paper how some daring group or individual has highjacked an airplane in order to escape from behind the iron curtain. Although we leave the door wide open, you never read of people here escaping to the Soviet Union. It is the other way around in America. Millions want in, but none want out.

Not only are we Americans favored far above the rest of the earth's inhabitants; today's young people are the luckiest of all Americans.

I heard a speaker describe the 1890's as America's golden decade.

Then, he said, would have been an ideal time to live in this country. During the 1890's, he pointed out, people here had boundless faith in their country and its institutions. We had conquered the frontiers. Our railroads were practically all built. We didn't have to worry about income taxes. We assumed we completely understood the physical sciences and the laws of nature.

I was born in 1890; consequently, I have some personal recollections of that golden decade. One of my earliest memories is that of sitting in a tin tub with my baby brother and watching my mother lug water for our bath from the pump on the back porch and the kettle on the kitchen stove. Our house and the houses of all our neighbors were lighted by kerosene lamps. There were no telephones in our small Ohio town; the only local form of transportation was by horse and buggy; the steam railroad and the telegraph line beside it that ran north 70 miles to Cleveland provided our only contact with the outside world. There were no washing machines, electric refrigerators, vacuum cleaners, radios, automobiles, and, of course, no airplanes or television sets.

In the 1890's Americans worked harder than they do today. Ten hours was then considered a normal working day; and the Saturday half-holiday had yet to be invented. The death rate for people from 6 to 60 was two-thirds higher than it is now, while four times as many children died before they reached the age of 6. Americans then had poorer health and less education. Tuberculosis claimed six times as many victims; epidemics of smallpox, typhoid, and scarlet fever recurred with disastrous regularity. In the 1890's only 1 boy or girl of 17 out of 3 attended high school, as against 2 out of 3 today. Technology and the progress that results have made possible a shortened workweek and improved health standards.

I learned from my parents that a good education is worth almost any sacrifice. They both taught school themselves. My father on graduating from college had accepted the post of principal of the little 4-room school at Minerva, Ohio; my mother was teaching there when he arrived. They met, fell in love, and married; and my mother abandoned teaching in order to raise a family.

When I was 4, my father, too, gave up teaching to become the cashier of the bank at nearby Mineral City, a community of about 1,200 people. A town of that size then afforded plenty of educational opportunities even outside of school. There was a blacksmith shop just one square down the street from where we lived. If you hung around and showed any interest in what he was doing, the blacksmith would let you pump the bellows, hold the horse that he was shoeing, or help him shrink a tire on a wheel.

Across the way was a lumber yard and planing mill. The men who worked there were glad to take time out to explain to us boys what they were doing. Whenever a carload of slate or tile arrived the owner of the yard would pay us a dime or a quarter apiece to help unload it.

Mineral City derived its name from a small coal mine at the edge of town. The father of one of my classmates was one of the seven miners employed there. I remember entering the mine the first time to take him his dinner. Although the day was hot and bright, it was cold and dark inside. Later I was allowed to help load the mine cars with coal so that the one old mule could draw them from the mine; this annoyed my mother, as I was sure to come home crow-black from coal dust. From the men I learned some of the simpler principles of mining; how you attacked the coal by undercutting; how you brought it down by powder charges, which you set off with squibs; how you ventilated the mine with a trapdoor and fire; and why you couldn't go into certain entries where the air was bad.

Among our nearest neighbors were two locomotive engineers. Charlie Diebolt ran the passenger locomotive up to Cleveland; his brother Bill hauled the freight. When his engine was on the siding, either of these men would pass the time of day with us. Often I took Charlie's lunch pail down to him or ran home with a message for Bill's wife. Then I'd clamber up into the cab and ask endless questions about how the steel monster worked. I got my first lessons in mechanical safety from listening to the Diebolt brothers discuss the newfangled air brakes that would hold the train coming downgrade from Sandyville and the automatic couplings that would save the brakeman from smashed hands.

When I was 12 my father decided that it was time for Mineral City to catch up with the march of progress. He persuaded the other council members to install running water and electric lights. I helped survey the line for the pipe that was to bring the water from Sandy Creek. After the power plant was built, the two men who ran it were always willing to let me lend a hand at shoveling coal, especially on warm summer days. In return, they showed me how to blow off the boiler, how to throw the switches, how the arc lights worked, and other wonders.

I learned my first lesson in the sanctity of contracts when I was about the same age. Across the lane that ran behind our house was an apple orchard. The grass in the orchard needed mowing, and I needed money to buy fireworks for the Fourth of July. I went to Mr. Davis, the owner, and offered to do the job for a quarter. I worked all afternoon. But the orchard was large, the grass was tall, the mower was dull, and I was just a little tyke. By suppertime I was only half through. When my father came to fetch me, I would have been only too glad to quit; instead, he silently surveyed the situation, then peeled off his coat and went to work beside me. An hour later, as we trudged wearily across the lane, toward home and a supper long since grown cold, he rested his hand momentarily on my shoulder.

"Remember, son," he said, "once you've given your word, always live up to it, no matter how much it costs you."

About 3 miles from where I lived there was a "communist" settlement called Zoar. It had been founded by Germans some 80 years before The community was pretty nearly self-sufficient. The folks there raised their own food. They smelted their own iron and cast their own implements in a primitive sort of foundry. They wove their own clothing; made their tile, crockery, and brick; had their own harness shop, and built their own wagons. They were a sturdy, independent lot; but they had some peculiar notions. For one thing, they all dressed alike; and, for another, everything they had—land, houses, barns, tools, and cattle—was owned in common. They had a dairy of 100 cows; and regardless of whether you needed 1 quart or 2 gallons, you got the same amount of milk as everybody else.

I used to go swimming in the Zoar Canal with the boys of the community, and got to learn a lot about their customs. Afterward I'd discuss what I'd learned with my father, and he'd explain why, in the long run, the set-up failed.

After a number of tough years the community finally seemed prosperous. The Zoar Canal was built right through their property, and the society had a contract for building a piece of it. This gave them cash to pay their debts and transportation to the market for their surplus products.

Prosperity and increased contact with the outside world, however, revealed the weakness of their system. Many left the village to seek new homes for themselves, especially the young and ambitious men to whom the broader freedoms of the outside world appealed. The older members of Zoar could not keep up the work, and they employed outsiders, which added to their difficulties. Finally it became clear that they could not operate a communistic society, even a religious form of communism, in competition with a free society. There was no reward for the industrious and no punishment for the idle, which ultimately led to universal dissatisfaction. By mutual agreement the Zoar society was finally disbanded; and the remaining Zoarites and their descendants became regular Americans.

I earned my first real money while I was in college, working summers in a lamp works in Pittsburgh, Pa., to help defray my tuition. My pay, as I recall, was exactly 12 cents an hour. After graduation I signed up with Westinghouse as an apprentice engineer at 18 cents an hour.

One of my earliest chores at Westinghouse was assembling electrolytic-type lightning arresters used on direct-current streetcar lines. They consisted of a series of aluminum disks with porcelain and felt spacers in between, stacked on a tripod in a big crock.

The way I'd been instructed to assemble them was to lean over the crock and put the pieces in one at a time, a tedious job at best. I finished the first lot that way. In about a week I got a much bigger lot to do. By that time I was a little smarter. I built myself some subassemblies; then I took my stacks of parts and put them in the crock. This way I leaned over two or three times, instead of maybe 40 times.

This speeded up the job and I finished about the middle of the afternoon. I was just writing out my work slip when one of the older workers sauntered up to me.

"Boy," he said, "what are you trying to do—kill that job?"

"What do you mean?" I countered.

"Look. You're one of these young apprentices. You won't be here very long. Already you've done 2 days' work in less than a day. If you turn in that slip, the standard

will be changed and I'll have to work twice as hard all the rest of my life."

I turned in my slip; but, so far as I know, nobody had to work twice as hard. Actually, the work was performed my way; even if the standard had been changed, no one would have had to work twice as hard to make good on the job, but would have accomplished more with the same effort.

About the beginning of my second year at Westinghouse my foreman told me that I was wanted in the chief engineer's office. When I got there I found that Mr. Benjamin G. Lamme, the chief engineer, needed a young engineer to chase up blueprints, make calculations, and do some clerical work for him. He told me afterward that I took the job before he was sure he had offered it to me. The 2 years I spent in his office were a very valuable experience for me, as they would have been for any young engineer. Not only was Lamme one of the foremost engineers of his time but he was an inventor. Also, he had a forward-looking approach to training young engineers which amounted to a hobby.

There were usually half a dozen other student engineers in Lamme's outer office, working on design and construction problems he had assigned them as part of their training program. One of the young men—the one in his office—helped supervise the others. All the young engineers who had special training under Mr. Lamme considered themselves lucky to have attracted the attention of such a remarkable man. How right we were is proved by the fact that a majority of his erstwhile students now occupy important positions in American industry.

Chance plays a part in every man's career. The Wilsons had come from Virginia and settled in Ohio when that part of Ohio was Virginia territory. Many of the neighbors were also of southern stock. When the Civil War broke out there was a big argument among the young men of the county regarding which side they should take. As neighbors, they didn't like the idea of fighting each other. Eighty-five of them decided to have a secret ballot and all go with the majority. The Union side won and they elected my grandfather captain; and all 85 enlisted together. I understand that is the way that my Grandfather Wilson became a Union officer instead of a Confederate private.

My first bit of business luck, of course, was being taken into Lamme's office. My second break was getting into the automobile business while it was still young.

I remember vividly my first sight of an automobile. Back in 1904 a promoter had come to Mineral City in a curve-dash Oldsmobile runabout—the "Merry Oldsmobile" they wrote the song about. The motor fumed and spluttered and made a fearful racket. Dogs barked; horses shied; and we boys ran along beside the machine, trying our best to keep with it. What a thrill.

A couple of years later in Atlantic City I had my first ride in an automobile. A man there was charging $5 for a short spin on the beach. In 1912, however, when I was assigned the task of designing an electric auto starter for Westinghouse, I neither owned a car nor knew how to drive one—a situation which I soon remedied.

Early in the year 1919 I received an offer to join the Remy Electric Co., a General Motors subsidiary. The war was over, and during the war the Westinghouse Co. had decided to move its automotive equipment plant from East Pittsburgh to Springfield, Mass. I faced the probability of moving my family anyhow, so I decided to take the job with Remy. I often think that if that factory had stayed where it was in East Pittsburgh, I very probably would be an electrical engineer today instead of an automobile manufacturer.

I have found that one way to make the most of your opportunities is to expand your knowledge in the direction you want to go, so that when you get a lucky break you can qualify for the opportunity. A doctor friend of mine observed not long ago that a man reaches the peak of his physical capacity between 21 and 24 years. After that, the only way he can continue growing is by expanding his mind.

I am a strong supporter of formal education. For more than 30 years I have been an ardent advocate of wider technical training both on and off the job for workers. However, I believe that what you learn in classrooms is only a beginning for what you can learn in your work and contacts with other people. To do this you must retain your youthful curiosity and maintain an open mind.

Sometimes what appears to have been a bad break ultimately turns out to have been a good one. For example, some years ago a certain Detroit school had a janitor who couldn't even sign his name. The school board decided the situation was undignified, not in keeping with the ideals of education, so they let him go. This was at a time when the rapidly expanding automobile industry was producing quite a lot of scrap for the disposal of which it had made no provision. So this fellow bought a hand truck and taught himself the business of buying and selling scrap. Before long he'd learned a lot about the business and had amassed quite a fortune, including a six-figure bank account, although he still signed his checks with just a cross. One day his business took him to the office of a member of the school board that had fired him.

"Mr. D," the member asked admiringly, "did you ever stop to think where you might be if you could read and write?"

"Sure," D replied. "I'd still be the janitor of your school."

Some people waste time and energy repining about the weather or other things that cannot be helped. There are enough things you can do something about without worrying about things that are beyond your influence. Perhaps, after all, the best approach is that life is a great adventure and be prepared to take it as it comes—plus or minus. Adaptability—the faculty of adjusting oneself quickly and easily to new and difficult situations—is a priceless asset, both in business and in private life.

You can improve your chances if you make it a habit always to give your current job your best. That is what I call exposing yourself to good luck. Work is really a normal part of living and in its broader aspects not just a means of staying alive. A man's work should give him a sense of fulfillment. That's why I say: Seek a job you know needs doing * * * one you feel you have the ability and experience to fill * * * one that's worth doing well, one you know will reward you for doing it that way. Once you've located that sort of job, you should find it easy to give it your very best.

A few months ago we have a letter-writing contest here at General Motors. The subject was My Job and Why I Like It. The contest was open to all employees not members of the executive group nearly 175,000 of them took part. A theme that ran through all 5,000 prize-winning letters was pride in the writers' work. One worker summed it up this way:

"A drop-forge operator is a peculiar sort of Joe. He has a tough job and he is proud of it. He makes forgings 8, 9, or 10 hours a shift. After work he makes them in the tavern, he makes them at the dinner table. In fact, he makes them wherever and whenever he can get anyone to listen, and he always makes them better than any other guy."

The harder and longer you work at your job the more rapidly you gain experience. After I had been in the Westinghouse shop a few months we got busy on some special orders and worked as much as 80 hours a week for 3 or 4 months. It was a little hard on the arches, but it paid off in experience.

You'll find it pays to make an extra effort to get along with people. In business, whether big or small, the human element comes first. The bigger the business, the more urgent is the matter of teamwork.

In the letter-writing contest I previously referred to there was a letter from a workman who wrote: "I have a good foreman, and for every reason that I think he is good I like my job just that much better. He thinks I have more ability than I think I have, so I consistently do better work than I thought I could do." You'll find a whole treatise on the art of getting along with people compressed into those sentences.

In General Motors we have manufacturing plants in many different cities. We turn out a wide variety of products, from automobiles to Diesel locomotives, from jet engine to home refrigerators and television sets. Last year we made more than 1,000,000 car radios. It takes an amazing multiplicity of materials to produce these things: An automobile, for example, requires no less than 8,000 individual parts. Many people often wonder how we ever get all these parts together and build these many products on time. It is only the teamwork of people that makes this possible—the teamwork of 380,000 GM employees, all working in a common effort to serve the millions of Americans who are the customers for our products.

To cash in on your luck it's a good idea, too, to acquire a reputation for keeping your promises and commitments. As you go through life, you'll discover that people judge you, not alone by what you do, but by what you do, in relation to what you say you'll do. It's almost as bad to make promises you have little or no chance of keeping as it is to make promises you don't intend to keep. I've never forgotten mowing Mr. Davis' orchard and my father's counsel at the time. Since then I've tried not to make promises that were beyond my ability to fulfill.

A final way to improve your luck is to look facts straight in the face. Facts are stubborn things. They must be reckoned with. If you attempt to brush them aside and ignore them you are sure to trip over them. An important lesson that all engineers must learn is that no one can build a bridge or a machine and substitute superstition, prejudice, or wishful thinking for facts. When physical and engineering facts are ignored, bridges collapse and machines fail. When other facts in our lives are ignored, the results may be just as disastrous, though the causes and effects may not be so clear.

In facing facts, moreover, it's a good idea to make certain you know exactly what they mean. You may have heard the story of the traveler who came to a stream and, wanting to get to the other side, asked a native how deep it was. "It averages just under 2 feet deep," the native told him. Nevertheless, the stranger drowned trying to wade across.

Right now the Russians seem to be twisting the facts of science. For them the party line is the truth rather than the physical facts. For example, American biologists and those of practically every other country have agreed upon certain scientifically observed facts about heredity. However, these facts fly in the face of Communist dogma. Therefore, the Russians, rejecting the fruits of more than a century of careful observation and experiment, have invented a sort of fairy-tale Marxist biology of their own. When the truth is recognized, as it is sure to be some day, a large hunk of Soviet ideology will collapse.

We Americans would be making a grave mistake if we were to follow Russia's example by refusing to look facts in the face.

We shall court disaster if, ignoring the facts about democracy, capitalism, and free enterprise, we attempt to substitute dogma or sheer emotionalism.

The important facts about America are these: First, our present system is the best that has ever been devised in history; second, it has an inherent ability to improve itself—and, in fact, is constantly improving; and, third, it is built on the desirability of progress and improvement. Therefore, to argue that we should scrap our system because it isn't already perfect makes no sense.

I look upon America today as I look upon a 1949 car. They have both come a long way from their early beginnings. Both can stand improvement. But each of them is far and away the best thing of its kind that has been produced to date. God willing, I hope to do my share toward building still better motorcars, and, as one in millions, to do my part toward creating a still better country.

Another fact we need to face is that we must be willing to work for the things we would like to have. The only way we can increase our prosperity, measured in terms of physical goods, is by producing more. You can't eat bread made of wheat that's not been raised; you can't ride in a motorcar that hasn't been manufactured. That's why increasing wages without increasing production won't give us a higher standard of living.

A friend of mine claims he has figured out a way to hand every man, woman, and child in the United States $1,000,000 cash. He asked a group of people how they would spend it.

After some deliberation one woman said she would go to Chicago and buy herself a number of things, including a sable coat.

My friend asked how she proposed to get there.

"I'd take the train," she said.

"Now, you've got to remember that the engineer and the fireman and the brakeman and the conductor each have $1,000,000," he reminded her. "Do you suppose they're going to waste their time riding you around the country?"

"Well, I'll go some other way. I might even walk."

"Of course, by the time you get there all the fur coats will be gone. And the trappers each have $1,000,000, too. Will they be willing to go out in the snow and cold and catch more animals for you? And remember, the furriers who have been making the coats and the clerks who have been selling them are also millionaires. They're hardly likely to bother with your order."

That stumped her.

"Well," she said at last, "I guess I'll just have to make my old coat do."

She was wrong, of course. Money, itself is not the answer. Money is essentially a medium of exchange and a common medium for valuing goods and services. In the final analysis we can enjoy only what we produce. But if the people of this country are willing to work for the things they'd like to have as they have been in the past, there's no reason why we shouldn't go on having more of everything.

To do so we shall need to step up our output per acre, per machine, and per man-hour. Our prewar rate of improvement in this respect was between 2½ percent and 3 percent a year. That doesn't sound like much; but it operates like compound interest. If we continue to maintain that rate, we shall have a standard of living 25 years from now twice as high as we enjoy today; and our great grandchildren, 100 years from now, will enjoy a standard of living 16 times higher than we have at present. Nowhere in the world and at no time in history has any other nation ever achieved, let alone maintained, such a rate of increase in its standard of living. Such progress, of course, assumes that we avoid disastrous wars, and that we do not artificially and rapidly shorten hours of work or dissipate in other ways the fruits of science and technology.

Changes that seem to take place slowly as you live through them appear in retrospect to have arrived from nowhere with the speed of jet propulsion. During my lifetime humanity has witnessed startling advances in science and technology. My boyhood coincided with high noon of the horse-and-buggy era. Henry Ford, Thomas Edison, George Westinghouse, and others had not perfected their inventions, which have revolutionized our entire way of living. The Curies had still to discover radium, upsetting the fundamental concepts of physics and pointing the way to the release of atomic energy.

I remember the first movies. I watched Glenn Curtiss fly one of the first airplanes. I even assisted, in some slight measure, in the development of radio. I do not know what the developments of the next half century will be, any more than I could foresee the developments of the past 50 years; but I do know that they will be equally startling. New and important discoveries are assuredly on the way; and human needs and human wants will continue to expand in the future, as they have done in the past.

Each new discovery opens up new opportunities for producing more and accomplishing more with the same amount of human labor. The opportunities for young people today are undoubtedly greater than when I was a boy. They will be greater still tomorrow.

Forty years ago, when I was launching my career, every boy expected to have to get out and hustle to make a living. This is true today; but the same amount of hustle will produce a much better living. Of course, those young people who expect to have things made easy for them are likely to receive benefits only in proportion to the value of their social contributions. The more there are of this sort the less will be the competition for the girl or boy who has the energy and ambition to work and improve himself.

America continues to be a wonderland of opportunity for those who are willing to invest a little extra effort. If we keep it that way, if we hold fast to the things that made our country great, no force on earth can halt this Nation's social and economic progress.

Address of Lt. Gen. Walter Bedell Smith Before the Conference of Governors

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. EVINS. Mr. Speaker, in the Department of State publication, The Bulletin, volume 21, July 4, 1949, there appeared a reprint of an address made by Lt. Gen. Walter Bedell Smith before the recent conference of governors. This is an excellent and thought-provoking speech by the distinguished military leader. General Smith, as we all know, was Chief of Staff to General Eisenhower during the course of the European War, subsequently serving the Army of Occupation and later as Ambassador of the United States to the Soviet Union. In his speech before the governors' conference General Smith discussed the European recovery program, the proposal of military assistance, the responsibility for leadership of the United States in world affairs.

I have asked unanimous consent that General Smith's speech be included in the RECORD, and I commend the reading of this address to the Members.

The speech is as follows:

I appreciate the honor of being invited to address the governors of the United States at their annual conference. I consider it especially significant that our Governors, preoccupied as they are with the special problems and interests of the respective States, should turn their attention to a consideration of foreign affairs, which in our time have come to affect the lives of all Americans in the most personal and intimate way.

The turn of events since the end of the war has placed upon the United States, as the citadel of freedom and the strongest of the free nations, the major responsibility for world recovery, world peace, and world progress, and at the same time has confronted this Nation with potentially the gravest challenge ever offered to our principles and our way of life. This situation results from the decision of the leaders of Soviet Russia to turn away from the cooperation which we hoped would prevail after the war, and instead to seek to impose communism upon the world. The consequent resistance of the free peoples of the world to subjugation and enslavement has brought about the world-wide struggle in which we are now engaged.

ELEMENTS OF SOVIET COMMUNISM

In any such conflict, the first requirement is to understand the nature of the opposing force. In analyzing Soviet communism, we can distinguish certain basic characteristics or elements. The first element is a group of ruthless and ambitious men, animated by a lust for power and bound by a fanatical doctrine which holds that the end justifies the means, no matter how brutal or unjust. The second element is the seizure by this group of absolute control of a large and powerful nation, whose strength and resources are used by the arbitrary rulers to carry out their aggressive and expansive policies. The third element is the control and manipulation by these rulers of subservient groups in other countries so as to subject those countries to the will of the dominant power, as has been done throughout eastern Europe, as is being done in China, and as will be done wherever freedom and democracy do not prove themselves strong enough to resist.

STRENGTH OF THE DEMOCRACIES

This combination of unrestrained power, based in a vast and lusty country and reaching out in all directions through the mechanism of international communism, makes Soviet Russia a formidable opponent. Yet the democracies, aroused to common action and dedicated to the preservation of their liberties, are substantially stronger.

I am convinced that the Soviets, although exasperatingly difficult to deal with, do not want to risk war and will modify their aggressive policies when confronted with firm resistance, backed by recognizable force. This opinion was not hastily arrived at but is based in large part on my experience as ambassador to Moscow.

It is extremely important for the democracies, and especially the United States, never to lose sight of the fundamental fact that we are engaged in a constant, continuing, gruelling struggle for freedom and the American way of life that may extend over a period of many years. We must not be thrown off balance by temporary ups and downs, indecisive triumphs and failures. We must anticipate that the Soviet tactic will be to attempt to wear us down, to exasperate us beyond endurance, to keep probing for weak

spots they can exploit. Obviously the Russians believe they are playing a game of patience, in which they can outlast us.

We need to keep reminding ourselves to take the long view, particularly at the conclusion of some dramatic or frustrating experience, whether it be the end of a blockade or the termination of a Conference of Foreign Ministers. We cannot allow ourselves to be swerved from our long-term purpose by the elations or the disappointments of the moment.

Regardless of from what direction one approaches the problem, he must inevitably arrive at the conclusion that the best assurance of peace is our determination and strength to support our convictions. It is not sufficient only to have strength to defend ourselves by military means if necessary. The potential must exist and by its very existence it serves its highest purpose, which is in preventing war. We all know now that while victory in war saves us from the imposition of solutions we are determined to reject, victory itself raises grave new problems in turn As one who has seen war, I am earnestly concerned with the creation of conditions that will assure peace.

This is the object of this Nation's policies in foreign affairs. As a member of the United Nations, we are pledged to the settlement of international disputes by pacific means. We are conscientiously trying to strengthen the United Nations as an effective instrument for preserving the peace. We are energetically working, both inside and outside the United Nations, to promote the economic and social conditions throughout the world that will minimize conflicts and remove the causes of wars. If we continue to pursue these policies vigorously and steadfastly we will succeed in throwing back the challenge of communism and at the same time preserving the peace.

EUROPEAN RECOVERY PROGRAM

One of the fundamental measures for achieving that purpose is the European recovery program, an essential and effective means of assuring peace. No one who has been in Europe for any length of time since the war can help but be profoundly impressed by the great change that has taken place since the Marshall plan has been in operation. Little more than a year ago, western Europe was disorganized economically, depleted physically, and depressed spiritually. The position of its free nations was precarious. It was a situation of crisis in which anything might happen. The prospects for peace were anything but promising.

The contrast between conditions in Europe then and today is remarkable. The free nations of western Europe have literally taken a new lease on life. They are working together as never before. The people have been given more than new hope, as important as that is. They have been given something to work with, and their production record proves that they not only are eager to work but that they also have the skill and the determination to reestablish themselves in the world. The Marshall plan has not been the only factor in effecting this transformation, but it has been the major force in the stabilization of Europe. I am certain that history will confirm President Truman's judgment that the Marshall plan marked the turning point.

In the marked increase of production achieved in Europe during the last year, the contributions of farm and labor groups both in this country and in Europe have been notable. The organized labor movement in this country and the non-Communist labor movements in the participating countries of Europe have strongly supported the Marshall plan. These movements on both sides of the Atlantic joined in establishing a trade-union advisory committee to assist in carrying out the recovery program. The support of the labor groups is essential to success, since the workers hold the key to industrial production. Similarly, the representatives of farm organizations in this country have testified for the Marshall plan in congressional hearings and likewise have been active in an advisory committee to assist the ECA. The farmers of Europe, favored by the weather, have substantially increased the production of food crops. Such interest and support is of great importance because it demonstrates that the Marshall plan is not just an arrangement among governments but basically a cooperative effort among the people of the countries concerned.

But we must not forget that the essence of the Marshall plan is that it is not a relief program but a recovery program and that it is based on calculations of the minimum requirements for recovery over a 4-year period. We knew this when we accepted the plan in the first place. This means that we must be prepared to follow this program through to its logical conclusion if it is to accomplish its purpose. If we turn back from the course we set ourselves little more than a year ago, or if we slacken our efforts, we not only risk losing the momentum achieved thus far, but we also run the danger of wasting what we have already invested in the program. Aside from the material factors involved, any sign of vacillation or indecision on our part will profoundly discourage our friends and strengthen the belief of the Communists that they have only to keep up the pressure until we grow tired and give up the struggle. We must understand that we are engaged in a contest of indefinite duration and that we must decide our course and stick to it through thick and thin.

The recovery of Europe is a primary requisite for the maintenance of the free way of life and the preservation of peace. But even European recovery is only part of a larger design. The economic revival of western Europe is necessary to make the peoples of that continent self-supporting and to enable them to resume their proper place in world affairs. Economic recovery also will provide them in time with the strength to assume their own security. But they do not have that strength at present.

All the nations of western Europe that engaged in the recent war, with the exception of Great Britain, emerged from that conflict practically defenseless. Since VE-day they have begun rebuilding their defenses, but it is a slow, laborious process, particularly since economic recovery has priority. The knowledge of their inadequate defenses, in the face of the aggressive and expansive tendencies of the Soviet Union, has contributed to a pervading sense of insecurity that weighs heavily on western Europe. Even while putting forth their utmost effort for recovery, the people have been haunted by the fear that they might be rebuilding only to have the fruits of their labor again usurped by an occupying army.

THE NORTH ATLANTIC TREATY

The sense of insecurity arising from these circumstances is in itself a serious detriment to recovery, stability, and peace. In order to achieve our objectives in Europe, the United States must use its own strength to shield the free nations of Europe from aggression while they rebuild their defenses, just as we are using our material resources to enable the people of western Europe to revive their economies. This is the purpose of the North Atlantic Treaty, which the Foreign Relations Committee of the Senate has unanimously recommended for ratification, and the legislation for military assistance, which the administration is now preparing to submit to the Congress.

The treaty, which is a pact for the mutual defense of the North Atlantic area against armed attack from any source, commits the 12 signatory countries to help each other to maintain and develop their individual and collective capacity to resist aggression. It is in partial fulfillment of that obligation that the administration proposes to provide $1,130,000,000 of military assistance to the European members of the treaty during the next fiscal year.

The purpose of this measure is to accelerate the rebuilding of the defenses of western Europe, both to increase the faith of the free peoples of Europe in their own ability to resist aggression and to make more effective their pledge to contribute to the mutual defense of the North Atlantic area. The promise that all of the 12 nations signing the treaty naturally including the United States will come promptly to the aid of any one of them which is attacked is in itself a strong deterrent to aggression. From what we know of the nature of Soviet communism, it is obvious that the effectiveness of that deterrent will be increased in proportion to the known ability of all 12 nations to resist and defeat an aggressor.

The great, the priceless benefit we expect to gain from this treaty is peace. We seek that benefit by making clear in advance our determination and that of our partners in the treaty resolutely to resist armed attack with all the strength available to us all. Determination is not enough; it must be backed by strength.

MILITARY ASSISTANCE

If war should nevertheless come, the advantages of this arrangement would not by any means accrue solely to the European members of the treaty. With the experience of two World Wars in mind, I think it is clearly apparent that there are tremendous advantages to the United States in having strong and loyal friends on the continent of Europe. In the event of war, these advantages are greatly increased if our associates in Europe are able to maintain their position until we are able to join our forces with theirs on the continent. Therefore, our assistance in strengthening the ability of our Atlantic pact associates successfully to resist aggression in Europe is equivalent to strengthening the defenses of the United States.

The conclusive reason for military assistance to the free nations of Europe is that it materially enhances the prospects for peace. The greatest single achievement leading to the creation of conditions that would assure lasting peace in the world would be the reestablishment in Europe of a group of strong, free, virile and progressive States, living together in harmony and cooperating closely in political, economic, and social matters for the good of their own people and the people of the world. This kind of Europe, no longer dependent on the United States or fearful of attack from the East, would be a stabilizing force with great influence in world affairs.

EUROPE AS A BULWARK OF PEACE

This kind of Europe would contain a population greater than that of Russia, much further advanced in science and technology, with resources much better developed and an industrial organization much more efficient and productive. Such a Europe would be able effectively to resist the encroachments of communism. By providing a living, dynamic demonstration of the superior values of the free way of life over totalitarian, such a Europe would inevitably exert a profound attraction for the repressed and impoverished peoples under the Communist yoke.

Above all, the kind of Europe envisioned as resulting from our present policies would be a great constructive force for peace. The free nations of Europe share our aversion for war. That aversion has been intensified by the tragic experiences of recent years. Strength in the hands of the free peoples of Europe will be strength dedicated to the de-

fense of peace. We can make no better investment for peace than the restoration of the strength of the free nations of Europe.

We can help make Europe a bulwark of peace by doing three things: First, continuing the European recovery program in full force until we have finished the job and attained the objective we set ourselves in the beginning. Second, entering fully and wholeheartedly into the North Atlantic Treaty for the mutual defense of the vital centers of western civilization. Third, providing military assistance as an effective step toward reconstituting the strength of western Europe as a positive force for peace.

BIPARTISAN NATURE OF UNITED STATES POLICIES TOWARD EUROPE

I should like to emphasize the bipartisan nature of these policies. The legislation providing aid for Greece and Turkey and for economic assistance to Europe and the Senate resolution which guided this Government in negotiation of the treaty were all passed by a Republican Congress with a Democratic administration and by overwhelmingly bipartisan votes. To me this is clear proof that these measures far transcend partisan politics and are recognized as representing the true basic interests of the American people.

In advocating these measures, I fully recognize that they are undertakings not to be lightly assumed. The continuance of the European recovery program and the initiation of the military assistance program require large public expenditures at a time when our commitments are already heavy and economic adjustments apparently are in progress. I support these measures out of a deep conviction that they are essential in the national interest. What is involved here is nothing less than the preservation of our way of life—the continued assertion of our right as freemen to govern ourselves as we see fit and to live according to the dictates of our own conscience.

SACRIFICES OF AMERICAN PEOPLE

This being true, we should not hesitate to make whatever sacrifices are necessary to defend our free institutions. The American people have repeatedly shown that they will willingly make great sacrifices for that purpose. Public opinion clearly favored the inauguration of the Marshall plan at a time when it appeared that the shipment of the necessary foodstuffs and other materials to Europe might cut drastically into our own supplies. That danger no longer exists. In fact, the procurement program for European recovery might become a valuable stabilizing influence in our domestic economy when production is declining. Certainly it is true that our foreign-aid programs and our domestic economy must be kept in balance as component parts of an integrated national policy.

The time has passed when foreign affairs and domestic affairs could be regarded as separate and distinct. The border line between the two has practically ceased to exist. Henry L. Stimson, who has served both as Secretary of State and as Secretary of War, has summed it up this way: "No private program and no public policy, in any sector of our national life, can now escape from the compelling fact that if it is not framed with reference to the world, it is framed with perfect futility."

UNITED STATES RESPONSIBILITIES IN WORLD AFFAIRS

Our great responsibilities in world affairs inevitably have their effect on every aspect of our national life, and every element of our national life enters into our actions with respect to the rest of the world. The strength which we must have to overcome the dangers that threaten and to accomplish the great task of achieving a just and decent peace is not military strength or economic strength alone, but the total strength of the Nation. It is a strength that encompasses such things as education, public health, family life, and opportunity and incentive for individual achievement. And basic to that strength is the passionate devotion of our people to the free way of life. We can maintain the material, moral, and spiritual strength of America if our democratic faith remains strong.

We in this country know that we can draw from this wellspring of faith the strength necessary to carry out the tremendous responsibilities of world leadership. We must express that strength in purposeful and resolute action. We must never give others cause to doubt our purpose and our resolution. The stakes are too high to afford even a suspicion of irresolution.

In this critical period of history, the United States cannot have a fair-weather foreign policy formulated under favorable conditions only to be abandoned or watered down when the going gets rough. We cannot embark on a certain course of action, advertised to the world, and then back down before the job is finished.

We have made a good start on a policy that has achieved a considerable measure of success. We need to keep at it. Hesitancy or delay at this time would only hearten the enemies of democracy and weaken the confidence of the free peoples in the leadership of the United States which has brought the world thus far along the road to recovery and peace. We can't march up the hill one day and down again the next. We must go forward, step by step, to world peace and security. Only in such a world can our own peace and security be assured.

Read Them and Weep

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. MULTER. Mr. Speaker, I am spreading upon the RECORD four articles written by Charles Van Devander, national-affairs correspondent for the New York Post, which appeared on July 5, 6, 7, and 8, 1949. Here we have again a full, fair, and factual résumé of how completely we have failed to destroy the monopolies and cartels which have twice before put Germany in a position to attack the peace of the world. Unless we implement our declared policy by acts which will fulfill it, we have every reason to expect trouble again in the not too far distant future. If the man in high places are not going to effectuate the President's policy, they should be replaced with persons who will.

TWENTY-SEVEN GERMAN INDUSTRIAL MONOPOLIES HIGH LIGHT UNITED STATES FAILURE TO BAN CARTELS

WASHINGTON, July 5.—Twenty-seven industrial monopolies listed for dissolution by the American military government 2 years ago are still operating without interference in the United States zone in Germany.

The Atlantic Charter, the Potsdam agreement, and numerous official statements by Presidents Roosevelt and Truman long ago committed the Army to an all-out effort to smash these powerful and war-breeding German industrial empires.

This is still the policy, officially, and has never been openly challenged, but the practical results are represented by a big, round, black zero.

In at least one case, involving war-essential ball bearings, the Army rule in Germany has converted an 80 percent monopoly into a 100 percent monopoly. This was done by grabbing up the lone competitor to the powerful VKF ball-bearing company and dismantling it for reparations. VKF was left intact.

FOUR YEARS TO LAY ONE EGG

Four years after VE-day, military government officials last month filed the first, and to date only, "deconcentration" order against a German company under Occupation Law 56, which is roughly comparable to United States Sherman and Clayton antitrust laws.

The order was directed against the Robert Bosch Co., which has a virtually complete monopoly on certain types of Diesel engine and automotive equipment. The deconcentration order failed to make even a dent in the main sources of the Bosch Co.'s industrial power, but merely required it to divest itself of some radio side lines. That lone order, subject to appeal, is the sum total of more than 2 years of effort to break up monopolistic concentrations of industrial power in beaten Germany.

The companies involved, without exception, were deeply involved in Hitler's bloody drive for world domination. Some notably benefited from Nazi conquests by swallowing up competitor firms in Austria after the Anschluss, and in Poland and the Balkans after they had been blitzed. Others profited by the "Aryanization" of German industry.

SABOTAGE IS CHARGED

A three-man investigating committee, appointed by former Army Secretary Royall and headed by Federal Trade Commissioner Garland Ferguson, reported last April that the decartelization and deconcentration drive had been "sabotaged" by AMG officials "unsympathetic" to announced United States policy.

The Army's formal reply last week suggested the basic reason for inaction; top AMG officials have set German "economic recovery" as their primary goal. And the banker-big business clique, dominant in AMG, regards trust-busting as inconsistent with economic recovery.

This contention was noted and answered in the report of the Ferguson committee, which said:

"* * * The economic advisers to General Clay generally took the position that deconcentration would interfere with German economic recovery. Although the matter was gone into extensively by your committee, we have found no support for the proposition that deconcentration would interfere (with recovery) when carried out along the lines of a sound policy. * * * Whatever the amount of production authorized or permitted, it should be accomplished under the same policy regarding cartels and deconcentration as it has existed from the beginning."

The issue between AMG trust busters and top officials who blocked them at every turn were directly joined in cases involving the Robert Bosch, VKF, and Henschel (locomotive) companies. Details of each of these cases will be set forth in subsequent articles in this series.

REVEAL HOW UNITED STATES MILITARY CHIEFS FOILED SPLIT-UP OF NAZI FIRMS

WASHINGTON, July 6—Henschel & Sohn, of Kassel, Germany (United States zone), is the largest locomotive-manufacturing concern in Europe. During the war it more than doubled its capacity and expanded into the manufacture of Tiger tanks, planes, trucks, etc.

Scavenging in the trail of Hitler's political and blitzkrieg conquests, it swallowed up the principal locomotive companies in Austria and Poland.

Now, according to an Army Department investigating committee, Henschel & Sohn

possesses between 70 and 80 percent of Germany's locomotive facilities, between 90 and 95 percent of its trolley-bus manufacturing capacity, and holds a commanding position in other fields of production.

It was one of four companies selected by American military government trust busters in June 1947 to be dissolved in 3 to 6 months. But to date top AMG officials have blocked all efforts to break up this industrial empire into two competing parts.

Philip Hawkins, head of the AMG Decartelization Branch at the time, said in a report to the Army Secretary on September 23, 1947:

"The Henschel combine cannot be left intact for the reason that its position in the German industrial world was so powerful that it could dictate the terms under which it would do business, and that it was beyond the reach of competitive influence; and that its size and influence rendered it impervious to the conditions of free enterprise."

The Henschel case issues are simple and clear.

The company was founded as a gun factory by George Kark Henschel in 1810, and subsequently turned to manufacture of locomotives as its main activity. After 1924 it also began making streetcars and motor vehicles, It is now owned exclusively by members of the Henschel family, all residents of Kassel, with Oscar Henschel owning 69 percent.

During the war the company built a huge new factory at Mittelfield, 6 miles from Kassel, where it produced Tiger tanks. The Mittelfield plant has now been converted to the manufacture of locomotives, and has twice the capacity of the original plant at Kassel, with which it had obtained a dominant position in the locomotive industry in Europe.

Finding Henschel in monopolistic possession of these two factories, the Decartelization Branch proposed a simple solution; that the company be required to sell one plant or the other to a competing firm.

This recommendation was vetoed by General Clay, presumably on the advice of General Draper, his first economic adviser.

The Army investigating committee headed by Federal Trade Commissioner Garland Ferguson recommended 2 months ago that Clay's decision "should be entirely reexamined."

In its reply last week the Army quoted Clay as saying he "did not believe that the breaking up of Henschel, the principal locomotive works in Germany, was a wise undertaking at a time when transportation was almost at a standstill, because of the need for repairs to rolling stock, and I am still of this view."

But there was never any proposal that the Henschel plants stop producing while there was a desperate need for rolling stock, but merely that the company be broken up into two competing systems.

BALL BEARING CARTEL PROTECTED BY UNITED STATES ARMY CHIEFS IN REICH

WASHINGTON, July 7.—A recital of the Army's decisions affecting the production of ball bearings in Germany exposes the heart of the issue over what kind of Germany is being rebuilt under military government auspices. Here is the chronological account.

1. The United States and other occupying powers originally decided to prohibit production of ball bearings in order to limit Germany's war potential.

2. Gen. Lucius Clay, United States military governor, authorized temporary production by VKF, a subsidiary of the world-wide Swedish SKF ball-bearing cartel, "merely while Germany was under military government as a means of getting the economy started."

3. Clay vetoed an attempt by the AMG Decartelization Branch to break up VKF into two or more competing units and force it to sever its ties with the parent company in Sweden. He ruled that, since future production was to be prohibited anyway, "nothing was to be gained by breaking up this enterprise."

4. MG officials meanwhile ordered the dismantling of the independent Kugelfischer ball-bearing plant, SKF's only competitor, under the reparations program. All the Kugelfischer machinery was ripped out and removed to the Soviet zone. VKF was left intact.

5. In April 1949 the United States-British-French foreign ministers removed ball bearings from the list of prohibited industries.

VKF BACK IN BUSINESS

As a result of these five steps VKF is permanently back in business and, thanks to AMG's elimination of its only competitor, it now has a 100 percent monopoly on production of ball bearings in Germany. Before the war Kugelfischer had about 20 percent of the business.

The proposal to dissolve VKF into at least two competing producers, by requiring it to sell two of its six plants, was contained in a proposed deconcentration order submitted to AMG officials by its decartelization staff in 1948.

After the draft of this order had been circulated, Lawrence Wilkinson, who had succeeded Maj. Gen. William H. Draper, Jr., as economic adviser to Clay, met with Swedish officials of SKF. An agreement was reached to suspend the deconcentration proceedings, in return for a promise that VFK would relinquish its idle equipment to Kugelfischer.

OFFICIALS ACCUSED

This agreement was communicated to Richardson Bronson, head of the Decartelization Branch, without any consultation with the staff members who had painstakingly worked up the antitrust case.

A civilian committee headed by Garland Ferguson, member of the Federal Trade Commission, examined this and other cases this year at the request of former Army Secretary Royall. It found that both Wilkinson and Bronson were "unsympathetic" with the official United States policy of breaking up German cartels.

Of the VKF incident, the Ferguson committeee recommended specifically:

"Under all the circumstances, this case should be completely reexamined."

ARMY DEFENDS MEN

But the Army's official reply to the Ferguson committee made last week by Assistant Army Secretary Voorhees, asserted:

"There is nothing in the record to justify reopening cases which General Clay has closed, unless changed circumstances in a particular situation may so require."

One additional striking fact in connection with this case is worth noting. The Justice Department has filed an antitrust action which is now pending, to force SKF Industries, the American branch of the world-wide ball-bearing cartel, to break its connections with the parent company in Sweden. But under the procedure followed by military government the relations between the German and Swedish companies remain undisturbed.

ARMY CITES ONLY SINGLE CASE OF FINAL ACTION ON CARTELS

WASHINGTON, July 8.—In its defense of military government against the charge of sabotaging United States decartelization policy in Germany, the Army was able to cite only one instance in which final action has been taken to break up a monopolistic German combine.

Assistant Army Secretary Voorhees, replying to mounting criticism, said last week that in the case of the Robert Bosch Co., there had been filed a final determination and order for the company's deconcentration.

The fact is that this order, filed last month after the Army was already under heavy fire, merely attacks the Bosch monopoly on its fringes. It leaves unchallenged the company's major sources of industrial power.

In this case the AMG disregarded the recommendations of its own antitrust experts and of the Garland Ferguson committee, which investigated the decartelization program at the request of former Army Secretary Royall.

Before World War II the Bosch Co., with headquarters at Stuttgart, had achieved a virtual world-wide patent monopoly in the production and distribution of fuel injection equipment, which is essential in the operation of Diesel engines and is becoming increasingly important as a fuel feed system for high-powered aircraft.

From the time Hitler came to power, the Ferguson committee reported, "Robert Bosch was dominated by the Nazi government."

The company was alleged to have engaged in industrial espionage in the United States and to have received specifications and details on Army radio developments in the short-wave, high-frequency field.

Since VE-day, the giant Bosch combine has strengthened its monopolistic position in Germany. By its own estimate it now accounts for more than 50 percent (ranging up to 80 percent) of the entire German production in 13 separate classes of commodities. These include fuel-injection pumps, spark plugs, generators, starters, ignition distributors, and contact breakers, magnetos, etc.

Bosch was one of four huge companies which antitrust experts in the AMG Decartelization Branch selected in June 1947 for legal action to force their dissolution within 3 to 6 months.

A proposed determination and directive (similar to an antitrust complaint in the United States) was prepared and submitted to Richardson Bronson, head of the Decartelization Branch. Bronson is one of the economic advisers to AMG whom the Ferguson committee listed as unsympathetic to the anticartel program and responsible for its failure.

Major recommendation of the antitrust team was that Bosch be required to divest itself of ownership of Ernst Eisemann & Co., a former competitor. Bosch had secretly acquired control of the Eisemann company in 1925, but had continued to operate it as an ostensibly independent concern until 1937.

The proposed antitrust order would have reestablished Eisemann as a competitor to Bosch.

In addition, the order would have forced Bosch to break its ties with foreign companies in which it had an interest, and to make available technological information to competitors.

Bronson revised the directive, eliminating the principal requirement—that Eisemann be separated from Bosch—and watering down other provisions.

As finally filed last month, the deconcentration order does not touch or threaten in any way the Bosch monopoly in its main lines, which are fuel injection pumps and automotive parts.

Their World

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very interesting editorial article

which appeared in the July 11, 1949, issue of the Framingham News, Framingham, Mass.

The editorial follows:

THEIR WORLD

There's a new word in the jargon of the Marxian dialectic. "Bourgeois" is becoming shopworn. The new word is fresher, more resounding, more complex. It's "cosmopolitanism."

As used in the Soviet Union, "Cosmopolitanism" is intended as a term of utmost opprobrium—a fighting word. The "putrid microbes of cosmopolitanism are a poisonous weapon in the hands of the instigators of another war," declares one Soviet writer. Webster's defines "cosmopolitan" as:

"Belonging to all the world; not restricted to any locality, field of activity or sphere of thought."

This is anathema to Communists. The aim of cosmopolitans is "to disseminate 100 percent Americanism in all cultural spheres." The concept of an abstract world science, knowing no boundaries, is denounced as anti-Marxist, an assault on Soviet patriotism, false to Leninist-Stalinist teaching.

It would all be so absurd, so illogical, so tiresome were it not the diet on which all who can read in the Soviet Union are being fed. But Marxists believe in the coexistence of opposites, so from their viewpoint there's nothing inconsistent in prating of peace and stirring up massive sentiments of prejudice and hatred.

That, after all, is their world.

Repeal of Excise Taxes

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1949

Mr. TAURIELLO. Mr. Speaker, in my opinion, Federal excise taxes should be cut back to the 1942 levels generally. These are the taxes on such items as telephone bills, railroad, airplane tickets, silverware, luggage, cosmetics, furs, and so forth.

It is my intention to introduce my own bill in Congress to try to bring about this reduction. If this is possible, I am positive it will create a wave of buying on the part of the public and this, in turn, would stimulate business right down the line.

There are millions of people throughout the country who are purposely refraining from making any purchases because of the excise tax and will continue to do so until this tax is reduced at least 50 percent.

Taxes on the above-mentioned items were increased or put on as a wartime measure to raise revenues on the part of the Government for defense purposes and the American people were promised that these nuisance taxes would be repealed at the cessation of hostilities. The war has been over almost 4 years and certainly the people are entitled to some relief.

As a member of the Committee on Expenditures in the Executive Departments, I am going to support the Hoover Commission's recommendations on the reorganization of the Federal Government wholeheartedly. The time has come when we must reduce governmental spending by the consolidation, elimination, and streamlining of all bureaus and agencies.

Our Government has grown so top-heavy with bureaus and agencies and with functions being duplicated over and over again that it is almost ready to crumble under its own weight.

If the Congress will adopt the Hoover Commission recommendations for governmental reorganization, billions of dollars will be saved and eventually these excise taxes can be repealed completely.

I am not going to sign Representative MARTIN'S motion to discharge H. R. 2100, his bill to reduce excise taxes to the prewar basis, because I do not believe that Republican efforts along this line are sincere.

It was the Republican-controlled Eightieth Congress, under the leadership of Mr. MARTIN who was then Speaker of the House, that passed legislation making these excise taxes permanent. President Truman had recommended that they be extended for a period of only 1 year.

The Democratic Party has always held the position that excise taxes are in effect sales taxes. It was the Republican Eightieth Congress that made permanent these excise taxes that had been levied for wartime purposes.

I believe that these taxes take their biggest toll on our American citizens in the lower-income brackets and generally reduce the purchasing power of the entire public.

To alleviate this condition, I intend to introduce my own bill to repeal these unfair, wartime taxes.

My bill would call for the following cuts in excise taxes:

First. All travel tickets from 15 to 10 percent.

Second. Long-distance telephone calls from 25 to 15 percent.

Third. Local telephone bills from 15 to 5 percent.

Fourth. Telegrams and leased wires from 25 to 10 percent.

Fifth. Theater and other amusement admission tickets from 1 cent on each 5 cents spent for tickets to 1 cent on each 10 cents spent.

Sixth. Jewelry, furs, and toilet preparations from 20 to 10 percent.

Seventh. Luggage and handbags, the present 20 percent tax at retail would be repealed. The old 10 percent manufacturers' tax would be restored.

Eighth. Electric light bulbs from 20 to 5 percent.

Dismantling of Ruhr Plants

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1949

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dorothy Thompson from the Washington Evening Star:

ON THE RECORD—UNITED STATES SHOULD ACCEPT RUHR INDUSTRY OFFER AND HALT DISMANTLING OF PLANTS

(By Dorothy Thompson)

LONDON.—The offer of Ruhr industrialists to ceed the western allies complete ownership of the Ruhr plants in preference to dismantling those scheduled, which include—in addition to the great plants for distilling oil and byproducts from coal—eight large steel plants and 214 smaller factories, should be accepted immediately. The offer should also awaken the attention of the American taxpayer to the insanities committed at his cost.

Whether Germany eventually turns east or west will determine the fate of Europe and the issue of war and peace. We certainly cannot afford continued psychological blunders.

No measure taken by the western allies has had a worse psychological effect than the resumption of dismantling 4 years after the war. As the Communists triumphantly point out to their compatriots, this is in flat contradiction to the Potsdam agreement which specifically promised that dismantling would cease by October 1947.

WORST POLICY IMAGINABLE

The continuance of wanton destruction in the midst of a wilderness of ruins was, in the beginning, the worst peace policy imaginable. To begin it again now is unbearable to any rational mentality, especially as the theory that these industries would be "transferred" to operate elsewhere in Europe has never been proved to the German people.

Dismantling is not something that can be hidden. In the Ruhr you can see foundations and bits of walls of buildings that show no trace of fire or explosion. These buildings were not destroyed by bombs. They were taken down brick by brick and shipped, in some cases, hundreds of miles in fleets of railroad wagons, using labor, coal, and money enough to put up brand-new factories.

Nobody believes that neighboring countries or Czechoslovakia are going to rebuild factories of chipped, broken, and cement-encrusted brick. This has not stopped. Among the factories to be dismantled, there are still some whose receivers claim walls and windows. And this occurs in a territory where every building with a roof, wiring, and a water system is at a premium. Now the managers of the Ruhr say, "For God's sake take the factories, operate them, take their products, but stop a policy of wreck and ruin."

Any policy to be successful must be supportable in reason. Otherwise the German—and any rational visitor—feels that he lives in an insane asylum. It is sense to compel the Germans to contribute to the reconstruction of Europe. It is not sense to compel them further to contribute to its scrap piles.

FEW OBVIOUS FACTS

Sooner or later everybody will have to recognize a few obvious facts. The result of the Paris conference is that Germany remains divided. The result of the unilateral Polish and Russian action at the war's end means that nearly a fourth of Germany's pre-Hitler land is permanently lost. And as long as the division exists western Germany constitutes only half the territory of pre-Hitler Germany, and into this have fled or been deported some 9,000,000 extra souls, all destitute, making half of pre-Hitler Germany support five-sevenths of its pre-Hitler population. Whereas in 1936 Germany had 140 persons per square kilometer of territory, she has more than 200 in 1949.

Under these conditions Germany can approach her pre-Hitler level of prosperity only by (1) greatly increasing and intensifying

both her industrial and agricultural production—the latter being impossible on any vast scale, or (2) providing for the wholesale emigration of some 6,000,000 or 7,000,000 Germans, or (3) keeping Germany forever on American relief.

The offer of the Ruhr industrialists makes it possible for the western Allies to reverse the false policy they took last April. And the sooner they do so the better.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Tablet, Brooklyn, N. Y., Saturday, July 9, 1949:

THE CHURCH AND FEDERAL AID

The House of Representatives is expected to begin debate shortly on the Barden bill, which would grant Federal aid to the extent of $300,000,000 for education. The bill specifically prohibits the use of Federal funds for private and religious schools, even for such services as health and transportation. The bill, however, provides that all children of school age shall be counted for the purposes of allocating Federal funds. Cardinal Spellman and other members of the American hierarchy have denounced the bill as a piece of bigoted and discriminatory legislation. The Catholic press has been unanimous in vigorous opposition to the measure. On the other hand the POAU (Protestants and Other Americans United for Separation of Church and State) is organizing support for the bill and claiming credit for its discriminatory provisions.

The attitude of the Catholic Church in the United States toward this and similar measures which in effect make of parents and children who desire religious education second-class citizens, is based on solid American ground and upon the moral issues involved. First of all, a Catholic prelate is an American citizen and a spokesman for a very important group of American citizens. The Catholic press represents, likewise, the viewpoint of a large and important segment of American public opinion. Who dares to stand up and say that a member of the Catholic hierarchy or a unit of the Catholic press has no right freely to express approval or disapproval of any piece of legislation is thereby denying to an American citizen the right of freedom of speech and to a section of the American press the right of freedom of expression.

Despite POAU and similar groups, the American hierarchy and the American Catholic press will continue vigorously to express opinions on legislative matters which affect the interests of Catholic Americans, and will apologize to nobody for the exercise of their rights as Americans. We Catholics will take a back seat for nobody in asserting our rights and in demanding justice from our legislators. Our blood, sweat, and tears have gone into its greatness along with that of all other Americans. While we respect every American's right to state his opinion, we demand the same respect for our opinions. We will be heard.

This Barden bill counts our Catholic children and taxes our Catholic people but forbids any use of the taxes collected even for health services or transportation for the Catholic children counted. That is a rank and raw injustice. It penalizes American taxpayers for exercising their freedom of educational choice. It punishes Americans for defending their academic freedom. It forces one group of Americans to pay for the education of another group of Americans while forbidding their children any benefit from the taxes paid for the benefit of their neighbor's children. The thing is outrageously unAmerican, bigoted and discriminatory. The children of two men who fought side by side at Iwo Jima or in the Battle of the Bulge are divided and separated by the Barden bill. Because one of these men wants to train his children to be good Americans in a religious school, the Barden bill, having counted them and having taxed their father, forbids any use of Federal funds even to pay for a bus to take them to school.

Beyond these obvious American issues in the Barden bill, the spokesmen for Catholic Americans cannot be silent in the face of the moral issues involved without being derelict in their duty as the spiritual and moral leaders of their people. Any legislation which in its nature divides Americans from Americans, which makes fish of one and flesh of the other, which introduces a nonreligious qualification for Government benefits, plays directly into the hands of propagandists for communism. Communism thrives on disunity and dissension, on setting one group of citizens against another group. Witness what has happened in Yugoslavia, Hungary, Bulgaria and what is happening in Czechoslovakia! The very same non-religious qualification is set up for government benefits as a means of destroying free institutions and free government. Catholic spokesmen must be heard now lest America go the way of the countries behind the iron curtain.

Secondly, the Barden bill definitely establishes secularist education as the only recognized American form of education. By its prohibitions it establishes the principle that the future citizens of America can be trained properly only in nonreligious schools. This is a definite and clear-cut attack on religious education which, historically and traditionally, trained the citizens of America. The Barden bill legislates a preference for the kind of education that ignores God, the source of all human rights, and by inference bans God completely from the American school. With the horrible experiences of millions of freedom-loving people of eastern Europe in mind, Catholic Americans would be criminally delinquent in their spiritual and moral duties if they did not speak out against a measure which opens the way to the same horrible prospect for the future of this country.

Because our spiritual leaders have a right and a duty to protect the interests of their flock, and because they have a patriotic duty toward our country, they must be heard in the legislative halls of our Nation. The Barden bill must be defeated. Every Catholic American should make his will known to Congress.

T. R.'s Home

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting an editorial from the New York Herald Tribune of Monday, July 11, regarding the home of the late Theodore Roosevelt and his family.

It should be good news to all Americans that Sagamore Hill is to be purchased by the Roosevelt Memorial Association in order to establish it as a national shrine. The greatest monument to Theodore Roosevelt is the enduring quality of his achievements. But it is entirely appropriate that there should also be this physical monument to the kind of Americanism which he represented. His talents, his lofty character, his outstanding statesmanship will light the way for the people of America for many years to come. It is good to know that Sagamore Hill is to be preserved as a tangible reminder of the outstanding service which Theodore Roosevelt rendered to his country.

T. R.'S HOME

As do few American names, Sagamore Hill evokes a sharp image. This house, which architecturally reflects so much that was typical of its period, was for several decades the center of a uniquely happy and devoted family life. Theodore Roosevelt lives safely in history, an innovating, precedent-setting figure; but there is a part of him that escapes the record and is most vivid among those who knew him and followed him in his time. The bright personality, the eager, bounding, ever-youthful spirit, expressed itself in relationships with those about him, and became embodied in the home which formed the background for his adventures. The announcement that the trustees of the Roosevelt Memorial Association propose to purchase Sagamore Hill and to establish it as a national shrine is one which will surely be greeted by widespread approbation.

An aristocracy lives by traditions; a democracy, if it is to be harmonious and vital, must live by myths which sum up in heroic form the virtues to which it aspires and the goal toward which it moves. Theodore Roosevelt was a myth-maker, and at Sagamore Hill, as present plans mature, the fountain of that myth can be continually renewed. Here Americans of this and future generations will come to catch a glimpse of something profoundly important to their Nation's life. The memory of T. R., alive in that place, will speak to them of family affection, of duty, of service, of victory and defeat borne with equanimity; and they will live as men who have drunk at a pure spring.

Chinese Communists Continue To Smash the Myths About Them

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Associated Press dispatch from the Washington Post of July 11, 1949. The last paragraph is particularly informative. Most Americans stayed on in Shanghai because they believed the glowing myths about the Chinese Communists which were so skillfully propagated during the last 5 years by officials of our own Government and many western correspondents and writers on China. They diligently labored to tear down and discredit the

Chinese Government under the slogan that nothing could be worse. Those readers know better now—but too late. They helped destroy the government that was more friendly to America than any Chinese regime in history, and thereby helped bring in a Communist regime avowedly our enemy. What a record we have made in China since VJ-day.

SHANGHAI, July 10.—Foreigners in Red China were told by the Communist Liberation Daily today that police treatment of United States Vice Consul William M. Olive was an example of what they could expect.

United States Consul General John Cabot said Olive was "utterly, brutally beaten" by the police and forced to sign "apologies and confessions" during 3 days he was held handcuffed and incommunicado in jail because of a minor traffic altercation.

Olive, 32, from Ironton, Mo., was released Saturday after consular protests to high Communist authorities.

The Liberation Daily, in a lead editorial headed "Warning to American Imperialists," described the traffic incident as "imperialist provocative action." Olive, it said, was guilty of imperialistic arrogance.

The Liberation Daily editorial declared today, "The people's government will not tolerate foreign nationals to treat our people with arrogance, roughness or slight."

In another place the paper published a special warning to Americans, saying, "You must abandon your provocative action at once or you will reap the consequences."

A great many foreigners remained in Shanghai when the Reds took over because Mao Tze-tung, No. 1 Red, had promised protection of property and persons of all who obeyed the law.

It appears that the law is whatever local authorities choose to make it, and there is no higher authority. Consulates and embassies can offer little help because the Reds have no relations with foreign governments.

Whenever travel from Shanghai is resumed, it is certain there will be a big exodus of foreigners.

Tax Revision

EXTENSION OF REMARKS
OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. FORAND. Mr. Speaker, I have today introduced a bill incorporating the recommendations made by the President in his midyear economic report relative to taxes.

I have gone somewhat beyond the President's recommendations to carry out what I believe to be a fair readjustment of the tax situation.

Under the provisions of my bill there would be a loss of revenue of $1,057,000,000, approximately, through the repeal of excise taxes, but that loss would be more than made up by restoring income-tax rates which were reduced by the Republican Revenue Act of 1948 on that portion of the adjusted gross income of married couples above $6,500 and of single persons above $3,250, and increasing the estate and gift taxes so that in the final analysis the bill would provide revenue amounting to approximately $1,100,000,000.

In other words, it would afford tax relief where it is badly needed and yet not reduce the tax revenue of the Treasury.

The bill has four principal features, each contained in a separate title, as follows:

A. INCREASE IN INDIVIDUAL INCOME TAXES ABOVE THE FIRST SURTAX BRACKET

Title I would restore the income-tax rate reduction made by the Republican Revenue Act of 1948 upon that portion of the adjusted gross income of married couples above $6,500 and of single persons above $3,250. The effect of this amendment is to equalize the tax-rate reductions made by the Eightieth Congress by insuring approximately the same dollar savings for everyone—whether in the highest or lowest surtax brackets. The $600,000,000 raised by this proposal can be utilized more equitably and wisely in the elimination of the wartime excise taxes, prompt postwar repeal of which was promised by Congress at the time of their enactment.

B. INCREASE IN ESTATE AND GIFT TAXES

Title II of the bill would increase estate- and gift-tax revenues, as recommended by the President, by repealing the 1948 estate- and gift-tax amendments. As President Truman said in his veto message of the Revenue Act of 1948:

> In the case of the estate and gift taxes, nearly all of the $250,000,000 annual reduction would go to only about 12,000 of the most wealthy families. The discovery that it is possible to make very substantial savings in the gift and estate taxes by dividing a family's wealth between husband and wife has brought forth much ingenious argument to the effect that the provisions in this bill are needed to equalize the application of these taxes in community-property and common-law States. In fact, this equalization was in all essential respects achieved by legislation enacted by the Congress in 1942.

Approximately an additional $250,000,000 to $275,000,000 would be derived by reducing estate-tax exemptions from $60,000 to $30,000, gift-tax exemptions from $30,000 to $15,000, and the annual gift-tax exclusion per donee from $3,000 to $1,500; and from "closing the loopholes in administration" of the estate and gift taxes, as proposed by the President.

Even with the changes made by my bill, estate- and gift-tax payers still would be subject to a far smaller net increase in prewar tax burden than that borne by income- and excise-tax payers.

C. LIBERALIZATION IN NET OPERATING LOSS DEDUCTION

As increased incentive to venture capital, title III of the bill would allow both corporate and unincorporated businesses to carry over business losses for the 5 years next following the year in which a loss is incurred, instead of the 2-year carry-over permitted under existing law. The 2-year carry-back of losses under present law would be reduced to 1 year. This amendment should stimulate new businesses by guaranteeing that any initial losses will be taken into account against future profits once the enterprise gets on its feet.

There would be little immediate effect upon revenue receipts under this provision of the bill.

D. REPEAL OR REDUCTION OF CERTAIN EXCISE TAXES

Titles I and II would increase tax liabilities by approximately $1,100,000,000, which would offset, roughly, the same amount of excise-tax reduction under title IV, as follows:

Tax	Present rate	New rate	Annual revenue loss
	Percent	*Percent*	
Jewelry	20	10	88,000,000
Furs	20	10	35,000,000
Toilet preparations	20	10	40,000,000
Baby oil, baby powder, etc.	20	0	5,000,000
Luggage	20	10	57,000,000
Handbags, wallets, etc.	20	0	28,000,000
Long-distance telephone	25	20	70,000,000
Telegraph messages	25	15	
Photographic apparatus	25	10	20,000,000
Photographic supplies	15		
Electric-light bulbs	20	0	27,000,000
Electric, gas and oil stoves, heaters, etc.	10	0	80,000,000
Matches:			
Plain	(1)	0	10,000,000
Fancy	(2)	0	
Transportation of persons	15	0	245,000,000
Transportation of property	3	0	372,000,000
Total excise tax reduction			1,057,000,000

[1] 2 cents per M.
[2] 5 cents per M.

The excise taxes that would be reduced or repealed constitute a fixed charge that tends to reduce the consumption of the articles and services taxed. Their repeal will promote expansion of, and increase employment in, the industries affected. Moreover, as a group, these taxes are not based upon ability to pay, since in most instances they do not take into account the financial resources of the person paying the tax. They are in the nature of sales taxes, and the 1948 Democratic National Platform is firmly committed to opposition to a general Federal sales tax.

CONCLUSION

For the reasons indicated, my bill generally follows the recommendations made by the President. It can favorably be judged by the effect which it might have upon national income and purchasing power. It will have no significant adverse effects upon present economic conditions. The net effect of the changes, taken together, will be favorable to the expansion of business activity, without causing a significant net loss in total receipts.

The bill follows:

A bill to increase individual income taxes above the first surtax bracket, to increase estate and gift taxes, to reduce or repeal certain excise taxes, and for other purposes

Be it enacted, etc., That this act may be cited as the "Tax Adjustment Act of 1949."

TITLE I—INCREASE IN INDIVIDUAL INCOME TAXES ABOVE THE FIRST SURTAX BRACKET

SEC. 101. Computation of normal tax and surtax.

(a) Section 12 (c) of the Internal Revenue Code is hereby amended to read as follows:

"(c) Reduction of tentative normal tax and tentative surtax:

"(1) The combined normal tax and surtax under section 11 and subsection (b) of

this section shall be the aggregate of the tentative normal tax and tentative surtax, reduced as follows:

"If the aggregate is—	The reduction shall be—
"Not over $400	17 percent of the aggregate.
"Over $400	$68 plus 5 percent of excess over $400.

"(2) In no event shall the combined normal tax and surtax exceed 85½ percent of the net income."

SEC. 102. Changes in tax and withholding tables.

The Secretary of the Treasury is authorized and directed to make such changes in the tables in section 400 (optional tax tables) and section 1622 (withholding tables) as may be necessary to reflect the reduction in taxes provided for in section 101 of this act.

SEC. 103. Effective date of income-tax amendment.

The amendment to the Internal Revenue Code made by section 101 of this act shall become effective with respect to taxable years beginning after December 31, 1948.

TITLE II—ESTATE AND GIFT TAXES

PART I—ESTATE TAX

SEC. 201. Estates to which amendments applicable.

Except as otherwise expressly provided, the amendments made by this part shall be applicable only with respect to estates of decedents dying after the date of the enactment of this act.

SEC. 202. Specific exemption.

(a) Amount of exemption: Section 935 (c) of the Internal Revenue Code (relating to the exemption for the purposes of the additional estate tax) is hereby amended by striking out "$60,000" and inserting in lieu thereof "$30,000."

(b) Technical amendment: Section 821 (a) (3) of the Internal Revenue Code (relating to requirement of estate tax return) is hereby amended by striking out "$40,000" and inserting in lieu thereof "$30,000."

SEC. 203. Repeal of marital deduction.

(a) Repeal of deduction: Section 812 (e) of the Internal Revenue Code (relating to the deduction for bequests, etc., to surviving spouse) is hereby repealed.

(b) Amendment of related provisions:

(1) Gift-tax credit against basic tax: Section 813 (a) (2) of the Internal Revenue Code (relating to credit for gift tax against the basic estate tax) is hereby amended—

(A) by striking "subsections (d) and (e)" from subparagraph (A) and inserting in lieu thereof the following: "subsection (d)";

(B) by inserting "and" at the end of clause (i) of subparagraph (B); and

(C) by striking out clause (ii) of subparagraph (B).

(2) Gift tax credit against additional tax: Section 936 (b) of the Internal Revenue Code (relating to credit for gift tax against the additional estate tax) is hereby amended—

(A) by striking "subsections (d) and (e)" from paragraph (1) and inserting in lieu thereof the following: "subsection (d)",

(B) by inserting "and" at the end of subparagraph (A) of paragraph (2); and

(C) by striking out subparagraph (B) of paragraph (2).

(3) Optional valuation: The last sentence of section 811 (j) of the Internal Revenue Code (relating to optional valuation) is hereby amended to read as follows: "In case of an election made by the executor under this subsection, then for the purposes of the deduction under section 812 (d) or section 861 (a) (3), any bequest, legacy, devise, or transfer enumerated therein shall be valued as of the date of decedent's death with adjustment for any difference in value (not due to mere lapse of time or the occurrence or nonoccurrence of a contingency) of the property as of the date 1 year after the decedent's death (substituting the date of sale or exchange in the case of property sold or exchanged during such 1-year period)."

(4) Property previously taxed: Section 812 (c) of the Internal Revenue Code (relating to the deduction for property previously taxed) is hereby amended by changing the second paragraph to read as follows:

"The following property shall not, for the purposes of this subsection, be considered as property with respect to which a deduction may be allowed: (A) Property received from a prior decedent who died after December 31, 1947, and on or before the date of the enactment of the Tax Adjustment Act of 1949, and was at the time of such death the decedent's spouse; (B) property received by gift after the date of the enactment of the Revenue Act of 1948, and on or before the date of the enactment of the Tax Adjustment Act of 1949 from a donor who at the time of the gift was the decendent's spouse; and (C) property acquired in exchange for property described in clause (A) or (B)."

(5) Liability of life beneficiaries, etc.: Subsections (c) and (d) of section 826 of the Internal Revenue Code are each hereby amended by striking out the last sentence thereof.

SEC. 204. Community interests.

(a) Transfers of community property in contemplation of death, etc.: Section 811 (d) of the Internal Revenue Code (relating to revocable transfers hereby is amended by adding at the end thereof the following new paragraph:

"(5) Transfers of community property in contemplation of death, etc.: For the purposes of this subsection and subsections (c) and (1), a transfer of property held as community property by the decedent and surviving spouse under the law of any State, Territory, or possession of the United States, or any foreign country, shall be considered to have been made by the decedent, except such part thereof as may be shown to have been received as compensation for personal services actually rendered by the surviving spouse or derived originally from such compensation or from separate property of the surviving spouse."

(b) General rule: Section 811 (e) of the Internal Revenue Code (relating to joint interests) hereby is amended as follows:

(1) By striking out "(e) Joint interests." and inserting in lieu thereof:

"(e) Joint and community interests:

"(1) Joint interests."

(2) By inserting at the end thereof the following new paragraph:

"(2) Community interests: To the extent of the interest therein held as community property by the decedent and surviving spouse under the law of any State, Territory, or possession of the United States, or any foreign country, except such part thereof as may be shown to have been received as compensation for personal services actually rendered by the surviving spouse or derived originally from such compensation or from separate property of the surviving spouse. In no case shall such interest included in the gross estate of the decedent be less than the value of such part of the community property as was subject to the decedent's power of testamentary disposition, and was not bequested or devised to, or inherited by, the surviving spouse."

(c) Life insurance held as or acquired with community property: Section 811 (g) of the Internal Revenue Code (relating to life insurance) is hereby amended by adding at the end thereof the following new paragraph:

"(4) Community property: For the purposes of this subsection, premiums or other consideration paid with property held as community property by the insured and surviving spouse under the law of any State, Territory, or possession of the United States, or any foreign country, shall be considered to have been paid by the insured, except such part thereof as may be shown to have been received as compensation for personal services actually rendered by the surviving spouse or derived originally from such compensation or from separate property of the surviving spouse; and the term 'incidents of ownership' includes incidents of ownership possessed by the decedent at his death as manager of the community."

SEC. 205. Basis of surviving spouse's interest in community property.

Section 113 (a) (5) of the Internal Revenue Code (relating to basis of property transmitted at death) is hereby amended by striking out the last two sentences and inserting in lieu thereof the following: "For the purposes of this paragraph the surviving spouse's one-half share of community property held by the decedent and the surviving spouse under the community property laws of any State, Territory, or possession of the United States or any foreign country shall be considered to be property 'acquired by bequest, devise, or inheritance' from the decedent, if the death of the decedent was after December 31, 1947, and on or before the date of the enactment of the Tax Adjustment Act of 1949, and if at least one-half of the whole of the community interest in such property was includible in determining the value of the decedent's gross estate under section 811. In the case of property held by a decedent and his surviving spouse under the community property laws of any State, Territory, or possession of the United States or any foreign country, if the value of any part of the surviving spouse's one-half share of such property was included in determining the value of the gross estate of the decedent and a tax under chapter 3 was payable upon the transfer of the net estate of the decedent, then for the purposes of this paragraph such part of such one-half share of the surviving spouse shall be considered to be property 'acquired by bequest, devise, or inheritance' from the decedent, if the death of the decedent was after the date of the enactment of the Revenue Act of 1942 and on or before December 31, 1947, or was after the date of the enactment of the Tax Adjustment Act of 1949; but nothing in this sentence shall reduce basis below that which would exist if the Revenue Act of 1948 had not been enacted."

SEC. 206. Definition of property in the United States.

(a) Property within the United States: Section 862 of the Internal Revenue Code (relating to property within the United States) is hereby amended—

(1) by inserting in subsection (a) thereof immediately before "owned" the following: "(but not stock in a foreign corporation)";

(2) by striking out the period at the end of subsection (b) thereof and inserting in lieu thereof a semicolon and the word "and"; and

(3) by adding at the end thereof a new subsection to read as follows:

"(c) Bonds, notes, bank deposits, and other debts or obligations: Bonds, promissory notes, bills of exchange, moneys deposited with any person carrying on the banking business, life insurance proceeds, and any other debt or obligation owing to a nonresident not a citizen of the United States shall be deemed property within the United States if and only if the debtor or obligor is the United States, any State, Territory, or political subdivision thereof; the District of Columbia, an instrumentality of any of the foregoing, a domestic corporation, or a resident of the United States."

(b) Property without the United States: Section 863 of the Internal Revenue Code (relating to property without the United States) is hereby repealed.

(c) Obligations of the United States: Notwithstanding the provisions of subsec-

tion (a) of this section, bonds, notes, and certificates of indebtedness of the United States issued before March 1, 1941, beneficially owned by a nonresident who was not a citizen and not engaged in business in the United States shall not be included in the part of the gross estate which at the time of his death is situated in the United States; however, bonds, notes, and certificates of indebtedness of the United States issued on or after March 1, 1941, beneficially owned by a nonresident alien shall be included in such part of the gross estate.

(d) Treaty obligations: No amendment made by this section shall apply in any case where its application would be contrary to any treaty obligation of the United States.

SEC. 207. Transfers intended to take effect in possession or enjoyment at or after death.

(a) In general: Section 811 (c) of the Internal Revenue Code (relating to transfers in contemplation of, or taking effect at death) is hereby amended by inserting immediately after the words "to take effect in possession or enjoyment at or after his death" the following: "(including a transfer of any interest which is so limited as to take effect in possession or enjoyment at or after his death, irrespective of whether he retained a right or interest in the property)."

(b) Powers of appointment: Section 811 (f) (1) of the Internal Revenue Code (relating to power of appointment) is hereby amended by inserting immediately after the words "to take effect in possession or enjoyment at or after his death" the following: "(including a disposition of any interest which is so limited as to take effect in possession or enjoyment at or after his death, irrespective of whether he retained a right or interest in the property)."

SEC. 208. Transfers within 5 years preceding death.

(a) Transfers, etc., within 5 years of death: Section 811 of the Internal Revenue Code (relating to determination of gross estate) is hereby amended by striking "(1)" at the beginning of subsection (1) and inserting in lieu thereof "(m)", and by inserting after subsection (k) a new subsection to read as follows:

"(1) Transfers, etc., within 5 years of death: If within 5 years prior to his death the decedent (1) transferred any interest in property, or (2) assigned, quitclaimed, or released any right to the possession or enjoyment of, or to the income from, property, or (3) exercised, released, or relinquished any right to designate who should possess or enjoy property or the income therefrom, any power to change the enjoyment of property, or any power of appointment, or if within such period a joint tenancy or tenancy by the entirety is terminated or property is removed from such a tenancy or from any joint ownership with right of survivorship, and such transfer, assignment, quitclaim, release, exercise, relinquishment, termination, or removal has the effect of removing the value of any property or interest in property from the scope of subsections (a) to (g), inclusive, of this section, then the value of such property or interest in property shall (except in the case of a bona fide sale for an adequate and full consideration in money or money's worth) be included in determining the value of the gross estate as through such transfer, assignment, quitclaim, release, exercise, relinquishment, termination, or removal had not occurred."

(b) Repeal of contemplation of death provisions:

(1) Section 811 (c) (relating to transfers in contemplation of, or taking effect at death) is hereby amended by striking the words "in contemplation of or" from the first sentence thereof, by striking out the period at the end of such sentence and inserting in lieu thereof a semicolon, and by striking out the second sentence thereof.

(2) Section 811 (d) (relating to revocable transfers) is hereby amended by striking out paragraph (4) thereof.

(3) Section 811 (f) (1) (relating to powers of appointment) is hereby amended by striking out "with respect to which he has at any time exercised or released a power of appointment in contemplation of death, or (C)."

(c) Applicability to prior transfers, etc.: The provisions of subsection (a) of this section shall not apply with respect to any transfer, assignment, quitclaim, release, exercise, relinquishment, termination, or removal occurring on or before the date of the enactment of this act except to the extent that the value of any property or interest in property thereby removed from the scope of subsection (a) to (g) of section 811 of the Internal Revenue Code would have been includible in determining the value of the gross estate if this section had not been enacted.

SEC. 209. Proceeds of life insurance.

In determining, for the purpose of section 811 (g) (2) of the Internal Revenue Code, the extent to which insurance under policies upon the life of the decedent was purchased with premiums, or other consideration, paid directly or indirectly by the decedent, the total amount so paid by the decedent shall (notwithstanding the provisions of section 404 (c) of the Revenue Act of 1942) be included, whether paid before or after January 10, 1941, and irrespective of whether the decedent possessed at any time an incident of ownership in the policy.

SEC. 210. Repeal of deduction for support of dependents.

Section 812 (b) of the Internal Revenue Code (relating to deductions for expenses, etc.) is hereby amended—

(a) by inserting the word "and" at the end of paragraph (3) thereof;

(b) by striking out of paragraph (4) thereof the following: "and";

(c) by striking out paragraph (5) thereof; and

(d) by striking out "(3), (4), and (5) exceed" and inserting in lieu thereof "(3), and (4) exceed".

PART II—GIFT TAX

SEC. 250. Gifts to which amendments applicable.

Except as otherwise expressly provided, the amendments made by this part shall be applicable only to gifts made in the calendar year 1950 and succeeding calendar years.

SEC. 251. Marital deduction.

Section 1004 (a) (3) (A) of the Internal Revenue Code (relating to the deduction for gifts to spouse) is hereby amended by inserting immediately after "Revenue Act of 1948" the following: "and on or before the date of the enactment of the Tax Adjustment Act of 1949".

SEC. 252. Gift of husband or wife to third party.

Section 1000 (f) (1) (A) of the Internal Revenue Code (relating to gift of husband or wife to third party) is hereby amended by inserting immediately after "Revenue Act of 1948" the following: "and on or before the date of the enactment of the Tax Adjustment Act of 1949".

SEC. 253. Specific exemption of gifts reduced.

That part of section 1004 of the Internal Revenue Code (relating to deduction for the purpose of the gift tax) which precedes paragraph (2) of subsection (a) is hereby amended—

(a) by striking out "1942" and "1943" wherever they appear and inserting in lieu thereof "1949" and "1950," respectively; and

(b) by striking out "$30,000" and inserting in lieu thereof "$15,000."

SEC. 254. Reduction in gift-tax exclusion.

Section 1003 (b) of the Internal Revenue Code (relating to exclusions from gifts) is hereby amended by striking out paragraph (3) and by inserting in lieu thereof the following:

"(3) Gifts after 1942 and prior to 1950: In the case of gifts (other than gifts of future interests in property) made to any person by the donor during the calendar year 1943 and subsequent calendar years prior to 1950, the first $3,000 of such gifts to such person shall not, for the purposes of subsection (a), be included in the total amount of gifts made during such year.

"(4) Gifts after 1949: In the case of gifts (other than gifts of future interests in property) made to any person by the donor during the calendar year 1950 and subsequent calendar years, the first $1,500 of such gifts to such person shall not, for the purposes of subsection (a) be included in the total amount of gifts made during such year."

SEC. 255. Gifts of community property.

(a) Amendments to section 1000 (d): Section 1000 (d) of the Internal Revenue Code (relating to gifts of property held as community property) is hereby amended—

(1) by inserting at the end of the first paragraph thereof the following new sentence: "For the purposes of this subsection the term 'gifts of property held as community property' shall be deemed to include partitions of community property between husband and wife."

(2) by inserting immediately before the period at the end of the last sentence thereof the following words "and to gifts made after the date of the enactment of the Tax Adjustment Act of 1949."

(b) Gifts to which amendments applicable: The amendments made by this section shall be applicable with respect to gifts made after the date of the enactment of this Act.

SEC. 256. Definition of property in the United States.

(a) Property within the United States: Section 1030 (b) of the Internal Revenue Code (relating to property within the United States) is hereby amended to read as follows:

"(b) Property within the United States:

"(1) Stock in domestic corporation: Stock in a domestic corporation (but not stock in a foreign corporation) owned and held by a nonresident not a citizen of the United States shall be deemed property within the United States; and

"(2) Bonds, notes, bank deposits, and other debts or obligations: Bonds, promissory notes, bills of exchange, moneys deposited with any person carrying on the banking business, life insurance proceeds, and any other debt or obligation owing to a nonresident not a citizen of the United States shall be deemed property within the United States if and only if the debtor or obligor is the United States, any State, Territory, or political subdivision thereof; the District of Columbia, an instrumentality of any of the foregoing, a domestic corporation, or a resident of the United States."

(b) Obligations of the United States: Notwithstanding the provisions of subsection (a) of this section, the gift tax under section 1000 of the Internal Revenue Code shall not apply to a transfer by a nonresident not a citizen of the United States and not engaged in business in the United States of a bond, note, or certificate of indebtedness of the United States issued before March 1, 1941; however, such tax shall apply to a transfer by a nonresident not a citizen of the United States of a bond, note, or certificate of indebtedness of the United States issued on or after March 1, 1941.

(c) Effective date: The amendments made by this section shall be applicable with respect to gifts made after the date of the enactment of this act.

TITLE III—LIBERALIZATION OF NET OPERATING LOSS DEDUCTION

SEC. 301. Net operating loss deduction.

(a) Amendment of section 122 (b): Section 122 (b) (relating to amount of carry-back and carry-over) is hereby amended to read as follows:

"(b) Amount of carry-back and carry-over:

"(1) Net operating loss carry-back:

"(A) Loss for taxable year beginning before 1950: If for any taxable year beginning after December 31, 1941, and before January 1, 1950, the taxpayer has a net operating loss, such net operating loss shall be a net operating loss carry-back for each of the two preceding taxable years, except that the carry-back in the case of the first preceding taxable year shall be the excess, if any, of the amount of such net operating loss over the net income for the second preceding taxable year computed—

"(i) with the exceptions, additions, and limitations provided in subsection (d) (1), (2), (4), and (6); and

"(ii) by determining the net operating loss deduction for such second preceding taxable year without regard to such net operating loss or to any reduction specified in subsection (c).

"(B) Loss for taxable year beginning after 1949: If for any taxable year beginning after December 31, 1949, the taxpayer has a net operating loss, such net operating loss shall be a net operating loss carry-back for the preceding taxable year.

"(2) Net operating loss carry-over:

"(A) Loss for taxable year beginning before 1950: If for any taxable year beginning before January 1, 1950, the taxpayer has a net operating loss, such net operating loss shall be a net operating loss carry-over for each of the two succeeding taxable years, except that the carry-over in the case of the second succeeding taxable year shall be the excess, if any, of the amount of such net operating loss over the net income for the intervening taxable year computed—

"(i) With the exceptions, additions, and limitations, provided in subsection (d) (1), (2), (4), and (6); and

"(ii) by determining the net operating loss deduction for such intervening taxable year without regard to such net operating loss, to any net operating loss carry-back, or to any reduction specified in subsection (c).

For the purposes of the preceding sentence, the net operating loss for any taxable year beginning after December 31, 1941, shall be reduced by the sum of the net income for each of the two preceding taxable years computed for each such preceding taxable year—

"(iii) with the exceptions, additions, and limitations provided in subsection (d) (1), (2), (4), and (6); and

"(iv) by determining the net operating loss deduction without regard to such net operating loss, to any net operating loss for the succeeding taxable year, or to any reduction specified in subsection (c).

"(B) Loss for taxable year beginning after 1949: If for any taxable year beginning after December 31, 1949, the taxpayer has a net operating loss, such net operating loss shall be a net operating loss carry-over for each of the five succeeding taxable years, except that the carry-over in the case of each of such succeeding taxable years (other than the first succeeding taxable year) shall be the excess, if any, of the amount of such net operating loss over the sum of the net income for each of the intervening taxable years computed—

"(i) with the exceptions, additions, and limitations provided in subsection (d) (1), (2), (4), and (6); and

"(ii) by determining the net operating loss deduction for such intervening taxable year without regard to such net operating loss, to any net operating loss for an intervening taxable year, to any net operating loss carry-back, or to any reduction specified in subsection (c).

For the purposes of the preceding sentence, the net operating loss for any taxable year shall be reduced by the amount, if any, of the net income for the preceding taxable year computed—

"(iii) with the exceptions, additions, and limitations provided in subsection (d) (1), (2), (4), and (6); and

"(iv) by determining the net operating loss deduction for such preceding taxable year without regard to such net operating loss or to any reduction specified in subsection (c)."

(b) Rule for application of section 122: Section 122 is further amended by adding at the end thereof the following new subsection:

"(f) Law applicable in computing gross income, etc.: In computing the net operating loss deduction for any taxable year, the gross income and deductions for any other taxable year involved in such computation, and the exceptions, additions, and limitations (provided in subsection (d) in effect for such other taxable year) with respect to such gross income and deductions, shall be determined under the law applicable to such other year."

(c) Effective date: The amendments made by subsection (a) of this section shall be applicable in computing the net operating loss deduction for taxable years beginning after December 31, 1941, and the amendment made by subsection (b) of this section shall be applicable in computing the net operating loss deduction for any taxable year beginning after December 31, 1940.

(d) Carry-overs in the case of certain reorganized railroads: Subsection (c) of the first section of the act of July 15, 1947 (Public Law 189, 80th Cong.), entitled "An act to allow to a successor railroad corporation the benefits of certain carry-overs of a predecessor corporation for the purposes of certain provisions of the Internal Revenue Code," is hereby amended by striking out "three instead of two" and inserting in lieu thereof "one more than that prescribed in the Internal Revenue Code."

TITLE IV—REPEAL OR REDUCTION OF CERTAIN EXCISE TAXES

SEC. 401. Repeal of tax on baby oil, baby powder, etc.

Section 2402 (a) of the Internal Revenue Code (tax on toilet preparations) is hereby amended by striking out the period at the end thereof and by inserting in lieu thereof the following: "(except baby oils, baby lotions, baby powders, or similar preparations designed primarily for use in the care of infants)."

SEC. 402. Repeal of tax on purses, handbags, pocketbooks, etc., and reduction of rate of tax on luggage.

Section 1651 (a) of the Internal Revenue Code (retailer's excise tax on luggage, etc.) is hereby amended to read as follows:

"(a) Tax: There is hereby imposed upon the following articles (including in each case fittings or accessories therefor sold on or in connection with the sale thereof) sold at retail a tax equivalent to 10 percent of the price for which so sold:

"(1) Trunks, valises, traveling bags, suitcases, satchels, overnight bags, hat boxes for use by travelers, beach bags, bathing-suit bags, brief cases made of leather or imitation leather, and salesmen's sample and display cases.

"(2) Toilet cases and other cases, bags, and kits (without regard to size, shape, construction, or material from which made) for use in carrying toilet articles or articles of wearing apparel."

SEC. 403. Repeal of tax on transportation of persons.

Subchapter C of chapter 30 of the Internal Revenue Code (tax on transportation of persons) is hereby repealed.

SEC. 404. Repeal of tax on transportation of property.

Subchapter E of chapter 30 of the Internal Revenue Code (tax on transportation of property) is hereby repealed.

SEC. 405. Repeal of tax on matches.

Section 3409 of the Internal Revenue Code (tax on matches) is hereby repealed.

SEC. 406. Repeal of tax on electric-light bulbs.

Section 3406 (a) (10) of the Internal Revenue Code (tax on electric-light bulbs and tubes) is hereby repealed.

SEC. 407. Repeal of tax on electric, gas, and oil appliances.

Section 3406 (a) (3) of the Internal Revenue Code (tax on electric, gas, and oil appliances) is hereby repealed.

SEC. 408. Reduction of tax on photographic apparatus.

Section 3406 (a) (4) of the Internal Revenue Code (tax on photographic apparatus) is hereby amended by striking out "25 per centum;"; and by striking out "15 per centum" and by inserting in lieu thereof "10 per centum."

SEC. 409. Repeal of war-tax rates on jewelry, furs, toilet preparations, and long-distance telephone and telegraph, cable, and radio messages.

Section 1650 of the Internal Revenue Code (war-tax rates of certain miscellaneous taxes) is hereby amended by striking out everything after the colon and by inserting in lieu thereof the following:

Section	Description of tax	Old rate	War-tax rate
1700 (a)	Admissions	1 cent for each 10 cents or fraction thereof.	1 cent for each 5 cents or major fraction thereof.
1700 (b)	Permanent use or lease of boxes or seats	11 percent	20 percent.
1700 (c)	Sales of tickets outside box office	do	Do.
1700 (e)	Cabarets, roof gardens, etc	5 percent	Do.
1710 (a) (1)	Dues or membership fees	11 percent	Do.
1710 (a) (2)	Initiation fees	do	Do.
2800 (a) (1)	Distilled spirits	$6 per gallon	$9 per gallon.
2800 (a) (3)	Imported perfumes containing distilled spirits.	do	Do.
2030 (a) (1)	Still wines:		
	(1) Not over 14 percent of alcohol	10 cents per gallon	15 cents per gallon.
	(2) Over 14 percent and not over 21 percent of alcohol.	40 cents per gallon	60 cents per gallon.
	(3) Over 21 percent and not over 24 percent of alcohol.	$1 per gallon	$2 per gallon.
3030 (a) (2)	Sparkling wines, liqueurs and cordials:		
	(1) Champagne or sparkling wine	10 cents per half pint or fraction thereof.	15 cents per half pint or fraction thereof.
	(2) Artificially carbonated wine	5 cents per half pint or fraction thereof.	10 cents per half pint or fraction thereof.
	(3) Liqueurs, cordials, etc	do	Do.
3150	Fermented malt liquors	$7 per barrel	$8 per barrel.
3208	Billiard and pool tables; and bowling alleys.	$10 per year per table; $10 per year per alley.	$20 per year per table; $20 per year per alley.
3465 (a) (2) (A)	Leased wires, etc	15 percent	25 percent.
3465 (a) (2) (B)	Wire and equipment service	5 percent	8 percent.

SEC. 410. Effective date of amendments made by this title.

(a) The amendments made by sections 401, 402, 405, 406, 407, and 408 shall take effect on the first day of the first month which begins more than 20 days after the date of the enactment of this act.

(b) The amendments made by sections 403 and 404 shall apply to amounts paid on or after the first day of the first month which begins more than 20 days after the date of the enactment of this act for transportation on or after such first day.

(c) That part of the amendment made by section 409 which relates to the taxes imposed by section 3465 of the Internal Revenue Code (tax on telegraph, telephone, radio, and cable facilities) shall apply in the case of amounts paid pursuant to bills rendered on or after the first day of the first month which begins more than 20 days after the date of the enactment of this act for services for which no previous bill was rendered, except that such an amendment shall not apply with respect to such services as were rendered more than 2 months before the first day of the first month which begins more than 20 days after the date of the enactment of this act; that part of the amendment made by section 409 which relates to taxes imposed by section 3469 of the Internal Revenue Code (tax on transportation of persons, etc.) shall have the same effective date as the amendment made by section 403; and the remainder of the amendment made by section 409 shall take effect on the first day of the first such month which begins more than twenty days after the date of the enactment of this act.

Business Realists

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very timely and thought-provoking editorial entitled "Business Realists," which appeared in the July 2, 1949, issue of America, a Catholic Review of the week.

The editorial follows:

BUSINESS REALISTS

Businessmen gathered in Chicago last week for conventions of the National Association of Cost Accountants and the National Association of Purchasing Agents heard some refreshingly realistic talk about their role in the American economy. Stealing some thunder from labor leaders, L. A. Peterson, president of Otis Elevator, who addressed the cost accountants at the Palmer House, urged industry to take strong, aggressive, forceful action to achieve an economy stabilized at the highest possible levels of production and employment. Other speakers made it clear that at the present moment strong, aggressive action involved a hard look at pricing policies. Prof. Joel Dean of Columbia University raised doubts about cost-plus pricing; denied that costs are the only consideration in pricing, or even the most important one. The dominant factor in pricing policy, he argued, is its effect on volume and sales, in other words, the pricing policies of business must contribute to stabilizing production and employment at high levels.

Similar talk was heard at the Stevens Hotel, where the purchasing agents were assembled. Robert C. Swanton, of Winchester Repeating Arms, urged industry to adopt a more realistic price policy. He contended that such a policy would help business to reach price stability sooner than present policies of token or "cut-and-try" reductions. In a dig at the steel industry, a committee headed by Fred G. Syburg, of the Chain Belt Co., reported that costs of coal and steel scrap are down, and efficiency is up. Mr. Syburg denied that rigid high labor rates would prevent steel price cuts dictated by other considerations. The report noted that steel is being consumed at a greater rate than it is being produced, and regarded this as a hopeful sign for the future.

If these conventions indicate that industrialists are beginning to think more of taking positive measures to head off a depression and less of trying to ride out the storm after it breaks, they are a harbinger of better times. They suggest that labor—which for the past two decades has insisted on positive action to deal with the boom-bust cycle—and management are approaching a common viewpoint on an issue which up till now has bitterly divided them.

Just Dollar Short, Not Broke

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a bit of satire on the fancy words we use nowadays to prevent ourselves from facing unpleasant facts. It is by Jack Wilson, a Minneapolis Tribune staff correspondent here in Washington, who uses the pseudonym Martin Took when telling his story by parable rather than by straight reporting. The piece is from the Minneapolis Tribune of July 8, 1949:

SHY OF THE RIGHT KIND OF BILLS

(By Martin Took)

WASHINGTON.—I have just found out what is wrong with me, fiscally speaking, and it is worse than I thought.

I have a dollar shortage.

Here I have been going along thinking the reason I couldn't buy a nice light blue convertible or a piece of porterhouse was that I couldn't afford it.

It never occurred to me that the real trouble was my dollar shortage. Not until I read about how things were in England.

What it all adds up to is that I have got a crisis on my hands. A crisis is what happens when you have got a dollar shortage and two kids who want a television contraption.

We had a full-dress economic conference at our house as soon as I found out about this crisis, and took steps to relieve the same. I opened it by explaining to my kids about my dollar shortage.

MONETARY IMBALANCE

They said did that mean I was shy on dough, and I said that was a heck of a way to talk at an economic conference.

I said the fact of the matter was that I was in a state of monetary imbalance. I said the thing that was wrong at our house was that we bought more stuff from the grocery store than we sold to it.

My kids said we hadn't bought a television set from anywhere and they were getting pretty tired of not having a television set.

I said you couldn't have a television set and a dollar shortage at the same time, and they said they would just as soon get along without the dollar shortage if they could just have a television set.

I said I had a dandy plan. I said we would have an austerity program until the crisis was over.

They said they didn't want an austerity program, they just wanted a television set.

BED SLATS WORK

They said they did't even know what an austerity program was, so I showed them how it worked.

An austerity program means that instead of buying your kids a television set to keep them from yammering you give them a couple of crisp cracks with a bed slat.

The Human Situation

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting a penetrating and helpful article by Walter Lippmann. The considerations which he mentions are, I believe, basic to a deep understanding of the dilemma in which we find ourselves with regard to our international relations.

The article follows:

TODAY AND TOMORROW

(By Walter Lippmann)

THE HUMAN SITUATION

Why, we are bound to ask ourselves, have all our plans for world recovery fallen so far short of what they were supposed to do? Beginning with the World Bank and the Monetary Fund, which were followed by the British and the French loans, which were followed by the Marshall plan, we have tried to reconstruct a world economy in which our partners and friends could earn their way toward a rising standard of life. Neither they nor we have wanted to think of the American subsidy as anything but a temporary and undesirable necessity. But we have not succeeded, and once again the economic relations of Europe and North America are at a crisis.

The easy temptation is first to deny that there is a crisis. Then to complain about the policies, measures, economic theories, or ideologies which we disagree with and do not like. And after that to look for trick remedies, like devaluation—or for utopian solutions, such as the unification of a Europe which is partitioned at the Elbe River—or to fix on counsels of perfection, as for example, that the relatively backward industries of western Europe should begin quickly to compete efficiently with American industry.

But if we are looking very honestly for the true answer, we must, I think, say that our error has been to underrate the tremendous consequence of the two world wars not only on Europe but on the United States as well. So we have allowed ourselves to believe, what we so much wanted to believe, that each successive project would be the one that would soon bring the world back to what was once the normal.

Now, having made these many disappointing experiments, we shall have to admit that the old normal is not being restored, that the problem of postwar reconstruction is unique, that within the near future it may be manageable but it is not soluble, and that even with the wisest statesmanship we

can hope only to assuage the difficulties, choose the lesser of the unpleasant choices open to us, leaving it to time and the much longer future to evolve a new relationship between Europe and America.

Because the crisis is being discussed in the technical terms of finance, the real issues become obscured. Yet beneath the chronic dollar deficit and the inconvertibility of the foreign currencies, there is a human situation the like of which the modern world has never seen before. The two World Wars, plus the cold war and the fear of a third war, have made western Europe dependent, as it never was before, on supplies from North America. This same warring and warlike epoch has made, indeed forced, the United States to become self-sufficient as it never was before. The crux of the problem and the heart of the crisis is that Europe must buy absolute necessities from us whereas there is almost nothing that we have to buy from Europe. Even in 1937, when the situation was more favorable than it is now, European finished manufactures imported into this country were less than 1 percent of our consumption. There were perhaps a dozen commodities, none of them necessities, of which our imports from Europe were more than 5 percent.

This is the hard and irreducible core of the problem of the balance of payments and its chronic dollar deficits, and of the unsuccess of the loans and of the Marshall plan. The baffling question has been, and is, how a businesslike relation can be maintained between the Europeans who must buy from us and Americans who do not have to buy from Europe.

The story has often been told of how the wars have exhausted the foreign investments, have depleted the capital, and have disrupted the markets of Europe, and of how the military partition of Europe, the cold war, and the colonial revolutions have reduced the earning power of Europe.

But an equally important chapter of the same story is not so well known. It is how the wars have affected the United States, causing by forced draught an increase not only in American productivity but also in American self-sufficiency. It is a malicious caricature of this development, often used by the Communist propaganda, to say that America has grown rich from the wars. America would be much richer without them. But it is true that the wars in Europe have compelled this country to save itself and to save Europe, including Russia, by developing its own industrial and agricultural production to a point where it is largely self-sufficient with great surpluses in addition.

Not only have the wars compelled us to grow more food than we would have grown, and to manufacture more of the goods that we used to manufacture. The wars compelled us also to make many things we used to pay dollars to import, such as chemicals, dyestuffs, optical glass, and rubber.

The result, as the economic survey of Europe points out is that our imports in 1948 at the peak of the boom, were a very much smaller percentage of our total production than they have ever been before. Compared with 1929 our imports had increased only 5 percent while our total production was two-thirds larger. The war has made this country self-sufficient and self-contained as it never was before, and yet the American standard of life is very high.

Therefore, while Europe must import or suffer, there is no corresponding necessity for America to import from Europe. On the contrary there is a strong resistance to European imports which would compete with the self-sufficiency of our own postwar economy. As a result the development of world trade with Europe is a matter of enlightened self-interest for America rather than of immediate and obvious need. This makes the problem of our relations with Europe essentially political, moral, and ideological, and therefore endlessly debatable, rather than necessary, profitable, and a matter of business.

These considerations do not provide a solution to the problem. But perhaps, as we reflect on them, they will make us tolerant, open-minded, and humble in the face of a problem which transcends our immediate capacity to solve it, which nevertheless we must live with for a long time to come.

Natural Tendencies

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article which appeared in the Daily Evening Item, Lynn, Mass., Monday, July 11, 1949:

TRUE LIBERALISM

What does it mean to be a liberal?

In the nineteenth century, liberalism meant a high degree of freedom from government restrictions in both the economic and political realms. It set the stage for the commercial and industrial growth that made over much of the world.

In the twentieth century, by an odd twist, liberalism seems to symbolize the very opposite tendencies: Bigger government, more restrictions, less room for free choice.

How can the term "liberalism" have any worth if it can be stretched to cover these extremes?

Let's wade into the confusion surrounding this sadly overworked term and see if we can determine whether it still has any value.

To have any continuing meaning, liberalism clearly must be defined in a manner that will make it adaptable to changing times and conditions.

To define it thus means to free it from any permanent association with a fixed pattern of ideas, whether social, economic or political. In other words, it can't be identified with a pat political doctrine, for political philosophies become outmoded and die.

Obviously, if liberalism means just the nineteenth century variety, it is practically dead today. If it means big government, it might wither away in some future time when trends perhaps veer in another direction.

Couldn't it be possible that liberalism is really an attitude, a way of thinking that shifts to meet the varying circumstances of an always changing society? But what sort of an attitude?

The record of history suggests an answer. The men who have earned the liberal label seem to have had in common a bold willingness to experiment, to try the new, to shatter old frameworks in quest of solutions to pressing human problems.

By contrast, conservatives appear most often to search for answers within the existing structure of society. They may be no less concerned with solving human problems; they simply are predisposed to solve them without breaking new ground.

If a liberal is properly defined as a ground breaker, then in one era he may favor fewer Government restrictions and in another he might seek more. His eye is on the problems facing society. He feels no allegiance to any cause but their solution.

Liberalism thus characterized is not a monopoly of any political party. It may exist side by side with conservatism—and does—in both major United States parties. By the same token, any individual may exhibit both liberal and conservative tendencies.

But the liberal attitude must show itself in action if it is to count. It is hardly enough to announce: "I am a liberal" in the hope that you thereby establish yourself on a high plane of righteousness. You earn the label solely by seeking liberal solutions to problems.

Furthermore, it is just as honorable and important to be a conservative. Society is not always breaking new ground in all directions; much of the time it is busy nurturing and improving ground already broken.

Liberalism and conservatism represent our most fundamental attitudes toward life. They are natural tendencies that ought to be honestly expressed. Nothing is sillier than to regard liberalism automatically as a cloak of virtue. It is a sound, useful attitude; but it is not the only one a man of good will can have.

Leaving Labor Law Decision to the People

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1949

Mr. MICHENER. Mr. Speaker, the Ann Arbor (Mich.) News of July 9 carries an editorial concerning recent action in the Senate modifying the Taft-Hartley Act. The editorial is logical and well worth reading. It is apparent that there is no possibility of the Eighty-first Congress repealing the Taft-Hartley Act in toto.

President Truman did make the repeal of this law an issue in the 1948 campaign. The President was elected, not by a majority of those who voted in the 1948 election, but by a minority of the voters. Admittedly the repeal of the Taft-Hartley Act was an issue in the last election, not only so far as the President was concerned but, which is very important also, so far as Members of Congress in their respective districts were concerned; that is, while the President claimed to have a mandate from a majority of the voters, at the same time the respective Representatives in Congress have a mandate from their districts. In the district which I have the honor to represent this repeal was the most talked about issue. My opponent definitely and vociferously promised repeal. On the other hand, I voted for the Taft-Hartley Act and made it clear I would vote for any amendments which I thought would make it a better law, but would not vote to repeal it entirely. Therefore, if President Truman feels he has a national mandate to repeal the law, I certainly have a direct mandate from a majority of my constituents to oppose such repeal. This I shall do.

There are so many factors entering into a congressional, a senatorial, or a Presidential campaign that one is hardly warranted in saying any particular issue outweighs all the rest. Suffice it to say that the people in a majority of the

congressional districts in the United States did not promise to repeal the Taft-Hartley law and it is fair to assume that the Representatives from those districts are expressing the views of their own constituents in voting against such repeal.

Pursuant to permission granted me, I include the editorial, which is as follows:

LEAVING LABOR LAW DECISION TO THE PEOPLE

Despite the charges and countercharges surrounding defeat of President Truman's efforts to have the Taft-Hartley Act repealed there is something remarkable in the way both sides propose to settle this controversial question, namely, at the polls in 1950.

When Senator TAFT won a smashing victory over the administration last week by securing approval in the Senate of his substitute bill embodying most of the Taft-Hartley Act's provisions, Democratic leaders and labor bosses alike threatened revenge in the 1950 elections.

They appear determined to carry on an all-out fight between now and November 1950 against Senators who voted with Senator TAFT and who come up for reelection next year.

At the same time, however, Mr. TAFT and his supporters on labor legislation feel that their efforts to enact a fair labor law will be rewarded by the votes of people who believe that labor-management relations have been much, and could be further, improved by suggested modifications—not by repeal.

The significant aspect of this dispute is that both sides are willing to accept the vote of the people as the final word.

In many other countries of the world powerful men or groups do not always bow to the will of the majority.

In some South American countries, for example, issues are often settled by guns rather than with votes. Students of politics point out that a revolution in a South American nation is often about the same as an election here because it sometimes becomes the only means by which a change of government can be effected.

In other countries, notably those behind the iron curtain, there is no normal or democratic change of government because only one party is allowed to exist and it controls every phase of the individual's life.

Americans have been brought up on the theory that the best and by far the most successful form of government is that in which a majority of the people decide what is best.

The underlying factor in our system is that a party or group of individuals always has the chance to try out its own ideas if it can convince a majority of the voters that it has something better to offer.

The Wagner Act was a one-sided law—in favor of union leaders, union organizers, and segments of union labor. In practice it was often used unfairly against employers, against workers, and against the public.

The Taft-Hartley law sought to deal more fairly with employers, with workers, and with the public. It became recognized in practice that it had swung a bit too far to the other side. Senator TAFT sought to correct this and to provide a measure equitable to union labor, equitable to employers, equitable to workers, and equitable to the public.

Mr. Truman and the labor leaders, intent upon restoring the provisions of the one-sided Wagner Act, and as we believe, wrongly interpreting the feeling of the people of the country, would not compromise. And hence their defeat in the Senate.

Between now and November 1950, workers themselves, as well as the rest of the people will have a chance to think calmly over the issue and to reach sound conclusions as to the merits or demerits of the Taft-Hartley Act and of the proposed Taft substitute which would have corrected certain unsatisfactory features in it. They had little such chance for calm, sound thinking amidst the hurly-burly, the rantings and the wild statements of the 1948 campaign.

The labor debate in the Senate provided much food for thought for the workers, for the employers, and for the public. It may be helpful in arriving at sound decisions on this particular issue in the 1950 elections.

However, by the time of these elections other issues of equal or greater importance to the people at large may have arisen. And a wise constituency chooses its Senators and its Representatives not on his stand on one issue or on his favoritism to a particular group, but on his all-around service and his all-around worthiness.

Col. Charles G. Holle, Corps of Engineers, United States Army

EXTENSION OF REMARKS
OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. HÉBERT. Mr. Speaker, the blessings and privileges of victorious democracy are indeed many. One of the indulgencies that we can and usually do permit ourselves, between wars, is to forget about the professional military men who are so vitally necessary to these victories; to provide sparingly and grudgingly for their needs; to belittle their achievements and give free reign to all of the various peeves and prejudices of an essentially nonmilitary citizenry against them. But there are, among these professional soldiers, some whose inherent abilities and outstanding worth are so evident that they overcome prejudice and command the confidence and respect of all those with whom they come in contact throughout their entire careers in peacetime as well as in war.

One such outstanding officer is Col. Charles G. Holle, of the Corps of Engineers. He became known to many, if not most, of my colleagues in this Chamber in the years immediately following the war as the able executive officer of the Chief of Engineers. Last year, in recognition of his high qualifications he was made engineer of maintenance of the Panama Canal.

Under leave to extend my remarks in the RECORD, I herewith include an editorial of The Nation, leading newspaper of the Canal Zone, attesting to the esteem in which Colonel Holle is held in Panama:

THE CROSSROADS

(By Brodie Burnham)

The unexpected transfer of Col. Charles G. Holle from his post as engineer of maintenance of the Panama Canal to some mysterious assignment elsewhere has been greeted in all Isthmian quarters with a combination of dismay and puzzlement.

This is tinged with, in many cases, a touch of resentment, since he is widely liked and admired and it was agreeable to know he was on hand to act as Governor during General Newcomer's absences, and that it was he who was in line to succeed to the big office on the second floor of the Admin Building at the end of Governor Newcomer's term.

The resentment was at the jerking of a good man out of here, for we consider the Panama Canal to be a pretty important place.

The situation has not been aided by the element of mystery that surrounded the sudden transfer, particularly concerning Colonel Holle's next assignment. We might be able better to understand if it had been revealed, for instance, that he was to take a very important post in Germany (this in fact was one of the many rumors floating hereabouts) or at some other hot spot.

But everyone here claimed ignorance of where he was to be sent, and that included Holle himself and top Zone executives. Even today they were cagey despite the report from Washington that he would go to the Mississippi Valley engineer district.

What's more, the Defense Department held for 2 days that "the new assignment * * * has not yet been selected." A Defense spokesman told the International News Service, on our request, that Colonel Holle was to be reassigned shortly in what he described as a "routine transfer."

For my money the Defense Department had better get a new public relations man. This isn't any more a routine transfer than I am engineer of maintenance; Holle has been here less than a year; it is "routine" for an engineer of maintenance to occupy that post for 4 years and then succeed immediately to the governorship for another 4.

Further indication, as if we needed it, that the defense spokesman didn't know what he was talking about may be seen in his careless assertion to INS that the governorship of the Panama Canal "is not generally given to officers lower than major general in rank."

It is a fact, however, that Colonel Holle occupied a position of such importance in the office of Chief of Engineers that before his selection for his late Panama Canal post there was some doubt expressed among us guessers as to whether he would be considered for the maintenance engineership, but rather might be slated for something that would be, immediately at least, more impressive.

Among the disadvantages that go with unnecessary secrecy on the part of the armed services in cases such as this is the rumors, some of them harmful, that are bound to circulate. One current one asserts that friction between or among the topmost officials in the administration building led to the transfer. This has been flatly denied by a top man whose word I accept without question, who insists on the contrary that relations on the hill have been remarkably good and efficiency making. And indeed all my experience and observation there and that of numerous others with whom I've discussed it confirm the latter, more reasonable version of relations on the heights.

In the absence of believable information from Washington, all we could assume was that somebody who didn't know much about the Panama Canal situation got an idea, and it wasn't a very good one.

Either that or something big was in the offing for our departing friend. As one of our staff members put it:

"If it isn't a promotion for Holle, somebody ought to have his head examined."

Mr. Speaker, Panama's loss is New Orleans' gain. It is indeed a pleasure to welcome Colonel Holle and his family to New Orleans where he has been assigned as district engineer in the Lower Mississippi Valley Division.

Can Singapore Remain Free if China Goes Communist?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Stewart Alsop from the Washington Post of July 10, 1949. It reports another of the many costly and dangerous consequences which it is inevitable will flow from Communist conquest of China, if by indifference, indecision, or delay we allow that to happen:

"SILENT" WAR STIRS SINGAPORE

(By Stewart Alsop)

SINGAPORE.—This great strategic outpost of British power is really two cities, mixed and mingled together, a Chinese city and a British city. The Chinese city is precisely like any city in China proper—the monstrously crowded streets; the unending rows of open, boxlike shops; the smells; the steady chattering noise; the violent colors; the antlike energy. There are more than 700,000 Chinese in the Chinese city.

The British city is diluted Rudyard Kipling, with its dull but imposing colonial architecture, its cricket lawns, its clubs from which Asiatics are rigidly excluded, and its air, a little shopworn now, of conscious power-conscious rectitude. There are less than 8,000 British in the British city.

There is a facade of self-government in the crown colony of Singapore. But all real power stems from the heart of the British city—the governor general's palace, with its well-tended lawns and its well-oiled cannon. It is hard to believe that the palace has seen any changes since Kipling's time.

In the Chinese city a change is taking place. From the walls of the boxlike shops pictures of Chiang Kai-shek are being torn down. Furtively, pictures of Mao Tse-tung are being pasted up. What has happened in China is already clearly reflected here. How soon, and how decisively, will the great Chinese city challenge the power of the tiny British city?

RIOTING FIRST TEST

British power has already been challenged once—last summer—when the Chinese Communist high command ordered the Communist Chinese here to switch from agitation to direct action. When the riots and shooting started the British reacted swiftly and toughly. The Communist leaders were seized, and some were hanged. The Communist Party was broken in Singapore, and since then a great, uneasy calm has descended on the city.

The British believe that the calm will continue. They point out that they have certain assets in the struggle for power which is now silently being waged. In the first place, Singapore is an island, hemmed in by the power of British troops, ships, and planes. Armed resistance is easy enough in the jungle, but it is not easy in an island city.

In the second place, at least half of Singapore's population are aliens, and as aliens, deportable. This is a weapon which the British have already used, sparingly. From Singapore and Malaya they have sent upward of 5,000 Chinese back to China, which means from comparative prosperity to aching poverty. The mere threat of using this weapon may be enough to keep Chinese resistance down to the level of pasting Mao's pictures on walls.

In the third place (and here is a sharp contrast to the rest of colonial Asia) the native Malays are the allies of the British. They are allies of the British not because they love the British but because they fear the Chinese. After the Japanese surrender, when the Chinese Communists briefly seized power, the Malays learned a lesson—that if the British went, they would be reduced to near-surfdom by the richer and more energetic Chinese. The large and tough police force here is made up almost entirely of Malays.

ODDS REMAIN LONG

These are the assets which the British command. Yet the odds seem very great—thousands against hundreds of thousands. Much will clearly depend on the extent to which the Chinese city will support the new rulers of the Chinese homeland. This is, in fact, one of Asia's great political puzzles. For every city in southeast Asia has its own Chinatown, though none so huge as Singapore.

British officials who should know do not take the pasting up of Mao's picture too seriously. Of the 700,000 Chinese here, they say, probably 500,000 are wholly indifferent to such matters. These Chinese are concerned only with making a living. Most of the rest are pro-Communist only because they do not want to alienate whatever government holds power in China; they want to protect their property, their avenues of trade and their family connections. For these reasons, the rich Chinese here are already financing the local Communsits. But the rich men want no trouble.

Those who do want trouble, and are willing to take personal risks to make trouble, are probably less than 10,000 of the total Chinese population. And the weapons which the British command here will be enough to control this Communist hard core.

Thus the British reason. There are those who believe that, as they have been before, the British are too complacent. But there is one point on which all agree. If much more of Asia goes, the Communists will take the Chinese city. The Chinese city will at length take the British city, and another vital outpost of the West in Asia will be lost. Such are the appalling risks we have run by letting China go.

Good Neighbors, Good Friends: United States and France

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1949

Mr. CELLER. Mr. Speaker, what the good people of the United States and France must clearly understand—and to a considerable extent already do—is that the ocean between them does not make them any less neighbors. Contiguity, as the only factor in definition of "neighbor," is no longer valid, as applied to countries. It has now become a platitude that the ocean has shrunk to the size of a lawn or a fence, militarily, politically, and in the economic sense. But in essence, like most platitudes, it has grown out of an unassailable truth.

What happens in and to France is of most intimate concern to us. Not only because of the unbroken line of friendship that has existed between the two countries since the days of the American Revolution, when the French helped turn the tide of victory for the Colonies, and not only because of the political concept of French humanitarianism which influenced beyond calculation our own political structure, and not only because the clear, precise light of French culture has given a creative quality to civilized living which it could not otherwise possess is France of such concern to us. Had none of these reasons existed and were the whole past to be removed from our contemplation, yet would the survival and well-being of France today be of most vital importance in securing and maintaining the peace and security we seek.

In the cold war occupying the minds of men today, France's position is the most strategic. The Communists view France as its most coveted prize. A France, prostrate, and economically drained can be the Communists' most fertile field for exploitation. Nowhere in western Europe has the Communist drive for political control been so intensive because the Kremlin is well aware that political control by the Communists in France means the death of the Marshall plan, means the end of possibilities of trade revival in western Europe and, ideologically, would be the greatest propaganda victory for the Soviet way of life. We have not faced this situation squarely. By this I do not mean that our approach to France must be a negative one—that is, against communism and for nothing concrete. We must, to reach the understanding of France, reemphasize the words of General Marshall which he spoke in the memorable Harvard speech, "Our policy is directed not against any country or doctrine, but against hunger, poverty, desperation, and chaos."

In pursuing the cold war, we may very dangerously overlook the proper emphasis, placing the stress only where we in our wealth and strength see it. In rebuilding Germany, for example, we may see a future, strong, centralized Germany as a bulwark against Russia. But the position of the French with regard to Germany has a proven validity. France wanted the Ruhr internationalized after the Second World War. It must be remembered that 90 percent of Germany's coal, 70 percent of her cast-iron and steel and 70 percent of her rolled steel products are located in the Ruhr. When France learned that under the now famous law 75 of the British and American military government, ownership of the Ruhr would be finally determined by a freely elected German Government, it is little wonder, with the knowledge of two German invasions, she protested vehemently. With this tremendous war potential given back to Germany, what assurance had France, so she reasoned, that Germany would not make a bargain with Russia, and that Germany rebuilt as a bulwark against Russia, would not turn on her rebuilders as she has done before, and subject France to yet another agony of invasion? It was France who forced the two powers to make a more practical adjustment of the Ruhr problem, whereby other European powers will get fixed amounts of coal, coke and steel

from the Ruhr and provides for a system of inspection and investigation.

In viewing any disposition of the Ruhr and its powerful industrial potential, the proven fears and vulnerability of France must not for a moment be overlooked. What constitutes a danger for France constitutes a danger for all western Europe.

We must keep in mind, too, that France has taken the leadership in two closely-linked measures for the rehabilitation and strengthening of western Europe. One is for increased European production and freer, increased, intra-European trade, seeking to eliminate nationalistic patterns of preferences and blocs. It seeks to develop a program of foreign trade based on specialization of products and a joint program of information about European products, thus eliminating as far as possible the trade rivalries which are blocking the course to European recovery. Closely allied, is its leadership in fostering European union.

To these efforts of France, we must give understanding and aid, in addition to the Marshall plan and the Atlantic Pact, not only in terms of enlightened self-interest, but in the terms of common purpose and mutual friendship.

Flushing Meadow Park Tenth Anniversary

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Commissioner Robert Moses, of the New York City Department of Parks. It is interesting to note how public improvements are maintained in a city such as New York under a great mayor, Gen. William O'Dwyer, and an excellent park department.

FLUSHING MEADOW PARK TENTH ANNIVERSARY

(By Robert Moses)

The tenth anniversary of the opening of the World's Fair of 1939 has recently been celebrated. This happens also to be the tenth anniversary of Flushing Meadow Park. Speaking in a sense as the residuary legatee of the fair, and assuming that the true perspective is arrived at from several angles, I am glad to tell the story from the point of those who from the very beginning planned to substitute a great park for the mosquito ridden swamp and hideous ash and garbage dump which blocked all the avenues from eastern Long Island into the city.

Our inheritance from the World's Fair was no accident. If I may say so with becoming modesty, on behalf of the little group of park enthusiasts who made it possible, this was quite an achievement in advance planning. Back in 1938 I wrote a pre-fair piece for the Saturday Evening Post entitled "From Dump to Glory." By way of introduction to this piece I quoted the description of the Corona dump in F. Scott Fitzgerald's famous novel The Great Gatsby. It ran like this:

"About halfway between West Egg and New York the motor road hastily joins the railroad and runs beside it for a quarter of a mile, so as to shrink away from a certain desolate area of land. This is a valley of ashes—a fantastic farm where ashes grow like wheat into ridges and hills and grotesque gardens; where ashes take the forms of houses and chimneys and rising smoke, and finally, with a transcendent effort, of ash-gray men, who move dimly and already crumbling through the powdery air. Occasionally a line of gray cars crawls along an invisible track, gives out a ghastly creak and comes to rest, and immediately the ash-gray men swarm up with leaden spades and stir up an impenetrable cloud, which screens their obscure operations from your sight.

"The valley of ashes is bounded on one side by a small foul river, and, when the drawbridge is up to let barges through, the passengers on waiting trains can stare at the dismal scene for as long as half an hour."

The new Grand Central Parkway had to run through this waste land, with its huge ash heap in which were buried 30 years of offscourings, tin cans, cast-off baby carriages, and umbrellas of the Borough of Brooklyn. There was no other place for it to go, and it seemed as if the best we could do would be to obtain a reasonably wide right-of-way, fill in part of the meadow, and cut through the middle of the dump, leaving two great mountains of ashes and refuse which we fondly hoped to cover with a thin layer of topsoil and to plant; if we could remove some of the grip of that extraordinary character, affectionately known as Fishhooks McCarthy, head of the Brooklyn Ash Removal Co., at a price which would not subject us to indictment. We studied every possible means of acquiring the whole meadow, ultimately if not immediately, but the whole thing seemed too big for the vision and means of the city in the face of competition of so many other urgent and worthy enterprises.

Then the miracle happened—the idea of the World's Fair. It was not, as the public seems to believe, a conception of those who have taken most of the credit for it. It was merely a gleam in the eyes of two quiet, unheralded, and comparatively uninfluential gentlemen who met casually in a tavern in Kew Gardens, and whose ideas were put into words by a young girl in high school, the daughter of one of them. One of these men was Mr. Joseph Shadgen, a Belgian engineer, whose young daughter acted as a sort of interpreter and public relations agent for him. The second was Col. Edward Roosevelt, relative of the other Roosevelts, who had lived for a long time in France and had worked in many parts of the world. These two men and the little Shadgen girl, between and among them, hashed up the idea of a World's Fair at Flushing Meadow, and they sold this idea to George McAneny who, in turn, sold it to me to sell to Mayor LaGuardia. I told Mr. McAneny that I would stop at nothing to help him if the fair were actually to be in Flushing Meadow, and if from the beginning the project was planned so as to insure a great park in the geographical and population center of the city.

The plan blossomed, received official, public and financial approval, and the project got under way with a complicated program of basic improvements, financed with city, State and fair exhibitors' money, and directed by a committee of distinguished city and State engineers. We drove what appeared to be a tough bargain with the fair based on division of ultimate profits. Flushing Meadow Park was to receive a total of $4,000,000. This proved to be wooden money because there was a deficit instead of a balance, and our main source of future development funds thus simply evaporated.

The relations of the fair and park gangs in this fantastic enterprise were at times strained, but this was really very superficial. Both George McAneny and Grover Whalen had been public officials, were genuinely interested in the future park and, along with the other directors, were concerned with what the fair would leave the city when the pageant faded. Most of the big exhibitors knew they would get their money's worth out of advertising, and even the bankers who took over in 1940 did not take too dim a view of the permanent improvements. Therefore, aside from a lot of good-natured joshing and rather primitive practical joking and occasional slugging, we got along famously.

Let me give a rough idea of the scope of this program. It began with leveling of the great ash dump, filling of a considerable part of the meadow, creation of two lakes north of the filled land, building of new approaches, boundary and intersecting traffic arteries; reclamation of the south shore of Flushing Bay; elimination of sewage pollution in the whole bay by the construction of disposal plants with trunks leading to them; bulkheading and riprapping of the bay front; construction of a permanent boat basin; building of permanent utilities for the park and temporary utilities for the fair, throughout the entire area; manufacture of topsoil out of earth, peat moss and mulch; planting of large trees, grass and shrubs on the basis of the final landscape design; and an endless number of other basic improvements, not to speak of permanent buildings, such as the city building, planned for ice and roller skating after the fair; the State amphitheatre, planned for swimming, concerts and shows when the fair ended; and other structures. The total cost of these permanent improvements reached the staggering figure of $59,000,000. Without them the fair could not have been held at all. Other great permanent public improvements come distance from Flushing Meadow were in a very real sense byproducts of the fair—the Bronx Whitestone Bridge, the Queens Midtown Tunnel and the removal of the Riker's Island ash dump to build LaGuardia Airport, an achievement which started Bill Somervell on the meteoric rise from lieutenant colonel to four star general.

It was obvious to all of us that the final program for Flushing Meadow Park and the parkway system would take a long time to carry out, and that after all the temporary buildings of the fair had been removed it would take years to finish Flushing Meadow Park. The war intervened and for a time stopped work. Then came the United Nations and the opportunity to convert a substantial part of Flushing Meadow into the world capitol. A distinguished committee offered this program, but it was finally rejected in favor of the site in midtown Manhattan on the East River. Those connected with the Flushing Meadow committee, however, went on. The architects and engineers became identified with the new site and its approaches, and much of the preliminary work which was done to attract the United Nations to Flushing Meadow proved in the end to be valuable at the location which was finally decided upon. At the same time, it was agreed that the city building at Flushing Meadow would be converted into an assembly hall for annual meetings of the United Nations until the new capitol was completed, and this gave us an opportunity to carry out a substantial part of the park program in the vicinity of the city building once dominated by the Trylon and Perisphere, and surrounded by the communications and power groups.

West of the city building and of the Grand Central Parkway, and across the bridges of wheels and wings, in the area where the transportation exhibits, courts of railways and wheels, were located, most of the ultimate park program has been carried out and little remains here of the old fair but the interesting stainless steel weather vane left to us by the Budd Co., and the nearby vistas, walks, and landscaping. It has been replaced by a well kept park, neighborhood recreation facilities and 20 football and baseball fields.

To the south, across the Empire State Bridge, the State Amphitheatre area is completed and in active use. No doubt Billy Rose will always feel that this is his Aquacade. Billy was the smartest trader at the Fair. He made a bid for a noble historic pageant at the State Amphitheatre and when he had gaily eliminated the academic historians who were his rivals, simply stripped the muse of history to her essentials, and put on a girlie pool show with historical undertones. A temporary wart on the amphitheatre nose housed the State exhibits during the fair and eventually followed other outhouses, extensions and butler's pantries into the wreckers' Valhalla. Those who recall the parachute jump, Terrace Club, Jungleland and Great White Way will always see in their minds' eye the amusement area where they had so much fun in 1939 and 1940. Never shall I forget the agricultural enclosure in which lovely lassies in brief bras and G-strings, bowed by the weight of centuries, as the poet said, leaned on their hoes and gazed pensively upon our synthetic topsoil. Grover's minions insisted that this was a perfectly terrific piece of symbolism, and scouted the idea that the appeal was deliberately aimed below the Adam's apple.

Our park men are still working for the final development of the amusement and lake areas, and we believe that the enormous increase in surrounding population will before long force financing of this work. Even now the view north over Flushing Meadow from Borough President Burke's office in the new Borough Hall is one of the finest in the entire city.

In the center of Flushing Meadow, Constitution Mall has been reconstructed, but our program for the segment where the Lagoon of Nations, Great Fountain, Court of Peace, foreign buildings, and the Court of States stood during the fair area was too far away from the United Nations Assembly to enable us to do any of the ultimate landscaping and development.

During the last decade, we held on to Gardens on Parade, and with the help of the borough president and interested citizens, these gardens are being developed into a permanent botanical and horticultural center. The New Jersey Building, constructed with stone excavated from the same quarry out of which one of the Washington headquarters was once built, now houses the police who protect the Flushing Meadow area. Three marginal playgrounds along Grand Central Parkway, one in Corona, another near Horace Harding Boulevard and a third in Kew Gardens, have been completed and are open to public use.

South of the boat basin on Flushing Bay and the parkway system, we have a huge parking field where a stadium and athletic center have been designed. No doubt part of this plan will be carried out. It seems likely, however, that some of the area will be devoted permanently to automobile parking accessible to the elevated railway. South of Roosevelt Avenue, the Board of Transportation yards are being expanded, and some park land will have to be given up for this purpose.

East of Flushing Meadow, we are making a tremendous addition to the park system in the development of the so-called Kissena Corridor, a swampy valley leading from Flushing Meadow Park through Kissena Park to Cunningham Park. The opportunity to acquire this entire corridor arose through the construction of a great storm-water sewer. We used sanitation material for fill. The trunk sewer is now almost completed. Many play fields, walks, basic paths, and other recreation facilities will be installed and Flushing Meadow in this way will become part of a continuous park and parkway belt extending along the entire north side of Queens to Alley Park. Grand Central Parkway itself, which was temporarily paved between Horace Harding Boulevard and the Kew Gardens Loop, is to be widened and the roadway system in the loop will be revised as an extension of the Van Wyck Expressway to connect the parkway system with the South Shore and Idlewild Airport.

People with short memories and no conception of the really prodigious difficulties in the way of a program of this scope have complained recently that Flushing Meadow is going back to its primitive condition, and is a haunt of rabbits, foxes, and even possums. If this were so, we would have a fine start on a zoo for the Borough of Queens. Some impatient nearby residents, and reporters and editors, would have you believe that, as Omar Khayyam said:

"The lion and the lizard keep
The courts where Jamshyd gloried
and drank deep."

This, however, is picturesque fiction emanating from those who must have been drinking the lions' milk cocktails served at the Turkish pavillion in the fair, two of which would convert Caspar Milquetoast into a raving Münchhausen.

The fact is that more than half of Flushing Meadow Park is now in general public use, that it is emerging as fast as the city budget will permit, and that, measured by previous accomplishments here or elsewhere under similiar conditions, this program has moved at an exceptional rate. Central Park was a reclamation project. It was not, as most people think, a natural park. It was man-made. Its acquisition was enthusiastically advocated for more than a quarter of a century before anything happened. It's initial construction took more than 15 years and could not have been accomplished if there had not been a depression and a contemporary WPA program. Many years passed before the entire park was opened, and in fact, it is not finished yet.

Patience, my fine critics, patience. Keep your shirts and shifts on. You were not conspicuous when we leveled the ash mountains, and rats big enough to wear saddles, with white whiskers a foot long, gazed wistfully at the bulldozers and junkies who disturbed their ancient solitary reign. The fair was a marvellous extravaganza. The park will be a great park when countless unheralded workers have raised it from dump to glory.

The Late Reverend Francis A. Wanenmacher

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. TAURIELLO. Mr. Speaker, I desire to pay a tribute of respect to the memory of a friend of long standing, the Reverend Francis A. Wanenmacher, pastor of St. Mary of Sorrows Church, in my home town of Buffalo, N. Y.

Father Wanenmacher was distinguished for his service to his community, his country, and his church. His record was indeed a splendid one. He served as an Army chaplain during World War I and was chairman of the Bishop's Relief Committee for War-Devastated Areas after World War II.

He was rich in his devotion to duty; in his friendship, in his idealism, and in his courage, the mark he has left on the spiritual and educational institutions of Buffalo and the Nation will carry on through all time as a living monument to a great spiritual leader.

I feel deeply the loss that has come to the people of Buffalo and to the Catholic Church. However, it is a matter of great satisfaction to know that he has been called from his strenuous labors so faithfully performed, to his well-earned immortal reward.

I wish to include the following article from the Buffalo Evening News of July 8, 1949, which gives a history of Father Wanenmacher's brilliant career:

FATHER WANENMACHER, PASTOR OF ST. MARY OF SORROWS, DIES

Death today prevented the Reverend Francis A. Wanenmacher, J. C. D., pastor of St. Mary of Sorrows Church, from realizing one of his fondest wishes—to celebrate mass in his newly decorated and remodeled church at Genesee and Rich Streets.

The church was swept by a disastrous fire in January 1947, necessitating considerable repairs and alterations. Since then, the parishioners of the church have been attending mass in the parochial school hall.

Father Wanenmacher had been looking forward to officiating in the new church in about a month, when the extensive repair program was due to be completed. However, the first function in the church will be the solemn pontifical mass of requiem which will be celebrated for the priest at 10 o'clock Tuesday morning by the Most Reverend John F. O'Hara, C. S. C., bishop of the Buffalo Diocese.

TO LIE IN STATE IN CHURCH

Father Wanenmacher, one of the best-known diocesan priests, died at 1:10 o'clock this morning in Sisters Hospital, where he had been a patient for the past 2 months. He had been ailing since Easter.

Bishop O'Hara has appointed the Reverend Francis J. Hall, assistant pastor of St. Mary of Sorrows Church as administrator of the parish.

Diocesan priests will gather in the church at 4 o'clock Monday afternoon, when the dead priest's body will be taken from the rectory to the church, to recite the Office of the Dead. Father Wanenmacher will lie in state in the church from then until time of the funeral mass.

Burial will be in the Wanenmacher family plot in the United German and French Roman Catholic Cemetery at Pine Hill.

A native Buffalonian, Father Wanenmacher would have been 62 years old on November 22. His father, the late Francis Wanenmacher, was treasurer of the Buffalo Savings Bank.

ORDAINED IN 1913

Father Wanenmacher attended Canisius High School and College, graduating from the college in 1909. In September of that year he entered the famous theological school at Louvain University in Belgium. The following year he continued his studies for the priesthood at the University of Innsbruck in Austria.

Returning to the United States in 1913, Father Wanenmacher was ordained a priest on August 16 of that year in St. Joseph's Old Cathedral by the late Most Reverend Charles H. Colton, then bishop of the Buffalo Diocese. He celebrated his first mass the following day in Holy Angels Church.

His first assignment as a priest was assistant pastor of St. John the Evangelist Church. Later he became assistant at Our Lady of Lourdes and Sacred Heart Churches. When the United States entered World War I he volunteered as an Army chaplain, serving with the Twenty-sixth Field Artillery.

SERVED AS ST. BERNARD'S PASTOR

The regiment did not serve in France, but was in transport there when the armistice

was signed. After the war, Father Wanenmacher went to the Catholic University in Washington, D. C., for advanced studies in canon law. He received the degree of doctor of canon law from the university.

He then served for a time as assistant pastor of St. Mary Magdalene's Church, later becoming pastor of St. Cecelia's Church, Sheldon, in Wyoming County. While at Sheldor he also was dean of the county. He was appointed pastor of St. Bernard's Church, in Buffalo, on July 10, 1926, serving in that capacity until his appointment as pastor of St. Mary of Sorrows, March 1, 1943.

HEADED WAR RELIEF UNIT HERE

Father Wanenmacher has held one of the most important diocesan posts since May 1, 1937, when he was appointed Defensor Vinculi (defender of the marriage bond in the Matrimonial Tribunal). Widely regarded as an authority on knotty marital problems, he wrote a book, Canonical Evidence in Marriage Cases, which is used extensively as a guide in disposing of such matters.

Father Wanenmacher also authored another book, Liturgical and Biblical Stations of the Cross, for congregational use. He also was a diocesan synodal examiner, a former budget director for Catholic Charities, a member of the board of directors of the German Roman Catholic Orphan Asylum, and local chairman of the Friends of the Catholic University of America.

Two years ago Father Wanenmacher, at the request of Bishop O'Hara, was chairman of the Bishop's Relief Committee for War-Devastated Areas, and raised more than $100,000 in the Buffalo diocese for the cause.

EXPERT WOODCARVER

Ruddy faced and energetic, Father Wanenmacher also was an expert woodcarver. While at St. Bernard's Church, he did some hammered-brass handicraft work and also painted the decorations in the church.

When the late Most Reverend William Turner was bishop of the diocese, he carried a crozier which had been designed by Father Wanenmacher. The crozier, a staff which is the symbol of the bishop's pastoral office as shepherd of the people, was termed by ecclesiastical authorities as one of the finest in the country.

Father Wanenmacher is survived by two sisters, Mrs. John M. Hogan and Mrs. Percy J. Hunt, and a brother, Edmund L.

More DP Propaganda

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. GOSSETT. Mr. Speaker, during the last several days I have noticed full-paged ads entitled "An Appeal to the United States Senate." Then follows a lot of sentimental demagogery about DP's. These ads are designed to put pressure on the United States Senate to liberalize the so-called DP act. These ads are signed by a number of leading Americans. It is my judgment that most of those signing these ads simply do not know the injury they would do their country. They are misguided humanitarians.

That millions of dollars has been and is being spent on propaganda for such legislation should startle all of those who love this country and who want to protect it from the infiltration of unfit and undesirable persons.

In this connection I wish to place in the record an article by Mr. St. John Waddell, which appeared in the Memphis Commercial Appeal on the 9th of this month. Such accounts could be multiplied a hundredfold.

The article follows:

SOME DP IMMIGRANTS ARE ALLERGIC TO WORK—ON OCEAN TRIP, 30 OF THEM ABOUT MATCH 6 SAILORS—QUALITY IS QUESTIONED

(At the invitation of the International Refugee Organization, St. John Waddell, assistant managing editor of the Commercial Appeal, was one of a group of American newspaper men to inspect the displaced persons situation in Europe. This article is one in a series of his reports.)

(By St. John Waddell)

Five of the displaced persons aboard the United States-bound Army transport General Howze last week, refused to work at the ship's housekeeping routine, a stint which they agreed in writing to do on their voyage toward freedom.

Threats of "no work, no eat," and of imprisonment in the brig, had to be used to bring the recalcitrants into line. The chief bos'n's mate, whose lot it is to supervise the displaced persons' deck duties, said that as usual the threats did not have to be carried out. He added that all of the rebellious immigrants were Polish Jews.

HAS HARASSED ATTITUDE

Chief Bos'n's Mate Louis Ware, a stout young southerner from Ringgold, Ga., near Chattanooga, has acquired a harassed attitude from his experiences in transporting displaced persons for the International Refugee Organization. He is supposed to keep a certain number of them busy at such jobs as sweeping the decks, the simpler kind of painting, and other nonskilled housekeeping work.

"Thirty of them will do about as much as 6 American deck hands," he said. "The big majority just plain don't want to work. The usual excuse is that they have already worked 1 day, and now it should be somebody else's turn."

He explained that women and children, old men, and very young boys, and those who are not in good physical shape are not asked to do anything except keep their own quarters shipshape. This, he said, takes a large cut out of the total number available to help on deck, in the engine room, the kitchens and the dining rooms. Result is that the effectives are called on for their 5 hours work almost daily.

"But you can't explain that to them," was the bos'n's skeptical comment.

He added that people are not asked to work if they are seasick.

Bos'n Ware shares the feelings of the ship's higher officers in being worried about the quality of the immigrants being brought over under the displaced persons program. It was pointed out that the ship's company knows nothing of the persecuted past of the refugees at first hand, and forms its impressions from observing the immigrants at close quarters during a 10-day voyage. Comments of the officers made it obvious that none was willing to describe their passengers as "all good" or "all bad." They based their conclusions on the comparative prevalence of the desirable future citizens over the undesirable, or vice versa.

RAW DEAL ON QUALITY

One of the mates, who asked that his name not be used, made this analysis: "We have some splendid people aboard, who will certainly become an asset to the Nation—musicians, skilled workmen, artists, scientists. But they are a small minority of the total passenger list. It seems to me the United States is letting itself in for a very raw deal on quality."

In resettling Europe's displaced persons the International Refugee Organization is operating what is probably the greatest fast mass migration in history. To do it IRO has chartered some 36 vessels on its world-wide runs. The United States Army transport *General Howze* is typical of about a dozen similar ships engaged in bringing the refugees to the United States and Canada.

Officials feel that Army transports are ideal for the task. They were designed to accommodate a maximum number of troops in maximum comfort and safety. Originally planned to carry 1,871 soldiers in addition to the ship's crew, the *Howze* on this trip had 943 displaced persons aboard, only a little more than half the troop capacity. So the ship was not crowded.

Except for the bridge, officers' and crew's quarters and A desk, which is dangerous for children, the DP's have the run of the ship. They use the deck chairs on B and C decks, the lounges and recreation rooms, the special service department where games and books are provided. They organize concerts, sing on deck in groups in the evenings. The rule is that all must be in their quarters by 10 o'clock at night.

On C deck there are 33 staterooms which are assigned to mothers with small children, usually four persons to the room. There are cribs for the babies whose ages require them, and a formula room where a registered nurse prepares the right kind of bottles for the infants at the right times of day. With 42 of these tiny DP's aboard, she was kept fairly busy.

DORMITORY COMPARTMENTS

The other passengers live on the lower decks in dormitory compartments, men and women separated. Double-decker bunks are used, and while they are not luxury liner style, they are sufficiently comfortable and the sanitation is unquestionable. Wash rooms and toilets are plentiful, and fresh water is not rationed.

Cafeteria systems are used in the dining rooms, except in the special one for mothers with smaller children above the infant age. There the passengers are waited on by other DP's assigned to the duty.

A typical meal consists of meat, at least two vegetables, bread, butter, dessert, coffee or tea. Sunday's dinner was marked by chicken and ice cream. The servings are plentiful.

For the voyage, each adult displaced person aboard was issued $2.50 in PX tickets, free, and each child $1.75. These are good for cigarettes, tobacco, candy, gum, toilet articles, and the hundreds of items usual to the average Army post exchange.

Cost of bringing the immigrants to the United States is borne by the IRO, with funds provided by the nations which make up the organization, including the United States. Each member nation contributes to the IRO budget according to its financial strength. This means that most of the money comes from the United States.

"A Little Debt Makes a Debtor, But a Great One an Enemy"

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following article which appeared in the July 12 issue of the Richmond Times-Dispatch:

TIME FOR A SHOW-DOWN

The Anglo-American financial agreement of 1946 pledged Great Britain not to set up import quotas discriminating against the United States. That promise, spelled out in article IX of the agreement, was a primary condition upon which we granted Britain a loan of 3.75 billion dollars.

In Washington last week the Socialist government of Britain submitted a formal request to be released from that promise, in order to implement the trade restriction plan outlined by Chancelor of the Exchequer Sir Stafford Cripps last Tuesday.

Three years ago when the Laborites signed that agreement, they assured our Government that the pact was epochal as a mutual step toward the freedom of world trade essential to its postwar recovery.

Article IX was intended to document and confirm the British Government's determination to abandon its prewar policy of trading via cartels and within a framework of special concessions granted to what was then known as "the Empire."

This reneging on a solemn pledge is not without precedent in the Attlee regime. Article VIII of the 1946 agreement was a promise by Britain to make her pound sterling "freely convertible" into dollars on most current transactions a year after ratification of the agreement, on July 15, 1947. The subsequent rush by nations to convert their earned sterling into dollars panicked the British to plead for release from the convertibility pledge. The request was laid before a congressional committee, and granted without legislative action.

Like the crawfishing on convertibility, which was dubbed "purely temporary," the proposed release from the antirestriction clause is said to be "transsitional," but as in the first instance, the emergency promises to become permanent.

Britain now pleads that it is necessary to establish a "soft currency bloc"—as a stepping stone toward the free-trade objective she claims to share with us. Thus far there are no signs that, once embarked on this trail of easy expediency, she will be willing to backtrack.

The Laborite government has not laid its cards on the table, face up. Advices from London last week confirmed an earlier report that Britain had initialed a secret trade agreement with Russia—a week prior, to the announcement of the Cripps plan to impose what amounts to a boycott of the "dollar areas." This Moscow-London deal had been kept secret since it was initiated 3 months ago. It binds Britain to purchase 1,000,000 tons of Russian grain during the next 12 months. Other trade agreements with Russia—in preference to the United States—are said to be under way.

A similar unilateral barter agreement was entered into by Britain less than a month ago, over our objection, when she agreed to buy more than half a billion dollars' worth of Argentine products, in return for $486,000,000 in exports to the country dominated by the violently anti-American Juan Peron.

It may be argued that Britain's desperate state forced her to do what she did, but the uneasy suspicion will remain, that she is using exports and imports in a trade war to exploit her strategic position between Russia and the United States.

In spite of these unappreciative tactics, the British are said to be making overtures to obtain new American loans to aid the British economy, at home and in the colonies.

Is this going to be the old game of international cutthroat poker all over again, and if so, are we going to continue to pump billions into a country taking advantage of our need for friends in the cold war, to impose on our friendship?

In the face of these "ultrarealistic" policies, shall we continue to indulge the quaint illusion of the British that we are somehow obligated, by a sort of unwritten law, to perpetuate the utopian follies of their Socialist government, chiefly responsible for Britain's economic anemia?

While fully aware of cultural kinship with Britain, we should not ignore our concomitant right to speak our mind in this instance with the brutal frankness of a blood relation.

The Late Honorable Fred E. Lewis

EXTENSION OF REMARKS
OF
HON. F. H. LICHTENWALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. LICHTENWALTER. Mr. Speaker, on June 27, 1949, death came to the Honorable Fred E. Lewis, who was a Member of the House in the Sixty-third Congress, at his home in Allentown, Pa., after a brilliant and distinguished career.

Mr. Lewis, who was 84 years of age, was a member of one of the oldest and most prominent families of Allentown, where he was born and where his life was closely connected with the development of the city and surrounding communities. A leader in the life of the community for more than 60 years, Mr. Lewis served as president of two of its banks, was one of the oldest members of the Lehigh County Bar Association, headed the board of trade, served as Congressman at Large from Pennsylvania, and for years enjoyed the prestige of elder statesmen.

The political career of Mr. Lewis, which continued up until the closing years of his life and brought him high honors, began early. In fact when he sought the office of mayor of the city of Allentown for the first time in 1896 his chances were discounted because of his youth. He was elected again as the city's chief executive in 1902 and again in 1931, serving his third term from 1932 to 1936.

In 1912, Mr. Lewis was nominated by the Republicans and endorsed by the Washington party for Congressman at Large from Pennsylvania and won by a large plurality.

As a businessman, Mr. Lewis was always active. He organized the Lehigh Telephone Co. which later became a part of the Bell System. He was a leading figure in the founding of the Merchants National Bank in Allentown of which he was the first president and served in that office for 7 years. He was also the prime mover in the founding of the Dime Savings & Trust Co. and served as its president until it was consolidated in 1932 with the Lehigh Valley Trust Co.

As president of the Allentown Board of Trade, Mr. Lewis did much to arouse public interest and action in bringing new industries to the city to increase the prosperity of the city.

Mr. Lewis was very much interested in the affairs of firemen which continued from the time be became a volunteer firemen as a young man until his last illness. He held office for many years in the Pennsylvania State Firemen's Association and just recently we elected to his twenty-eighth consecutive term as president of the Allentown Firemen's Relief Association.

Another of Mr. Lewis great interests for many years was the Lehigh County Agriculture Society of which he was treasurer and took an active part in making plans for this year's great Allentown fair.

The memory of Mr. Lewis for his human qualities and his outstanding contribution to his community and the Nation will continue to live.

Address by the President on His Fiscal Program

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Thursday, July 14 (legislative day of Thursday, June 2), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the speech delivered by the President of the United States from the White House last night, and broadcast over the country.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow citizens, I want to talk to you tonight about our country, about its future, and about its importance to the hopes and aspirations of mankind.

It is a good thing to stop and think about where we are, where we are going, and what our national aims and objectives should be. The elected representatives of the people, and particularly their President, have a duty to report from time to time on these basic questions.

On Monday I sent the midyear economic report to the Congress. Tonight I want to tell you something about what was in that report, and also about the Federal budget, concerning which there has recently been much discussion.

The history of the United States is a story of constant economic growth and expansion. When I was a young man the population of the United States was between 90,000,000 and 100,000,000. Today it is nearly 150,000,000. Forty years ago the national income—the total of all the income received by all the people in the United States—was in the neighborhood of $30,000,000,000. Today the national income is well over $200,000,000,000. It has increased more than 10 times as fast as the population.

These figures are a measure of our rising standard of living—our increasing freedom from toil and poverty. They are the result of constant expansion in agriculture and industry.

In fact, unless we do expand our production steadily, we run into economic difficulties. We cannot stand still. We must expand if we are to stay prosperous.

A little more than 10 years ago President Roosevelt called for a national income of

$100,000,000,000 a year. This was a surprising figure when he mentioned it, but we have far surpassed it in the space of 10 years. Our national income last year was $225,000,000,000.

If we could make such progress in the past, we can go on making it in the future. Before long our national income should reach a total of $300,000,000,000.

But if we want to reach that goal, we all have some hard work ahead of us. We shall have to make wise decisions about our national policies. And we shall have to be sure that the selfish interests do not drive us into the ditch, as they have done before.

At the present time there is a drop in employment and in production in certain lines. I have been concerned about this and I have studied the facts carefully. I want to tell you what these facts are.

As to employment we now have more than 59,500,000 people working in civilian jobs. This is a tremendous number, but last year at this time we had a little over 61,000,000 employed. Furthermore, there are more people looking for jobs this year, because about a million young people and veterans have become available for employment for the first time.

Consequently, although the number of people with jobs is very high, the number of people without jobs is substantially larger than it was a year ago. Last year at this time the number of people out of work was as low as we can expect it to be in peacetime. It was a little over two million. Now the number out of work is almost four million.

While much of this unemployment is temporary and is part of the normal process of changing jobs, there are substantial numbers of people who have been out of work for some time, and are now suffering hardship.

As to production, the output of all goods and services declined slightly during the first half of this year. In some types of business, there has been no decline at all. In others there have been slight increases. In manufacturing, however, output in June had dropped 13 percent from the high point of last November.

In the economic message in January, I said that we should strive for a 3- to 4-percent increase in total output this year if we were to maintain maximum production and employment. Instead, we have fallen somewhat below last year's level.

These are the facts. I am not coloring them one way or the other.

Some people are saying, and saying very loudly, that these facts mean that we are in a depression. Many of these people, for political reasons, would like to have a depression. Others are saying that there is nothing to worry about and that an increase in the number looking for work is a good thing. This attitude ignores the human suffering caused by unemployment.

Both groups are wrong. We are not in a depression. But an increase in the number of people out of work is something to worry about, and is something that must be cured.

If we were in a depression, I would be the first person to tell you, and I would call upon all the resources of this Nation to stop it.

What we face today is not a depression, and if we follow the right course, it will not become a depression.

We are going through an economic change which is the result of the inflationary spiral that we were in until a few months ago. I warned repeatedly against the dangers of this inflation, and I asked the Congress time and again to take steps to curb the excessive rise in prices. I did this because I knew that if prices went too high, they would topple over and bring about a decline in production and employment.

Unfortunately, my recommendations were not accepted. Prices continued to climb. As the most urgent needs of the people and of industry were satisfied, these high prices cut down the sale of goods. As a result, production declined. Prices are now finding more reasonable levels—a fact which should stimulate sales and production again.

In this period of change, our national economy is protected by important economic reforms which the Government has adopted over the last 16 years. Unemployment insurance and social security are helping people who are out of work, and are helping to maintain consumer-purchasing power. The farm price-support program is keeping agriculture on a fairly even keel. The insurance of bank deposits protects us against bank runs. Our controls over the marketing and exchange of securities prevent wild speculative sprees and stock-market crashes.

Because of these and other Government policies, we have suffered far less in this period of declining prices than we ever have in a similar period before. These Government measures, all of which were bitterly opposed by selfish interests when they were passed, have proved their value in protecting the economy.

Furthermore, all groups in the Nation have gained a better understanding of economic problems since the 1920's, and this understanding, on the part of businessmen, consumers, and labor, has helped to cushion the process of price change.

Now all of us—business, labor, agriculture, and government—must take positive action together to restore the upward trend. The decisions we make in the next few months can prolong the present decline, or they can turn it into an upswing.

Our goal is maximum employment and production. The only way to reach this goal is to increase our economic activity. The needs of our people are constantly growing. Our skills are increasing. Every year brings forth new inventions and techniques, new opportunities for improvement and development.

The tools are at hand for continued economic expansion. All we need is the courage to use them.

Businessmen should take advantage now of opportunities for modernizing their plants and for new business investment, and together with labor should cooperate in achieving higher production and employment. Farm production should continue at high levels.

The Government likewise must direct its policies toward continued economic expansion. The country is growing and we need to preserve and develop our natural resources for this generation and the next. We must therefore press forward with programs of soil conservation and river-valley development and other public works.

Economic expansion requires constantly rising living standards for our people. We must therefore expand our programs of social security, education, health, and housing. We must build, as we are building, for the future.

There are men of little vision who say we ought not to go on doing these things. They say they cost too much. They say we are wasting money.

The truth is that an investment in the future of America is not a waste of money. The dollars we put into our rivers and our power plants will be repaid to us in fruitful valleys and prosperous communities. Expenditures for the health and education of our children will yield us untold dividends in human happiness.

But, say those who object, look at the size of the budget.

All right, let's look at the budget.

The budget includes the cost of almost everything the Government does. It is not simply the pay roll of Federal employees, as some people appear to think. In fact, the pay of Federal civilian employees is only about 12 percent of the budget. The budget includes all Federal expenses for national defense, for international aid, and for the conduct of the affairs of this Nation abroad. It includes Federal aid to the States, for roads and health, and other programs. It includes atomic energy, and dams, and soil conservation and flood control, and many other things essential to the growth of our country.

These things are necessary, but in the present budget we have not provided extravagantly for them. Let me make it clear that I believe in prudent financial management. That has been my rule in my private life and in my public life. I am working for the reorganization and better management of the Government to achieve greater efficiency. I believe in the economical use of the public's money—and the budget is based on that principle.

If we examine the items in the budget, we see, in dollar figures, the magnitude of the task which confronts this Nation in protecting the cause of peace and freedom. Over three-fourths of the budget is due to international events. Less than one-fourth arises from the domestic functions of the Government.

Let me explain to you why this is so.

The total of the whole budget today is about $42,000,000,000. Of this total, $32,000,000,000 is the result either of past wars or our efforts to prevent another war. Three big items make up this $32,000,000,000.

The first is the national defense. That accounts for over $14,000,000,000. The armed services, at the start of this year, wanted a much bigger sum than that, but I cut it down to the minimum necessary for our protection and for the preservation of peace in this troubled world. It is expensive to keep up the forces necessary to prevent war, but in the long run it could be a lot more expensive not to have them.

The second big item is the cost of our international programs. They will cost this year about $7,000,000,000, and they are worth every penny of it. This sum includes the cost of the European recovery program and our occupation responsibilities. These programs have kept western Europe out of the hands of the Communists, and are helping to restore the economic and social strength of the free nations. If we were to cut these programs, it would weaken our efforts to bring about peace. That is a risk we must not take.

These two items, national defense and international aid, add up to $21,000,000,000—more than half the budget. These are the expenditures we are making to prevent future wars. If anybody thinks it extravagant to maintain the peace, let him remember that it cost us not $21,000,000,000 a year but $100,000,000,000 a year to conduct the last war.

I do not believe that our defense and international expenditures will have to remain at their present high level indefinitely. I hope that they may be reduced as our program for peace takes effect. But, as of today, I regard these expenditures as the most valuable insurance we can take out against the enormous expense and the terrible loss of another war.

The third big item includes interest on Government bonds and benefits to veterans. Together these expenses total about $11,000,000,000. I don't believe anybody has suggested that we default on the Government bonds or on our obligations to our veterans by cutting this item.

These are the costs of past wars. Together with the $21,000,000,000 for preventing future wars, they add up to $32,000,000,000, more than three-fourths of the budget.

The remaining $10,000,000,000 of the budget provides for all other functions of the Government. The major items in this category are public works, farm price supports, education and housing programs, and payments for health and social security. For a country of this size, with a $200,000,000,000 economy, $10,000,000,000 for such essential programs is a reasonable sum indeed.

Today, after an increase of population and in spite of rising prices, this part of the budget is only 50 percent greater than it was 10 years ago. The other part of the budget—the cost of past wars and of preventing future wars—is the part that has shown such a tremendous increase. This part of the budget is 900 percent greater than it was 10 years ago.

The size of the budget reflects the world we are living in. We have to face the facts of the world of today. It does no good to retire into the world of the past and to wish that somehow the facts would just go away, so that we could have a small budget again.

The leaders of the Eightieth Congress thought they could wish the facts away. They insisted on passing a tax reduction against my advice and over my veto. I warned that this tax cut of $5,000,000,000 was almost certain to produce a deficit. It did produce a deficit. For the year ending July 1, 1949, the deficit was $1,800,000,000.

The economy was running at a high level when this untimely tax cut was made. People then could pay the taxes necessary to balance the budget and to provide a surplus for debt reduction. Today, because profits and incomes have fallen, taxes bring in less money. An increase in taxes now might bear too heavily on business and discourage the investment necessary to full production and full employment.

At this time, therefore, I am not recommending new taxes to make up the deficit. I do not like to have a Government deficit. But still less do I want to injure the economic health of the country.

Selfish interests were behind the tax reduction of the Eightieth Congress. They were also behind the failure to provide authority to stabilize prices. These two blunders of the selfish interests have had unfortunate economic consequences. They will continue to cause us trouble for some time.

Now these same selfish interests are urging us to commit a third great blunder. They are now urging drastic cuts in Government expenditures—cuts which would fall hardest on those expenditures which are most important to our domestic economy.

Making cuts of this type in the budget is just the thing you do not do if you want to help the economy expand. At a time when employment is already lower than it should be, cutting Government expenditures would cause more unemployment. At a time when more investment is needed, it would be foolish to cut down productive Government investment in national resources and public works. To slash Government expenditures now, would add to the downward trend.

Let us take public works, for example. It has been estimated that every billion dollars spent for public works gives employment to 315,000 people, and adds to the income, indirectly, of some 700,000 more. The current budget provides more than $3,000,000,000 for public works. These public works are greatly needed improvement. If we cut them out, we would not only hamper the growth of the economy, we would also increase unemployment by about a million persons, and weaken the position of over 2,000,000 more. This would be the most expensive kind of saving I can think of.

The people who unwisely urge that Government expenditures be slashed are for the most part the very same people who have long been opposing our social programs and our resource-development programs. They have resisted such things as social security, housing, the minimum-wage law, and public-power development, from the very beginning. They have opposed every improvement in these programs.

During an inflationary period, they are against these programs because they say they are inflationary. During a deflationary period, they are against them because they say they are deflationary.

Rain or shine, they are just against them.

It was programs like these, for the benefit of the people, that saved business in the thirties, that are supporting purchasing power now, and that are laying a foundation for increased prosperity in the future. Most of the people know this, even if the selfish interests don't.

In the long run, these programs are not only necessary to the welfare of the country—they are necessary if we are to balance the budget.

The very heart of sound government finance is to make the expenditures that are necessary to help achieve prosperity and peace. The items in the budget are consistent with this principle. That is why the Congress, in considering the details of the budget, has not made significant cuts. It has approved the particulars of the budget, item by item, because the Congress knows they are good for the country.

I achieved a budget surplus—before the Eightieth Congress tax cut—and I intend to achieve one again.

When we had an excess of receipts over expenditures, we applied it to reduce the national debt. We have already paid off more of the debt than the total size of the national debt after the First World War.

But you cannot achieve a surplus in the Government budget when you have a declining national economy. A Government surplus and national prosperity go together. The income and the expenditure of the Government are a very important part of the entire national economy. If we follow the wrong budget policy at this time and slash our expenditures, we will decrease employment, cut down investment, weaken our defenses, and injure our efforts for peace.

If we follow the right budget policy, and support the national economy, we can help bring the country back to our normal rate of growth and expansion.

Some of the measures which will be most effective in the present situation have either been enacted or are on their way to final passage. They include the housing program, the agricultural program, and an increase in the minimum wage.

In addition, I have proposed to the Congress in the economic report that it take added steps at this time to keep purchasing power up, to aid those who are suffering from unemployment, and to enable us to make plans so that we will be in a position to step up public works activities if necessary.

If these measures are adopted, the Government will be in an improved position to play its role in our expanding economy. But changing the course of our present economic situation is also going to require wise action by business, labor, and agriculture. If businessmen, labor, and farmers base their actions now on an expanding economy, we will work our way successfully through the present period of transition.

I have confidence in the unlimited capacity and in the unlimited opportunities of the American economy and the American people. I have confidence in our ability to master the international problems which confront us and to achieve world peace.

I have this confidence because of our achievements in the past and because of the present strength of our institutions.

Above all, I am confident because I believe that Almighty God has set before this Nation the greatest task in the history of mankind, and that He will give us the wisdom and the strength to carry it out.

Southern Crossing Over San Francisco Bay

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. WELCH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before a subcommittee of the Committee on Armed Services:

Mr. Chairman and gentlemen of the subcommittee, after listening to witnesses establish their credibility and background, who were here to testify, I am prompted to ask your indulgence that I may also briefly state my experience with reference to the Golden Gate Bridge, the San Francisco-Oakland Bay Bridge and highways.

I am not an engineer. However, some of my practical background came from a San Francisco shipyard where, as a young man, I learned a trade, to read a blueprint, and to work from plans and specifications. I have sometimes regretted that I did not follow my natural bent. Instead, in 1900, upon the urgent request of neighbors and friends, I became a candidate for State senator from San Francisco. I served in the State senate for 12 years, nearly all of which time I was chairman of the committee on commerce and navigation. From the State senate I went to the board of supervisors, the legislative body of the city and county of San Francisco. I served on this body for 10 years before being elected to Congress.

During my service with the board of supervisors, I was made chairman of the committee on highways, streets, bridges, and commercial development. I was also a member of the important committee on public utilities. During this time the city built, at a cost of $150,000,000, its present water system to provide against the recurrence of such a catastrophe as took place in 1906 due to lack of water. During my service on the board, San Francisco's wholly inadequate transportation system, consisting of one road of ingress and egress and a ferry system gave me great concern.

After conferring with Mr. O. H. Ammann, Mr. Leon Moisseiff, Mr. Gustave Lilienthal, Mr. Ralph Modjeska, and Mr. Joseph B. Strauss, some of the world's outstanding long-span bridge engineers, on the physical and financial feasibility of spanning the Golden Gate and connecting the city of San Francisco with the east bay, I started a campaign to connect the great international seaport city of San Francisco with its natural hinterlands—the great valleys of San Joaquin, Livermore, Sacramenta, Napa, Sonoma, and Santa Clara counties—by a comprehensive system of highways and bridges. A small organization was perfected for that purpose. I named a committee of five citizens of which I was a member. We proceeded with a plan which required an act of the California State legislature to create what is known as the Golden Gate bridge and highway district consisting of the city and county of San Francisco, Marin, Napa, Sonoma, Mendocino, and Del Norte counties. We held an election within the district and bonded it for $35,000,000, and built the longest single span bridge in the world during the depth of the depression and without one dollar of cost to the Federal Government.

I was made chairman of the transbay bridge committee for the purpose of building what is now the world-famed San Francisco-

Oakland Bay Bridge. Our efforts were retarded. Strange as it may seem, both the Army and Navy were adamant in their opposition to building a bridge across San Francisco Bay. For all purposes, the bridge was as dead as a dodo. I finally appealed to President Herbert Hoover for help. The President responded by appointing a commission, known as the Hoover-Young commission, the late C. C. Young being then Governor of the State of California. President Hoover appointed a majority of that board and on it were engineers of his own choice. It will be remembered that Mr. Hoover is an able engineer. It was this Hoover-Young commission which went forward and made possible the San Francisco–Oakland Bay Bridge.

The geographical and strategic location of the great international seaport city of San Francisco has caused the Federal Government to establish on its shores and in the immediate vicinity more military and naval establishments than in any other section of this country. Navigation as it applies to clearance under a 200-foot high bay bridge with a 1,700-foot span or a 50-foot or more clearance over a combination tube and trestle is a minor matter in comparison with an adequate means of dispersion of a great city's population. The opponents of what has come to be known as the southern crossing over San Francisco Bay, the crossing recommended after a year of exhaustive studies by a joint Army-Navy board of engineers authorized by an act of Congress, and the recent report of the Secretary of Defense, the Secretary of the Army, and the Secretary of the Navy, seem to find comfort in reference to navigation.

Mr. Chairman, from the standpoint of navigation I would approve the carbon-copy parallel bridge proposed to be built 300 feet from the existing San Francisco-Oakland Bay Bridge knowing that its piers would certainly parallel the present bridge. I do not claim to be an expert on navigation. I am however, familiar with San Francisco Bay and its tributaries. I served for a number of years as harbor master (chief wharfinger) of that great international seaport. I held that position at the time of the earthquake and fire in San Francisco in April 1906. Gentlemen, I saw it all. Ten square miles of that great city were laid waste. The water mains leading to the city were burst by the earthquake and the city left to the mercy of the flames. The police and fire departments were demoralized. They, like all others, fled with their families and with what few belongings they could salvage beyond the reach of the flames. The chief of the fire department was killed before he could leave his bed that fateful morning.

Gen. Frederick Funston, who was personally known to me, was at the time military commander of the Presidio of San Francisco. It will be remembered that it was he who captured Aguinaldo, leader of the Philippine insurgents, and ended the war in the Philippines. All communication lines between Washington and San Francisco were broken. General Funston did not wait for orders but took the situation in hand. On the second day of the fire, which lasted 3 days, a United States cruiser came into port. I immediately provided the captain with a berth for his ship and shared my office with him. Between the Army and the Navy, looting and disorder were stopped and order was brought out of chaos.

Mr. Chairman, now I have come to a point I want to stress. San Francisco, like all of the State of California, is in an earthquake zone. Another major earthquake, which I fervently trust may never occur, could happen while I am here with others pleading for the safety of our people. In 1906 there were no bridges over San Francisco Bay and the Golden Gate. Instead, we had probably the largest fleet of ferryboats in the world. These made evacuation of the city by the Army and Navy possible. Since the building of the San Francisco-Oakland Bay Bridge and the Golden Gate Bridge this vast ferry fleet, with the exception of two or three antiquated ferryboats, has been dispensed with.

Construction of a parallel bridge 300 feet to the north of the present structure is tempting fate. It is conceded that the present bridge and the proposed parallel bridge could be destroyed by a single bomb, and not necessarily an atomic bomb, leaving some 800,000 souls without access to the continental side of the bay.

San Francisco is built on a peninsula and has an exceedingly hilly terrain, which has made possible the development of only three main arteries leading out of the city, these to the south.

Gentlemen, may I say to you that the Joint Army-Navy Board of Engineers had in mind dispersion, a word seemingly forgotten by the proponents of the parallel crossing. The Secretary of Defense, the Secretary of the Army, and the Secretary of the Navy, in following the recommendation of the Joint Army-Navy Board of Engineers, also had in mind dispersion.

The city and county of San Francisco comprises only 44 square miles. We cannot grow into the Golden Gate, into the Pacific Ocean, or into San Francisco Bay. We must, of necessity, grow to the south. May I repeat, the Joint Army-Navy Board of Engineers, the Secretary of Defense, the Secretary of the Army, and the Secretary of the Navy had that thought in mind when they recommended the southern crossing to be located 5 miles south of the present bridge.

The San Francisco Police and Fire Departments have objected strenuously to the parallel crossing, naturally, as it is their duty to save lives and protect property.

I wish to say that should your subcommittee deem it necessary to visit San Francisco for further proof of the imperative necessity of this southern crossing, you will observe that the proposed parallel crossing would double the traffic load no being dumped into the most congested section of San Francisco.

The first Army-Navy board provided for pursuant to House Resolution 158 in 1941, like House Resolution 529, also introduced by me in 1946, recommended a high-level bridge in the vicinity of the site of the combination bridge and tube recommended by the second joint Army-Navy board. In the meantime the high-level southern crossing was objected to strenuously by the Department of the Navy on the grounds of national defense. The Navy claimed that it would interfere with the taking off and landing of the large planes used by the Navy. Still, gentlemen, we are told by some that there are no national-defense features involved in the second bay crossing.

The Pump-Priming Record

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Washington Evening Star of yesterday, which is illuminating and timely in connection with recent utterances of the President:

THE PUMP-PRIMING RECORD

Now that President Truman, in his economic report to Congress, has suggested that we are in for a period of deficit financing, and that such financing will help to check and reverse our current recession, it is interesting—and perhaps instructive—to look back into the 1930's, when the Federal Government resorted to a similar pump-priming policy to get the country out of the depression that followed the crash in 1929.

In 1929 our national income totaled $87,400,000,000 and only 1,550,000 Americans were unemployed. Thereafter our economy skidded downhill very fast. By 1933, when the New Deal first began, the situation was desperate, and it was not unnatural that the Federal Government started to spend much more than it took in. Actually, however, this deficit financing, or pump priming, did not solve the unemployment problem. The following table—showing the year-by-year deficits in round numbers, along with the total out of work—illustrates the point:

	Deficit	Unemployed
1933	$3,063,000,000	12,830,000
1934	3,989,000,000	11,340,000
1935	3,364,000,000	10,610,000
1936	4,829,000,000	9,030,000
1937	2,880,000,000	7,700,000
1938	1,242,000,000	10,390,000
1939	3,920,000,000	9,480,000

During the same period national income failed to get back anywhere near the 1929 total of $87,400,000,000. In 1933 it stood at $39,600,000,000, in 1934 at $48,600,000,000, in 1935 at $56,800,000,000, in 1936 at $64,700,000,000, in 1937 at $73,600,000,000, in 1938 at $67,400,000,000, and in 1939 at $72,500,000,000. Of course, had there been no deficit financing during the thirties, the income and employment figures might have been much worse. But the fact that they were not better seems to be proof enough that pump-priming has very decided limitations as a fiscal device designed to create employment, increase production, and make the economy generally prosperous.

To be sure, the Second World War had the effect of a tremendous pump-priming operation primarily responsible for the fact that our national income in 1949 is around $225,000,000,000, as against $87,400,000,000 in 1929, and that 10,000,000 more Americans are in jobs now. But that is hardly an argument in favor of unbalanced budgets. War is one thing, and peace another, and the record of the 1930's offers at least the suggestion that deficit financing is likely to perform as few miracles at this stage as it did then. And in those days, we must remember, we did not have the gigantic public debt that weighs so heavily on all of us today.

Address by Hon. Edward Martin, of Pennsylvania, to the Pennsylvania Newspaper Publishers' Association

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 14 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me to the Pennsylvania Newspaper Publishers' Association, in New York City, on April 28, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman and my fellow Americans, I am happy to be here because no group in America has a clearer understanding of the real needs of the people of our country.

One of the problems before you is the provision in H. R. 2945 for a sharp increase in second-class postal rates.

From my study of that proposal I am convinced that this bill, if enacted, would destroy many newspaper publishers, and would be detrimental to the people of our country.

I shall, therefore, oppose the present bill. I am happy to report to you that a substantial majority of the Congress are opposed to it and, in my opinion, it will not be enacted into law.

There are many other proposals that would destroy other business and industries, but I won't take time to talk about them.

I do want to talk about one danger that threatens every business and the freedom of every individual.

The continued increase in the cost of Government threatens our country with national bankruptcy and the destruction of everything that America stands for.

Gentlemen, the most shocking experience I have ever had in my life has been to hear some of my Senate colleagues, of both political parties, say that there is nothing we can do to avert national bankruptcy.

Sitting around the luncheon table or in conference, I have heard the opinion expressed that we are over the hill, that we might as well go along with the tide, that the sooner it happens the better off we will be, because we will then still have an opportunity to pick up the pieces and make a fresh start.

Gentlemen, in recent weeks I have heard conversations like that not once but on numerous occasions. And I cannot describe the sinking feeling that came over me to think that this great Nation of ours has come to such a sorry plight that Members of the Senate of the United States are willing to suggest giving up in this struggle.

I am happy to say that there are men in the Senate like Senator BYRD and Senator GEORGE, and many others whom I could mention, who are not willing to take that attitude.

They feel, as I do, that the fight to keep America solvent and to prevent its destruction must be continued to the last ounce of our strength and determination.

I want to give you some facts and figures that to me are so shocking and so alarming that they have caused me many sleepless nights.

Consider first the cost of operating the Federal Government.

In 1930 it was less than $4,000,000,000. Ten years later it had gone up to nine billion. Today it is more than $42,000,000,000 a year.

On top of that enormous budget there have been proposed 15 new domestic spending programs to be financed out of general tax funds, and 3 new so-called welfare and health plans to be paid for by pay-roll deductions.

How much will they cost? No one knows.

But estimates by experts place the minimum added cost of these projects at $14,000,000,000 a year.

It has been estimated also that the full objectives of those promoting these new spending projects will push the costs of Federal Government up to the frightening figure of $84,000,000,000.

The nine appropriation bills for the support of the various departments and agencies of the Federal Government have now passed the House and are in the Senate for action.

An examination of these bills shows that the cash appropriations for the fiscal year 1950 exceed the appropriations made for 1949 by $4,277,000,000.

It shows that the contract authorizations for fiscal 1950 exceed the contract authorizations for the current year by $1,677,000,000.

That is a total increase in cash appropriations and authorizations of $5,955,000,000 over the amount appropriated by Congress for the same departments for fiscal year 1949.

But that's not all. We have before us the North Atlantic Pact and the cost of rearming the nations that have joined in that alliance.

The Secretary of State, Mr. Acheson, told the Senate Foreign Relations Committee the cost for the first year alone would be $1,130,000,000.

Keep in mind that was the price for the first year only. No one can begin to guess how much the total will be in addition to the sixteen billions already appropriated by the House for national defense.

Then there is the new farm subsidy plan, proposed by the Secretary of Agriculture, to cost the taxpayers about $6,000,000,000 a year, the housing program, Federal aid to education and other spending programs.

In 1940, only 8 years ago, tax collections for all levels of Government were only $14,000,000,000. That was nearly 19 percent of the national income, or $109 for every man, woman, and child in the United States.

In 1948 the total tax collections had skyrocketed to above fifty-five billion, better than 26 percent of the national income or $377 for each individual.

In 1930 there were less than 500 separate units in the Federal Government. Today there are more than 1,800 boards, bureaus, divisions, agencies and commissions.

The number of civilian employees has increased from 600,000 in 1930 to approximately 2,200,000 today.

Last year our national income, the greatest in our history, was approximately two hundred and twenty-five billion. It produced forty-two billion in Federal taxes.

Do you, as businessmen, anticipate that the national income in 1949 will be sustained at that high level?

I do not predict a depression in 1949, but I sincerely believe that the national income will drop and may go as low as one hundred and ninety-five billion.

If it does, it means a minimum loss in Fedederal revenue of approximately $5,000,000,000 and a similar amount for State and local government.

At present tax rates, this would mean that our Federal tax receipts would be about thirty-seven billion instead of forty-two billion. If we cannot have a balanced budget in these prosperous times, what in the name of heaven will we do in less favorable times when demands upon the Government will of necessity be increased?

Let us now consider the debt—which must be paid.

In 1930 the Federal debt was only $16,000,000,000.

In 1940 it had climbed to nearly forty-three billion, and today we owe approximately $252,000,000,000. That is about $1,800 per capita or $7,500 for the average family. In other words, the Federal Government owes $15 for every dollar it owed 18 years ago.

Let us look at the debt from another angle. In 1930, the total debt of all levels of government, plus the private debt, was $188,000,000,000.

That was 44 percent of the national wealth which then amounted to $428,000,000,000.

Today the same public and private debt has shot up to almost four hundred and forty-four billion, or 71 percent of the present national wealth of $620,000,000,000.

Is it not plainly evident that at the rate we are going it will not be long before the debt of our country will be greater than our entire national wealth?

Keep in mind that it is not the Federal Government alone that is expanding costs to an alarming degree.

In every part of the country State and local governments are reaching out for higher taxes and bigger spending.

Our own State is following the same pattern. Only 2 years ago our net bonded indebtedness had been reduced to a little more than $44,000,000.

Furthermore, we had wiped out nearly 49 million of indirect obligations by paying of the general State authority bonds.

I predict that if the soldiers bonus is approved at the November election our own State of Pennsylvania will end the next biennium with direct and indirect obligations in excess of $1,000,000,000.

In 1930 we taxed the people of Pennsylvania to the extent of $160,000,000. Last year the tax burden was above four hundred and thirty-two million.

In 1930, out of its own revenues, the State spent for welfare purposes, including public assistance, approximately $18,000,000. Last year the cost was almost one hundred and twelve million.

Forty-six and a half million dollars were paid out of State revenues for public instruction in 1930 and nearly one hundred and twenty-two million last year.

Salaries and wages of State employees in 1930 totaled thirty-five and one-half million. Last year one hundred and fifteen and one-half million were paid out in salaries and wages.

The figures, as applied to local government, boroughs, townships, and school districts, are equally startling but I won't take the time to go into those.

Recently, Senator BRIDGES pointed out that his home State of New Hampshire could be run for 8 years on what it now costs to run the Federal Government for 1 day.

Senator BRIDGES also told of arguing with an administrator about the necessity of an $8,000,000 project.

When the Administrator has exhausted his logical argument for the project, he hinted that Senator BRIDGES was making an awful fuss over a little $8,000,000 item.

That's the way they talk about such picayune amounts—$8,000,000—just a drop in the bucket.

The other day a CIO spokesman broadcast a demand that we spend $8,000,000,000 to replace inadequate school houses and build some new ones.

Just another drop in the bucket.

Remember that every time $1,000,000,000 is added to the cost of Government, the tax bill goes up $7 for every man, woman and child in the country—over $28 for the average family of four.

How many billions can we add before we all go broke?

This uncontrolled spending is based on the false philosophy that every one can look to the Government for aid and assistance—that security provided by the Government can take the place of self reliance, hard work and thrift.

Too many of our people not only want this enormous spending, but they are demanding it.

I have been shocked and disappointed many times to hear strong argument for economy in Government advanced by the same group or organization that demanded, with equal force, that State or Federal money be spent for their pet project.

I regret to state that this applies also to some newspapers.

The picture is perfectly clear to me. Unless this philosophy is shown to be false, unless we convince its followers that it is unsound and treacherous, it means the de-

struction of the United States and the loss of all freedom.

If the American people were given an opportunity to say directly whether or not they wanted a socialized form of government, I am sure what the answer would be.

I know they would respond in no uncertain terms—a loud and resounding "No."

But unknowingly and unwittingly, and assuredly as night follows the day, they are bringing about that very thing in America.

How, then, shall we stop it?

How shall we reverse the trend toward socialism and bring our people to a realization of the tragic fate that awaits a bankrupt nation?

That is why I am here today, not as a Republican but as an American, appealing to you men, not as Republicans, not as Democrats, but as Americans.

I urge you, for the future of our country, to take leadership in the crusade to save America.

I know of no group of men that has more influence in Pennsylvania or in the United States than the newspaper publishers. You can arouse the people to fight for the preservation of our freedom.

You can do it through the columns of your newspapers, through your affiliations with civic-minded organizations, and through your close contacts with community activities.

No objective is more worthy, no cause more sacred.

Again I appeal to you to accept a full share of the high responsibility for the survival of the American Republic.

The Threatened Steel Strike

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, July 14 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement which I have prepared on the steel strike.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, I want to make a statement for the record in connection with the present steel strike. I want to congratulate Mr. Philip Murray and the United States Steel Workers of America, CIO, for again indicating their public spiritedness and concern for the public welfare in responding to the request of President Truman for a 60-day work continuation pending a public inquiry and recommendations. This action is to be contrasted with the callous disregard for the high office of the President demonstrated by the United States Steel Corp. in refusing to accept the President's proposal to bring about labor peace in the steel industry.

The President of the United States asked both parties to the steel dispute to put the public interest above their private interest. Both big business and big unionism have such a responsibility to the American people. President Truman requested that labor and management continue operations for 60 days and accept the appointment of an impartial board of inquiry which would study the problem and make recommendations. He did this, as is his responsibility, in the interest of the American people. A steel strike would not only be disastrous to the working men and women directly involved, but also to thousands of related industries and small businesses. The American people, through their President, had a right to expect both parties to accept this recommendation. I regret that the United States Steel Corp. saw fit to ignore the public interest and insist on its own way. The significance of this action will not be lost on the American people.

I sincerely hope that a strike in the steel industry will not be necessary. Should the disagreement between the parties continue, however, and should the steel workers come to feel that a strike is necessary in view of the irresponsible attitude of steel management, it is the United States Steel Corp. which will have to face the responsibility for many hundreds of thousands of American workers being thrown out of work and for production in this basic industry being paralyzed. With the letter of Mr. Benjamin F. Fairless, the United States Steel Corp. is making it clear that it prefers crisis to national welfare. This may well be the first real use made of the Taft-Hartley law by big business to crush trade-unionism. It is significant that the United States Steel Corp., in its reply to the President, uses the Taft-Hartley law as its shield.

Majority Leader Lucas

EXTENSION OF REMARKS
OF
HON. GARRETT L. WITHERS
OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, July 14 (legislative day of Thursday, June 2), 1949

Mr. WITHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by John F. Day, of the Courier-Journal's Washington bureau, which appeared in the July 10, 1949, issue of the Louisville Courier-Journal. Mr. Day writes of the work done by our distinguished majority leader, the Honorable SCOTT W. LUCAS, of Illinois.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON, July 9—Until SCOTT LUCAS worried himself into ulcers and a consequent 2-week stay in the hospital last April, it looked as though he might not make the grade as Kentuckian ALBEN BARKLEY'S successor in the majority leadership of the United States Senate.

But that hospital visit did more than patch up the body of the man from Illinois. In fact, it is possible few hospitalizations have been more significant. For that one made a changed man out of SCOTT WIKE LUCAS. And LUCAS holds—and probably now will hold for some time to come—one of the most exacting, delicately balanced and important job in our complex Government.

To understand what happened at the hospital and subsequently, one must take a look at what happened before.

When the election returns came in last November and the Democrats learned to their surprise and the Republicans to their confoundment that the Eighty-first Congress was going to have a different complexion from the Eightieth's, it seemed apparent that SCOTT LUCAS would be the new majority leader.

NEXT TO BARKLEY

As Democratic whip in the Eightieth, LUCAS had been next in party rank to BARKLEY. He had been in the Senate 10 years, had served two terms in the House. Several Senators from the South had considerable seniority over him. But how could KENNETH MCKELLAR or WALTER GEORGE or DICK RUSSELL be majority leader after what had happened during the campaign and in view of the President's announced program? LUCAS had not always voted with the administration, but few legislators had a more consistent record of party regularity.

LUCAS never sought headlines, and he was not as well known as some Senators. Then, too, there were questions as to how LUCAS' temperament would fit into a job requiring so much tact, patience, persuasiveness, skill, give and take; a job requiring a careful balance between toughness and good humor; a job, in short, calling for a full measure of the quality called leadership.

But there was no getting around the fact that LUCAS was a party stalwart, a liberal and a pre-Philadelphia Democrat, and that he was the man who would get the job.

As a matter of fact, Time magazine, in one of its characteristically snippy sketches, said: "Illinois' handsome, athletic Senator is living proof of the virtues of party regularity. In his 14 years as a Congressman and Senator, he has sponsored little major legislation, made few headlines, shown no notable talent for leadership. But he has toiled long and loyally for the administration on Capitol Hill and had stuck stanchly by Harry Truman in the dark days before Philadelphia. A ponderous, prolix debater with an edgy temper and a taste for snappy, double-breasted suits, SCOTT LUCAS likes to describe himself as just another Midwest farm boy."

ALSO A FOLLOWER

In a different vein, United States News and World Report said:

"In his prospective part as leader, LUCAS, a party man, also will be a follower. His directions will come from the White House. His job is to back the President's viewpoint and try to enact his laws. * * * LUCAS, like BARKLEY, is highly popular with other Senators of both parties. He is not the jovial, wisecracking mixer that BARKLEY is. If more reserved, he is, however, unfailingly kind, considerate, and courteous."

So SCOTT LUCAS did become Senate majority leader, and thereby took on trouble with a capital "T."

If he looked around for assets in the situation, he could be thankful for the facts that (1) he had been elected by unanimous vote of the Senate Democratic caucus; (2) there were 12 more Democrats (so-called at least) than Republicans in the Senate; (3) BARKLEY was still around to give counsel and assistance; and (4) LUCAS and the President were on thoroughly good terms.

From those points on, nearly everything was on the other side of the ledger.

First and worst, he was the leader of what amounted to three parties: The left-wing Democrats, the conservative Democrats, and the Dixiecrats. This division was not new, but it was definitely more pronounced. Especially bad was—and is—the North-South split. As a Kentuckian, BARKLEY had a measure of appeal to the southerners that LUCAS could not have. And even BARKLEY would not be able to bridge the chasm at many points.

ELECTION WAS LIABILITY

Then there no longer was the unity that war had enforced. It's one thing to hold your forces in line during the stress of war, and quite another during the entirely different stress of readjustment. And the country was just entering a period where some economists were warning of inflation and some of deflation.

Yet another liability was the election of 1950. The leader would have to keep his eye on that, both because he himself is up for reelection then, and also because he must

help to hold or increase his party's majority. The Republicans, too, have a few eyes on 1950, and every move they make in the Senate is made with at least a thought in that direction.

Then President Truman threw the book at Congress in the form of a vast Fair Deal program. He said in effect, "Now there you are. Get to work," and took off for a vacation in Florida.

Congress got to work, all right, but not the way Truman intended. SCOTT LUCAS found himself in the midst of a full-blown filibuster whose immediate aim was to block a rules change on cloture, but whose long-range aim was to knock the administration's civil-rights program for a loop.

FAT IN THE FIRE

No sooner had this ended—and in a southern victory—than the Senate began to harangue over the extension of Marshall-plan aid. Instead of the 3 days of debate calculated by the leadership, some 18 days were consumed.

During these earlier days of the current session, the new majority leader worried and fretted, pushed and denounced. He tried night sessions and Saturday sessions, begged for action, pleaded for action, shouted for action. He found that he couldn't get unanimous agreement on even the most minor points. During the filibuster, the President threw fat in the fire by coming out for simple-majority cloture, a change that LUCAS himself couldn't support.

The strain began to tell on LUCAS. His patience was shot and his flashing smile was seldom seen. His temper did indeed become edgy, and he sometimes snapped at reporters or others about him. He was getting blamed for the whole slow-down, which certainly wasn't his fault.

To anyone watching him on the floor, he appeared tired and ill—which he was—and to have lost his last friend—which he really hadn't.

Reporters began to ask one another, then "qualified sources," then the President himself, "Is Senator LUCAS going to resign the leadership?"

MAKES RESOLUTION

That question hasn't turned up recently. It's apparent now SCOTT LUCAS isn't going to resign, because he's growing in the job and has the difficult situation as well in hand as the next fellow could get it.

The change started, as pointed out at the beginning of this piece, in the hospital.

"Just what," I asked LUCAS this week, "happened in the hospital that changed your approach?"

"Well," he said, "while I was in there I began to review my history a bit; and it was impressed upon me that the Senate had operated for a century and a half without me, was operating without me right then, and undoubtedly would be operated a long time after I was gone. I resolved to take it easier, not to drive at things so hard, to be just as patient as humanly possible, and not to get mad when things didn't go as I thought they should. I realized that there was only so much a man can do, and that I wouldn't gain anything by worrying myself to death."

In other words, SCOTT LUCAS is a changed man today primarily because he resolved to quit knocking himself out.

That isn't to say that he is now a carefree guy who goes around slapping BOB TAFT on the back and whistling in the cloakroom like Bing Crosby. He is still a serious, determined, hard-working—and overworked—man. But he approaches things more gingerly, worries less, relaxes more, acts like a man bent on doing his best and not gnashing teeth because not everybody thinks his best is all it might be.

The mention of "overworked" brings up the question of why anyone would want such a man-killing job. LUCAS puts in many a 14- to 16-hour day. As a Senator from one of the most populous States (Illinois has a population of 8,670,000), he would be a busy man if he had no special job in the Senate. Always a conscientious and sympathetic workman, he gives personal attention to many, many constituents. His administrative assistant, Margaret McMahon, has a card file she estimates contains 50,000 cases marked "accomplished." They represent everything from improvements in a mail route to the obtaining of major construction projects for cities or communities. Letters received even before he became majority leader totaled around 10,000 a month. Now they hit 25,000.

He is a member of the Agriculture and Finance Committees, and he feels it is his duty to attend whenever possible. Any Senator is subjected to many pressures; but for the majority leader, they are doubled, tripled and quadrupled.

The labor unions want what they want, and they want it first. So do the civil-rights advocates, the farmers and the church and welfare groups, the foreign-policy associations, the builders and the landlords and the tenants, the bankers and the Lord only knows who else. Senators want to get their bills on the floor or they want to get something kept off. People by the hundreds have requests of one kind or another; and some of them don't mind calling LUCAS in the middle of the night to propound them.

LUCAS, as was BARKLEY, not only is the floor leader, but also is chairman of the Senate Democratic caucus. In the case of the Republicans, three men hold the three jobs. KENNETH WHERRY is minority leader, ROBERT A. TAFT is chairman of the policy committee and EUGENE MILLIKIN is chairman of the caucus.

So—why, Mr. LUCAS, do you want a job that put you in a hospital, that still presses on you so strenuously, that pays you no additional salary, that gives you virtually no time you can call your own?

"That one," said the Senator frowning a bit, "is hard to answer. Why does a person want any responsible job? Why does a man want to be President? I guess it is a part of the American tradition. Someone has to do jobs like this one, or our Government couldn't function. I hope the reason I was chosen was that I had demonstrated a sense of responsibility. I didn't ask for the job; but once in it, there's no turning back."

CAMPAIGN BLURB

Unmentioned was the ambition that has pushed SCOTT LUCAS along from tenant farm boy to one of the Nation's leaders. Born February 19, 1892, LUCAS was the youngest of six children. The following, from a campaign brochure, is overblown but basically true:

"The parents of the senior Senator were tenant farmers, who worked leased acres which they hoped some day to own. Thus SCOTT LUCAS grew up with the knowledge of what it means to yearn for economic security. His early years were days of sweating with the land in the hot prairie summers and gritting his teeth in the face of blizzard winds as he labored at his chores of the Illinois farm.

"Today as lawyer, soldier, statesman, SCOTT LUCAS is clearly a product of those early days of hard, farm labor and boyhood dreams of forging ahead. That labor and those dreams show in him now. They show in his consummate understanding of the problems of the farmer and his family, and in his sympathy for the problems of the average man of the cities—the worker and the small-business man. SCOTT LUCAS never had to learn about their problems from books, for he lived their lives."

He worked his way through Illinois Wesleyan University, receiving his bachelor of laws in 1914. (Thirty years later, he received an honorary doctor of laws from the school.) While studying law, he played professional baseball for a time with the Three-I League. He entered the Army in World War I as a private and came out a lieutenant.

FILLED RAINEY'S SEAT

His first political office was as State's attorney for Mason County, Ill., in 1920. He was chosen commander of the American Legion in 1926, and national judge advocate of the Legion in 1927. In the latter post, he served four terms. He was appointed chairman of the Illinois State tax commission in 1933, and was elected to the House of Representatives in 1934. He married a girl from his home town of Havana, Ill., Edith Biggs, in 1923. They have one son, Scott, Jr.

When LUCAS went to the House, he had the difficult job of filling the seat occupied for many years by Henry T. Rainey, who was Speaker at the time of his death in 1934. Thus when he became majority leader, he knew what it was to succeed someone who had built a reputation.

At first blush, LUCAS seems to suffer badly in any comparison with BARKLEY. But on closer examination, LUCAS comes out fairly well. The principal injustice is done in comparing the present-day LUCAS—new at the job—with the latter-day BARKLEY, an old and tried hand.

People forget that when ALBEN BARKLEY succeeded to the leadership in 1937 upon the death of Joe Robinson, he beat out Pat Harrison by just one vote in the caucus. That one decisive vote came from Theodore Bilbo—not because he loved BARKLEY more than Harrison, but because he hated him less. Additionally, BARKLEY was not really the choice of the Senate, but of President Roosevelt.

They forget that BARKLEY had to operate with one eye on Kentucky that first session because A. B. "Happy" Chandler was making noises indicating a hot race in 1938.

BARKLEY HAD TROUBLES

They forget that not everybody loved ALBEN in those days, that Time magazine dubbed him "Bumbling BARKLEY" and the name was picked up by many a Senator as well as by many a commentator.

They forget that the shrewd minority leader, Charles McNary, sometimes made BARKLEY look foolish, and that anti-New Deal Senators heaped abuse and vilification upon him.

They forget, in short, that while in the end he acquitted himself well, mighty well, he had a rough time of it. He developed into one of the greatest leaders the Senate ever had; but he found—as LUCAS has found these first few months—some mighty slippery track just out of the barrier.

In fact, the Kentuckian didn't really come into his own until 1944, when he boiled over at being taken for granted by F. D. R. and resigned the leadership with a blast at the President's wording of a tax-bill veto. After that, the caucus renamed him leader by unanimous vote.

LUCAS' method of operation varies considerably from BARKLEY'S. That's partly from choice and partly from necessity. It's probable that no other Senate leader had the power of individual persuasion that BARKLEY had. He was master of the art of "button-holing." With a telling argument here and a joke there, he could change many a made-up mind.

He was extremely effective on the floor, too. He could roar at the right time, and coo at the right time He seemed to sense when he could gain a point by sheer bludgeoning, and when by gentle good humor. He was a master of parliamentary tactics. He could fence with TAFT or some other adroit tactician, parrying here, thrusting there,

stepping in, stepping back—and more often than not, winning. TAFT himself said BARKLEY'S battle for OPA extension in the summer of 1946 was the finest legislative performance he had ever witnessed. In that same year, he demonstrated his ability by pushing through the $3,750,000,000 British loan. Odds were the Senate would reject it; but by cajolery and persuasiveness, by giving in at one point and standing stubbornly at another, he won approval by a majority of 12.

OPINION IS VARIED

BARKLEY seldom made use of the Senate Democratic policy committee, and just as rarely called a caucus meeting. In effect, he was the policy committee. He conferred with his colleagues, of course, but he did it individually rather than in group.

The policy committees were not formalized and provided with professional staffs until adoption of the Legislative Reorganization Act of 1946. The House still does not have formal policy committees, but the Senate has. And SCOTT LUCAS determined when he assumed the leadership to make full use of the Democratic group.

This he has done through regular weekly meetings of the committee and through employment and use of professional researchers and writers.

The policy committee LUCAS heads as one of his three jobs as leader was chosen by the caucus. It is composed of MCMAHON, Connecticut; TYDINGS, Maryland; RUSSELL, Georgia; O'MAHONEY, Wyoming; GREEN, Rhode Island; HILL, Alabama, and MYERS of Pennsylvania, who also is majority whip. There is one vacancy at present.

As can be seen from the home States, these Senators represent varied opinions. LUCAS calls them together every Monday, and BARKLEY usually attends. The meetings are closed, but LUCAS says there is full and frank discussion of legislative matters, the calendar, and procedures.

SEES TRUMAN WEEKLY

LUCAS does not necessarily have to follow, as majority leader, the decisions of the policy committee. But in general he chooses to do so. He says he believes it better for one man to hold the three jobs then for three men, as in the case of the Republicans. He points out that Floor Leader WHERRY and Policy Chairman TAFT sometimes disagree, and that WHERRY'S vote often is contrary to policy committee decisions.

LUCAS has 19 staff assistants—14 as a Senator, 2 as majority leader, and 3 as chairman of the policy committee. The professionals he has employed keep minutes of meetings, prepare memoranda relating to precedents and other matters, analyze bills and resolutions, prepare summaries of facts and arguments, maintain liaison with the standing legislative committees, keep schedules of the exact stage of all legislation, tabulate votes on all matters of any importance, and perform varied miscellaneous duties relating to the work of LUCAS, the policy committee, and the caucus.

LUCAS regards his responsibility to the President very much as BARKLEY did. He, Vice President BARKLEY, Speaker RAYBURN, and House Majority Leader MCCORMACK meet with the President every week to discuss the status and timing of legislative matters. LUCAS says he is in accord with most of Truman's program—and his past voting record shows that to be so—and that he believes it his duty to carry out the program, so far as he is able.

He says he feels the greatest draw-back to his job as leader is loss of independence in voting. "I can't agree with the President in every detail," he explains, "but I feel I must accede to his wishes so long as I can do so in good conscience. If the time should come when I could not do so, then I would have to resign."

Flag Day Address by Hon. Edward Martin, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, July 14 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Flag Day address delivered by me at a meeting of the Masonic Scottish Rite Consistory, at New Castle, Pa., on June 14, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We meet tonight to honor the anniversary of a memorable day in the history of the American Republic.

On June 14, 1777—172 years ago today—we were completing the first year of American independence.

We were in the second year of the Revolution. Washington's army, ill-clothed, inadequately armed and poorly disciplined, was falling back before the trained regulars of the British Empire. Only the skill and daring of General Washington saved the patriot forces from total disaster.

The historic event we celebrate today was not enacted on the battlefield but in the sober atmosphere of the Old State House in the city of Philadelphia.

Meeting at a time of stress and discouragement the Continent l Congress adopted a resolution authorizing the Stars and Stripes as the standard of the infant Republic.

Thus was established a new emblem of liberty and freedom—a symbol of those human rights that are the gift of God—the banner of a free God-fearing people that is today the oldest, the proudest and the best loved flag in the world.

In meetings such as this it is appropriate to discuss the meaning of the flag and to consider thoughtfully the significance of our pledge of "allegiance to the flag of the United States and to the Republic for which it stands."

To every loyal American, regardless of his ancestry or national origin, that pledge means solemn rededication. It means that we believe with all our hearts in the sacred ideals that guided the illustrious patriots and heroes of our Nation's struggle for independence.

It means that we pledge, as they did, "our lives, our fortunes and our sacred honor" in the cause of American liberty.

It means that we will work, sacrifice and fight to preserve and defend the American system of free government—not only when it is threatened from abroad but also from enemies who lurk within our own borders.

How proud we can be that in all its glorious history the Stars and Stripes has never been carried in a war of aggression. It has never been the banner of conquest or territorial gain. It has never brought tyranny or oppression to any people on earth.

Instead it has been loved and acclaimed as the flag of liberation from persecution and enslavement.

Wherever Old Glory has been unfurled to the breeze its noble and inspiring message has been: Here men shall be free!

Have we been faithful to that solemn declaration?

Twice within the lifetime of most of us here tonight we have gone forth to fight for human liberty at a stupendous cost in blood and treasure.

Twice within our generation the people of many nations, liberated from tyranny and oppression by the heroic sacrifice of our young men and young women, have looked to the Stars and Stripes as their last remaining hope for peace and freedom.

After World War I we believed we had emerged victorious from a war to end wars. But a jumbled peace and a confused foreign policy prepared the way for the rise of new men of evil intent with poisoned minds and lust for power. They brought us into more terrible conflict on a global scale.

Once more the Stars and Stripes were carried to victory on the battlefields of Europe, Africa, Asia, and the far-flung islands of the Pacific.

Once more the precious lives of young Americans were sacrified in the cause of liberty and civilization.

Once more the people whom we liberated from cruel, ruthless persecution welcomed Old Glory as the bright symbol of hope and happiness.

Where are they now—the little Baltic States of Lithuania, Latvia, and Estonia, eastern Germany, Poland, Czechoslovakia, Jugoslavia, and China?

They are behind the iron curtain, enslaved to godless, communistic Russia because we followed a blundering, double-dealing foreign policy.

We bartered away their freedom in a policy of appeasement. Because of that blundering policy we find ourselves today in a time of unrest, confusion, and crisis.

The pattern of freedom to which we subscribe as Americans is set forth in clear and unmistakable language. It is found in the Declaration of Independence, the American Constitution and the Bill of Rights.

Those are sacred documents. For the first time in the world they expressed a new concept of liberty derived from Divine rule in the affairs of men.

They enumerated human rights and privileges that are unalienable—that are not within the power of any ruler or any government to grant or withhold.

In their determination to prevent encroachment by government upon the liberties of the people the founding fathers limited the powers of the Government. Their aim was to assure everlasting protection for the individual against the misuse of power by the state.

Those principles are part of the sacred American heritage. They are the essence of individual freedom—the bright promise that America has always held forth as the torchbearer of human progress and self-government.

My fellow Americans, with deep regret I must report to you that we have reached a time when that promise is no longer valid.

It has been replaced by confused experiments in human relations which ignore individual freedom and would impose upon us and the free world a paternalistic pattern of government in which the state is supreme.

Let me call your attention first to the so-called Universal Declaration of Human Rights that has been adopted by the General Assembly of the League of Nations.

That is the document framed by international "do-gooders" to replace the Declaration of Independence and to establish standards of government contrary to the Constitution and the Bill of Rights.

In reciting the truths they held to be self-evident the authors of the Declaration of Independence listed life, liberty and the pursuit of happiness as the most precious blessings granted by the Creater of the Universe.

Mark well their well chosen words—pursuit of happiness. They recognized that government cannot guarantee happiness. They knew the tragic lessons of the past and

the record of disaster in nations where it had been attempted.

All history proves the wisdom of the founding fathers. Yet it is now proposed that we destroy the foundation they so ably built and erect a new system with everything guaranteed by the Government.

Self-reliance, industry and thrift would become forgotten words in our language. No man would find it necessary to engage in the pursuit of happiness through his own efforts. Food, clothing, housing, medical care, social services—all would be provided by the Government, together with security in the event of unemployment, sickness, disability, widowhood and old age.

Those are the rights represented as guaranteed in article 25 of the so-called universal bill of human rights. I urge that you give the whole document serious study and learn of the many other dangerous paths into which we could be led if it is ratified by the Senate of the United States.

Let me call your attention also to the fact that our Government had a large part in the framing of the new basic law for western Germany.

That document has been represented by our State Department as a constitution and a charter of liberty for that part of Germany occupied by England, France, and the United States.

The American people have been told and the press has reported that this charter is patterned after our Constitution and the unwritten British constitution.

But it is not, and cannot be, a constitution because it ignores the American principle that "governments derive their just powers from the consent of the governed."

The people of western Germany were not given an opportunity to ratify its provisions or to consent to its adoption.

The document denies the American principle of self-government and withholds the fundamental guaranties of the American Bill of Rights.

The whole charter is shot full of joker clauses that nullify the hope of individual freedom for the 46,000,000 people of western Germany.

In one section it recites high-sounding phrases about liberty and freedom and in another section it sets up machinery by which every right can be taken away by any tyrannical ruler who reaches a place of power.

And this, my friends, has the approval of our State Department and the British and French Governments.

Let me give you a few examples of how the fundamental guaranties of the American Bill of Rights have been so altered that their real meaning and purposes have been completely destroyed.

On the subject of free speech, article 5 of the basic law states:

"Everyone shall have the right freely to express and to disseminate his opinion through speeches, writing and illustration and, without hindrance, to instruct himself from generally accessible sources. Freedom of the press and freedom of reporting by radio and motion pictures shall be guaranteed. There shall be no censorship."

Up to that point it is fine—but it goes on to say:

"These rights shall be limited by provisions of the general laws, legal regulations for the protection of juveniles, and by the right of personal honor."

The American Bill of Rights guarantees free speech by the provision "Congress shall make no law * * * abridging the freedom of speech or of the press." But the people of western Germany can be deprived of that right whenever their rulers see fit to limit it by passing a law.

Article 8 deals with the right of assembly in the same un-American manner. It reads as follows:

"All Germans shall have the right without prior notification or permission to assemble peacefully and unarmed for open-air meetings."

But the next sentence snatches away the right of assembly by stating:

"This right may be restricted by legislation or on a basis of law."

Repeated over and over again in the 146 articles of this basic law there appears this pretense of guaranteeing rights to the people but providing for their limitation by the passage of a law.

"Details (of freedom of religion and conscience) may be regulated by Federal law.

"This right (of freedom of movement) may be restricted only by legislation."

"Contents and limitations (on the right of owning and inheriting property) shall be determined by legislation."

Furthermore, the basic law provides that the President of the new German Government shall be elected by a federal convention without discussion and that his nominee for the vastly more important post of Chancelor shall be voted upon in the legislative branch without discussion.

Clearly the so-called charter of liberty for western Germany is one of the greatest frauds ever perpetrated.

It pretends to establish a free republican form of government but actually it is a framework on which another pattern of socialistic dictatorship can be built.

In these days of conflicting philosophies of government it is our duty to our country and our flag to inquire into the motives which led to this abandonment of American principles.

Was it because there has developed in our own Government a lack of faith in the American system?

Does it mean that those responsible for the universal declaration of human rights and the new German code do not recognize as sacred the ideals of Americanism?

Do they propose to substitute policies of their own creation if given an opportunity to do so?

Would they destroy the American system and make the Government the master and not the servant of the people?

Are they working for the establishment of the planned, regulated, and controlled economy of the welfare state?

These are grave questions. They arise in a time of crisis as stern as those in which the founding fathers gave us our liberty. The ideals and beliefs symbolized by the flag are in danger.

On this day, dedicated to the glory of the Stars and Stripes let us honor all who died under the flag to keep it free. Let us declare unrelenting war against every force that would undermine or weaken the American plan of individual liberty and opportunity.

The Eightieth Congress Was a Good Congress to the American Farmer—Cash Farm Receipts From Sale of Farm Products, 1939 to 1949

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, under permission to extend and revise my remarks, I wish to state that it is manifest at this time that there is a great interest in the national farm income.

This is due to the fact that some agricultural products are selling for one-half the price of a year ago, while many are selling for one-third the price of just 1 year ago.

You will note that the cash receipts from sale of farm products under price controls averaged about $20,000,000,000 per year with an increase after the price controls were lifted.

Increased production and wartime prices account for the high cash receipts for the period 1943 to 1949. The wartime subsidy is also reflected in these cash receipts.

The following is an official table prepared by the Bureau of Agricultural Economics of the United States Department of Agriculture:

Cash receipts from sale of farm products

State	1939	1940	1941	1942	1943	1944	1945	1946	1947	1948 [1]

[1] Preliminary.

The 1947 and 1948 farm receipts surely indicate that the Eightieth Congress was a rather good Congress. The consumer in 1949 is paying more for food in many instances than in 1948 even though the farm prices have been reduced materially below 1948 prices.

The Responsibility of Free Enterprise in Mid-1949

EXTENSION OF REMARKS
OF

HON. RAYMOND E. BALDWIN

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, July 14 (legislative day of Thursday, June 2), 1949

Mr. BALDWIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject The Responsibility of Free Enterprise in Mid-1949, delivered by Walter H. Wheeler, Jr., chairman of the industrial committee of the New England Council, and president of Pitney-Bowes, Inc., of Stamford, Conn.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE RESPONSIBILITY OF FREE ENTERPRISE IN MID-1949

The most important question we have to face today is the future level of business activity. Upon the right answer depends not only the welfare of New England, but of the Nation, to say nothing of the world. It seems fitting that we in New England, who cradled the American way of life, which now represents the hope of the world, should take aggressive action to see that the right answer is found.

We have it within our power as independent individuals, to turn the inevitable and healthy period of adjustment through which we are passing, into a sound stabilization on which to build an orderly and steady advance in the welfare of the Nation; or we can help it develop into a prolonged and deep depression—a long period of domestic and worldwide chaos—out of which will surely grow a degree of Government control and socialism which might well end in the loss of liberty and freedom for all.

No matter how we as individual businessmen may feel about our power and responsibility to avert this, the fact remains that politically, free enterprise is going to be blamed for failure if it comes. It will do us little good to rail against the mistakes of Government and organized labor, which we may feel has played a major part. We as a group will be held responsible, and the political repercussions suggested above cannot be averted, except in degree.

It is not my purpose to sound any Paul Revere cry of alarm and call to action. The present situation is certainly not serious enough to warrant any such attitude. It is only my purpose to give support to the appeal already coming from many significant sources for businessmen cooly and wisely to consider the implications of the present situation, and to move ahead constructively, to the maximum degree possible in their individual spheres.

I feel sure that the majority of businessmen today, while differing in many respects, do agree that while the cyclical movements of our economy are started by definite identifiable economic factors, their intensity and duration are largely the result of mass psychology—optimism or fear.

As free, independent, and influential individuals, we must lead in affairs affecting the economic well-being of the Nation, or the Government at the demand of the people, wisely or unwisely, will move in and do it for us.

Of course it is clear that nothing can be gained unless individual businesses maintain themselves in a healthy condition. However, it is equally clear that if we all overreach for security by retrenchment during a recession period, if we talk and act in terms of fear, we can certainly jointly bring about a degree of depression equal to our worst fears.

In the past period of depression, particularly in 1929 to 1939, there were such major, widespread, and real economic readjustments necessary that no effort to counteract the fear engendered by the instinct of self-preservation could hope to fully succeed. I refer to the collapse of the security market, the commodity markets, mortgage foreclosures, and bank failures. Later the rapid encroachment of Government into affairs affecting our economy and economic freedom, for which we were totally unprepared, not to mention socialization trends and unbalanced Federal budgets, all taxed our ability to acclimatize ourselves to new situations to engender the new vigor necessary to forge ahead.

Today, we are faced with an entirely different and certainly far more encouraging set of conditions. Fortunately, our security market has been the one thing which did not become inflated. Security values are so cheap today that surely future movements must be upward, unless we are actually to have a total collapse. Consumer purchasing power is still higher than it was a year ago, and savings have shown a marked increase. The Nation-wide survey just completed by the Federal Reserve bank clearly shows a reservoir of potential buying, waiting for more aggressive pricing and selling.

Mortgage loans are, for the most part, long-term with small yearly amortizations, many of them Government-insured; bank deposits are, for the most part, similarly insured, and banks are liquid. Farm-product prices are Government-supported. Wage rates are high and protected by yearly contracts and minimum-wage laws. Construction is on the increase.

Finally we have discovered that we can successfully operate our economy, even with a large degree of Government intervention, high taxation, and the Government spending, despite how objectionable we may feel these conditions are in many of their aspects. We have also learned to live and operate successfully with strong labor organizations. We are daily developing better techniques in industrial and public relations.

In short, we seem to have all of the economic and psychological fundamentals to warrant a reasonable confidence in the future. If we can't build on this foundation, we will have to admit that private leadership has lost its vigor and vitality.

This does not appear to be the case at present, at least not in New England. The overwhelming majority of New England manufacturers who were questioned on the status of their business in a survey recently made jointly by the NEC and the Federal Reserve Bank of Boston, have expressed confidence that they will hold their own or show improvement during the next 5 years. The analysis of the survey is yet incomplete, but

to date 78 percent of the first 450 manufacturers responding felt that they were doing fair business at present and expected improvement during the next 5 years. Another very significant result of the survey, pointing again to individual confidence, was that almost without exception individual manufacturers expected their own businesses would fare better than that of their competitors.

At a recent round-table discusion of general business, held in conjunction with the council's quarterly meeting in Manchester, Vt., on Saturday, June 11, a number of manufacturers cited plans for expansion, and gave chapter and verse of sales maintained at last year's levels, or increased as a result of aggressive pricing and selling policies.

There were, of course, instances, too, of a discouraging nature. It is no businessman's desire to play Pollyanna, but it is perfectly obvious that if the discouraging factors in the present situation are dwelt on, exaggerated, and repeated without counteraction by the more encouraging side of the picture, we can and will make matters worse.

The unwarranted and panicky shrinkage of inventories is probably the one factor which can do more harm than any other. The effect of substantial lay-offs and rising unemployment can only serve to create greater caution and shrinkage in consumer buying. The postponement of necessary plant renovations, replacements, and expansions due to the expectancy of lower prices or to lack of faith in the long-range future can go a long way to dry up the durable-goods industry.

Actually business buying and business action or lack of action, as the case may be, seems to be contributing more to the present situation than any other single factor. It seems to me it is clearly up to us to bring a real enlightened business leadership into play, or face the consequences.

I feel that in the critical months ahead every businessman should consider his acts, his conversation, and his attitude in the light of whether they will help or hinder the reversal of the general business trend of the past 6 months. Obviously there is a limit beyond which no businessman can go in placing public interest ahead of the security of his own business. But I am strongly of the opinion that our individual security will be greatly enhanced if we all search for that limit.

The New England Council has joined with other forward-looking organizations in stressing from time to time the great importance of industry's earning and obtaining better public and industrial relations. Its greatest problem of this nature—or of any nature any time—is to satisfy the American people that it can and will provide reasonably stabilized employment opportunities and a rising standard of living for all. The only way this can be accomplished is by each business recognizing its own social responsibility in the present situation and meeting it courageously and aggressively.

The Threatened Steel Strike

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, July 14 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a telegram sent by me today to the presidents of the United States Steel, Bethlehem Steel, and Republic Steel corporations.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

I join with the President of the United States in urging you to cooperate with the fact-finding board now being appointed in an effort to avert a steel strike.

I believe, and I certainly hope you do, too, that free American enterprise and free American labor together can reach mutually satisfactory agreements and relationships. I further believe, and I hope you do, too, that reason and good sense can prevail in industrial relations. A steel strike at this time would be an unfortunate admission on the part of management and labor that they cannot achieve satisfactory relationships.

The President of the United States has asked only that you allow impartial representatives of the public to look into the issues of the dispute in an effort not to dictate a solution but to help you and labor to get together in a mutually agreeable solution.

I do not think the request is unreasonable. Rejection of this request would imply, I think, that you insist upon the government actually intervening in the dispute on management's side through the injunctive process.

FRANCIS J. MYERS.

Alien Communists Throttle Hawaii

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Thursday, July 14 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Alien Communists Throttle Hawaii," written by Harry C. Withers and published in the Dallas (Tex.) Morning News of July 8, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALIEN COMMUNISTS THROTTLE HAWAII

(By Harry C. Withers)

Hawaii is calling upon the mainland to help it stop a strike that threatens to impoverish the islands. Since May 1 its ports have been blockaded by Harry Bridges' dockworkers' union. The food it must import to live is dangerously short. The products it must export to keep solvent are wasting or rotting on the docks, in warehouses, or in the fields.

Appeal has been made to Congress and the President of the United States, or which Hawaii is a Territory, but Truman replies that his inherent powers are inadequate to deal with the situation because, he says, it is not a national emergency. Perhaps it is just another red herring, which Hawaii can't eat.

Now the people of Hawaii have turned to the newspapers of the United States as a means of creating a public opinion so strong that its pressure will compel Congress to act.

Tear sheets from the Honolulu Advertiser and letters from relatives of Dallas residents have come to the News in large numbers, revealing a desperate food shortage, a suspension of the sugar harvest, the loss of many jobs, frequent business failures, and the slow strangulation of the economic life of the islands.

The Advertiser prints stories under such headlines as these: "Child-care centers to go on milk ration," "Army of unemployed grows," "Feed shortage cuts milk production," "13,000 chicks destroyed," "308 firms lay off 906," "Strike stops harvesting of cane," "Sugar firms will not pay dividends," "Three more firms cut pay."

The Advertiser claims the union has 2,000 members, only 500 of whom are American citizens. It protests that such a small group should not be permitted to throttle the lives of 540,000 people, whose welfare and rights the President of the United States is obligated to protect.

"During the past 15 years," the Advertiser says, "Bridges has made amply plain his ambition to subjugate the American people of Hawaii to his will, wreck their industries and reduce this free unit of the United States to poverty and serfdom.

"He has engineered five shipping tie-ups that have finally severed completely Hawaii's transportation lifeline. Three years ago his henchmen made heavy inroads into the Territorial legislature in an attempt to take over the Democratic Party, lock, stock, and barrel. Their failure to do so in 1948 was one of the motivating causes of today's blockade of the Territory.

" 'Bridges is the unseen Communist dictator of Hawaii,' Senator BUTLER told Congress. 'The Kremlin in Moscow regards Hawaii as one of its principal operating bases in the campaign for a Communist United States of America.'

"The Communists are softening up Hawaii in an effort to capture it as a base for operations against the American form of government.

"The Congress can save Hawaii and the country from this menace. It is the duty of every patriotic American to make sure his or her Member of Congress knows this. Give your Senators and Representatives at Washington the facts."

Kyle Palmer, political editor of the Los Angeles Times, has asked this question and made the following comment:

"If Harry Bridges and his union members can bring the people of Hawaii to their knees by reckless and ruthless exercise of arbitrary power, what is to prevent him—or others—from exercising that power elsewhere?

"True, neither Bridges nor any other union leader, even with the collaboration or collusion of a prolabor national administration, could get away with such tactics on the mainland now. But how about next year or the year after that or 10 years from now if the Hawaiian experiment succeeds?

"Here is a monopoly—a monopoly of power, of political pressure, and of economic control—that can say stop or go not only to business but to the workers, to the politicians, and to Government itself.

"Make no mistake about the dock strike in Hawaii. It goes far beyond the limits of an employer-employee dispute; is more fundamental than any struggle between capital and labor. It is a supreme bid for power.

"It is up to the people on the mainland to take cognizance of an unbearable and insufferable condition which, as it affects the fundamental rights of the few, affects the right of all."

JOSEPH H. FARRINGTON, Hawaiian Delegate to Congress, asked Truman to use his injunctive powers under the Taft-Hartley Act, and has introduced bills to give the Government power to operate ships plying between the United States and its Territories, to give the President injunctive powers, and to place the maritime industry serving Hawaii under the Railway Labor Act.

Congress has done nothing. FARRINGTON has some hope of getting a Senate investigation to determine if the strike is Communist-inspired.

Praising the Marshall plan as having halted communism in western Europe, Oscar Machado, president of little SMU at Porto Allegre, Brazil, writing for the News asks: "Now when are you American people going to help us hold back communism in South America?"

Communism has established a strong foothold throughout Latin America. The Moscow Journal on April 30, 1949, listed Communist membership in Latin-American countries, as follows:

Argentina, 30,000; Brazil, 200,000; Colombia, 15,000; Costa Rica, 7,000; Cuba, 50,000; Ecuador, 6,000; Mexico, 36,000; Nicaragua, 1,500; Panama, 5,000; Uruguay, 15,000.

Ratio of Communists to the population in most of these countries is higher than that in Russia when the Reds took over that government.

If they succeed in taking over our outposts, such as Latin America and Hawaii, the United States will become a democratic sea in an ocean of communism until such time as they take over this country.

Are We Forgetting India?

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Thursday, July 14 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "Are We Forgetting India?" prepared by me.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ARE WE FORGETTING INDIA?

Mr. President, during the past months the western part of the world has been sitting on its shores with telescopes trained on China. The vastness of her territory has been exceeded only by the vastness of her problems. China is an enigma. No one knows what will happen in the land where the earliest advanced civilization could not cut through the barriers to peace and plenty. But although nobody has known where the road leads to, there have been plenty of signs along the way. On November 1, the Communists took Mukden, a rail center, the same city that was the first point of Japanese invasion. On January 15, the Communists took Tientsin, a port significant for British imports. On January 31, the Communists took Peiping, the seat of some of China's most important universities. The road led unmistakably to Nanking, the government center. With the conquest of Nanking, the Communists are gathering up the reins of China to do with it what they will.

Mr. President, China is an enigma because the Western World has wrapped it up in its own mystery for 22 years. For 22 years China has suffered on and off from civil war between the Nationalists and the Communists. And for most of those 22 years we contributed to the vulnerability of the Chinese by our default. We did not see the portent of the three key factors in China: the newly awakened Chinese nationalism; the need for governmental and administrative machinery capable of meeting the problems of the modern world; and the pressure for improvement in the economic lot of the impoverished Chinese people—particularly the peasants who constitute a great majority of the population. When we came to the understanding that freedom was the stake in China, our help was too little and too late. We threw our money down the drain. I have read reports that of the $2,000,000,000 given Nationalist China in military aid, it is estimated that 90 percent ended up in Communist hands. When we finally moved to help China, we ended up, ironically enough, helping the Communists.

For almost 20 years we waited and watched while China withered. We couldn't take the responsibility for financing political and economic democracy in China.

Today, Mr. President, observers estimate that it will take about 1 year for the Communists to occupy and rule the entire Chinese mainland. Today we hear the Chinese Communists denounce American imperialism and we see their ideological tie to Moscow. Today we see with what futility the Chinese war lords resisted reform. We needed to discover and bolster democratic forces in China 22 years ago to save Chinese freedom. But the hindsight of all of us is clearer than the foresight. As we look back we see the job that could have been done in fostering Chinese democracy.

The implications and repercussions of the Chinese defeat compel us to look ahead now. We are spending billions of dollars and countless time and effort to stave off totalitarianism in Europe, to help put friendly countries in Europe on their feet economically, and to cement our friendship with them. How much foresight does it take to see that the problem is as real in the Far East and that it is time we cemented our friendship with the democratic elements in Asia?

Several weeks ago I stood before this body to present my reasons for looking to India as the bulwark of democracy in the Far East. Mr. President, the events in China in the last week have added to my conviction that it is imperative that our country take action to assure friendship with India, to encourage the democratic growth that has rooted itself in India, and to help India realize her potentialities.

India's new Ambassador to our country has arrived in this city. Mrs. Pandit has already indicated that she views her new assignment as an opportunity to develop American-Indian friendship. Having served as the Indian Ambassador to the Soviet Union previously, she knows full well the impact of totalitarianism. Her intimate knowledge of her country and her countrymen qualifies her eminently to interpret India's needs and India's role. Mrs. Pandit's residence in this country offers us an invaluable liaison with far-eastern democracy, and an opportunity to fulfill our responsibilities for freedom in Asia.

India's present situation is far more favorable than that of any other far-eastern country. She has vast riches emboweled in the earth. She has strategic and critical materials in abundance. She is a pivotal nation, geographically speaking, in our relationships with the Near East and the Far East. And, happily, she has great and proven democratic leaders.

India is a nation in which western ideals have been combined with native traditional culture. In order to attain the ideals of freedom with economic security, India needs help.

India needs help to bring her riches out of the ground, to hasten industrial production, to feed her expanding economy. As I have said before in this body, 85 percent of India's people are poverty stricken and illiterate. They look to their young democracy for relief from need. There is pressure in India for economic improvement just as there has been constant pressure in China. Experience after experience has shown us that hunger and need feed totalitarianism for a pittance reward. If their democracy cannot help them, India's people can fall prey to totalitarianism. We need to support India's new democracy, support it soon and adequately. Can we afford to wait 5 or 10 or 20 years again only to pour money down a drain? And if we let India cope with her problems alone while we aid Europe, what earthly gain will there be for democracy? If India should fall to the Communists as China has fallen through default, our aid to Europe will amount simply to a temporary reprieve.

No, Mr. President, it should not take much foresight to recognize the interdependence between India and the United States. It shouldn't take much foresight to see the potentialities of India as a democratic balance.

What can we do to strengthen our relationships with her? I would be presumptuous to offer a detailed program. I suggest that we give serious consideration to the formulation of a program in which educational opportunities are advanced for Indian students in our country on the basis of scholarships provided by our Government; a program in which direct financial assistance is given India under the same terms as our ECA or Marshall-plan program; and a program in which technical, scientific, and financial assistance is given to underdeveloped areas including India, as was stated by President Truman in his inaugural address.

I suggest that consideration of measures such as these begin immediately so that we can point to some concrete insurance against the hazards we overlooked in China far too long.

Mr. President, if we in our country do not take the opportunity to bolster and support virgin democracy in the Far East, then what a hollow victory we are winning in Europe.

Government's Antitrust Suit

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Thursday, July 14 (legislative day of Thursday, June 2), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter written by Mr. Crawford H. Greenewalt, president of the Du Pont Co., under date of June 11, 1949, and addressed to the stockholders of that corporation, in which letter Mr. Greenewalt answers the recent charges made against this corporation by the Department of Justice. I think this letter should be read by every American who believes in our free-enterprise system.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

E. I. DU PONT DE NEMOURS & CO., INC.,
Wilmington, Del., July 11, 1949.

To the Stockholders of E. I. du Pont de Nemours & Co.:

An antitrust suit generally regarded as the most important filed in recent years has been brought against your company, General Motors Corp., and United States Rubber Co., along with more than 100 individual members of the du Pont family. I am writing

you in regard to this suit not only because of its great significance to your company but because of what it implies for business in general and for the welfare of the country.

The central theme of the charges brought by the Department of Justice is that the individual defendants, through their stock ownerships in the various defendant corporations, have required these corporations to purchase goods from each other, thereby serving to restrain trade.

For the du Pont Co., we deny emphatically that our business transactions with these companies have been illegal or improper in any sense. While not attempting to speak for the 100 or more individual defendants, we do affirm positively that no pressure has been exerted by these persons directly or indirectly on the du Pont Co.'s management to pursue the course of action alleged by the Government.

It is impossible for me in the space of this letter to deal with the many specific charges brought by the Department of Justice. They will be answered fully in court at the proper time. Many of them are of no substance, some are completely unfounded or grossly exaggerated, and even in the aggregate could not possibly justify the drastic remedies demanded.

For example, it is alleged that the du Pont Co. subsidized its expansion by using for such purpose the profits derived by it from the sale of its products on a closed market basis to General Motors and United States Rubber, as well as the profits derived by du Pont Co. from its ownership of General Motors stock.

This charge has no basis in fact. Du Pont has paid out as dividends a higher percentage of net earnings than has been the case in most industries. Furthermore, dividends from General Motors after taxes have traditionally been passed on intact to du Pont stockholders.

As to du Pont sales, the dollar volume as stated by the Department of Justice for the 10-year period 1938 to 1947 totaled $134,000,000 to General Motors and $72,000,000 to United States Rubber. These represent 2.6 and 1.4 percent respectively of du Pont's total sales during the period to all customers, which amounted to $5,090,000,000. During the same 10 years, du Pont's expenditures for new plant construction and equipment were $458,000,000. Can anyone seriously believe that profits from this small percentage of our total sales could support an expansion program of such magnitude?

The parallel charge that rebates on the $134,000,000 sales to General Motors made possible that company's expansion is also not supportable. Such allegations show either ignorance of the most elementary economics, or willingness to distort the significance of the facts.

Again, the charge that du Pont forced General Motors and United States Rubber to expand in lines outside their normal business to provide outlets for du Pont products is simply absurd. If du Pont's only means of increasing sales had been by the enforced expansion of customers, it would indeed have remained small, insignificant, and presumably virtuous.

The true purpose of this case was stated by United States Attorney General Tom C. Clark when he said that it was directed to the breaking up of the largest single concentration of industrial power in the United States. From this statement, coupled with the nature of the specific charges, we can only conclude that this suit arises out of a determination by the Department of Justice to attack bigness in business as such.

It is apparent that the Department of Justice is proceeding along this path with no real understanding of the nature of the American economy and with no realization of the consequences to that economy of a successful attack upon bigness in business.

It must be clear to anyone that there are many jobs which can be best accomplished by small business, but that there are others that can be accomplished only by large companies with many resources at their disposal. It is the cooperation between large and small enterprises that has contributed strength and vigor to our economy.

For example, the du Pont Co. was one of the leaders of the drive among American chemical manufacturers to make this country independent of Germany in dyestuffs. That effort required for your company an investment of $43,000,000 over a period of 18 years before profits offset accumulated losses. Only a large company could have afforded to take such a risk, or could have brought together the technical skills required for ultimate success.

The same risks were taken in the development of many new du Pont products such as nylon, neoprene synthetic rubber, plastics, moisture-proof cellophane, synthetic camphor, agricultural chemicals, "Cordura" high tenacity rayon, quick-drying lacquers that broke the manufacturing bottleneck in the automobile industry, synthetic ammonia, and the many products coming from high-pressure synthesis. In each of these there were investments running into many millions of dollars, and the lapse of a considerable number of years before there was any assurance that any of them would be successful or would ever return a profit. Today 60 percent of the sales of your company are in products that did not exist or were not being manufactured on a commercial scale in 1928.

Most of these products are now used chiefly as raw materials by other companies. Because they were created, literally thousands of small businesses were enabled to exist and prosper through the processing and distribution of these new raw materials produced on a mass scale at minimum cost.

During the recent war your company, already burdened with the huge task of supplying unprecedented quantities of manufactured products for the armed services, was asked by the Government to design, construct, and operate a plant to produce plutonium for the atomic-warfare program. This request was accepted upon the insistence of the Government that du Pont was uniquely qualified for that undertaking. A plant costing $350,000,000 and involving technical and industrial problems never before encountered was designed and built. It produced plutonium in time for its effective use.

Your company believes that bigness contributes its greatest public service when it performs those tasks for which it is uniquely suited. Because of this belief, we have made it our aim to tackle the difficult research and manufacturing jobs, jobs that are beyond the reach of companies less endowed with technical personnel and financial resources.

America's recent industrial history must make it apparent to anyone that without your company and others like it there could have been no successful synthetic rubber industry, no synthetic textile fibers, no 30,000,000 automobiles in use, no successful atomic-energy program, no victory in World War II.

It should be remembered that du Pont is a big company because its products have found favor with the American public, and for no other reason. Should the day ever come when du Pont does not warrant and gain this endorsement, du Pont will become a small business, or even cease to exist. That result would come about simply by the decision of millions of Americans that competing products could be obtained elsewhere of better quality or lower cost.

So it appears that the Department of Justice is proceeding against du Pont because du Pont has been successful in meeting the demands of the American public in the market place. It is seeking to penalize that success, and if it is able to do so, I have no doubt that it will proceed to penalize success in other enterprises.

Much is made by the Department of Justice of the fact that du Pont owns 10,000,000 shares of General Motors stock. Full factual details of this investment and its operation have been made public in du Pont annual reports and other published material over a period of 30 years.

Exhaustive studies of this same investment were initiated by the Federal Trade Commission and the Department of Justice in 1927; and as a result of those studies neither made any criticism of du Pont's interest in General Motors, no order was entered, and no suit was filed.

I should emphasize here that it has always been the desire and intention of the du Pont Co. to conduct itself in harmony with the public interest and in full accordance with the law. In antitrust matters this is not easy, even with the most competent legal advice available, for the Sherman Act is very general in character, and court interpretations of its meaning shift from year to year.

We firmly believe, however, that under any just interpretation of the antitrust laws the relationships between the du Pont Co. and the other defendants in the suit have been neither illegal nor detrimental to the welfare of the people of the United States. On the contrary, these relationships have served the public interest in a conspicuous way.

I assure you, therefore, that your company will fight this unjustified attack with all possible vigor.

The consequences of defeat in the suit are of major import to all stockholders. The Government asks among other things that the court issue a decree directing du Pont to sell all of its General Motors stock promptly and to distribute the proceeds to its stockholders forthwith as a cash dividend.

The sale of such a substantial block of stock on the market, if practicable at all, would be certain to depress seriously the market price of General Motors securities and perhaps many others to a lesser extent, and cause vast injury to the several hundred thousand General Motors stockholders, as well as to the 100,000 du Pont stockholders.

Furthermore, such sale and distribution would involve for your company and for its stockholders a very large tax liability. First there would be the capital gains tax on profits resulting from the sale of the stock. The subsequent distribution of the proceeds would then result in large cash income taxable as such to stockholders in the year of distribution. Hence the remedy demanded by the Department of Justice is largely punitive and confiscatory, since it would result in channeling perhaps two-thirds of the sum realized from the sale of this asset away from the du Pont stockholders and into the hands of the Government.

While the dangers contained in this suit are extremely serious not alone for those directly interested—the stockholders and employees of the companies involved, and many thousands of other Americans—the philosophy and way of thinking that lie behind it present an even greater danger. The ability of the United States to advance in peace and survive in war is threatened by this contention that bigness is bad in anything but Government.

In America, we can out-produce the world because we have here many able industrial organizations capable of producing goods in mass quantities for millions of people.

I hope, therefore, that we may have your wholehearted support in resisting this action by the Department of Justice, not only on your own behalf as du Pont stockholders but on behalf of the national defense and the national welfare.

CRAWFORD H. GREENEWALT,
President.

Basing-Point Legislation

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, July 14 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "To End Confusion," having to do with basing-point legislation, from the Washington Post of yesterday.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TO END CONFUSION

Both the House and the Senate have now approved bills designed to remove doubts as to the legality per se of noncollusive delivered price systems and absorption of freight charges. As amended from the floor, the House bill is similar to that recently passed by the Senate. If enacted, this declaratory legislation should put an end to the confusion resulting from different interpretations of court decisions outlawing basing-point systems and allay the fears of businessmen that the practice of absorbing freight charges in good faith to meet competition might subject them to prosecution for violation of the antitrust laws.

However, both the House and Senate have insisted on certain protective restrictions limiting businessmen's freedom of action to meet competitors' prices by absorption of freight charges. The Senate inserted an amendment proposed by Senator KEFAUVER to the O'Mahoney bill providing that freight absorption to meet a competitor's price could not be used as a defense in any suit charging that such absorption would substantially injure competition. The House bill, as reported out of committee, omitted this amendment, but it was subsequently modified to include a provision (considered by Senator KEFAUVER to be better than his own amendment) intended to protect small-business men against discriminatory kinds of pricing banned by the Robinson-Patman Act. In other words, the House amendment would make it illegal to absorb freight charges, in any case, if such actions violated the provisions of the Robinson-Patman Act. In our opinion, this qualification was essential to avoid weakening the Robinson-Patman Act. That certainly was not the purpose of the House in approving a clarifying measure. In trying to clear up the confusion about the legality of delivered-pricing systems and freight absorption, neither the House nor the Senate has any intention of removing safeguards against monopolistic or discriminatory practices banned by existing laws.

Senator O'Mahoney Urges United States Steel To Cooperate With President Truman

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Thursday, July 14 (legislative day of Thursday, June 2), 1949

Mr. O'MAHONEY. Mr. President, the press accounts tell us that Mr. Ben Moreell, president of the Jones & Laughlin Steel Co., has indicated his willingness to cooperate with President Truman in the latter's effort to prevent a steel strike. President Fairless, of the United States Steel Corp., on the other hand, has been quoted in the press as declining to cooperate with the President in any way, except under the Taft-Hartley law. The Taft-Hartley law does not provide an injunctive process by which a wage contract can be negotiated; and the attitude of the United States Steel Corp., if it should become the attitude of the steel industry, would merely mean that that industry wanted to change a controversy over a wage contract into a national emergency. This would precipitate a very serious condition.

I have sent a telegram to Mr. Fairless, of the United States Steel Corp., urging his reconsideration of his reported attitude, and I have sent a telegram of congratulations to President Moreell of the Jones & Laughlin Co. on his attitude. I ask unanimous consent that the two telegrams may be printed at length in the RECORD.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

Mr. BENJAMIN F. FAIRLESS,
President, United States Steel,
Pittsburgh, Pa.:

I cannot believe that United States Steel has clearly understood the dangerous implications of its declination to cooperate with the President of the United States in an effort to prevent the wage controversy in the steel industry from becoming a national emergency.

In saying that you will cooperate only in the method established by the Taft-Hartley Act, United States Steel is saying that it is willing to risk making a national emergency out of a wage disagreement which is now only a typical contest over the termination of a labor contract.

If the leadership of United States Steel is followed by the steel industry generally, it will mean that the industry is putting itself in the position of trying to create a national danger that will force the President to use the injunctive process to enable the steel companies to operate at a profit through the labor of men who are compelled to work at wage rates to which they have not agreed.

Such a policy on the part of the managers of the steel industry would mean only that they have lost sight of the fact that anything resembling a class conflict in the United States would be destroying all hope of establishing international peace. It is class conflict which has produced the present desperate situation in which mankind finds itself. Business leadership and Government leadership should leave nothing undone to prevent a national economic emergency from arising in the United States.

Steel is a commodity of such importance to our economy that United States Steel and other steel companies which take the risk of creating an emergency are assuming an awful responsibility which the country will know how to assess when the crisis arises as a result of their refusal to cooperate with the President.

Before the steel industry assumes this responsibility, let its leaders realize that the fairness of the injunctive process in the Taft-Hartley Act is still a matter of basic controversy, but more important that this act sets up no plan whatever to bring about a settlement of the wage controversy. Its only effect is to compel the workers to labor for 80 days and then the public will be left helpless with an economic crisis in which the whole country and the whole world will be involved.

There is no basis for the assumption that because the Taft-Hartley Act provides a temporary method for dealing with national emergencies, the President of the United States is barred from using any other method to maintain industrial peace and to prevent a national emergency from arising.

I have wired my congratulations to Admiral Moreell of Jones & Laughlin for his action in expressing willingness to cooperate with President Truman.

Let me urge United States Steel to take a similar position. Leaders in business and in government owe as great an obligation to their country now to avoid the danger of creating a national economic emergency as they did during the war.

JOSEPH C. O'MAHONEY.

Admiral BEN MOREELL,
President, Jones & Laughlin Steel Co., Pittsburgh, Pa.:

May I not sincerely congratulate you on the action taken by Jones & Laughlin in acceding to the request of the President of the United States to cooperate with him in an effort to prevent the controversy over wages in the steel industry from becoming a national emergency. This controversy now is nothing more than a typical contest over the termination of a labor contract.

It can be turned into a national emergency with disastrous results not only for everybody engaged in the steel industry but for the entire economy of the United States.

It is true that the Taft-Hartley Act provides a method for dealing, by injunction, with national emergencies, but it is not an effective method of dealing with such emergencies, not only because the fairness of the injunctive process is still a matter of basic controversy but also because it is limited in scope by the law itself.

Moreover, the wage controversy in steel is not yet a national emergency and it need not become one if the President's plan is followed. The great need now is to avoid an emergency.

Leaders in business and in government owe as great an obligation, in my opinion, to their country now to avoid the danger of creating a national emergency as they did during the war because we are now seeking to establish international peace, and the development in the United States of anything resembling a class conflict in a national economic emergency would be destructive to that end.

I congratulate you and I trust that other leaders in the steel industry will adopt your statesmanlike attitude.

JOSEPH C. O'MAHONEY.

Public Power and Private Power Cooperate

EXTENSION OF REMARKS
OF
HON. W. M. (DON) WHEELER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. WHEELER. Mr. Speaker, five REA cooperatives and five municipalities, all located in extreme south Georgia, will receive large reductions in electric rates as well as assurance of an adequate power supply under an arrangement recently completed. The municipalities as well as the cooperatives purchase their power requirements for resale.

The municipalities and cooperatives, the Georgia Power Co. and the Georgia Power & Light Co., have entered into a

three-way agreement. Under its terms the Georgia Power Co. will deliver to the Georgia Power & Light Co. enough energy to meet the needs of the public agencies. The Georgia Power & Light Co. will in turn deliver an equal amount of energy to these customers at actual cost, taking into account transmission line losses.

The price charged by the Georgia Power Co. to the Georgia Power & Light Co. will be 6.5 mills per kilowatt-hour. The price charged by Georgia Power & Light Co. to the cooperatives will be 7.75 mills per kilowatt-hour and to the municipalities, 8.5 mills per kilowatt-hour. When the towns acquire their own transformer substations the price will be reduced to the same level as the price paid by cooperative—namely, 7.75 mills per kilowatt-hour.

The rate formerly paid by cooperatives averaged between 12 and 12.5 mills per kilowatt-hour. The price paid by municipalities varied from about 12 mills to 2.5 cents per kilowatt-hour. The reduction in price to cooperatives and municipalities will amount to approximately $130,000 per year, averaging about 30 percent for the two groups.

While the reduction in rates is of great benefit, an even greater advantage of the new agreement is that it encourages wide expansion of rural electrification in the Georgia Power & Light Co. territory. The area heretofore has been handicapped by lack of an adequate power supply. The enlargement of the power resources will be of equal benefit to the municipalities in that it will facilitate growth and industrial development. Thus the progress of the entire area will be stimulated, instead of retarded by lack of adequate electric power at low rates. The contract is for 5 years, but the cooperatives have the right to cancel it at the end of 3 years.

The Georgia Power Co. has recently added 145,000 kilowatts of modern, efficient steam-electric generating capacity to its State-wide system. In addition, it has 200,000 kilowatts under construction. It was the availability of these new power resources which enabled it to undertake the delivery of power to the south Georgia area.

The three-way agreement is a fine example of the constructive results which can be achieved by a spirit of mutual helpfulness between private utilities and REA cooperatives. It marks a milestone in electrical progress from which a whole region benefits.

Change in Lay-Off Rules

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. MULTER. Mr. Speaker, many of my colleagues no doubt have been flooded, as I have been, with requests from persons in the civil service who are being released from their positions because of reductions in force and for other reasons. Today's Washington News contains an article by John A. Overholt, of the United States Civil Service Commission, which gives a clear and concise explanation of the civil-service regulations applicable to lay-offs. I am sure that my colleagues will find here an answer to many of the inquiries which we have been getting.

OVERHOLT EXPLAINS CHANGES IN LAY-OFF RULES

(By John Cramer)

Civil Service Commission recently announced important changes in its lay-off rules for Federal employees. The man who drafted these changes is the man who knows most about them. He is Civil Service Commission's John Overholt.

Today, he takes over this column to explain just what the new rules are about—and how they fit in with the old ones.

(By John A. Overholt, U. S. Civil Service Commission)

Many people are curious about recent changes in the regulations governing reductions in force in Federal agencies. They are also curious as to former provisions which have not been changed.

No changes have been made in the basic principles. Competition is based on the four major points specified in the law, which are (1) tenure of employment, (2) veteran preference, (3) length of service, and (4) efficiency ratings.

Each of these points is considered under a ranking system. Permanent employees rank highest, in group A; war-service and temporary-indefinite employees are next, in group B; and temporary employees are lowest, in group C.

FOUR BIG GROUPS

Within each group there are four subgroups—subgroup 1, for war veterans whose efficiency ratings are good or better; subgroup 2, for nonveterans whose efficiency ratings are good or better; subgroup 3, for war veterans with efficiency ratings less than good; and subgroup 4, for nonveterans with ratings less than good.

EMPLOYEES COMPETE

Competitive areas and competitive levels are somewhat confusing, but the real point is that employees compete according to their jobs. All the jobs in which the employees can be shifted around in their daily work are in direct competition in a reduction in force. The employees in direct competition are ranked on a "retention register" by groups and by subgroups, and according to retention points within subgroups. They are then "reached for action" in direct order, beginning at the bottom of the register.

Then there is a second degree of competition based on qualifications of individual employees, according to subgroup preference. This means that a permanent status employee can displace or "bump" a nonstatus employee in a different line of work if he has the necessary qualifications. A permanent-status war veteran can displace any nonveteran in a job for which he is qualified, and a nonstatus war veteran can displace a nonstatus employee who is nonveteran. Furthermore, an employee may go back to a job from which he had been promoted, and a status employee with 5 years of service is considered for jobs in other cities. However, an employee with "bumping rights" cannot pick his job; the agency decides which jobs employees shall work in.

THIRTY DAYS' NOTICE

If an employee can't be kept in his own job in a reduction in force, and if no other job is found for him in the same grade, he is given a notice. This notice tells him of the action proposed in his case and the date it will become effective. The notice must be given at least 30 days in advance of separation or demotion or transfer to another city, and should be 30 days before going off active duty. However, an agency has authority to require an employee to take annual leave at any time and in an emergency can require employees who do not have annual leave to take leave without pay. The notice must also tell employees of their right to appeal to the Civil Service Commission within 10 days.

Under the former regulations, status employees in subgroups A–1 and A–2 were given 1-year notices before separation, which included all annual leave and extended furlough without pay. This extended notice was waived if the agency did not have sufficient appropriations to cover the total annual leave. Because of numerous waivers of this provision, most of the employees did not receive the benefits of 1-year notices.

The new regulations do not require 1-year notices at any time, but give reinstatement priority to status employes in A–1 and A–2 for 1 year after the date of their notices. Since reductions in force are usually caused by restricted appropriations, the savings in terminal-leave payments will permit more employees to be retained when reductions in force have to be made, and those who are separated will still have an advantage when there are vacancies to be filled.

RIGHT OF APPEAL

There is also a change with reference to exceptions to the provisions of the regulations. Hereafter when an agency wants to select an employee out of regular order, or deny him an offer of another job for which he is qualified, or to avoid his reinstatement priority, it must give him a statement of the reasons, and give him an opportunity to answer the reasons in writing. If the employee is not satisfied with the decision on his answer, he may appeal within 10 days to the Civil Service Commission. The test in any such case is whether the reasons will promote the efficiency of the service.

The new method will permit the retention of the best qualified employees in positions where their services are urgently needed, and the right of appeal should protect employees from decisions based on favoritism or prejudice. In any case where the facts clearly justify an exception in order to promote the efficiency of the service, the exception should be authorized, but exceptions which are not based on clear facts should not be made and will not be approved in appealed cases.

Although the regulations are still complex because of the many conflicting issues which are involved, they have been expressed more briefly and are perhaps a little clearer.

Federal Expenditures

REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. RICH. Mr. Speaker, this administration is the greatest spending administration of all time. Mr. Truman in his address last night gave us a philosophy that I have never heard of in all my life, that the only way to be successful is to spend, spend, spend, and squander, squander, squander. If we do that, just remember that the Congress is responsible for this action. It is the most outstanding piece of—I do not know

what to say—ridiculous advice I ever heard of. The speech last night was so ridiculous that I woke up at 5 o'clock this morning and I got to thinking about it. I never knew of anybody that made such a statement as that in all my life, as the President's address. It was ill advice, ill timed, and nothing sensible about it. If anybody in my business or anybody I associate with would make such a speech, giving such advice, I would want a psychiatrist to look at him.

Members of Congress, I thought you would be interested in the following figures relating to the financial condition of our country at this time, and I insert herewith table giving the population, the farm income, Federal receipts, expenditures, and gross Federal debt, showing Mr. Truman is the greatest spender of all time:

WOODROW WILSON, MAR. 4, 1913, TO MAR. 3, 1921

Year	Population	Farm income	Federal receipts	Federal expenditures	Gross Federal debt
	Mil.	*Mil. of dol.*	*Mil. of dol.*	*Mil. of dol.*	*Bil. of dol.*
1914	99.1	6,050	735	735	1.2
1919	105.1	14,602	5,152	18,515	25.5
1920	106.5	12,608	6,695	6,403	24.3
WARREN G. HARDING, MAR. 4, 1921, TO AUG. 2, 1923					
1921	108.5	8,150	5,625	5,116	24.0
1922	110.1	8,544	4,109	3,373	23.0
HERBERT C. HOOVER, MAR. 4, 1929, TO MAR. 3, 1933					
1929	121.8	11,296	4,033	3,299	16.9
1930	123.1	9,021	4,178	3,440	16.2
1931	124.0	6,371	3,190	3,652	16.8
1932	124.8	4,743	2,006	4,535	19.5
FRANKLIN D. ROOSEVELT, MAR. 4, 1933, TO APR. 12, 1945					
1936	128.1	8,367	4,116	8,666	33.8
1937	128.8	8,850	5,029	8,177	36.4
1938	129.8	7,686	5,855	7,239	37.2
1939	130.9	7,877	5,165	8,707	40.4
1940	132.0	8,364	5,387	8,998	43.0
1941	133.1	11,181	7,607	12,711	49.0
1942	133.8	15,376	12,799	32,397	72.4
1943	134.0	19,434	22,282	78,179	136.7
1944	132.6	20,360	44,149	93,744	201.0
1945	132.0	21,520	46,457	100,397	258.7
HARRY S. TRUMAN, APR. 12, 1945–					
1946	139.9	24,864	43,038	63,714	269.4
1947	143.4	30,186	43,259	42,505	258.3
1948	146.1	31,019	[1] 42,211	[1] 36,791	252.2

[1] Beginning in 1948 tax refunds were deducted from receipts and were not included among expenditures as had previously been done.

Depression Insurance

EXTENSION OF REMARKS
OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. TAURIELLO. Mr. Speaker, I have before me an article and an editorial which are particularly timely in view of the President's Mid-Year Economic Report which was sent to Congress on Monday of this week. This article, entitled "Will the Economic Storm Break?" is from the July 1949 International Teamster, the official organ of the International Brotherhood of Teamsters. This article and the editorial, Time for Action, from the same magazine, stresses the importance of public works and advance public works planning. Although written before the President's report was issued, it is timely inasmuch as the President has made a strong recommendation on advance planning.

WILL THE ECONOMIC STORM BREAK?

(By a Teamster staff writer)

Are we headed for a depression?

If we have a slump, will it be as severe as the 1929 crisis?

Can public works play an important part in providing jobs in a slump?

How do we stand on our public works planning situation?

These are questions which disturb labor as economic storm signals become more and more evident on the horizon. What do the storm signals—production, sales, inventory, purchasing, prices, and unemployment—portend?

Production: From a postwar peak of 195 in the Federal Reserve Board's index, over-all production has skidded to 179 in April as compared with 188 in April 1948. Auto production is still up but machinery, textiles, shoes, leather, and furniture have suffered sharp cut-backs. The 1949 over-all decline is described as mild and gradual as compared with the 30-percent drop in 1920–21 production and the 25-percent drop in 1929 and sharp drop in the 1937–38 set-back.

SALES ARE HOLDING

The problem arises: How much and how long will the production decline continue?

Sales volume: Sales are holding up better than the economists believe we have a right to expect. High prices and lowering incomes are influencing this factor, however.

Inventory: Our production machine has been filling our pipe lines of supply, but since last fall we have stopped building inventory and have begun to cut into it. Temporarily, we are selling more than we are producing and eventually, when the production-supply situation gets more acute, production will be resumed in many lines, say observers. The inventory situation now is described as healthy.

Purchasing power: The purchasing power of the people has been edging down in the last several months. Economists tell us that there is still a tremendous reservoir of purchasing power in currency, savings accounts, and Government securities. It would be a good guess to say that most of this is not in the hands of the wage earner making $3,000 a year or less. It takes that much and more to support a family on a standard of living that is far from luxurious. That figure the experts call disposable income will be smaller this year than it was in 1948.

Prices: We have seen a general decline in prices, but not enough has been reflected at the retail level to make an appreciable difference. Moreover, there has been a slight push upward in the cost-of-living index. The Bureau of Labor Statistics showed 2 months of upward rise in the living-cost figure. But prices are flattening out, and if consumer resistance—simple refusal to buy—continues to assert itself, we can expect more pronounced declines. Price cuts in consumer goods due to competition are becoming more frequent also.

CONSUMERS CAUTIOUS

Consumers are becoming a far more positive force than they were 10 or 20 years ago. They know when prices are too high and are refusing to buy unless they have to these days. But the over-all declines have not been enough to cause any sharp stimulation in purchasing except in spots and in a few commodities. Moreover, businessmen, manufacturers, etc., are not buying at any price as they did in 1946, 1947, and 1948 because they knew they could make a profit. They, too, are becoming cautious.

Employment: Ewan Clague, Director of the Bureau of Labor Statistics, in a recent speech said that we have about 3,000,000 jobless, which is a figure more than three-quarters of a million above that of last year. He says the figure "is not likely to fall much below this level for the balance of this year."

JOBLESS RISE SEEN

Some non-Government economists believe this figure is short by a substantial margin. They believe that unemployment is nearer four or five million and will go up sharply during the next several months.

Unemployment is spotty, with severe suffering reported in some areas. The spotty character of the unemployment is shown in the latest issue of the Labor Market, official report of the Federal Security Agency.

"Nonagricultural employment declined in all but 10 areas—6 of these in the West—but losses were slight to moderate in a vast majority of cases * * * manufacturing down-trends predominated in every economic region in the country * * * individual area comparisons reveal less favorable changes this year as compared with last in 75 areas and more favorable changes in 20 areas," say excerpts from the Federal Security Agency's official report.

In addition to these danger signals, other factors play a part in demonstrating the general economic slow-down. Consideration must be given adjustments necessary due to the increases in population. Not only is our whole population growing, but more people are coming into the labor force, particularly from high-school and college groups. Moreover, with price levels still high many of the elderly workers, wives, mothers, and so forth, who cannot afford to retire or remain out of the work force, all add to the number needing jobs.

TECHNICAL CHANGES

Technological advances are being made in many fields and these usually result in some labor displacement. Over the long haul these changes and advances are becoming markedly important.

Business failures have shown an upward trend. The squeeze of competition and the lack of business experience are adding up to a sharp toll in business ventures, all of which cause distress to owners and hired hands as well.

The psychological attitude of both business people and ultimate consumers is another storm signal. Many business organizations have extensive plans for plant expansion which would provide considerable employment both in construction and in ultimate service requirements. The construction backlogs in this class of building is undoubtedly great, but an attitude of wait and see—one of caution—is prevailing and, as a result, expansion plans are slowed down. Thus, many thousands of useful and necessary jobs are denied due to the cautious attitude of business.

But do all of these factors add up to a slump? Do the signals portend stormy economic weather? Many, if not most Government economists have to date not exhibited any pronounced signs of alarm. But you can give no flat answer to the question: Will there be a depression?

In its third annual report the President's Council of Economic Advisers said that "No techniques of analysis can forecast with assurance the actions and reactions of a free people."

DIFFERENT FROM 1929

Even if we were to have a sharp economic nose dive—and most economists say we are

not headed in any such direction—the situation today or this year would be quite different from that after the 1929 bust. The Government has some real economic cushions which should help let things down easily.

The Nation has a vast social-security system providing against many hazards. Unemployment compensation is especially important, and today the Nation has on its rolls approximately 3,000,000 getting unemployment compensation.

Support prices for farmers are guaranties that the days of the penny auctions will not be repeated. The support system is by no means perfect, but it has prevented serious trouble in agriculture this far and would prevent headaches similar to those of 20 years ago.

We have guaranteed bank deposits under the Federal Deposit Insurance System. We will not have a flood of bank failures such as that leading up to the bank holiday of March 1933.

By the Employment Act of 1946, Congress established the Council of Economic Advisers. This board of three top economic experts and its staff makes continuing studies of the Nation's economic-fever chart. They advise the President on steps to take to prevent economic disaster. Although the Council knows it cannot crystal gaze the economic future, it also realizes the value of constant studies of our economic health.

The Federal Reserve Board has certain fiscal regulatory powers important in a crisis period.

The acceptance by businessmen of the concept of planning and the necessity of doing some decent planning and the employment of public works as mechanism is helping to provide a measure of confidence and stabilization.

PUBLIC WORKS STUDIED

These cushions are designed to take some of the severity out of economic declines. But to the man who is out of a job and has used up his unemployment compensation funds, the situation can be serious indeed. Working people as a whole are interested in jobs more than in cushions to soften the blow. They want jobs to provide a decent living for themselves and their families.

In this connection increased attention is being directed toward public works and public-works planning. All economists, whether leftist or rightist, agree that public works can be an important and strategic weapon against a business slump. It should be said at the outset that we are woefully behind in our public-works planning. We are years behind in planning and construction.

For some 10 years there has been relatively little building of public-works projects. We need schools, hospitals, sewer systems, public-utility improvements, highways, bridges, and numerous other items. The normal needs, quite apart from any necessity of fighting a depression, have not been met. As a result, we have an accumulation of needs of tremendous proportions—some say as much as $100,000,000,000—in the State and local areas.

This figure is predicated on needs for a 15-year period. Measured by today's costs, this figure is not abnormally large. We spent $40,000,000,000 in 20 years, and those figures were on prices and costs considerably below those of today.

Here is the way the experts break down the $100,000,000,000 backlog of need: $10,500,000,000 for schools; $9,500,000,000 for sewers and waterworks and sanitary improvements; $8,500,000,000 for hospitals; $3,500,000,000 for airports; $3,500,000,000 for public buildings; $2,500,000,000 for public service plants; $2,000,000,000 for recreational developments; $60,000,000,000 for roads and highways.

These figures add up to what top experts feel are justifiable needs of our growing population. At the present rate of expenditure four or five billion dollars per year, we would be nearly 25 years building and by that time we would have yet more needs—thus we would never catch up, really.

Construction is the basis of so much of our economy that we might turn to current figures a moment. Any drastic changes in the construction level can have sharp effect on the over-all economy. In 1949 estimates point to $18,250,000,000 in construction, of which $5,000,000,000 would be in public sources and the balance from private sources.

But what would happen if construction should go into a sharp decline—it has on previous occasions. If private building fell by one-half—which is unlikely—we would be faced with the serious task of shoring up the economic breach by filling some of our great public-works needs.

The question is: Are we prepared to go into action with a public-works program if it should become necessary? Unfortunately, the answer is "No." The sad fact is that we have blueprints for only $4,500,000,000—and some critics say less—worth of public works. This would include $2,000,000,000 which the Federal Bureau of the Budget says the Federal Government will spend and $2,500,000,000 in State-local projects.

PLANS NOT READY

"As matters stand today," says Maj. Gen. Philip Fleming, our leading expert in public-works administration and for several years Federal Works Administrator, "we simply are not ready with plans which could both stabilize the construction cycle and help to bolster the business cycle. In general, the States and municipalities are not ready and the Federal Government is not ready."

It takes from 6 months to 2 years to advance plans from the idea through blueprints until we are ready to put men to work on the site. If we have a sharp cut-back in the economy, we would be caught short and would soon exhaust our "shelf" of plans. We might see agitation for "made work" type of the old Works Progress Administration.

Made work gives immediate and quick employment, but too often adds little to the permanent resource of the Nation. Public works, on the other hand, has a "multiplier" effect—immediate jobs; jobs in related industries and substantial upward push in the whole economic machine.

Why aren't we ready? The Government has neither the funds nor the authorization to make advance plans. Authority expired June 30, 1947. Under this authority—title V of the War Mobilization and Reconversion Act of 1944—$65,000,000 was provided by Congress for repayable loans to State and local units for blueprints of some $2,500,000,000 in potential work.

Today S. 707, a bill sponsored by Senators CLAUDE PEPPER, Democrat, of Florida, and THEODORE F. GREEN, Democrat, of Rhode Island, is languishing in the Senate Committee on Public Works. Representative HALE BOGGS, Democrat, of Louisiana, introduced a House bill providing for advanced planning. No action has been taken on this measure, H. R. 3086.

One bill has passed the House and is before the Senate to provide for $40,000,000 in loans for advanced planning. While this would provide some help, the results would be woefully inadequate.

BILL STUDIED

Senator JAMES E. MURRAY, Democrat, of Montana, sponsor of the Employment Act of 1946, is collaborating with a number of Senate liberals in another proposed measure to be called the "Economic Expansion Act of 1949." This bill, in draft form to date and not yet introduced, would set up a National Economic Cooperation Board with management, labor, agriculture, and the Government represented. This would be a top-level economic study and planning unit which could recommend fast action to curb alarming inflationary or deflationary movements. The job of the bill would be to provide the authority for the brains and the know-how whereby the Nation could keep the economic machine working in the interest of high-level employment. Sponsorship of the bill includes with Senator MURRAY, Senators ELBERT THOMAS, of Utah; BRIEN MCMAHON, of Connecticut; PEPPER, of Florida; KEFAUVER, of Tennessee; HUMPHREY, of Minnesota; SPARKMAN, of Alabama; and KILGORE, of West Virginia. This sponsorship insures a decent hearing if and when the bill comes up.

In the meantime, the Nation marks time and hopes for the best. Those who know that public works have pronounced value as a depression weapon of the first order watch the various economic storm signals with mounting alarm. They know that these signals spell danger and they want to ward off that danger with weapons which can be forged in minimum time.

Labor has a real stake in this problem of advanced public works planning. Leaf raking and improvised work are unsatisfactory substitutes for useful construction. Public works add to the Nation's resources and reverberate into other job-giving lines of endeavor, thereby giving the whole machine a healthy forward push.

Labor can do itself and the Nation a real service by urging the consideration and passage of a comprehensive public works advanced planning program. And many economists as well as many labor leaders believe that time grows short and the storm signals now evident emphasize that positive and decisive action is imperative.

TIME FOR ACTION

Elsewhere in this issue of the International Teamster is a discussion of the problem of advance planning of public works as a necessary factor in providing depression insurance.

The economists are by no means uniform in their forecasts as to what is going to happen in the coming months or the next couple of years. Some say the high level of employment and purchasing power will continue. Others, and we believe a growing number, are far more pessimistic than their colleagues in reading the economic portents. This latter group looks at the curves on their charts and sees that most of them are going down.

Economists from these more pessimistic brethren differ among themselves as to how far the curves will go down and how long the levels indicated will remain low. But they all know that these lowering statistical curves expressed in human terms mean unemployment—how great we don't know. But the problem of unemployment is getting more and more acute.

We would be wise as a Nation if we did a bit of economic forearming—we should not wait till a serious depression starts. We have some excellent cushions to soften a depression blow. These are discussed in our article, but we cannot depend on "cushion." We know that jobs are the answer and we should be ready to get jobs moving in depressed areas or on a national basis if need be.

Economists generally recognize the usefulness of public works as against improvised or "made" work. But we cannot have useful public works without planning for it. And the plain fact is today we have a woefully small shelf of public-works blueprints and we would be in no position to go forward with anything like a decent program if we need it.

We hope that we will not need to draw on any shelf of blueprints to give jobs. But it is sheer governmental folly to be unprepared for an economic storm. And the clouds are getting darker by the week.

We hope that Congress takes as a major antidepression step the enactment of a real bill for advance public-works planning. The money appropriated would be about the best economic insurance we could buy.

The Communist, His Mentality and His Morals

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. MULTER. Mr. Speaker, the following article, written by Harold Rosenberg, entitled "The Communist, His Mentality and His Morals," appears in the current issue of Commentary, published by the American Jewish Committee. It is one of the best articles of its kind I have read. In addition to being an excellent description of the current-day Communist it points a strong warning to those deluded persons who might affiliate with them, as to what may be expected as Communist expediency wavers back and forth.

THE COMMUNIST, HIS MENTALITY AND HIS MORALS

(By Harold Rosenberg)

"Much I prize the doubt"—Browning, Rabbi Ben Ezra.

The Englishman of Gilbert and Sullivan's era may have been born either a Liberal or a Conservative, but no one was ever born a Communist. Nor is this form of "greatness" ever thrust upon one. Nor is it something to be lightly grabbed, as the periodic party purges throughout the world attest. Becoming a Communist can only be achieved, the party chiefs often declare, through an intense process of self-transformation—a process that may never be relaxed without the risk of sliding back into an earlier condition of being. The psychological and ethical arduousness of making oneself a Bolshevik is also testified to by the Confessions of the Repentant Ex-Comrade which constitute such a lively branch of modern literature. As part of their Bolshevik discipline, the heroes of Koestler and others had to conquer every personal sentiment in themselves and attain the subjective state of professional executioners. The Communist's trained readiness to crush his sympathies, and the hallucinations that induce that readiness, cannot, however, be isolated from other aspects of his constructed character. In doing so, the confession literature, written from the point of view of moral disillusionment, tends to portray the Communist as a "sick" human being, rather than as a new coherent entity purposefully constructed out of human material.

The Communist, then, is an invented type into which a small fraction of contemporary humanity has been able to convert itself. This type was brought into the world by Lenin. He was, and is, its creator. We shall discuss later possible differences between the author and his creation. But reading the recent biographies of Lenin by David Shub (Lenin: A Biography) and Bertram Wolfe (Three Who Made a Revolution), one cannot fail to recoginze in the personality of the founder of bolshevism the primordial features of the Communist of today. Here is the man who struggles ceaselessly—"for 24 hours of the day" and even in his dreams, Axelrod noted—through organizational plot and counterplot to grasp unchallenged control of the revolutionary movement, first of Russia, then of the entire globe. This man is motivated, Wolfe wisely discerns, not by arrogance or lust for power but by his "unshakable conviction of his own rightness." Primarily, he is a man whose every act is impelled by the certainty that he, and he alone, knows what must be done on behalf of the future of the revolution, and hence of mankind.

Every Communist is a small replica of this man who knows. His knowledge is beyond human question, like that of the revolutionary leader in Sartre's movie the Chips Are Down, who through being dead has found out what will happen to the insurrection scheduled for the next day. The Communist, too, possesses a nonterrestrial prescience and can assert without the support of evidence what the situation is and what policy is required to meet it. Here, for example, in a prewar Soviet film, is a Communist who has arrived at a collective farm far out in the steppes. Trust him to know that it is best for the farmers to stop slaughtering surplus cattle and take to clearing overgrown land for fodder. Or here, in a war film or novel, is a Communist at a battlefront. He does not, like the directing personnel of other armies, confine himself to giving orders and getting them carried out. More like a scout leader than a commander of men, he bears an aroma of perceiving what has been ordained. He will recognize the moment chosen by history for his company to stand and die against overwhelming odds. And he will know, too, how to scare up some trick to prevent this lethal decision from yielding its logical results. In factory work, in mining, in forestry, his role is always the same. And above all, in the revolution, source of his authority. What is the drama of the October revolution to the Communist but the Bolshevik—from Lenin himself in his flat or at a caucus to the leather-jacketed emissary among the peasants of some distant village—foreseeing everything, bringing everything to pass? (Actually, of course even an account most biased on the side of historical necessity, like Trotsky's, cannot describe the Bolshevik seizure of power without creating an impression of improvisation and chance that verges on the farcical. One recalls, for instance, Lenin in disguise yet recognized by everybody; Kerensky leaving the winter palace in an open car waving to the insurrectionists; the commissar of war on a horse with a pistol in his hand galloping to the defense of Petrograd.)

All the other traits of the Communist are derived from his knowingness. For instance, his calm. This commissar seems a bit on edge as to the success of the revolutionary measure he has just proposed for planing pineboards or attacking a convoy. Don't worry. His anxiety is intended only to arouse suspense in his audience of disciples—like an acrobat deliberately missing a try in order to make his curtain act seem a greater triumph. Actually, the Bolshevik knows his plan will succeed, and is internally at rest. Indeed, his calm is deeper than that which comes from mere confidence in a specific outcome. For even if his project does not succeed, it will still have succeeded. It will have been the correct thing to do historically—there was no alternative—and if he was mistaken who could have been right? Since history is continuous, the present failure, like that of the Red Army in 1941, is inevitably a contribution to the larger success that will become visible in the long run.

The Communist's composure has a fatherly cast, almost divinely fatherly. Like a wise parent, he knows that growth and the victory of reason are compelled to issue by way of simple-mindedness, incomprehension, misguided exuberance. For those of his non-Communist fellow citizens who possess these handicaps he therefore keeps prepared the all-enduring smile with which toddlers are encouraged. Before him shines the pedagogical motto of Lenin: patiently explain. As we shall see, this slogan does not apply to disputes with intellectual opponents; it is reserved for the instruction of the guiltlessly backward. Who these are depends, of course, on the party line—even Catholics and capitalists may during "front" periods be included among the innocently lagging; at other times they are malicious schemers. Paternal affection streams from the responsibility-laden young Communist upon the gray head of the illiterate Ivan who remains folkloristically attached to his hand plow or machette until the superiority of the tractor has been explained to him; upon the liberal professor who is studying the rudiments of Marxism; upon the corpse of the boy of 14 who has blown himself up under a German tank. The love of the Bolshevik is the love of the shepherd for his flock; and its tolerant facial expression, made up of a mixture of smugness, boredom, and absent-mindedness, is duplicated on Sunday mornings in homes and chapels throughout the world. It is a physiognomical summary of the social worker's ideal of human existence. The pastoral species of affection comes into existence only in the presence of those standing in an acknowledged relation of intellectual inferiority. The response it aims at is the open mouth and widened eyes of sudden grateful comprehension.

Fables of sheep, idyllic as they are, contain the psychology of impending doom. The wolf is either lurking at the edge of the peaceful meadow or, disguised in sheep's clothing, has penetrated the flock itself. Without this ever-present threat, the shepherd's vocation would amount to but little. In each situation, fortunately, the Communist discovers the traditional lupine foe. "We must remember," said Lenin, "that we are at all times but a hair's breadth from invasion." Curiously, however, the Communist's wolf exists in a kind of double image—he snarls and shows his fangs at the frontier, yet at the same instant baas fraternally close at hand under his false sheep's head. Of course, he is really two separate wolves. One is the outside wolf, from Czarism to American imperialism; the other, the inside, or sheep's clothing wolf, from Menshevism to Trotskyism. But the Communist, perhaps because the sheep fable conforms in some profound way to his metaphysics, always insists that there exists but one monolithic wolf. In his factional struggles long before the Revolution, Lenin discovered the anisotropic formula: Menshevik-Czarist. Since then, Liberals have been white guardists; Socialists, British, German, French, Japanese, etc., imperialists; Trotskyists and rightists, "agents of fascism."

The wolf-in-the-sheep image is the most dire. Both Shub and Wolfe quote Lenin's characterization of his own attack on the Mensheviks as traitors in 1907: "That tone, that formulation, is not designed to convince, but to break the ranks, not to correct a mistake of the opponent but to annihilate him, to wipe him off the face of the earth." The wolfy wolf represents merely a physical opposition that may be evaded or pacified by compromise. The sheepy wolf, however, threatens to destroy the very ground of the Communist's existence, his shepherdom; and he must be annihilated. This enemy from within represents any opposition to Communist knowledge born not of ignorance but of contrary knowledge. The offending knowledge need not be political or historical; it is enough that it leads to informed, rather than naive noncooperation. This collective farmer opposes clearing brambles and favors eating the calves because, besides wanting meat, he has calculated that the land is not suitable for tillage—he is a social revolutionary white guardist. This worker withholds enthusiasm for a new speed-up, because in his experience such methods bring no increase either in wages or in output; he is a Trotskyist Fascist saboteur. Principle resistance to the Communist's historical omniscience is the malignant mark of the evil third person in the sheep

fable. Turned in his direction, the Communist's face has shed its benign ennui. The bored father has turned into the alert hunter. Now the pastoral vocation, which in Lenin's language makes it one's duty to wrest the masses from rival leadership, reveals its most active function—to exterminate.

The Communist belongs to an elite of the knowing. Thus he is an intellectual. But since all truth has been automatically bestowed upon him by his adherence to the party, he is an intellectual who need not think. The Communist is often crticized for his renunciation of independent thought. But what good is mental activity if one can know more by giving it up? The Communist is contemptuous of the non-Communist intellectual. The latter goes through all the motions of thinking, but at best he can only hope to arrive at what is already known. At best. More likely his thinking will lead him into error. Not one Bolshevik with a mind of his own who failed at one time or another to deviate from and betray Leninism. Actually, the intellectuals are superfluous people. Given the present unfinished state of history, they may have certain uses when friendly. But they have no future, and it is wise to be suspicious of them. The unlettered are much to be preferred.

In this connection, the mind of the Communist is involved in a profound gnostic mystery: thought reels on the rim of error, while knowledge is given to the simple. Ask the worker or the peasant and he will tell you what is hidden from the scholar and the genius. After he had moved into the Kremlin, Shub tells us, "Lenin enjoyed incognito contact with the common people of Moscow, talking with the man on the street, the common laborer and peasant, to get their honest opinions on the Bolshevik cause." Socialists who expressed their "honest opinions" were either banished or shot. In his debate with Trotsky on dialectics and logic some years ago, James Burnham cried out indignantly when his opponent spoke of "the dialectics of a fox." Why not? If the worker has his way of knowing that is superior to Martov's or Plekhanov's, why not a fox? Or better still a sheep, since the fox is notoriously tainted with intellectualism and besides must be harder to organize. Not that it is outrageous to speak of the wisdom of the simpleton, of animals, or even of things. It is in the best mystical and poetic tradition and is supported by the experience of great minds. But if messages of grains of sand or old women in the forest are more revealing than the discourse of intellectuals, why should one kind of intellectual, the Marxist-Leninist, be privileged?[1] I regret that it is not possible to develop further at this time this fundamental contradiction of Marxism.

Since he alone has the correct answer, the Communist everywhere seeks to control the activities of others. He does not always seek power—we have seen that with Lenin power was not a lust. Power itself is but one means, though perhaps the supreme one, for manipulating people. The Communist may consent to renounce this means temporarily, but never for a moment does he cease to reach for control. To this end he makes himself an expert in the mechanics of organization, for through it men can be controlled with or without authority. To the Communist the map of the world is an organization chart. Lenin's national program cannot be understood without taking this into account. From 1903 to 1917 the life of Lenin is a saga of contriving majorities in conventions, splitting and annihilating opposition factions, packing editorial boards and committees, challenging credentials, laying hold of membership lists, party funds, communication facilities. "His line of thought," said Rosa Luxemburg near the beginning of his leadership, "is cut to the control of party activity." Wolfe points out that factional disputes engaged Lenin's attention to a greater extent in 1912–14 than the impending World War.

To be engaged in combat without pause, for 24 hours in the day, is the Communist's way of being equal to his world, whose primary law is combat. (The history of all human society, past and present, has been the history of class struggles.) Courage is therefore indispensable to the Communist, and that he is courageous goes without saying. His courage, however, is of a different order than is met with elsewhere. The possibility of his own death simply does not interest him. Individual attachments, power over which gives death its terror, hold a secondary place in his existence. By temperament, understanding, values, the threatened curtailment of his personal future has no meaning to him. As for the future, he already knows what it will contain. Thus neither love nor curiosity contest his willingness to risk his life. In the face of torture, too, his own or another's, his courage preserves its distinction—since he lacks the reaction of horror. It is the strangeness of the inner state of the torturer, who resembles a human being, that freezes our spirit. We do not feel horror at the agony inflicted by the surgeon because we know why he "attacks" his patient. The Communist, accepting as sufficient his political explanation of torture, and knowing why his enemy inflicts it upon him, is never horrified by it. Thus enduring torture is for him a purely physical ordeal limited by the resistance capacity of his body. So far is he immune to the shock of mystery that even sadists among his tormentors appear to him in a political rather than a psychological or moral perspective; they only imagine they torture for pleasure, actually it is the policy they have accepted that turns them into fiends. Hence the Communist finds nothing questionable in the party's enlisting of former Gestapo or SS men in the service of communism. The only issue for him is: Have they abandoned the program that made them fascist murderers for one that makes them the vanguard of the working class?

The readiness of the Communist to clasp to his bosom the hated enemy of yesterday and to denounce as traitors and monsters his former allies and even adored leaders has often led him to be considered cynical or immoral. Quite the contrary; such reversals of judgment and feeling are the very key to the Communist's morality and the fullest expression of his constructed character. Accompanied by the strongest passions, they have nothing in common with switches in attitude resulting from a mere absence or relaxation of principles. Morally weak or indifferent people may, for the sake of expediency, collaborate with individuals whom they have denounced and drop former friends as a liability, but this is merely a shift in relations. With the Communist a change in the policy of the party transforms the nature itself of the former friend or ally. At one stroke the imperialist Roosevelt disappears and is replaced by Roosevelt the democratic champion of the peoples, while the isolationist peace-lover of this morning emerges this afternoon as a masked Nazi. It is as if Roosevelt or Hitler had never lived before the day of the change—as if their entire existence were conferred upon them by the party line. Thus the Communist's judgments stem from a metaphysics of being, and are the moral extension of that metaphysics. The question of what a Churchill or a Browder is having been decided, the Communist bestows upon thim the complete measure of his contempt or adulation. When a new decision is made, a new Churchill or Hitler or Browder appears, and the present judgment is extinguished in its opposite.

Since the way his being is defined by the party alone determines whether a man be good or evil, the private harm or advantage he has brought to the Communist plays no part in the latter's judgment of him. Non-Communists or incomplete Communists have been shocked to find themselves assaulted in the speeches of Communists who have been their close friends and who have accepted favors from them. Such an attack is no sign of either ingratitude or hypocrisy. It is an act consistent with the metaphysical-moral structure of the Communist type, in which individual experience has no place.

Accustomed to moral ambiguities, conflicting emotions, hesitations, doubts, we are constantly astonished both by the automatic workings of the Communist moral mechanism and the immediate and total character of the emotional responses it produces. In this area it is we, not the Ukranian peasant, who stand gaping before a twentieth-century supermachine. A narrative in the Dark Side of the Moon presents the contrast between old-style feeling and the Communist-made model. It is told by a Polish girl who was deported to Russia during the Stalin-Hitler pact. In a settlement for delinquent girls she and other young Polish deportees had been threatened with death by Soviet fellow-inmates who resented their stubborn refusal to acknowledge that Poland "had ceased to exist." All this was suddenly changed when, after having been attacked, the U. S. S. R. signed the Polish-Soviet agreement. A political director brought the girls the glad tidings. "He was smiling and joking [they now belong to the flock]," the narrative continues. "This news was so unexpected that we were quite stunned. A thousand thoughts crossed my mind. The feeling of happiness was marred by a still stronger realization of the wrongs we had suffered. The Soviet girls cried 'Da zdrastfuiyet Polsha,' 'Hail Poland.' We kept silent. From that moment we were heroines, and Poland became a nation with a great past and a great future."

The Polish girls were stunned into silence by their conflicting feelings, in which personal resentment played a big part. In contrast the Russians forgot instantaneously that they had once thought these young people had earned death by choosing for themselves the nonexistence of Poland. The Poles had been reborn with a great past and a great future out of the new party line. As allies they deserved to be hailed for that heroism which pertained to all those united against the Nazis in the people's war.

The power to erase and restore human status is given to the Communist by his historical clairvoyance. For the Communist the humanity of an individual lies in his historical role and this role is at all times wholly visible to the Communist. Accordingly, his judgment is that of history itself. It states who exists truly and who has but a sham existence, in that his extinction is already under way. It is as if the evolutionary process announced its preferences in moral terms. Lenin's reference to an opponent as a political corpse is more than an estimate of the value of his views. Like Trotsky's favorite description of people as swept into the dust-bin of history it implies that he has entered into non-being in everything but the physical sense. Actually killing such persons or removing them to Siberian camps simply assists time in its hygienic tasks. "The prisoner is to get it

[1] The privilege is related, of course, to the Bolshevik conception of a party composed of professional revolutionists who introduce Marxist science into the directionless struggles of the masses.

into his head as soon as possible," testifies a Polish Socialist in the Dark Side of the Moon, "that he is nothing but a thing and that nobody has any reason to be particular about the way he treats him." Prisoners of other systems have also been treated as things. But with the Communist the separation of the individual from the human species is not a byproduct of the callousness of police, military, or colonial administrations. It flows from his metaphysics of man and his relation to reality, and he justifies it by that metaphysics. For him a person conceived to be in a situation that deprives him of his past and future, like the defendants at the Moscow trials, has literally lost his human identity. Vyshinsky's designation of Bukharin as this damnable cross of a fox and a swine and others as beasts in human form, terminating in his demand that they must be shot like dirty dogs, was not just hysterical vituperation. The animal images belong to a serious attempt to establish by analogy a definition of creatures who are another kind of animal than man.

Just as the traitor is made of a nonhuman substance, so also is the Communist leader. Regarding some human beings as nothings or submen always goes hand in hand with the adoration of other human beings as gods or supermen. Shub describes the surprise and distaste of Lenin at the adulation he received from his comrades; apparently, he could not comprehend what had made his creature into an idol worshiper. Yet the explanation is not so difficult. Most historians of the Bolshevik movement point to the strain of Nechaevism in it. Nechaev's Catechism of a Revolutionist centered on the training of the revolutionist, through the systematic elimination of all sentiment, in utilizing human beings, including his fellow-fighters, as things. In his figure of Nechaev in the Possessed, Dostoevsky exposed the idolatrous core of this discipline. "Stavrogin, you are beautiful," cried Pyotr Stepanovitch, almost ecstatically. "* * * You are my idol. You injure no one, and everyone hates you. You treat everyone as an equal, and yet everyone is afraid of you. * * * To sacrifice life, your own or another's, is nothing to you. You are just the man that's needed. It's just such a man as you that I need. I know no one but you. You are the leader, you are the sun and I am your worm." The utter contempt for persons historically worthless or "dead," and the resolve to utilize them and then cast them aside, which Lenin instilled in the Bolshevik, could not fail to complete itself in the adoration of the leader—the figure who for him is the world proletariat and its promise of human brotherhood, salvation, and transcendence.

Lenin's personality is without a trace of bad conscience—all his biographers concur in this. Of the Red terror he speaks with lightheartedness, almost with levity. History does not disturb itself with regrets[2]—nor does its personification, the Communist. "Don't you understand," Shub quotes Lenin as asking, "that if we do not shoot these few leaders we may be placed in a position where we would need to shoot 10,000 workers?" Even the latter need would reveal itself to him as beyond the possibility of doubt, as in the massacre of the Kronstadt sailors. Ruthlessness for him is an indispensable means for conserving human life. He does not resort to it on his own behalf or for his group or his nation—with him death is not in the employ of an ego, as with the Nazis. It serves the universal; it works for the good as such.

What deeper temptation can exist for the man awakened to the modern crisis than to accept this solution to the problem of action? He has seen increasingly large masses of people sentenced to enslavement and death. He has recognized that in his time the old issues of poverty and injustice, which earlier generations of humanitarians could approach with a certain softness and leisureliness, have given way to the issue of human survival itself. He knows that in such a situation action must be drastic, must be absolute. Yet this call to be "hard" torments his consciousness. He is wracked by the impermeable puzzle of how to preserve in the plunge into action the fragile contingencies of the humanly desirable—freedom, sociability, truthfulness. By becoming a Communist or even a fellow traveler he can dissolve this riddle and with it the mental anguish. Through the party he will inherit Lenin's "unshakeable conviction," he will know from moment to moment that his actions, no matter what they be, are necessary to rescue mankind from catastrophe. It will no longer be necessary to reconcile "hardness" with good will, for his violence will be benevolent by definition.[3]

But is not a doctrine of necessity in which benevolence is present as an abstraction the supreme formula of ruthlessness? Is not the inhumanity of "good men," of priests and zealots determined to control events for the sake of man's salvation, always more consistent, thorough, and fervent than that of the merely vicious? The ruthlessness of the Communist, composed of benevolence attenuated by "science," recalls once more the image of the surgeon. Knowing that his act is good in that it is necessary, he is morally obligated to make himself indifferent to the pain of the patient. The Communist has chosen humanity itself as his patient, and he has become a "true Bolshevik" when his inner peace is unmarred by the ills which his deeds bring to particular individuals.

The question of Lenin's relation to the communism of today continues to be a subject for debate. The discussion usually takes a rather abstract, not to say, theological, form. The writings of the master and details of his biography are combed for evidence establishing or refuting Stalin's claim to be his legitimate heir. In the following paragraphs I shall try to suggest why, if these doctrinal disputes remain inconclusive, perhaps the strongest link between the first Red occupant of the Kremlin and the second is the figure of the Communist.

Wolfe and Shub leave no doubt that the essence of Lenin's doctrine and practice was total control of the Socialist movement at the top. To this extent, Stalinism is indisputably a logical development of Leninism. So logical, in fact, that its main features were foreseen from the beginning. At the very founding congress of the All-Russian Social Democratic Labor Party in 1903, many Socialists fully recognized that the type of centralized organization for which Lenin was desperately battling would inevitably be composed of members who, in the words of Martov, had abdicated their right to think. The bitter debate on article I of the party constitution brought from Axelrod the query: "Is not Lenin dreaming of the administrative subordination of an entire party to a few guardians of doctrine?" And shortly after the Congress, Trotsky, who had sided with the opponents of Lenin on article I, wrote that Lenin's "egocentralism" would bring it about that "the organization of the party takes the place of the party itself; the Central Committee takes the place of the organization; and finally the dictator takes the place of the Central Committee."

All the quotations in the previous paragraph are from Wolfe's study, one of the great merits of which is its detailing of the struggle on this crucial issue of party democracy. Yet despite the evidence he presents that Leninism meant dictatorship, Wolfe is able to state: "Up to his seizure of power in 1917, Lenin always remained by conviction a democrat, however much his temperament and will and the organizational structure of his party may have conflicted with his democratic convictions." A democrat who felt, willed, and functioned as a dictator. If democratic convictions formed part of Lenin's doctrine, might not that doctrine have been something quite different from Stalinism? The issue cannot be decided by reference to the events of the revolution. Control by a man so contradictory in principle would inescapably produce phenomena in which one could discern, if perhaps but dimly, the suggestion of a Leninism to which that of Stalin bears only an outer resemblance. Thus Trotsky could point to the violent disagreements among members of the Bolshevik Central Committee even after 1917, to Lenin's yielding to majority decisions even on such vital issues as Brest-Litovsk. And Wolfe, too, testifies to Lenin's constant self-criticism and his willingness to admit errors openly, to his generosity in stretching out a hand to former political foes. These might have been but expedients to which Lenin was forced, as Stalin, too, has been forced into "democratic" moves. On the other hand, they might be glimpses of a democratic core in Leninism which under different circumstances might have revealed itself fully.

Plainly, there is no such core in Stalinism. And were bolshevism like other political doctrines, Lenin, though responsible for his own autocracy and terrorism, might be little more responsible for its perpetuation and intensification by Stalin than, say (though the comparison is admittedly far-fetched), Lincoln's Republicanism is responsible for Hoover's. Programs, especially revolutionary programs, are changed, if not reversed, in the attempt to realize them. "People who imagined they had made a revolution," Wolfe quotes Engels as saying, "always saw the next day that they did not know what they had been doing, and that the revolution which they made was nothing like the one they wanted to make." If, as Trotsky claimed, the revolution was betrayed by Stalin, it might be equally true that Lenin was betrayed by the revolution. Along these lines, one could go on arguing forever as to what the "pure" doctrine of Leninism really was.

But the doctrine of Lenin is not like other political programs; it is even more than a doctrine, and is distinguished from Marxism itself in this respect. It belongs to that type of modern political movement to which one pledges not only his action but his very being. One could be a pre-World War I Marxist without making himself into a type. Bolshevism turned ideas into flesh—and flesh into an abstraction. Lenin invented the Communist man. This act of creation, whatever Lenin's doctrinal democracy, makes the Communist of today into a Leninist regardless of his party's political program, regardless of whether it is right, left, or "centrist," regardless of whether it abandons revolutionary politics for collaboration or pushes revolution to the point of insane adventure.

Stalin saw in the existence of the Communist a fact above mere considerations of program and doctrine; it was here that the connection lay between Lenin and the movement. Having seized the leadership of the Bolshevik personnel, through laying hands on the organizational apparatus (a deed of proper Leninism), his strategy lay entirely in preserving his cohesion with it and reproducing

[2] On this score the Leninist imagination seems entirely deluded. History constantly repeats itself, preserves outworn modes, returns to the scenes of its crimes, and behaves generally as if it were overcome with guilt and nostalgia.

[3] The reader will recall the recent speech of Thorez on the attitude of the French Communists in the event of an invasion of France by the Red Army. He stressed that the Red Army was nonaggressive by definition.

or curtailing it to serve his purpose.[4] By this appropriation of the Leninist type, the Leninism of any program he proposed was guaranteed.

For his part, Trotsky strove to dislodge Stalin by doctrinal interpretations, in the center of which he placed Lenin's internationalism, his democracy, and his capacity to admit error—all irrelevant to the character of the Bolshevik. Fundamentally, the former non-Bolshevik despised the Bolshevik type, in which he saw only the bureaucratic flunky who had abdicated his right to think. He refused to acknowledge that Leninism had embodied itself once and for all in this very flunky, and that apart from him it had no reality. Yet to an extent Trotsky did acknowledge it, for more than to the non-Communists he continued to address himself to the minds of men whose nature is that their minds exist at the end of thought.

Granted that Lenin, for all the authoritarianism of his thought and action, did believe in democracy; granted that, for all his conviction of being right, he could acknowledge that the facts had declared him mistaken. Granting all this, the doctrine of Bolshevism is not, as Trotsky contended, changed thereby. It is to life itself, not to doctrine, that the recognition of others and the experience of fallibility belong. "That was the strength of Lenin as revolutionist," says Wolfe, "that, despite his passionate and dogmatic attachment to centralized organization and its rigid control of the masses, he could thrust both into the background whenever the foaming, tumbling, creative and uncontainable life of the million-headed mass in motion made their doctrinaire application dangerous to the party's life." This living intuition of Lenin did not create the Bolshevik type. The Communist was the product of this external formulations, as rigorous as those of any scientist or disciplined artist. Whatever else there was in Lenin was thus doomed to die with him. Out of his tomb was bound to rise Leninism, the doctrine without the living man, from which the dialectical possibility of Bolshevik democracy and Bolshevik doubt had vanished forever. What appeared now was not a different doctrine but the creature of the doctrine, as distinct from its author.[5]

All differences between Lenin and the Communist of today refer back to this difference between an author and his creation. For instance, one who is an authority to himself, as Lenin was in those areas of theory and party work into which Marx and Engels had not penetrated, is never, no matter how authoritarian he be, comparable to the one who takes the dead for his authority. The living man convinced of his own rightness was never to that degree excluded from perception and communication as is his invention, the man who knows. To restore Lenin's bolshevism in the face of Lenin's creature, Trotsky would have had to do nothing less than bring Lenin himself back to life. For without Lenin, party democracy and the admission of error were to the Bolshevik but alien thoughts—as Stalin said, thoughts of a Menshevik.

[4] After writing the above, I came across the following description of the Chinese Communist Party today; it indicates the degree to which Stalinism means the reproduction of the Leninist type regardless of program: "The bureaucracy for the entire country is developed in advance, in isolation, almost in laboratory fashion. * * * It deals with social groupings as a separate entity and by retention of its social independence determines the relationship between classes on the basis of the needs of its own rule. Thus Liu informs us that the policy for today is construction of a new capitalism but that the party retains the liberty to move against this new capitalism and its economic classes when it decides the time has come for socialism. It is the party—or more accurately the state-party-army—which is the bearer of historic change, no matter in whose name it acts at the moment." (The New International, February 1949.)

[5] Georges Sorel, in his Reflections on Violence quotes Bergson's observation that "the master insofar as he formulates, develops, translates into abstract ideas what he brings is already in a way his own disciple." He is not identical with the disciple, but he does resemble him by way of the doctrine.

The American Creed

EXTENSION OF REMARKS
OF

HON. JOHN R. WALSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. WALSH. Mr. Speaker, in these critical times when our youth is being subjected to attacks from those within our country that believe in false philosophies and foreign isms, I am proud to announce to this House that the Anderson College, of Anderson, Ind., is encouraging its students in the American way of democracy, and recently I had sent to me two manuscripts from recent history examinations given by Val Clear, one of the professors of that school, and these manuscripts very ably presented the views of two of the students on the subject of the American creed.

I would like for the entire House membership to have the opportunity to read them, and I am now inserting them in the RECORD:

THE AMERICAN CREED

(By Fred Strachel)

(A) A creed (credo), Webster: "is a brief presentation of essential doctrine."

My definition of the American creed, in the first person, June 2, 1949, is:

I believe that all men are created equal (the right to social status). I believe in "certain inalienable rights, among them life, liberty, and the pursuit of happiness."[1] I believe in the four great freedoms emphasized by President Roosevelt,[2] namely, "freedom of speech and expression, freedom of worship, freedom from want, and freedom from fear." Further, I believe in the 10 (at present) basic rights of man[3] (a right being that claim to a condition necessary for an individual to live at his best). These 10 basic rights are: The right (1) to health, (2) to education, (3) to freedom (of opinion, speech, religion, etc.), (4) to work and a living wage, (5) to security, (6) to love and a home, (7) to play and leisure, (8) to share in the control of the conditions of life, (9) to share in the cultural and spiritual heritage of the race, including art, literature, and religion (10) to be well born (access to the best hospital at birth to be born well). I believe in the "sanctity of the human personality."[4] I believe that one is born morally obligated to his society; that is, the responsibility to good citizenship. And I believe that a democratic form of government, a democracy,[5] is the best type of governing instrument through which my definition of the American creed can be justly administered, served, and preserved. [I believe in the several rights specifically enumerated in the three great American documents, the Declaration of Independence, the Constitution of the United States, and the Bill of Rights.]

The American creed means several things to different peoples and groups of peoples. To some this creed symbolizes the land of liberty, equality, and freedom; or it might symbolize to some the land of Christianity, or democracy, or the way of free enterprise or "rugged individualism." To others it may symbolize freedom from tyranny; to some carefreeness. The above-mentioned expressions of the American creed are really pieces of the creed itself. This creed means different things to different ages. Dr. G. Myrdal says that this creed, really our ideals, changes slowly but constantly and that we are leaving the period of rugged individualism for the present era of the other fellow's rights. To him, the creed is a culmination of the three above-mentioned American documents plus Wilson's Fourteen Points and Roosevelt's "four freedoms." To this I would add President Truman's Point Four in his State of the Union message.

The American creed is more than any one of the small pieces of liberty, free speech, or equality mentioned above. These expressions by themselves are ends in themselves. The American creed is a mixture of all of this, plus, but only as a standard or a means to reach an end. The American creed is a doctrine, a standard, a criteria. It is the rules by which we play the game of life within these physical boundaries on this hemisphere. The temporary goal might be peace, happy and cooperative living, progress, or all three, and the best way to attain this goal for the benefit of the majority of us is to obey the rules. As we grow, these rules might be changed or corrected or enlarged upon, but these rules are the American creed.

(B) The American creed changes, has changed. Hector St. John De Crevecceur in a letter, on "What Is an American"[6] (written about 1782), considers just an occupant of this country an American if in feeling he is thankful to God and appreciable to his fellow men for being a freeman, for being part of the Government, for religious tolerance (surprise) for tax-free land, and especially for the lack of the distinctness common in Europe between tenant and lord, debtor and landlord, citizen and squire. He considered the racial mixture advantageous and good, already a melting down.

(a) Today, the recently arrived from abroad are sometimes ignored or looked down upon. This is a suspicious psychosis of which we in a complex society suffer. The chief cause might be as explained by David Lilienthal in his book TVA, Democracy on the March, as the resistance to change in the status quo. This change might occur at home and/or abroad. He would have us learn that the development of resources in Russia or in Tennessee are advantageous to all of us and that these studied changes of the status quo do not mean the end of democracy and the beginning of bureaucracy. He says that we are plagued with fear which enhances our ability to live freely. We are choking ourselves. This fear gives way to suspicions which exist because we fear an end to a limited interpretation of democracy or freedom that we hold, and to defend this limited interpretation, we must expose and accuse these killers of * * *.

(b) Democracy in itself is not the American creed. It is a phase of the American

[1] Declaration of Independence.

[2] From President Roosevelt's annual message to Congress, January 6, 1941.

[3] Ethics for Today: Titus.

[4] "America" (a speech): Dorothy Thompson.

[5] Webster: Democracy is "government by the people."

[6] The American Tradition: Wright and Swedenberg.

creed—and that which has to do with system through which we express our hopes and ideals. In line with democracy or governmental practices, we have since 1860 seen several negativisms (crimes) take place. We have seen: (1) the Constitution ignored, (2) allegiance between vested or special interests and Congress, (3) autocratic party organization control—(undemocratic in structure and corrupt in practice), (4) buying votes, (5) organizations based on prejudice arise like the Ku Klux Klan, (6) inferior forms of government.[7] Most of the above-mentioned are undemocratic, therefore, un-American or un-American creedal. And some of this is in evidence today.

(c) Very evident in our country today is the ignoring of this creed by the many. Myrdal points this out as he shows how our laws reflect our ideals but not our practices. Also, like the smell on Noah's Ark is this hypocrisy within the Nation as regards our creed. It is the church, the clubs, our institutions. This is the far distance between our practice and our preaching

But we have a bright side in analyzing the present status of the American creed. With all of its hypocrisy, indifference, and ignorance of this creed has grown from the dream of De Crivecceus to Lincoln's endorsement of inalienable right, Wilson's 14 points, Roosevelt's "four freedoms," and Truman's point four. We have made progress. Titus says that the realization of the 10 basic rights of man mentioned in part A was realized about 1933. Myrdal says, "We're heading more and more into the era of the other fellow's rights." Also Myrdal says as regarding the issues that is most evident of irrelevance between ideal and practice, that "the conquering of the color caste in America is America's innermost desire."[8] He says that consciously all of the Americans realize or are aware of the implications and meanings of the American creed. If this be true, then we of all people are most fortunate. Patience and education might bring the American creed to reality.

Also, in times past we have responded to call of duty in that we: (1) Rebelled in sentiment against those who ignored our Constitution, (2) instituted law and the merit system to foil corruptness, (3) organized a third party to fight party autocracy, (4) safeguarded the voter, (5) and used popular democratic government to deal with corruption.[9]

We have a free press in a respected sense and have our many rights and freedoms. We can preserve and give as a heritage to future millions a real American creed especially by practice, tradition, and experience.

(C) Practical proposals for its implementation:

(a) Let us begin by furthering the Springfield, Mass., plan as demonstrated in a movie.

(b) This must be carried on to high school and college courses specifically dealing with the American creed and practical application. Also the furthering of interest organization as the IRC of Anderson College with its program of the American melting-pot dinner and model United Nations.

(c) We must begin an exchange of students and citizens with the world—the other nations thereof.

(d) We must educate the public—those who are the backlog of this present movie—this via educational movies as "Don't be a sucker," community and educational interest groups, and government policies.

(e) We must begin public planning in a democracy so that we may reap the benefits of earlier efforts—so that we can gain the full and complete benefit from nature. (D. Lilienthal.)

[7] Responsible Citizenship: (Ralph Harlow) edited by Mosher.

[8] An American Dilemma, S. Myrdal.

[9] (Ibid. Mosher.)

(f) We must practice the economic Golden Rule (D. Lilienthal, Roosevelt, and Churchill in Atlantic Charter.)

(g) We must get a world outlook. The Constitution says "all men"; Lincoln said "shall not perish from the earth"; Roosevelt said "all peoples, everywhere." Willkie coined it: "One world." Right, we are all one people. This means the sincere consideration, planning for universal government.

(h) We must practice positive democracy.[10] He says we must originate theory once again from wherein practice comes.

(i) And last, we must realize certain fundamentals: (a) Liberty is obedience to law, (b) the free are of all peoples most bond (notes); (c) our ideals must become forceful laws that we are as conscious of as the stop signs we do stop at. (In Anderson.)

THE AMERICAN CREED

(By Marcus H. Morgan)

I. The American creed is essentially a belief in the dignity of a man as a man that transcends all barriers of race, creed, or color. Its fundamental tenets are liberty and equality. It is a concept that holds that every man possesses by right of birth certain inalienable rights such as life, liberty, and the pursuit of happiness. It holds that the individual does not exist for the state but rather the state exists for the individual. It maintains that the "gains of the commonwealth are essentially mass gains" and that distribution of these gains should be on an equitable basis. The American Creed is a humanistic development derived from three roots, namely: (1) The age of enlightenment from Europe; (2) English law, and (3) Christianity. Thomas Jefferson enunciated the main norms of the American creed in the Declaration of Independence. "We hold these truths to be self evident; that all men are created equal; that they are endowed by their Creator with certain inalienable rights, life, liberty, and the pursuit of happiness. Abraham Lincoln in his immortal Gettysburg Address sounded the organ tones of the American creed when he said "Fourscore and seven years ago our fathers brought forth on this Continent a new Nation; conceived in liberty and dedicated to the proposition that all men are created equal. America then is a dream unfilled. "It is a dream of equality of opportunity, of privilege, and property widely distributed; a dream of a place where class is abolished and where a man is a man, a place where race and birth and color are transcended by the fact of a common brotherhood, a place where all our gifts and resources are held not for ourselves but as instruments of service for the betterment of humanity".

II. As Gunnar Myrdal aptly points out, we Americans have a unique habit of inserting our ideals into law that we never put into practice. Thus America is somewhat of a split personality struggling within itself. We have had considerably trouble with the little word "all". Since the founding of our Nation this little word has been sensitive to the American conscience. "All men are created equal," "With liberty and justice for all," the foregoing statements have never been implemented in our national life. Perhaps one of the basic reasons for our not giving equality to "all" is our fundamental doubt of the proposition that "All men are created equal." Intrinsically all men are not created equal for there are diversities in endowment. I believe rather that democracy should be founded on the belief that all men should have equality of opportunity "Equality of opportunity is the birthright of every man, and society can give that." I should like to briefly discuss with constructive criticism some shortcoming of the American creed as it is now being practiced.

[10] Positive Democracy: Feibleman.

1. We preach democracy, freedom, and equality for all, yet we refuse to extend it to those of another color. Without reservation we discriminate, segregate, and practice Jim Crowism against those whose skin happens to be pigmented. This is rather pagan and rude I think. Why should we judge a man by the pigmentation of his skin? That is not the most essential thing. Rather a man's character and ability should be the criterion upon which judgment if at all should be based. The evidence of science overwhelmingly attests the fact that the differences between classes and races are not biological but cultural. There are no permanently inferior races or classes; rather there are only undeveloped races and classes. If we make democracy to mean the rule of the white, we abandon true democracy and adopt a brutal and inhuman snobocracy. Unless democracy is extended to all, we cannot hold it for anybody. We are hooked by this little word "all." It will not let our conscience rest until we can say, "all men" without reservations and with complete abandon.

2. We have elevated property rights above personal rights. This is contradictory to the American creed. It seems to me that we have, in a figurative sense, put the "cart before the horse." I believe that wealth and privilege should be widely distributed. I am not opposed to property and privilege nor do I wish to be labeled a Red or a Socialist because of my belief As a Christian I believe that everybody should share in the distribution of wealth and privilege.

E. Stanley Jones says, "Wealth and privilege are like manure: concentrate it in one pile and it is an evil smelling mass, but distribute it across the fields and it results in abundant harvests." Only as the little word "all" is applied pertaining to wealth and privilege will the American dream ever be fully realized.

3. We have hesitated to extend freedom and equality to peoples beyond our borders. We are endeavoring to practice pagan democracy at home and sanction pagan imperialism abroad. We are harboring the deluded belief that the white races are superior to the colored races. Democracy and imperialism cannot exist side by side without canceling out each other. The American Creed was not intended to be applied exclusively to America but rather was intended by God, I believe, to be a little leaven that would leaven the whole lump. Thus I concur with E. Stanley Jones in the belief that America is God's experimental ground where he has gathered segments of all races and nationalities under one government to test corporate living. If we succeed here then the whole world can lift up its head with hope for we are indeed the world's proving ground. I could go on and on but time is running out, so I will sum up this question by saying democracy must extend to every man equal opportunity to education, to meaningful employment, to culture, to political rights and power, to leisure, to adequate housing, to know and achieve the highest. Society gives the access or opportunity; the man develops the achievement. The America that is the lover of liberty and the believer in democracy I love dearly. This America has under God my complete allegiance and loyalty. On the contrary the pagan democracy that expounds the philosophy, "With liberty and justice for all white people," does not have my loyalty. It is alien to me. It is comparable to any other totalitarian ideology. It must be crucified and the true democracy as enunciated in the American Creed be made to live and grow abundantly.

III. In approaching practical proposals for the implementation of the American Creed I should like to discuss briefly four proposals.

1. Race prejudice is not inherent, it is socially imposed. Thus, if prejudice can be taught and assimilated, so also can race appreciation be put into our public school system. I feel if a program of this nature

were adopted that race prejudice could be eliminated in one generation.

2. The second solution is the Christian faith. Its teachings are crystal-clear on the race proposition as well as how to implement the little word "all." The church can be a formidable force in implementing the American Creed by practicing the principles of Christ. We would be well along the road toward ridding ourselves of prejudice, segregation, and discrimination if the so-called Christian folk would practice what they preach and testify.

3. The third solution is in the findings of modern science. Here science has given conclusive proof that there are no permanently inferior or superior races; there are only undeveloped and developed races. Science, both theoretical and practical, is corroborating what the Christian faith has always taught; the soul, brain, and body of humanity is basically one, modified here and there by culture.

4. The final solution is that of democracy. Democracy is essentially a belief in the possibilities of a man as a man. We must unconditionally surrender to the statement of the pledge to the flag which says, "One nation, indivisible, with liberty and justice for all." E pluribus unum. Out of the many one.

John J. Delaney

MEMORIAL ADDRESS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1949

On the life, character, and public service of Hon. JOHN J. DELANEY, late a Representative from the State of New York

Mr. KLEIN. Mr. Speaker, there is no sadder duty and privilege than that of attempting to put into barren words the emotion of loss and sorrow occasioned by the passing of one of our beloved colleagues. The task is particularly difficult when we are called upon to pronounce a threnody for a man so alive with personal affection and lovable characteristics as JOHN J. DELANEY.

JACK DELANEY'S ready wit, his zest for living, his personal exemplification of the virtues of his faith, all endeared him to everyone who came under the benign influence of his personality.

In his capacity as a member of the Committee on Rules he faithfully served his chairman, his President, his party, and his congressional district. He was a tower of strength to the administration in the crucial legislative struggles for progressive law-making, and was always able to ease tension with a quip.

Among the endearing traits of this departed colleague was his kindness to new Members of the House, and especially to the new members of the New York delegation. He was always ready with pungent advice and wise counsel in any situation, and his guidance was leavened by his salty humor and earthy kindness.

"JACK" DELANEY is going to be missed most sorely.

A token of the universal affection felt for this great gentleman is the overwhelming vote by which he had most recently been chosen as the Representative of the Seventh Congressional District; his sad and untimely death occurred before he could take his seat in the Eighty-first Congress.

JOHN J. DELANEY will not soon be forgotten, Mr. Speaker; his spirit will linger with us while our memory lasts.

Danger of Nazi Resurgence

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 6, 1949

Mr. JAVITS. Mr. Speaker, the appended editorial from the Christian Science Monitor of July 11, 1949, presents a balanced point of view on the situation in Germany. It urges us not to forget the aggressions of World Wars I and II, and implies that we must maintain our perspective in the current ideological struggle, recognizing that the totalitarianisms of the right and of the left are natural allies in any struggle against free institutions:

ONE VILLAIN

Most people prefer to have only one villain at a time. For the Western World at present the villain is clearly communism. Hence comes the visible tendency to whitewash or at least minimize the villainies of fascism.

Multiplied items of news from Germany appear to fall on largely indifferent American ears: Non-Nazi officials being dismissed in increasing numbers and replaced by former Nazis; picayune sentences given by German courts to men and women proved guilty of atrocious crimes against humanity.

Typical of this last phenomenon are the sentences—18 months to 5 years—given to three doctors found guilty of slaughtering inmates of the Grafeneck Insane Asylum during the Nazi rule—in one case murdering more than 1,000 persons. The peculiar horror of such crimes lies in the intellectual arrogance and moral idiocy which convinced their perpetrators they had every right to kill as they saw fit. This is no mere brutality; it is the rotten fruit of a highly developed, highly perverted culture.

Vindictiveness and vengeance are not the answer to such horror, but neither is a loose and lazy attitude of "forgive and forget." The almost certain general amnesty which such offenders will have in another year or two can leave them free to practice again and to poison further the springs of German life. The healing that unhappy nation so sorely needs demands both compassionate insight and an unflinching confrontation of evil.

For that purpose evil must be seen as something more and something less than a system. It is not to be played down when it appears as yesterday's fascism, merely that it may be played up when it appears as today's communism—any more than it is to be excused and ignored when it appears in the democratic system.

There is, in an exact sense, only one villain—the dark ignorance of man's spiritual estate as the image and likeness of God, an ignorance from which springs every denial of freedom and brotherhood. When human justice copies the divine, it does not license this villain to roam at large, but holds it in check while education lets in that light in which is no darkness at all.

Postal Reclassification Bill

REMARKS
OF
HON. JOHN R. WALSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. WALSH. Mr. Speaker, I have today placed a petition on the Speaker's desk, under the provisions of clause 4, rule XXVII, for the purpose of discharging the House Committee on Post Office and Civil Service from further consideration of H. R. 4495, better known as the postal reclassification bill. I cordially invite my colleagues on both sides of the aisle to join me by affixing their signatures to my discharge petition.

On June 20 I was given the courtesy of the floor to make an appeal for early hearings on postal legislation before the House Committee on Post Office and Civil Service. The distinguished chairman of that committee did schedule public hearings shortly thereafter. However, since under the terms of the Reorganization Act of 1946 the Congress should adjourn at the end of July, I believe something must be done to accelerate the legislation under discussion. I know the committee has a great volume of legislation before it; solely in the interest of expediting H. R. 4495, I have placed my discharge petition before you, Mr. Speaker.

I want to say further, Mr. Speaker, that I have been informed that hearings have been in progress before the House Committee on Post Office and Civil Service relative to postal salary and reclassification legislation since June 28. These hearings are being held before a subcommittee of the full committee. To date, I am told, no representative of any employee group has been called upon to testify for or against the pending bills. Moreover, there is no indication given these employee representatives as to when they might expect to be called before the subcommittee. Almost 7 months have elapsed since this session of the Eighty-first Congress convened. Now in the closing days of the session hearings are finally scheduled, but I am fearful lest the sands of time will run out before the employees are permitted to state their case. I know that all members of this body want fair play for our postal people, and so it appears to me that the best method of granting equitable treatment to the men and women in the postal service, at this late day of this Congress, is to bring H. R. 4495 before us. Give every member an opportunity to express himself or herself by vote.

Very briefly to outline the provisions of H. R. 4495, I might say that it contains six sections, each of which are modest and reasonable requests on the part of the employees. Section 1 of the bill provides for 26 days annual leave and 15 days sick leave. Enactment of this section will merely bring about an equalization of annual and sick leave, since the postal employees are presently about the only group in Government not granted

26 days' vacation time and 15 days sick leave.

Section 2 of the measure is designed to grant full credit for all past services for longevity awards. The maximum allowed any employee under the provisions of this section would be four steps of $100 each, the last payment being made at the completion of 22 years of meritorious service.

Section 3 would completely eliminate the present four lowest salary grades of Public Law 134. In effect, the starting wage in the postal service would then become $2,950 per annum. This is a most reasonable request, as I am certain that all of us appreciate the fact that with present-day high prices it is almost impossible to maintain a home and a family on anything less than $3,000 per year. I might also add that a majority of the postal employees in the low salary grades are honorably discharged veterans of the military. Certainly, we owe them an opportunity to maintain themselves and their families on the same level with their neighbors employed by private industry.

Section 4 of H. R. 4495 would grant all field service postal employees additional compensation at the rate of $150 per annum. Again, I am of the opinion that our postal people are being most modest in their ambitions. It will be recalled that last week this House took action on a bill that had reference to the compensation paid to Cabinet members and other top officials in Government. I voted for that bill, because I thought it was a good bill. If we are to retain skilled men and women in Government, and more important, if we are to attract competent personnel, adequate wages must be paid them—whether we are engaging the services of a Cabinet officer or an employee in the lowest pay grade.

Section 5 of the bill would grant a $100 uniform allowance for those employees to be designated by the Postmaster General. There is ample precedent for this type of legislation, as it is my understanding that our letter carriers and other uniformed personnel in the Post Office Department are the only employees, at least one of the very few groups of employees, in Government required to furnish a distinctive uniform at their own expense.

The last provision of H. R. 4495—section 6—would eliminate the postal service efficiency rating system. The present system is costly and its elimination should revert considerable savings to the Post Office Department. The present system is cumbersome and unworkable; moreover, the employees advise me that it is the greatest detriment to morale because it is basically a demerit system, with little or no provision for the award of merits.

Mr. Speaker, H. R. 4495 should be enacted before this session of the Congress finishes its business. The bill is just; it is reasonable. There must of course be some consideration of the cost of the measure. It is estimated that the bill would cost approximately $180,000,000. When we consider the great good the bill will do for our faithful and efficient postal people, that sum hardly seems unreasonable.

The Pump-Priming Record—No End to Spending

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. SHORT. Mr. Speaker, it is absurd to think that we can spend our way into prosperity.

Likewise it is utter folly to ignore an individual's or a nation's debt by baldly and stupidly stating that there is no need to worry because "we owe it to ourselves."

Yet, Mr. Speaker, this economic nonsense has been preached to the American people under both the New Deal and the Fair Deal. Unfortunately, too many of our people have fallen for this false philosophy.

Under leave to extend my remarks, I include the following editorial which appeared in last night's edition of the Washington Evening Star.

THE PUMP-PRIMING RECORD

Now that President Truman, in his economic report to Congress, has suggested that we are in for a period of deficit financing and that such financing will help to check and reverse our current recession, it is interesting—and perhaps instructive—to look back into the 1930's when the Federal Government resorted to a similar pump-priming policy to get the country out of the depression that followed the crash in 1929.

In 1929, our national income totaled $87,400,000,000 and only 1,550,000 Americans were unemployed. Thereafter, our economy skidded downhill very fast. By 1933, when the New Deal first began, the situation was desperate, and it was not unnatural that the Federal Government started to spend much more than it took in. Actually, however, this deficit financing, or pump priming, did not solve the unemployment problem. The following table—showing the year-by-year deficits in round numbers, along with the total out of work—illustrates the point:

	Deficit	Unemployed
1933	$3,063,000,000	12,830,000
1934	3,989,000,000	11,340,000
1935	3,364,000,000	10,610,000
1936	4,829,000,000	9,030,000
1937	2,880,000,000	7,700,000
1938	1,242,000,000	10,390,000
1939	3,920,000,000	9,480,000

During the same period, national income failed to get back anywhere near the 1929 total of 87.4 billion dollars. In 1933, it stood at 39.6 billions; in 1934, at 48.6; in 1935, at 56.8; in 1936, at 64.7; in 1937, at 73.6; in 1938, at 67.4, and in 1939, at 72.5 billions. Of course, had there been no deficit financing during the thirties, the income and employment figures might have been much worse. But the fact that they were not better seems to be proof enough that pump-priming has very decided limitations as a fiscal device designed to create employment, increase production and make the economy generally prosperous.

To be sure, the Second World War had the effect of a tremendous pump-priming operation primarily responsible for the fact that our national income in 1949 is around 225 billion dollars, as against 87.4 in 1929, and that 10,000,000 more Americans are in jobs now. But that is hardly an argument in favor of unbalanced budgets. War is one thing, and peace another, and the record of the 1930's offers at least the suggestion that deficit financing is likely to perform as few miracles at this stage as it did then. And in those days, we must remember, we did not have the gigantic public debt that weights so heavily on all of us today.

Mr. Speaker, under further leave to extend my remarks, I include a second editorial which appeared in today's Washington Daily News:

NO END TO SPENDING

Mr. Truman spelled it out last night and the un-good news is that we're in for a new peacetime era of red-ink financing by the Federal Government.

It's not because we're in a depression but because we've got to "follow the right course" to keep whatever it is from becoming a depression. And what is that "right course"? Why, it's just to keep on spending.

In fact, it would be a "great blunder" to make drastic cuts in Government expenditures now—"it's just the thing you do not do if you want to help the economy expand."

So Mr. Truman thinks a $42,000,000,000 budget (with a current deficit of $1,800,000,000) is the least we can get by with. He wishes businessmen would invest more, to help along full production and employment—and to that end he doesn't want to increase taxes now. But meanwhile the Government "must expand programs of social security, education, health, and housing."

"Men of little vision" and "selfish interests" think that is wasting money but no, says Mr. Truman, it's an "investment in the future of America."

So it appears solvency will have to wait—even though a lot of people seem to think a sound, solvent American economy is a good investment, too.

Unemployment in Connecticut

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. SADLAK. Mr. Speaker, the weekly release prepared by the research and statistics division of the employment security division of the department of labor of the State of Connecticut released today, and an excerpt from the Hartford (Conn.) Courant of July 12 written by Keith Schonrock entitled, "$30,048,567 Paid in Year to Jobless," should be of much interest to the Members of this House.

This latest release for July 14 indicates a sharp increase in unemployment-insurance benefits in Connecticut from 83,607 to 86,434. This release makes no comment upon the number who have exhausted their benefits but the figure in the release of July 8 indicated that the

total of those no longer eligible to file, though unemployed, increased to 19,741 since January 1, 1949.

I ask that both, the latest release and the newspaper excerpt be included with this statement and I desire to make one comment as to what would be a normal opportunity for jobs. After reading the latest report on employment and unemployment in California, prepared by the research and statistics staff of the department of employment of the State of California, I noted that the greatest single influence in reducing their unemployment is the seasonal increase in farm jobs at this time of the year, thus maintaining that many who work in nonagricultural fields during part of the year accepted farm work. Unemployment, however, has remained relatively high in the metropolitan centers of that State.

In my district, the State of Connecticut, unfortunately, the number of nonagricultural employees who could find employment on potato farms, tobacco farms, truck gardens, and other agricultural jobs has been very small due to the unusual dry weather and continued drought that Connecticut and other New England States are experiencing.

[State Labor Department, Hartford, Conn., July 13, 1949. Release for afternoon papers, Thursday, July 14, 1949]

After leveling off for 3 weeks, the number of jobless claimants for unemployment insurance benefits in Connecticut rose sharply to 86,434 during the week of July 4–9 as compared with 83,607 for the previous week. The rise was due to widespread vacation shut-downs throughout the State in which those not entitled to vacation pay filed unemployment claims. A year ago the claims load was 36,090. Women claimants numbered 32,213 (37.3 percent) as compared with 29,551 (35.3 percent) for the previous week. Veterans filing under the servicemen's readjustment law totaled 16,148 as compared with 16,649 for the previous week.

Initial claims, which start new periods of unemployment, rose steeply to 16,681 from 13,025 for the previous week with the increase attributed to vacation shut-downs.

Lack of work lay-offs were obscured by the numerous vacation shut-downs.

Although in Bridgeport the number of claimants dropped slightly, this area still led the State with 16,020 followed by New Haven 10,489, Waterbury 9,628, Hartford 9,153, New Britain 6,294, Meriden 5,736, and Bristol 4,239. These seven offices made up 71 percent of the number of jobless claimants in Connecticut. The other 12 offices were each under 3,200.

[From the Hartford (Conn.) Courant of July 12, 1949]

THIRTY MILLION FORTY-EIGHT THOUSAND FIVE HUNDRED AND SIXTY-SEVEN DOLLARS PAID IN YEAR TO JOBLESS—HIGHEST SINCE 1938; TAX ON EMPLOYERS TO BE DOUBLED JANUARY 1

(By Keith Schonrock)

During the year that ended on June 30, a total of $30,048,567 was paid out in State unemployment compensation benefits to a total of 124,500 persons. This is the highest amount paid out in any year since the program was started in 1938. It is more than one-third of the total paid out in benefits during all the years of the program.

Because of the large volume of jobless payments, which are expected to be necessary for many more months, Howard E. Hausman, executive director of the State unemployment compensation division, announced Monday that the tax on employers will be doubled as of next January 1.

AUTOMATICALLY RISES

Mr. Hausman said Monday there is no danger of the State unemployment compensation fund being depleted, because the law provides that whenever the fund decreases the tax on employers automatically rises.

The tax on employers is based on total pay roll. It is a graduated levy, however, different for each employer, because credits are given for small amounts of labor turnover. Employees, who benefit from the fund whenever they are out of work, pay nothing into the fund. It is financed entirely by the tax on employers.

In addition to the 124,500 persons who received unemployment compensation benefits during the period, 10,170 veterans also received $7,143,454 in jobless benefits under the servicemen's readjustment allowance program. This veterans' program is financed exclusively by the Federal Government and had nothing to do with the State compensation program.

Under the terms of the State program persons out of work may collect a maximum of $24 a week for a maximum of 26 weeks. The Federal program for veterans allows $20 checks for 52 weeks. This program is due to expire on July 25.

The $30,000,000 paid out in unemployment compensation checks during the year that ended June 30 is the highest ever paid out in a single 12-months period. The previous high was in 1945–46 when the total payment was $27,293,641. This period was just after the end of the war and in the middle of the postwar readjustment period.

1944 TOTAL LOWEST

Lowest amount of compensation paid out in a single year was in the period that ended June 30, 1944. In that year only $753,218 was paid out. This was the period of the State's greatest manpower shortage and the midst of the peak wartime production boom.

The balance of the unemployment compensation fund as of last June 30 was $174,224,913.

Officials of the compensation division said Monday that the heavy drain on the compensation fund during the past several months is due to the large increases in unemployment and temporary layoffs. They are looking for the present situation to continue a while longer and for that reason the tax on employers has been ordered doubled the first of next year.

The 124,000 persons who collected the $30,000,000 in jobless pay during the past 12 months were not collecting it all at the same time.

Some collected weekly benefit checks only for a short time before they were able to get other jobs while many exhausted their maximum period of benefits which was 22 weeks. The period was lengthened to 26 weeks by the legislature and became effective on July 1.

Irish Partition Coming to an End

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. MILLER of California. Mr. Speaker, recently Mr. Frank Aiken, outstanding member of the legal profession in Ireland, presented a very considered discussion of the Irish border question at a gathering in Camlough, County Armagh, one of the six counties of Northern Ireland. In his clear, reasoned manner, Mr. Aiken sets forth the problem of partition and asserts with confidence that sooner or later this travesty on justice and freedom must and will come to an end.

Because the enforced partition of Ireland has become a stumbling block in the path of Irish international affairs, it likewise is a matter of grave concern to us in the United States. It is solely due to the continuance of the division of Ireland that the Republic of Ireland has not seen fit to join with other European nations in signing the Atlantic Pact. Ireland, the greatest bulwark against communism, thus becomes an outsider in the cold war against communism. Ireland, the northern gateway on the approaches to Europe, must continue to be isolated from the other western nations of Europe due to the shortsighted policy of Great Britain in continuing the separation of northeastern Ireland from the rest of the country.

Repeatedly Irish statesmen have been the leaders in promoting the Marshall plan in Europe, cooperating fully with our own American administrators, and frequently suggesting and advocating solutions to the many problems that have developed. That same Irish leadership and advice could prove of inestimable value in the working out of the problems involved in the Atlantic Pact, but the partition of Ireland by the British prevents Ireland playing a part. Likewise in the United Nations Ireland is denied a voice, but here it is the opposition of the Russians that bars the way. It is time that Great Britain realized that they are but playing a Russian game in maintaining the border in Ireland, a border that cannot be justified on any sound legalistic basis, on any historic basis, or on any basis whatsoever. That this is so, is very succinctly set forth in the address by Mr. Frank Aiken at Camlough and I therefore desire to include his remarks in this statement.

Addressing the meeting at Camlough, Mr. Aiken said:

It gives me great pleasure to report to my old comrades and neighbors that the disastrous division of 1921, caused by the partition and King clauses in the treaty, has come to an end. The way is open to all Nationalists north and south to concentrate on the sole remaining cause of quarrel between ourselves and Great Britain and for a sustained effort to make effective the second article of the constitution:

"The national territory consists of the whole island of Ireland, its islands, and the territorial seas."

No one who appreciates the situation will promise a speedy end to partition. But no one who realizes its unnatural and undemocratic nature and the abhorrence and resentment with which it is viewed by the Irish people at home, and by all true democrats abroad, can have any doubt that it will come to an end. And the sooner the better for the happiness and prosperity of both parts of Ireland.

Partition was the child of unscrupulous party politics in Britain; it is today a tawdry remnant of the vicious and discredited power politics of the Lloyd George era. The Tories of 1913 did not hesitate to raise a revolt against the British Crown, and did not hesitate to accept German arms in order to de-

stroy their rivals, the Liberal Government, by defeating home rule. Lloyd George imposed partition by act of the British Parliament in 1920 and confirmed it in the treaty, justifying it on strategic grounds. His letter to Sir Edward Carson of May 29, 1916, made his attitude clear. "Ulster" was only a pawn in his imperialistic game.

"My dear Carson," he wrote, "we must make it clear that at the end of the provisional period Ulster does not, whether she wills it or not, merge in the rest of Ireland."

DENY LIBERTY

The British Government of today denounce power politics and preach throughout the world, particularly in eastern Europe, the principles of self-determination and individual liberty which they deny by force of arms in the six northeastern counties of Ireland.

There are greater minorities of Greeks, of Poles, of Rumanians, of Czechoslovakians, of Bulgarians, of Yugoslavs, and of Hungarians who desire union with Russia than there are Irishmen who desire union with Britain. Apart from countries in eastern Europe, there are others in which a greater minority of the population desire union with Russia than there are Irishmen who desire union with Britain. There are few Britishers who support those who stand for unity with Russia in these countries or who would support Russia's desire to dominate them because of the pro-Russians in the whole or portion of any of these countries.

All parties in England supported the Greek effort to crush the pro-Russian Government in Greece.

As far as we Irishmen are concerned we shall continue until victory comes to assert the right for our own country which Britain denies to us, but which she advocates for Greeks and Czechs and Hungarians: The right to have a democratically elected government in sole and exclusive control of the affairs of all the people of the nation; the right to be free from foreign aggression and from a foreign imposed government.

The freedom of our island from British occupation, whether for financial or strategic reasons, is as dear to us as is freedom to the British people from French or German or Russian occupation. The British may fool themselves into believing that the result of these elections, in a carefully selected portion of our country and based on gerrymandered constituencies and an out-of-date register, gives them a moral right to continue the occupation of the six counties, but she can't fool the Irish people into believing it. And with every day that passes she can fool fewer people in the United States and the Commonwealth into believing it. And with every day that passes the British people themselves, the ordinary folk who have to do the work and who have to do the fighting, come closer to the final realization that their government by supporting partition in Ireland is strengthening the antidemocratic forces in Europe and sapping the morale of those whom Britain, in her own interests, desires to resist these forces.

WILL BE VICTORIOUS

Partition is going to come to an end. The will of the vast majority of the Irish people and of the Irish race abroad to end it will be victorious sooner or later. He is only a very short-sighted Irishman, orange or green, who will not help to bring it to an end quickly.

Old prejudices fostered by Britain are a poor basis for policy in the modern world. If either part of the country is to develop to the limit of its mental powers and its economic resources, the barriers to trade in ideas as well as in goods must be thrown down.

Irishmen of all classes and creeds have more in common than in difference, and more in common with each other than with any other people. To others we are naturally just all Irish, north or south, whose interests must be subordinated to those of their own people, the last depressed area to be cared for in peace, the first expendable material in war. Britain's idea of her own interests brought about the betrayal of one section of Irishmen who fought for the freedom of small nations; her future estimate may lead her to change her mind. It is natural that Britain should seek the interests of her own people first. All sensible Irishmen in the northeast should be wise enough to recognize that although Britain may be generous in prosperity or when she wants something in return, the only sure reliance in adversity is their brother Irishmen. And he would be a bold man who would prophecy that nothing but prosperity and peace lies ahead for any part of the world.

Valley of the Dammed

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. LEMKE. Mr. Speaker, Governments are instituted to protect people, not to deprive them of their homes in violation of the Constitution. Under the Constitution, private property can be taken for public use by condemnation proceedings but not without just compensation. To obtain property by threats and bulldozing is not giving just compensation. In fact, it is a violation of the intent of the framers of the Constitution. It is extortion. It is obtaining property under false pretenses—the pretense that the Government wishes to drive a hard bargain.

Those guilty of threats should be brought to justice. It matters not whether they be the real estate division of the Army Engineer Corps or any other department of Government. The time has come that we make all governmental agencies humane and honest when dealing with the public.

In my remarks I include part 9 of Bigelow Neal's article, Valley of the Dammed, published in the McLean County (N. Dak.) Independent. This part, the same as the other eight parts of this article, is copyrighted.

Here is part 9:

VALLEY OF THE DAMMED

(By Bigelow Neal)

"Thereupon he became entitled to have the just compensation safeguarded by the fifth amendment of the Constitution; that is the value of the land taken, and the damages inflicted by the taking—was a sum as would put him in as good a position pecuniarily as he would have been had his property not been taken." (Unanimous opinion of the Supreme Court of the United States and written by Justice Butler in a case referred to by lawyers as *Campbell* v. *United States* (266 U. S. 368; 45 Supreme Court Reporter 115).

(Part IX)

Last week a combination of circumstances necessitated splitting what should have been one installment into two parts. In continuing this rather sordid portion of my narrative, I am asking permission to review just a little of last week's copy before going on with the new.

It is my contention that practically every option signed by my neighbors was signed because of some form of fear. Herewith I am presenting some of the statements alleged to have been made by officials of the real estate division and which caused or contributed to this fear.

First, drawing from my own experience when the negotiator had made me four offers and finally stopped dead in his tracks at $7,000 and I told him I thought we'd better adjourn our official relationship and meet again in the United States district court—came the following statement:

"Oh well, if you want to fight a case against the Government, in a Government court, I don't suppose there is anything I can do about it."

And then another statement:

"If we get this option signed up all right, I can fix it so that you can rent any part of your land you want."

Next a statement made to Mr. Fred E. Krueger when that gentleman mentioned taking his case to court:

"Try taking it into court and the Government will just clean you up in bunches."

And now a statement made to Mr. H. T. Burns—not by a negotiator but actually—believe it or not—by the Chief of the Real Estate Division in person:

"If you don't sign that option, I'll raise your rent so high it will drive you out of the country!"

Here's another. This taken from court records of statements made under oath by Mr. Lawrence Mahowald. It seemed that Mr. Mahowald owned a dairy business, split into two parts. One was a small farm with a lot of expensive equipment, near Garrison. The other part was land some miles away which he used for pasture and without which he could not operate his dairy business. The negotiator was trying to make him sign an option on the pasture land. I quote from a record in United States District Court numbered Civil 13891.

Mr. Mahowald speaking: "Mister," he said (the negotiator), "if you need that land to keep your operations going, you better sign on the dotted line."

Now turning to another case, we come to the record in Civil No. 13,892. Marie Fix is testifying in her own behalf as the owner of a half section of land. The questions are by her attorney.

Question: "He said what?"

Answer: "He said if I didn't sign those papers the Government would condemn that land and then we wouldn't get no more than what they offered us for it, maybe less."

Now comes Mr. Amos House testifying for his daughter, Maria Fix. Mr. House was present at the time of the conversations between Mrs. Fix and the negotiator.

Answer: "What I heard him say was that if she didn't sign the contract, it would be condemned and she would have to take what the Government offered or less. That is all he said to her."

Turning now to that portion of the same record in which Mr. George Fairbanks was the appellant. Mr. Fairbanks, being allowed to tell his story without interruption, said in part—speaking of his conversation with the negotiator:

"So he said, 'Well, that is the very best I can do.' I says, 'You are a stranger to me. We are strangers. Be honest between man and man. What will you give me for this land?' He said, 'The best I can do is give you what it is appraised for.' And so I says, 'Well, now, if I don't sign this agreement, what then?' And he says, 'Well.' And I says, 'Will my land be condemned and will I be forced to sell?' 'Yes.' 'Well, then in

that case, if I don't sign this agreement, my land will be sold and I will be forced to move even if I want to stay here to live on it?' 'That's it exactly.' I says, 'If I don't sign this, my land will be condemned and I will be forced out of here in 30 or 60 days, is that right?' He says, 'That is right.'

In addition to these there were, I believe, some eight or nine cases prepared for trial in the United States District Court where the appellants claim they were influenced in signing the option by some form of fear.

Again, I should like to introduce a bit of unique testimony. It is unique because no attempt is made to define the fear which deprived a man of his home at a fraction of its value.

For this I am introducing a neighbor of mine, Mr. John Horner, Mr. Horner is unique in himself. Few men, if any, in the community have a reputation so high. Originally, I believe, he came from Austria and the finer points of the English language have always been a difficult matter to him. But the fact remains that for many years, his name has stood as a symbol of generosity and kindness and absolute honesty. If he ever had a quarrel with a neighbor, I never heard of it. Among those who know him, to question Mr. Horner's word would be unthinkable.

Over a year ago I was surprised to learn that Mr. Horner had signed an option surrendering his home and land for $10,000 when he owned a half-section of the finest land on the river bottoms, had just invested some $3,000 in remodeling his barn and had in his granaries, grain raised that year worth more than the amount he was offered and had accepted.

A few days ago I asked him what had happened. His reply was, "I guess I got stuck."

"Yeah," I said, "anybody could see that but how did it happen?"

"Oh, gosh," he said, "I just got scared."

"What did the negotiator say that scared you?"

"Don't remember what he said but he scared me and I signed up."

I wonder if there is a man or woman in America, outside of the Real Estate Division of the Army Engineer Corps, who would say that John Horner received "fair and just treatment?" The single fact that he signed away everything he had for the ridiculous sum is proof that either he clearly was out of his mind or else he was afraid of something.

By no stretch of the imagination is my home worth half of that which John Horner gave away. By going into the United States district court, I got $10,500 for mine. He got $500 less because he was afraid.

Let's go back to that Maria Fix case a moment.

Maria Fix owned a half-section of land. It was all rough land, regular badlands, except that most of the hills were grass-covered. It has some valuable timber, springs that never freeze, shelter that allows cattle to graze out in all but the stormiest weather, and enough coal probably to supply the State of North Dakota a month or so. During the period from 1910 to 1930 that land was valued—for loan purposes—at $15 an acre, not considering the water or coal. The buildings on the land, according to an itemized statement submitted to the court under oath, show a replacement value of $3,239. As a matter of fact the five-room house alone probably would cost more than that. There were fences—3 miles of them valued at $600.

Now I'm not going to total the above values or even ask you to figure in a half-interest in some 2,700 tons of lignite coal, all uncovered but about a week's work.

But the negotiator saw Mrs. Fix one evening and postponed business until the following day because her father was away. On the next day the negotiator returned and went through with a conversation, a part of which I have given you from the court records. At the end of that time, because of some sort of fear, Maria Fix signed away evrything she owned in the world for $2,800.

How about it? Does that sound like "just and fair treatment?"

If it doesn't and you feel that it couldn't be worse, wait until next week. I have just enough of a flair for the dramatic to save my most deadly dope until the last.

One-Hundred-Percent Increase in Tax

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. WEICHEL. Mr. Speaker, the Director of Wildlife has been endeavoring to secure more money for spending. Not through the Committee on Appropriations after proper examination of his expenditures but by having his own legislation introduced. Such legislation is embodied in S. 1076, calling for more money by the Director of Wildlife without the screening of his expenditures by the Committee on Appropriations. This bill calls for an increase of 100 percent in the duck-stamp tax from $1 to $2, which passed the Senate and is now in the House for consideration.

The Director of Wildlife, outside of regular appropriations screened by the Committee on Appropriations, has at his disposal $10,000,000 a year from a 10-percent tax on cartridges, firearms, and hunting equipment for wildlife restoration, including selection, restoration, rehabilitation, and improvement in areas of land or water adaptable as feeding, resting, or breeding places for wildlife. Out of said $10,000,000 he has taken $800,000 annually for administrative purposes, in carrying out the set formula of allocating the balance of the $10,000,000 after he has used the 8 percent for administrative expenditures, and there is presently about $14,000,000 unexpended balance besides the $10,000,000 coming in this year, as indicated to the Committee on Appropriations.

In addition to the said sum of $800,000 spent administratively and not secured through the Appropriations Committee and being spent by the Director, he further has at his disposal approximately $2,000,000 a year by a duck-stamp tax of $1 for the location, ascertainment, acquisition, and administration as to refuges for waterfowl.

Now the Director, through S. 1076, has asked for a 100-percent increase in the tax so that he might have more funds for administrative spending. Outside of administration moneys given to the Director of Wildlife by the Committee on Appropriations the Director has more than a million dollars a year for so-called administration spending from the 10-percent tax on cartridges, firearms, hunting equipment and the duck-stamp tax. The duck-stamp tax has been bringing in about $2,000,000 a year out of which the Director uses 10 percent for administration and in the year 1949 it has brought in $5,000,000 which is 150 percent more than has been previously collected. In spite of the 150 percent increased collection of the tax the Director is asking a 100-percent increase in the duck-stamp tax, all of this when he now has nearly $1,250,000 for administration spending outside of that given to him by the screening of the Committee on Appropriations. And further, the Director is to pay to the States for the same purposes all the moneys which have been collected on the 10-percent tax after his using 8 percent for administration.

It comes with poor grace at a time when the people are saddled with taxes to have a bureau come in and ask for 100-percent increase in taxes, especially when there is no screening by the Committee on Appropriations of nearly $1,250,000 used for so-called administration spending out of nearly $15,000,000 collected annually in the name of preservation of wildlife, and I am including a statement of Edward Hunter of the Denver Post who testified before the committee in the Senate.

STATEMENT OF ED. M. HUNTER, DENVER, COLO.; DENVER POST WILDLIFE COLUMNIST AND DENVER BUSINESSMAN

Mr. HUNTER. I want to make it clear in the beginning that I am not a representative of any organized groups of sportsmen.

In opposing the passage of S. 1076, the bill which proposes to raise the price of duck stamps to $2 and to use the extra money for management and the acquisition of additional wildfowl refuges, I believe I reflect the almost unanimous sentiment of unorganized sportsmen who have not heretofore been heard on this matter.

There are in Colorado alone at least 25,000 of these unorganized duck hunters who buy duck stamps every year. They are not members of any of the sportsmen's organizations which have a total membership in Colorado of not more than three or four thousand. In this respect, I believe Colorado is typical of most of the other States in America.

I base my estimate of the sentiment of these unorganized hunters upon the mail which I receive as a result of my hunting and fishing column in the Denver Post and upon my extensive personal contacts with rank and file hunters and fishermen in all parts of the West.

These rank and file hunters are perfectly willing, even anxious, to approve a $2 duck stamp provided the extra dollar brings them more ducks to shoot. But we oppose the increase if it is to be used for so-called management which up to now has failed to provide adequate shooting for the hunters who pay the bill.

When the duck hunter buys a duck stamp and pays his special taxes on arms, ammunition, and other accessories, he is paying for shooting as distinguished from the mere protection of ducks or other game which cannot be harvested. Upon no other theory can the expense of maintaining the Federal Wildlife Service be saddled on the hunter instead of distributed over the entire national tax structure.

Ducks which cannot be harvested have no economic value. They are not a resource until they are available for shooting purposes. If they cannot be shot, or shot at, they are nothing more than an expensive nuisance. They are in fact so much of a nuisance that Representative LEMKE has introduced a bill, H. R. 4093, to raise the price of duck stamps to $2 so that Wildlife Service can pay farmers for crop damage done by ducks which the hunter is not allowed to shoot.

Likewise the Senate duck-stamp amendment would tax the hunter an extra dollar to expand a system which is fundamentally incapable of producing a sufficient number of shootable ducks for the 2,000,000 or more hunters who buy duck stamps every year. The present system has failed because it does not adequately promote the breeding of ducks.

The vast bulk of the ducks which fly over American shooting grounds, are bred in Canada and Alaska. This means that, as it now operates, the Federal Wildlife Service cannot touch the origin of the biggest part of the duck crop. Their efforts to increase the breeding of ducks are necessarily confined to a very small percentage of the total duck population.

The 200 refuges now possessed by the Service are mainly resting areas as distinguished from breeding areas. Their purpose is to conserve the seed stock of ducks, and to return enough breeders to Canada to produce a shootable crop of new ducks every year.

These refuges now cover 3,250,000 acres, acquired at a cost of $29,500,000, and maintained with duck-stamp money. Beyond the necessary function of preserving an adequate seed stock for return to Canadian breeding grounds, these refuges produce only a relatively small number of shootable ducks. No one has shown the duck hunter how the acquisition of more refuges or an increase in management can produce any worthwhile increase in the annual crop.

Under these circumstances, it seems obvious that the only way to produce more ducks for shooting purposes is to restore and develop additional nesting grounds in Canada where most of our ducks are bred. That such development is practical and successful is proved by the history of Ducks Unlimited. Ducks Unlimited is an organization of American sportsmen, financed by voluntary contributions from American hunters. Since 1938, with full cooperation of the Canadian Government, and with less than $2,000,000, this voluntary organization has restored and developed over 1,000,000 acres of breeding grounds in Canadian provinces, and has lifted the Canadian crop of shootable ducks which migrate over our shooting grounds to more than 110,000,000 in 1948.

Their engineers have surveyed and mapped out projects which could in a short time produce all the ducks we need for shooting purposes, at a cost far below the cost of our present system of refuges.

* * * * *

Mr. HUNTER. I notice in looking over the record of previous hearings that most of the people who have appeared before this committee have either been officials of the Wildlife Service; or the president of the Audubon Society, who, incidentally, last year said that the Wildlife Service had failed to handle the duck situation; and directors of State game departments. But I found nowhere in the hearings that I examined where there were any what you might call duck hunters, who were paying the bill, who have brought information before the committee.

The Soul of the Liberty Bell

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial which appeared in the Hearst newspapers entitled "The Soul of the Liberty Bell":

THE SOUL OF THE LIBERTY BELL
(By Harry H. Schlacht)

"Proclaim liberty throughout all the land unto all the inhabitants thereof." Leviticus 25: 10.

Today we greet our glorious Fourth of July.

Today we remember the bell man, who, betwixt the earth and the sky, rang out proudly our liberty which, please God, will never die.

"Land where my fathers died,
Land of the pilgrim's pride,
From every mountainside,
Let freedom ring."

Today is the one hundred and seventy-third anniversary of our Declaration of Independence. It is the day our birth certificate as a Nation was signed.

It is a heartbeat in the march of time.

In the diary of our national life, how like yesterday, when it is past, that across the years we can almost clasp hands with the fathers of the Republic.

We see the knit brow, we see the fire-flashing eye, we see the firm step as they march for liberty across the pages of our history.

With reverence we whisper the names of those who live in the sleep of the ages.

Their blood has been transmuted with glory everlasting, and those who cherish the loftiest precepts of patriotism will ever worship at their shrine.

Our immortal Declaration of Independence demanded the equality of rights which God and nature intended man to enjoy.

Our sacred document embraced that simple and sublime declaration which comprehends in one short sentence the whole mystery of liberty and law—"I am a man."

It was the soul of the Liberty Bell.

It pealed like a trumpet blast throughout the world. It roused men and women of thought, of hope, and of action. It marked the fulfillment of the prayers of the centuries of every living soul.

That mighty spirit was rocked as an infant in the cradle of American liberty.

Here was a land where liberty is the property of every man.

Here was a land where freemen dare to speak, to think, and to write their convictions.

Here was a land where every man dared to go from any schoolhouse to any church house.

Here was a land where every man is a peer and no man cares to wear a crown.

They came, the pillars of all races, to our shores. They drank deep from the fountain of liberty. They helped to forge and build a new civilization. They wrought, fought, and died that liberty might live; that our flag might be unstained, that all men underneath its folds shall bear no chains, and that no man shall sigh for freedom, while a single star shall shine in the heavens.

America is truly God's country.

Today we grasp the spirit of our saintly sires. Today we yearn to hear the accent of their thrilling utterances.

Their words are as immortal as their immaculate glory. Their words will live as long in history as the guns of Bunker Hill.

Our hearts are stirred by the echo of their thoughts. Our hearts are filled with ennobling aspirations.

The rays of immortality flame around us as our whole being bows to the majesty of their mighty intellects.

By all the memories of the past, by all the impulses of the present, by all the noblest instincts of our souls, by the touch of their spirit upon us, we rededicate ourselves to the preservation of our blessed Nation.

Today we gaze at our God-given ship of state. It beams aloft the ensign of the 48 States. It is freighted with the destinies of 148,000,000 of American hearts. It is chartered by men of '76 to bear to future generations the liberty which they purchased with their blood.

Today we cry out, in the magnificent apostrophe of the poet Longfellow:

"Sail on, O Ship of State!
Sail on, O Union, strong and great!
Humanity with all its fears,
With all the hopes of future years,
Is hanging breathless on thy fate!"

Our ship of state must be guarded by the compass of God's word. Its helm must be firmly held by pure patriotism and pure religion. Its canvas must swell to the winds of His spirit.

It must be manned by American hands. It must be sailed under American colors.

Unless we do this—despite its well-laid keel and its massive ribs, its weighty anchor, and its majestic form, its towering mast, and its freighted charts—it will be the sport of angry waves of anarchy and communism.

Men of America—beware of the traitors in our midst who are plotting to destroy our liberty.

Guard our liberty with a watchful eye. Sleep not at your posts.

See to it that no stain sullies our Stars and Stripes. See to it that our glorious emblem waves ever from our shores.

Let us today renew our vow to our beloved country. Let us swear at her altar that the holy flame of patriotism shall burn "unquenched through the ages like Vesta's sacred flame."

The genius of American democracy will ultimately lead the hosts of liberty in Europe to certain victory.

The eyes of the world are upon us. The fate of communism is sealed. The people's hour is come.

May the God of our fathers ever be with us. May He ever guide us through shadow and sun. May He ever unite us. May He never divide us. May He keep us, the many in one.

This is the benediction of every American on this birthday of our Nation.

The Chickens Come Home To Roost

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the July 12 issue of the Olean (N. Y.) Times-Herald:

The deficit of the United States Government for the fiscal year which ended on June 30 was much larger than administration spokesmen had predicted.

In fact, it was around $1,800,000,000—a figure large enough to give both Government officials and the average taxpayer quite a shock.

So much of a shock, indeed, that the realization has been reached by a considerable proportion of our people that with the deficit for the new fiscal year probably considerably greater than $1,800,000,000 the time is rapidly approaching when something will have to happen.

For even this great country cannot go in the hole to the tune of billions each year indefinitely.

There are only a few ways whereby the Government can balance its books—by deficit

financing, reduced expenditures, or increased taxation.

Increased taxation now is out of the question, and President Truman, who until quite recently demanded an increase of around $4,000,000,000 a year in Federal levies, has accepted the situation.

Indeed, there is an increasing sentiment throughout the country for a decrease in burdensome excise taxes as a means of stimulating business in general and combating a distinct deflationary trend.

And the Government knows, of course, that the more business declines, the more the Government's revenue shrinks.

As recently as the middle of May, experts of a Joint Congressional Committee on Internal Revenue Taxation estimated a drop of only $300,000,000 in receipts below the January forecast of $39,600,000,000.

But instead of only $300,000,000, the decline since the January estimate has been nearly $1,400,000,000; the net receipts of the Government totalling only $38,200,000,000 instead of $39,600,000,000.

A possibility that is disturbing Government economists is that receipts during the present fiscal year may drop even more than the congressional joint committee's experts estimated in May would be the case.

They predicted then that such receipts would be $2,100,000,000 less than was forecast in January.

And a drop of $2,100,000,000 would increase an estimated deficit of $900,000,000 to $3,000,000,000, assuming no reduction in expenditures.

We are beginning to sail quite close to the wind and we will have to trim ship if we are to navigate successfully.

Most of us are watching, with mixed feelings, the economic mess in which Britain now finds herself—a situation, let it be stated, that is far more serious than most of us have realized.

It would be foolish to delude ourselves that we must not begin to watch our own steps very carefully, lest we find ourselves floundering in a similar mire of stagnation and near-bankruptcy.

Reds Still Gain in East

EXTENSION OF REMARKS
OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hanson W. Baldwin, from the New York Times of July 14, 1949:

REDS STILL GAIN IN EAST—COMMUNISTS HELD USING LULL TO ADVANTAGE AS WEST LOSES GROUND BY "DOODLE-DRIFT"

(By Hanson W. Baldwin)

Political and military thunderheads hang above the Orient and the present outward calm precedes a coming storm.

Events of the past 2 weeks reveal clearly that communism is still on the march in Asia and that the western world is still fighting a losing battle to contain it.

In China the Communists have halted to consolidate politically and economically their military conquests before pushing on to new victories, in much the same manner that the Russian Army halted periodically during the last 2 years of the war to consolidate its gains and to bring up supplies. But the lull had not been used by the democracies; we are still following a hands-off policy—a negative policy—in China.

There is no major military impediment to a resumption of the Communist advance toward Hong Kong and south China; nor has any support developed in the Communist-held areas of China for the fatuous belief that a Communist China might turn toward the west instead of toward Russia.

Political opinions do not necessarily follow trade routes, and even though Communist China may need the products of the west—as eastern Europe undoubtedly needs them—we should not expect economic exchanges to lead to political friendship.

There has been no evidence of any development of Titoism in China. It would be premature to anticipate any such development so soon. Those who comfort themselves with this hope are probably indulging in wishful thinking. There has been, on the contrary, a revival in parts of Communist-held China, notably Shanghai, of antiforeign feeling, led by the Communists. It is probably fair to say that the prestige of the United States and of the western world in this whole area has never been lower in modern times.

In Korea, there is a dangerous dichotomy between our foreign and military policies. At the very time our occupying troops—the only stabilizing influence in Korea—have been withdrawn Congress is asked to provide $125,000,000 for economic aid. But dollars will not stop the bayonets of the Communist-dominated North Korean army on the thirty-eighth parallel. The days of the South Korean Government probably are numbered unless there is a drastic change in our plans and policies.

In many other areas of the east, communism is emerging as a stronger force than had been anticipated. In Japan, the Communists have gained steadily in strength in the past year. The military phase of our occupation ended long ago. Gen. Douglas MacArthur now is coping with economic, political, and psychological problems of immense magnitude. He is working in fields in which he has no particular competence and his usefulness in Japan—great in the initial phase of the occupation—has come to an end. A new and bold policy and a civilian governor to administer it are needed.

In Indonesia, the Republic's first and probably growing problem will be communism. In French Indochina, the Communist-led guerrillas defy a nation that once possessed an army with an unrivaled prestige.

Our politico-military hands-off policy in the Orient is perhaps better described as a policy of "doodle and drift."

America Muffs DP Opportunities

EXTENSION OF REMARKS
OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. GOODWIN. Mr. Speaker, in the Christian Science Monitor of July 12 is a very interesting and enlightening article by staff writer Josephine Ripley on our handling of displaced persons, and I include it herewith under leave to extend my remarks:

AMERICA MUFFS DP OPPORTUNITIES

(By Josephine Ripley, staff writer of the Christian Science Monitor)

WASHINTON.—After opening immigration gates reluctantly for the admission of 205,000 displaced persons, the United States then closed its eyes.

It is the only country admitting displaced persons which does not hand-pick what it wants. It takes what it gets—and it is not getting the best.

That is the impression that I and other newspaper correspondents gained after touring displaced persons camps in Italy, Germany, and Austria and returning on a DP ship.

Other nations have missions on the scene to select the immigrants in accordance with national needs. Canada's mission is hand-picking farmers and lumbermen from among the Balts.

Australia made its first choice from among the Latvians, Estonians, and Lithuanians. It is now taking Poles, Czechs, Romanians, Yugoslavs, and more recently single Jews. It wants 100,000 DPs this year in line with a national population drive.

The Belgian mission has been selecting coal miners. Britain is hand-picking all types of labor. France is taking farm families.

In contrast, the United States is operating under what has turned out to be a flimsy, complicated, and almost meaningless piece of legislation. It requires that 40 percent of the immigrants shall be Balts—refugees from communism; 30 percent shall be farmers, and none admitted who came into the camps after December 1, 1945. This shuts out many of the most desirable and deserving refugees.

All must have the assurance of a job and a place to live before they can come in. With this, the Government washes its hands of the whole affair. Actual selection is left to individuals—employers looking for labor, relatives, or friends of the DPs—and to voluntary agencies.

It is the voluntary agencies, not the Government, which have missions abroad picking and choosing the immigrants. Biggest and most active among these are the National (Roman) Catholic Welfare Conference, the Hebrew Sheltering and Immigrant Aid Society, and the Church World Service, Inc., representing Protestant groups.

It has been protested that the legislation, in effect, discriminates against Jews and Roman Catholics. If so, this does not show in immigration shipping lists.

On the DP ship on which I returned there were 329 Roman Catholics, 268 Jews, 168 Protestants, 81 Orthodox, 74 Greek Catholics, 12 Evangelical, 5 Lutherans, 2 Greek Orthodox, 2 Adventists, and 1 Mennonite.

The majority of shipping lists show a similar religious and racial make-up, with little variation.

The requirement that all immigrants have specific job assurances has little meaning. There is nothing binding about these contracts. The prospective employer is under no legal obligation to accept the DP once he arrives. The DP may change his mind and take another job at any time.

The legislative requirement for farm labor is being liberally interpreted. Many are signing up as farmers who have little or no acquaintance with agriculture.

I talked with one young man coming in under that classification on the job assurance of a friend. The farm on which he will work is a back-yard flower garden in New York City.

The young man is a linguist, an intellectual, and a fine individual. He will make a first-class citizen, but not a farmer.

On the ship I saw and made friends with many fine prospective Americans among all races and religions. I felt that they had left the old for the new with a sober sense of obligation and loyalty to their new country.

I saw others whose objective in emigration was simply "to make a lot of money," as one of them put it bluntly. One of the ship's mates, who has seen a great many displaced

persons on their way to new lands, sized it up this way: "We have some splendid people aboard who will certainly become an asset to the Nation—musicians, skilled workmen, artists. But they are a small minority of the total passenger list. It seems to me the United States is letting itself in for a very raw deal on quality."

This should not be interpreted to mean that the United States should admit fewer DP's. On the contrary, it could profitably admit more. There are many highly desirable workers and citizens among the camps. They would make fine Americans.

The fault is not with admission, but with the system. Congress would do well, in considering revision of DP legislation, to review the whole program on a realistic basis, as other nations have done.

To Bring Peace

EXTENSION OF REMARKS
OF
HON. CHARLES R. HOWELL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. HOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial printed on July 11 in the Trenton Evening Times on the subject of world federation, in which I am most interested. It is my sincere belief that the future peace of the world rests on the creation of a strong world government built on the foundation of the United Nations. This same belief is expressed in the Times editorial, which follows:

TO BRING PEACE

The desire for peace on the part of every American is the reason for our support of the United Nations. We continue our support of UN although the veto power permits the Russians to muddy the waters of peace.

Coming before the Senate soon will be three proposals designed to strengthen our chances for peace. They are the Ely Culbertson suggestion, the Atlantic Union Committee, and the United World Federalist proposals.

A 30-YEAR WAR

Mr. Culbertson would have us say to Stalin: "You must submit to world government and if you don't join now we will be forced to use the atomic bomb. We'll give you 1 month to decide." Such a proposal is directly opposed to the United Nations and would justify Russia's suspicion of us. It would lead directly to a preventive war which General Bradley has estimated would take 30 years to win. It would be hard for democracy and freedom to survive such a struggle.

The Atlantic Union Committee, acting on the principles set forth by Clarence Streit before World War II comes closer to the mark but makes two false assumptions, that peace can be had through military measures in the atomic age and that the experienced democracies are superior and can best work toward peace by starting with an exclusive and partial federation.

NO BALANCE OF POWER

Nearly every responsible military leader, like Generals Eisenhower, Bradley, Arnold, and MacArthur, has stated flatly that another war would be disastrous, even in victory. Atomic bombs and bacteriological weapons are not made for balance of power, like planes and warships.

Morally, we would be trying the impossible to claim that our standards of democracy were the only standards for a world federation. The Communists would grab the chance to point out that Russia honored and welcomed all men while the imperialist democracies excluded most of the peoples of the world.

THE ONLY WAY

The plan of the United World Federalists does not compromise with peace or with freedom for all men. It insists that world federation, no matter how hard it may be to realize, is the only practical way of geting peace and freedom. It seeks to work through the UN without letting Russia's veto stop us. The World Federalists favor going ahead without Russia, if she won't join, but leaving the door open on our own terms. While it is true this would be only part of world federation, since the Russians and their friends would not be likely to join, the United States would be stronger. Our moral and military position, because we would be acting on a clear principle and because we would have joined with us nations from all corners of the world, would be unassailable.

The only way in which we can be truly prepared for peace and prepared, at the same time, for the worst that may happen, is by a world federation. We must leave the door open for Russia to join whenever the Communists see that we mean peace as much as we meant war.

American Youth Speaks for Democracy

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Harry H. Schlacht, entitled "American Youth Speaks for Democracy," which appeared in the Hearst newspapers on June 24:

AMERICAN YOUTH SPEAKS FOR DEMOCRACY
(By Harry H. Schlacht)

Let every child learn from the cradle to the grave that his first and last duty is to his country.

Today we join with President Truman in honoring William Johnson. He is the 17-year-old student of McAlester, Okla., High School. He is the winner of the $1,000 prize in the national essay contest on Why Democracy Works.

We congratulate the all-American Benevolent and rotective Order of Elks for initiating this all-American contest.

It is a great organization of 1,000,000 patriots, who believe in the Constitution of the United States, who subscribe to the constitutional guarantees of liberty and equality, and who love our God-blessed country.

"We sponsored the contest to encourage the Nation's youth to study democracy and learn its fundamental principles for themselves," declared George I. Hall, the grand exalted ruler of Elks.

"The purpose has been gratifying.

"The essays written by these high-school students show that they understand that democracy's strength lies in the fact that it serves all the people."

Harold E. Stassen, president of the University of Pennsylvania, was national chairman.

Rabbi Dr. Samuel Belkin, president of Yeshiva University, and Rev. Francis X. Talbot were his associates on the committee.

Let young America speak for democracy, that noble heritage won with the sword of courage, baptized with the blood of patriots and cleansed with the tears of their loved ones.

Let us hear the voice of young America. The hope of our democracy, the salvation of our civilization. Our American youth will uphold our American tradition. Our American youth will crush any effort to undermine our glorious Nation.

Let us all read with glad hearts the winning essay—Why Democracy Works, by William Johnson.

"We, in the United States, are truly heirs of all the ages, building upon a foundation of the vast experiences of others. From the years of the Anglo-Saxons to our present time, we have been building a democracy. A place where, guaranteed by our Constitution, all men are considered equal. Here men are given the right to worship when and where they may wish, an opportunity to enjoy their own leisure and to carry out their own desires insofar as these do not interfere with or endanger the rights, the privileges, and the lives of other people.

"But why is this possible? Why can we in the United States live in comparative peace and security while so many in the world suffer? One very good reason for this difference is that the people are themselves the best guardians of their liberty. If the people are the power in their country, no petty demagog or selfish tryrant can long take away their cherished rights. This is exactly what a democracy is. For democracy is that way of self-government by which the many choose the few who are to carry out their mandates instead of the few determining the will of the many. Democracy is, in the words of that great American leader, Abraham Lincoln, 'Government of the people, by the people, and for the people.' Democracy determines that the will of the many shall prevail, not the will of the few.

"Democracy encourages unhampered initiative in the individual, rather than placing him at the mercy of those who would regiment him to their own way of restricted working and living. As a civilized, intelligent individual, respected for his individuality, he has the right to protest against wrongs which may be done against him and other men and is encouraged to seek correction of these wrongs in an orderly and worthy manner in courts set up for his protection.

"This principle of living, based on the Golden Rule, is that which dictators dread and tyrants fear. Its deepest concern is to protect human rights insead of exploiting the people who should possess these rights.

"Democracy encourages and fosters the public school, whereby every child has the same opportunity to learn how to make a living, and also how to live a life which is useful and abundant, both for himself and his fellow men.

"Every person is given the right to speak whatever his mind and his heart may dictate; the right to say whatever he desires about his government and the defects in his society, provided, of course, he does not speak words of treason, or those which counsel the tearing down instead of the building up of free institutions, or the jeopardizing of the inherent rights of free men and women.

"Where all men are considered equal, the human spirit is exalted rather than crushed. Here men are granted an abundance of life instead of the pitiful existence which is the lot of millions who live under the dread shadow of dictators and the secret police or

even those in whose country freedom has been only partially achieved.

"Democracy is an ideal, a way of life that is embedded in the heart of every American citizen, conversely every American citizen is democracy.

"Throughout the years, since the establishment of our Government, we, as a Nation and as individuals, have made mistakes. Hence, we realize that democracy is not a perfect government, but we also realize that under our Constitution we can correct our mistakes and that we grow in stature by our experiences. Perhaps our American democracy will never reach perfection, because our ideals advance with our progress, but we can make it serve more and more people better as the years go on. Our goal is to put laughter in the eyes of little children, hope in the hearts of youth, and contentment on the faces of the aged, instead of leaving all these with the despair and the hopelessness which is the universal and grim bequest of all those who live in lands where democracy is unknown.

"The ultimate worth and value of a government is determined by its end results. The results of democracy are so evident that they prove beyond any shadow of doubt it is the finest form of government ever conceived by man.

"May we transmit to an invisible posterity our democracy, not tarnished but made brighter with careful use.

"May we transmit to unborn generations our blessed democracy, not diminished but made greater through its extension to liberty-loving people everywhere.

"May the glorious order of the Elks—dedicated to God, country, and our fellow man—shine on with increasing luster and glory.

"Guard blessed America. God bless America."

Chinese Communists Further Reveal True Colors

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of July 2, 1949:

MAO AGAIN ON RECORD

Mao Tze-tung, leader of the Chinese Communists, persists in putting himself on the record in contradiction of his apologists in this country and in contradiction of the wishful thinkers about China. The apologia and the wishful thinking center chiefly on these themes: (1) The Chinese Communists aren't really Communists but represent a popular reform movement; (2) Mao Tze-tung is not really deeply Soviet-oriented in his sympathies and will turn out to be some sort of Tito who will be friendly to us instead of to the Kremlin; (3) we can and should do business as usual with the Chinese Communists and if we deny them our aid we will prejudice all of China against us.

Mao is explicit on all those points in his most recent pronouncement. On the first he says that the experience of several decades tells the Chinese that they must have a democratic dictatorship. Freedom of speech, assembly, association and franchise is to be restricted to the people and not to reactionaries. In other words, to those who concur in the dictatorship. That is agrarian reform and people's democracy, Communist style.

Is Mao a potential Tito? This is what he says: "We belong to the anti-imperialist front, headed by the Union of Socialist Soviet Republic." "China," he says, must "ally (herself) with the Soviet Union, ally with the new democratic countries of Europe and ally with the proletariat and masses of the people in other countries to form an international united front." He has indicated that this position is based in part on gratitude for Soviet assistance, declaring that his victory would have been impossible without the aid of the Soviet Union.

There is still business as usual and the need for aid to China. Mao says clearly that he can look for aid only from the Soviet Union and not from the imperialist front. But after having reproached reactionaries for thus far forestalling the opening of trade and diplomatic relations he has indicated quite clearly upon what basis those relations can be set up. They will be achieved, he says, "if we unite all forces at home and abroad to smash domestic and foreign reactionaries." Of course, it is the foreign reactionaries, in his vocabulary, who are the ones who are urging business as usual. On the face of it, they can get the business if they cooperate in being smashed.

Presumably there will still be persons who content themselves with holding that Mao's bark is worse than his bite will prove to be. There is nothing on the record, however, to suggest that Mao doesn't mean exactly what he says and that he will not carry out his program as he has laid it out, if he can. There is certainly no suggestion in any of his utterances, or in his acts, that his program will by any stretch of imagination be friendly to the United States.

The President's Message

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. VURSELL. Mr. Speaker, the President's message this week to Congress was an admission that he was wrong on every recommendation he made to the Congress last September when he convened it for political advantage.

At that special session he asked for the restriction of bank credits, for higher reserve deposits, restricted loans, and installment buying. The Congress gave him only about one-third of the restrictions he asked for, realizing that to grant him full power would bring on an immediate disastrous depression.

Every restriction given him has been thrown out the window as prices continue to decline.

In his message last week he still insists on greater spending, increase in the number of weeks, and higher unemployment pay; more and higher governmental assistance to all of the great bulk of voters; more politics.

Two weeks ago he said we must balance the budget and prevent deficit spending. Now he says we should not balance the budget and advocates deficit spending.

Let me explain deficit spending. The public debt now stands at $252,000,000,000. If the President and his administration continues to spend more than is taken in, the amount will be added to the increase of the national debt.

Ten days ago Senator GEORGE, a Democrat, said, "We should not increase taxes." The President quickly replied, in substance, "The Senator is wrong." With a straight face Monday the President said, "We should not increase taxes," as though it was his own idea.

He said the budget cannot and must not be cut. Take a look at this and you may see why.

The first act of his leaders in the Eighty-first Congress was to increase his salary from $75,000 to $100,000 a year. In addition they gave him $50,000 a year free of Federal taxes, which, added to the $40,000 he has for entertainment and travel, puts his cost at $190,000 a year. In addition the President is furnished with an expensive yacht, the presidential plane, cars and chauffeurs, as well as living quarters, all free.

Tuesday the President and his leaders forced through this Congress a bill increasing the salary of 240 of his top executives which gave them an average increase per person of $5,154; 240 men were given an increase of $1,237,173. Many of us Members opposed the increase to the President and to the executives referred to.

Thousands continue to be added to the expanding Federal pay roll. In May 9,180 persons were added and it will take $30,000,000 to pay for these added employees in May alone.

Let me throw some more light on the spending spree of this administration. In the fiscal year of 1949 the 14 executive departments of Government under the control of the President spent $5,000,000,000 more than was spent in 1948, yet the President says we cannot and should not cut the cost of government.

H. R. 5208

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. POULSON. Mr. Speaker, my colleague, Mr. D'EWART, has made a fine presentation of H. R. 5208. This legislation before us today is long overdue. When we read the history of our country, and I mean the authentic history, we find that one of the black marks against our record is our treatment of our Indians. Even since my membership on the Indian Affairs Committee, I have been dumbfounded and ashamed of our past treatment of the Indians.

We have violated our treaties with them. We have herded them like wild animals from one section of the country to the other. Discovering that the land upon which they were located might be

valuable in the future, we have traded them out or have moved them on to land which we were positive would be of little value.

The Navajo Indians are living in an area which can only be made livable through the assistance of such legislation as contained in H. R. 5208 now before us. This legislation has been thoroughly discussed and the amounts have been pruned down to the very minimum. There is no need for further debate. What we need is action; namely, the passage of this legislation.

Our Spanish Policy

EXTENSION OF REMARKS
OF
HON. LANSDALE G. SASSCER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. SASSCER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following recent communication of wartime Ambassador Carlton J. H. Hayes, an appointee of the late President Franklin D. Roosevelt. This important document was drawn to my attention by a Maryland scholar and friend, Dr. Joseph F. Thorning, associate editor of the Americas and World Affairs. According to former Ambassador Carlton Hayes, honor and gratitude alike suggest the importance of a United States Ambassador in Madrid, especially at a time when we have seen fit to appoint a chief of diplomatic mission in Sovietized Hungary, where His Eminence Joseph Cardinal Mindszenty, was submitted to a judicial lynching.

AFTON, N. Y., *May 21, 1948.*

Mr. ANDREW GAHAGAN,
New York, N. Y.

DEAR MR. GAHAGAN: I deeply regret that a speaking engagement in Binghamton prevents me from accepting your kind invitation to dinner in Washington on Tuesday evening. I particularly regret not having the opportunity which the occasion will afford of greeting the distinguished Spanish Ambassador, Señor Don José de Lequerica, who was Minister of Foreign Affairs at Madrid throughout the last year of my ambassadorship there and whom I greatly esteem as a personal friend and a true friend of the United States.

It is very unfortunate that propaganda of the Soviet Union, and of its conscious or unconscious apologists and appeasers in this country, has served, especially during the last 3 years, to conceal from the American people the signal services which Spain rendered us in the critical war years from 1942 to 1945, and to induce our Government to adopt toward Spain a policy which I can only regard as contrary to American interests and derogatory of American honor. Our fellow citizens should be enlightened, not deceived, about the actual facts in the situation.

Under Señor Lequerica, as under his predecessor, Count Francisco Jordana, the Spanish Foreign Office, with the obvious approval of the head of the Spanish state, granted us more favor than did any other neutral government, whether Sweden, Turkey, Switzerland, or Portugal. Not only did the Spanish Government pledge itself not to interfere in any way with our fateful landings and campaign in north Africa; not only did it assure us as early as February 1943 that it would join us in the war if the Axis should attempt an invasion of Spain; not only did it permit us to use Spain as the base for invaluable espionage of Axis activities in France and Mediterranean; it also accorded us important positive favors. It allowed us to get over 1,200 American airmen safely across the peninsula, without any internment. It permitted the transit and exit of over 25,000 members of the French resistance movement as reinforcements for the Allied armies in north Africa. It choked off export of strategic war materials to Germany before any other neutral had done so. Spain, too, was the first country to conclude a permanent air agreement with us, and one whereby we were enabled to obtain landing rights for military as well as civilian planes.

In the light of all such facts, it is simply hypocritical to countenance the notion that Spain has been hostile to us and should, therefore, be treated as a pariah among the nations. It certainly belies the solemn assurances which President Franklin D. Roosevelt gave to the head of the Spanish state in writing in November 1942.

The policy which we have latterly been pursuing toward Spain has had, I believe, still another unfortunate effect. It has retarded the natural and otherwise inevitable evolution of the Spanish domestic regime toward greater liberty and democracy. No nation likes to be dictated to by foreigners, and when our Government joins Marshal Stalin in telling the Spanish people that they must get rid of the head of the Spanish state, the natural response is popular reaction in support of the existing regime. And how silly it is to allege that Spain, or the head of the Spanish state is a threat to world peace. The real threat to world peace is in Moscow and not in Madrid.

Whatever may be the outcome of our presidential election this year, I sincerely trust that then, if not earlier, we will reverse our Spanish policy of the last 3 years. We should resume full and friendly diplomatic relations with Spain, and counsel our other friends in western Europe to do likewise. We should seek to cooperate with Spain commercially, economically, and culturally, and foreswear any interference in its internal affairs. We should eventually help to secure Spain's admission to the United Nations or to any other world or regional organization which may supplant or supplement it.

For Spain is vital, as I see it, to American interests. The late war has abundantly demonstrated the great strategic importance of the Iberian Peninsula for any way in which the United States, unhappily, may henceforth be involved. Nor can the United States have enduring proper understanding with Spanish America without proper understanding with Spain.

My high and cordial regards to Señor Lequerica and your other guests, and also to yourself.

Faithfully yours,

CARLTON J. H. HAYES.

Our Korean Policy

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Owen Lattimore, from the Buffalo Courier-Express of July 9, 1949:

SOUTH KOREA MILITARY LIABILITY, SAYS WRITER

(By Owen Lattimore)

WASHINGTON, July 8.—It is a foregone conclusion that the Truman administration and the Department of State are going to have a rough time with their Korean policy. By the same token, Republicans in Congress, together with Democrats who are critical of United States policy in Asia, are going to have a field day sniping at the official presentation of the policy of granting President Syngman Rhee's South Korea $150,000,000 for a recovery program.

As the record stands, it is now revealed that State Secretary Dean Acheson made a strong appeal for the $150,000,000 grant before a closed session of the House foreign affairs committee. Unless South Korea gets the money, he warned, it will fall within 3 months. The unspoken but well understood suggestion is, of course, that it would fall because of incursions from Soviet-dominated North Korea. Acheson went on to add that if we leave Korea without providing this deposit of $150,000,000, a shiver of fear would run through the Philippines, Southeast Asia, and India.

EVACUATION NOT COMPLETED

Simultaneously with this urgent appeal, however, it is also revealed that the evacuation of American occupation troops from South Korea, where they have been sitting on the lid ever since the end of the war with Japan, has now been completed. All that remain are about 200 officers and men who have the dismal and unpromising mission of attempting to train an anti Communist and anti-Russian defense force.

There is an ominous comparison between this mission and the magic force, or military advisory group in China, which found itself completely baffled by corruption and personal warlordism in Chiang Kai-shek's China.

This combination seems utterly preposterous. Why withdraw the troops and at the same time leave behind a wad of $150,000,000 to stem the revolution? It is hardly a secret, after all, that the military authorities are convinced that with the American forces gone, the Soviet-backed North Koreans could take South Korea in a few weeks, dollars or no dollars.

Yet there is logic to the course of action advocated by Secretary Acheson. It is, moreover, a perfectly convincing logic. What makes the utterances of the Secretary of State sound absurd is not the logic of United States policy, but the fact that the policy is now conducted under rules of protocol which have become as rigid as tribal taboos.

For the logic we must go back to the sad precedent of China. The truth is that Gen. George C. Marshall, on his mission to China in 1946, before he became Secretary of State, became convinced of several unpleasant things which, because of the state of political opinion in America, could not be stated out loud.

First, he was convinced that the Kuomintang would not be able to triumph over the Chinese Communists unless it took American advice. Yet it was obvious that some of the most powerful men around Chiang Kai-shek were going to see to it that American advice was not taken.

Second, he was convinced that politically and militarily America could not handle the situation in China by taking the Kuomintang by the scruff of the neck and the seat of the pants and making it behave. Yet, he could not, as a statesman, advise what seemed sensible to him as a general—that the United States simply pull out and abandon an untenable position. That would

have exposed the United States to criticism for abandoning a wartime ally.

COMPROMISE COURSE

As a compromise, American policy took a course of relative inaction, but not complete inaction. As it became more and more obvious that Chiang Kai-shek and the Kuomintang were doomed, the conduct of American policy became increasingly delicate. The problem was how to allow them to fall without making it look as if the United States had pushed them. Such a policy never succeeds completely, and critics have done their best to make the public believe that the United States did push Chiang and the Kuomintang over the cliff. The public, however, has shown itself hard-headed, and has realized that the Kuomintang, and especially the more violent militarists whom Chiang was unable to control, were responsible for their own doom.

Korea is another chapter in the same unhappy story. I have yet to meet an American who knows all the facts and believes that Syngman Rhee is either a popular or a competent President of south Korea. In spite of high-pressure elections, his legislature is more badly split against him than China's was against Chiang Kai-shek.

An Independent Judiciary

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include as a part thereof, an editorial from the Washington Daily News, a Scripps-Howard newspaper, of July 13.

No one has fought communism and its evil doctrines harder than I have. It was my vote in the Ohio Senate in 1941 which swayed enough doubtful votes to pass a law barring from the ballot in Ohio any group whose aim was the overthrow of the Government by force. I have introduced, in this Congress, a bill to prohibit groups advocating the overthrow of this Government by force, from using the United States mails. However, it is playing right into the hands of the Communists to have a constant uproar in Congress against the other branches of the Government. If Alger Hiss is guilty, I hope he receives a sentence for his crime. However, it is not the duty of the Congress to try him either on the floor of this House or in the public print. If the judge who handled his case has been guilty of any irregularities, let those who have been vociferous on the floor of this House bring charges against him in an orderly manner. This, incidentally, they have not done. The following editorial from the newspaper I think is timely and definitely American. I hope the membership will read it:

DON'T START IT

Two members of the House Un-American Activities Committee want a congressional investigation of Federal Judge Samuel H. Kaufman's conduct of the Alger Hiss trial.

We vote no. The judiciary branch of the Government traditionally is independent of the legislative and executive branches in our three-way balance. If the Un-American Activities Committee, or any other in Congress, should start investigating Federal judges just because their conduct of a trial, or its outcome, did not suit Congress Members, that independence would be undermined. And it would be only a step to congressional efforts to rearrange the judiciary to suit legislative whims and majorities.

Scripps-Howard newspapers 12 years ago fought strenuously against a court-packing plan attempted by the executive branch because of adverse decisions. Just as strongly we oppose any step in that direction now by the legislative branch.

Here Is One Farm Program of Established Soundness

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Quincy (Ill.) Herald-Whig:

HERE IS ONE FARM PROGRAM OF ESTABLISHED SOUNDNESS

Farm prosperity plays a major role in American economy, but the rightful role of government in agriculture is a debatable question. Perhaps the merits of the Brannan proposal, the Aiken law, and rigid parity will not be decided at this session of Congress. One plan important to agricultural health has, however, been accepted by both Houses of Congress. It is the grain-storage program.

This plan is neither new nor untried. The value of storing grains in lush years against the hazards of lean years was demonstrated by the ancient Egyptians. Prior to World War I it was an accepted practice of Midwestern farmers. As granaries fell into disrepair or were too small to handle greatly expanded crops, most farmers began selling small grains and some corn right from the harvest field.

The results were catastrophic. Through the twenties and thirties, grain was rushed to market within the space of a few weeks each year. Transportation systems were unable to handle it and buyers were lacking. Wheat lay in huge heaps on the Kansas prairies and everyone knows the story of tragic price declines. The farmer lacked the money to build granaries or to hold his grain even if space had been available. Bank loans on stored grain were practically unobtainable.

Under the Commodity Credit Corporation plan, farmers were enabled to borrow from the Government on stored grains. The parity price guaranty program insured them against ruinous prices. During the war there was more demand than supply for all produce despite big yields. Last year's bumper crops, however, topped demand and created what probably will become a normal condition of oversupply. There was not sufficient storage space.

The Crop Storage Act will permit the CCC to build additional storage space or to lend farmers up to 85 percent of the cost of bins. In order to secure a Federal loan, the farmers must be able to store his grain but the difference between the market price and the loan figure, on corn for instance, will almost pay the entire cost of new bins. The plan should result in a revival of on-the-farm storage, the simplest and most effective form of farm crop price control ever devised.

So, it seems, we are about to return to the old practice by which the farmer controlled the supply of grains and waited until demand lifted prices to a reasonable level before selling. Whatever the status of parity payments, the grain-storage program is sound, neither Government nor farmer can lose by it. It can be turned into a long-range automatic control program that will keep farmers prosperous whether or not Government takes a hand in farm crop prices.

Why the Marine Corps?

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Reserve Officer of July 1949:

WHY THE MARINE CORPS?

(By Col. Melvin J. Maas, U. S. Marine Corps Reserve; president, Marine Corps Reserve Officers Association)

The mere fact that we have always had marines—they are the oldest military servicemen in the United States—and that marines have always made a glorious record in peace and war, is not sufficient justification to continue having a Marine Corps.

If the Marine Corps is a duplication of the Army, as is frequently charged from some sources, and the Marine Air is a duplication of Naval Air and Air Force aviation, then there is no justification in maintaining the Marine Corps. The sole purpose of maintaining the Marine Corps is for spearhead-amphibious operations. In peacetimes, marines act as guards of naval installations and property and serve aboard capital ships as gunners, orderlies, etc. These peacetime functions, however, do not require a Marine Corps. They can be performed by civilian guards on shore and sailors at sea.

The fact is, however, that if the Marine Corps is abolished as a fighting arm of the United States' security team, then we may very well lose the next war. We will not lose such a war merely because there are no marines participating in the fighting, though their loss from our fighting forces would be felt seriously but that is not the major factor. The Marine Corps being small, homogeneous and a complete military organization possessing all weapons of warfare with the possible exception of submarines, are able to study the changing methods, techniques, and weapons of warfare, and plan the tactics to meet such changes in a way that no other military organization can. The marines were the only military men in this country who were ready for World War II when it came. Their combat organization, weapons, and methods were designed to meet the type of war with which we might be and as it turned out, were faced in 1941. The Army had to retrain almost completely after the war started. Even the Navy was not fully reorganized, equipped, and trained for the type of warfare that faced them in 1941. The marines on the other hand, immediately after World War I, realized that a future war would not be a duplication of World War I. They realized that they would not be fighting in trenches and that

signs of the times indicated that we would have to operate against shores held by hostile forces everywhere in the world.

In 1921 the Marine Corps was reorganized to prepare for such type of warfare. The Fleet Marine Force was born and a quiet but intensive study of modern amphibious tactics was begun. New weapons were designed such as the amphibious tank. Marine aviation was assigned the mission of close air support of amphibious landing operations. Their job was to assist in preparing the way for marines to land on hostile shores, by knocking out enemy shore defenses, and then to keep the enemy pinned down to reduce his resistance while marines waded ashore.

How successful the marines were in their concept, and the training and equipment they devised to carry out this concept, is evidenced by what happened in World War II. Not only did these tactics of the marines permit the Navy to conquer the entire Pacific island by island so that the Army and Air Force could ultimately get within striking distance of Japan, but it was these same tactics—taught to the Army by the marines—that enabled the Army to make its landings in Africa, Italy and finally on the shores of France. World War II was moving so fast that if these tactics and weapons to implement them, had not been ready when war broke out, there is little possibility that we could ever have won the war.

Already, the marines have forgotten World War II, as they immediately forgot World War I, and are developing techniques and weapons to be prepared against world war III, just as they started in 1921 to be prepared against World War II. It requires a completely integrated, small military force in which assault tactics are an entire military career, to make these kinds of studies and develop the necessary tactics, techniques, and weapons in time of peace to be prepared adequately for any future wars.

If the Marine Corps should be abolished in the name of economy or unification or for any other reason, we would be faced with the following alternative: either we would enter world war III unprepared for it and still with the techniques, tactics and weapons of World War II or the Army, Air Force and Navy would have to create by permanent assignment from their forces, ships, planes and ground forces to duplicate the Marine Corps. There would be no economy because these forces would have to be permanently and exclusively employed in the development and training of amphibious operations. Actually this would constitute no economy and in fact would be far more expensive than to continue to maintain the Marine Corps. The average cost of maintaining a soldier is $7,000 a year. The cost of maintaining a marine is $4,000 a year. Because of their highly specialized training, their highly developed skills in their specialty, the Marines are able to do a given military job with substantially fewer personnel and fewer weapons than any other branch of the service. This does not even touch on the question of that great intangible, the morale and esprit de corps of marines. This is important not only to enable the marines to do the job that they do as efficiently and expeditiously as marines always do it, but in itself is the right kind of stimulus to create the proper challenge to the sister services to spur them on in the performance of their own missions.

The Marine Corps of which marine aviation is a vital and absolutely essential component, is the sharp point to the spearhead of our defense forces. To destroy the Marine Corps would blunt the spear to the extent to which it might very well be destroyed as an effective weapon. In other words, our whole Military Establishment in its mission to provide security for this Nation, "must get there" to destroy the enemy's bases of operations. It is the Marine Corps through its peacetime developments and its wartime operations, which makes it possible for our great Army and Air Force to "get there." The Marine Corps has an even more vital role in the future security of this country than it has had in the past, as important as that has been.

William H. Newton

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include as a part thereof, two editorials from the Washington Daily News of July 13 and 14, 1949.

Bill Newton was a classmate of mine at Ohio State University and covered the Ohio senate in 1941 when I was a member of that body. He was my friend, yet he did not hesitate to criticize me when he thought I was wrong. He was eminently fair and forthright and in my opinion, one of the great newsmen of our time. The sorrow of his wife and family at his untimely loss will be shared by his friends, his employers, and his readers, who were legion. This country, in these perilous times, can ill afford to lose men like Bill Newton.

TRAGEDY IN JOURNALISM

The airplane crash that took the lives of 45 persons near Bombay, India, yesterday came as a particularly dreadful blow to the Scripps-Howard newspapers, including this one.

Among the dozen or more top-flight newsmen aboard the plane was our own William H. Newton and, in addition, Burton Heath of NEA whose dispatches often have appeared in the News.

Bill Newton, we think, was one of the great reporters of his time. The qualities of his greatness, which can only be suggested rather than defined, included an aggressive curiosity, a down-to-earth approach to the news he reported, an unquenchable love for the little people of all nations, and a forthright personality that could charm a story out of the most redoubtable sources.

The humanness of Bill Newton was rarely missing from his dispatches whether they came from Sweden, China, India, or Paris. Whether he reported a foreign ministers' conference or the plight of a stranded seaman in Shanghai there seemed always in his stories an underlying warmth and appreciation of man's effort to better himself. Yet he was explosively impatient with double-dealing, incompetency, or pettiness. Bill Newton couldn't be pushed around himself and he boiled over when he saw others pushed. Maybe that is why he loved the Russians and hated the Communists.

BILL NEWTON'S PHILOSOPHY

In the Scripps-Howard office, on the third floor of the Washington Daily News Building, one of Bill Newton's old friends was assembling his possessions for shipment to his family in Columbus, Ohio. It was a depressing task, for Bill had been killed the day before in an air crash near Bombay.

Among his papers was an old clipping of five lines of poetry by Galsworthy. The clipping had been pasted on cardboard and then covered with scotch tape so it wouldn't wear out. Those lines expressed Bill Newton's attitude toward life:

"Few would live so petty and unblest
That dare not hit at something ere he die
Rather than, screened by safe majority,
Preserve his little life to little ends
And never raise the rebel battle cry."

Freedom Is Not Bestowed, It Is Achieved

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. REES. Mr. Speaker, under leave given me by the House, I include a copy of a speech delivered by Deane W. Malott, chancellor of the University of Kansas, before a meeting of the Kansas Wheat Improvement Association on June 17, 1949.

You will observe in reading this statement Chancellor Malott believes that planned programs are insidious and subtle and are weakening America. I commend the reading of this address, which follows:

Education calls for dedication, venturesomeness, and research—dedication of such men as Jess B. Smith, and Lee Marshall—venturesomeness, such as the $45,000 for wheat cleaning and treating assemblies—and research, that has added $55,000,000 to the wheat income of Kansas through crop increases of 35 to 40 million bushels.

The production and distribution of food is the world's largest industry, with about one-fourth of all economic effort in the United States devoted to this basic want. Grain handling, through the great grain handling mechanism, is said to be lower than the cost of moving any other standard food product. In this mechanism, hundreds of problems are solved, with hedgers, speculators, and processors all meshed into a most skillful and complicated mechanism in a free market, an expression of the ideals of democracy which has made America great.

A change is coming over America. Planned programs, insidious and subtle, and not much understood, are weakening the American fiber. Whereas it was never considered a sin to make money, or to practice thrift, that philosophy has changed so that now the amount of profit an individual or corporation can make is scrutinized by the Government, and the amount of income that may be kept has been set and controlled by the Government, which is attempting to be all things to all people. Before long, if the trend continues, every farmer will be told what he may plant, and how much he may market. The Government is wrapping its tentacles with a tightening embrace around every action of its citizens. It has allowed labor dictators like John L. Lewis to challenge the right of a man to remain on his job. In agriculture, through the Brannan plan, it proposes to keep income up, to farmers through subsidies, and prices down to consumers, through removing control. The difference between the prices to the farmers and their free level market must come from the pockets of the taxpayers. And remember the bureaucratic toll—the difference between what is taken from the taxpayers and

given to the receiving groups. If the farmers are to have the protection which would be afforded under the Brannan plan, then every group in the Nation is entitled to the same kind of protection. America would at last be, in every sense of the word, a socialized state.

The Government, this year, would lend 2 billions on wheat, cotton, and corn, plus millions for new Government storage. We are operating on the theory of an inexhaustible public purse. Federal grants to States, in 1930, were $147,000,000; in the fiscal year 1950, $2,480,000,000. There is Federal aid to schools—which includes everything, down to free lunches in communities which need it not at all. We have Federal aid for wildlife restoration and migratory bird conservation. We have aid to private enterprise as well as to States—$100,000,000 a year to air lines for carrying mail.

A day of reckoning will be forced upon us. The Federal debt is rising—now over $250,000,000,000, with $1,500,000,000 added this year, and $5,000,000,000 more to be added in the year beginning July 1. The current budget means a Federal tax of $312 on every man, woman, and child in America. Today, with $250,000,000,000 of Government debt and $230,000,000,000 of private debt, the debt is twice the national income. We can't tax enough to retire the debt. If we attempted it, business would be driven out. It must be done by reducing costs of Government.

Our Government spokesmen still occasionally mention free enterprise, but our own Government trade activities today constitute the second largest state trading operation in the world. The Government this year is spending $36,000,000,000 for goods and services. And, incidentally, it is spending $75,000,000 of your money and mine for domestic propaganda.

Our international responsibilities are not backed by sound policies. Politically, we are dealing with Russia as we once dealt with Hitler. We excuse today the totalitarianism we just finished fighting yesterday. In much of the world today we have peace without justice, and we excuse it and take our chances on tomorrow. Are we allowing slavery by default?

Every citizen has a duty to make himself heard in protest. Only public sentiment can bring the kind of cuts in expenditures which were recommended in the report of the Hoover Commission. Public opinion is the only answer. We cannot lay the blame at the door of President Truman. Congress is our stumbling block. The Congress will continue to yield to pressure groups and spend more and more money unless the voice of the majority of the people rises in a volume of protest which cannot be misunderstood.

Thomas Hobbes, the British political philosopher, wrote a monumental book away back in 1651, and he said: "Government is a necessary but dangerous monster which always devours men's freedom if it be not constantly subjected to appropriate controls."

And away back in the medieval Republic of Florence it was said: "The masses care little for the form of government. Their main interest is necessarily economic rather than constitutional. Their support is given to the government which raises their standard of comfort and provides diversion from their toil. Material results gratify the populace. They did not heed that the theory of government was being changed."

The danger is from within, not from without. The danger is from our own people who seek protection and security from the cradle to the grave. The ramparts of freedom are the citizens of the republic—with individual initiative, and the willingness to risk winning or losing, in the same indomitable spirit that built this great empire of the Middle West.

Lord Bryce, the great British publicist, commenting on our American political system, said that its greatest weakness was "the fatalism of the multitude; a sense of the insignificance of personal effort.

We can distribute wealth by political action, but not genius and character and leadership.

Freedom is not bestowed, it is achieved. It is not a gift; but a conquest. It does not abide; but must be preserved.

Pay of Postal Clerks

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the very timely column written by one of my constituents, Henry McLemore:

[From the Washington (D. C.) Evening Star of July 13, 1949]

POSTAL CLERKS BADLY UNDERPAID

(By Henry McLemore)

The postal clerks of this country are seeking the passage of legislation which will give them a boost in pay, and here's hoping they'll get it.

They are almost as badly underpaid as school teachers which, in this day and time when the dollar doesn't have half the cents it used to have, means it is a wonder they have time to handle the mails for trying to make ends meet.

Working in a post office is a tough job. I trust someone will pop up and ask me how I know anything about it, because I have the perfect answer, namely, I worked in one; for one whole summer, to earn enough to finish my higher education, the benefits of which are now so obvious in this column.

TEMPTATIONS OF YOUTH

My first job was throwing mail—that is, distributing it in the boxes. Oh, the temptations of that job if you are young, in love, and in love with a girl who is in love with a fellow who lives in Providence, R. I., and who writes her every day.

Such was my situation, and to make it worse, the post office box of my sweetheart's father was in the section where I distributed. I had to handle those confounded letters from that confounded rival in Providence. No one will ever know how hard I had to fight with myself to keep from tearing up all the letters that came to Miss Lillian Burton from Rhode Island. They used to burn my hands. I'll have to admit that I often deliberately put them in the wrong box, thus making them a day late getting to Lillian.

But my worst trial came on the day when the low-life from Rhode Island sent what was obviously a picture of himself. I mislaid that for two full days while I debated with myself as to whether it wouldn't be better to tamper with the mails and spend the rest of my life in a Federal pen than to have my heart torn apart by the thought of that picture perched on my sweetheart's dressing table. I finally let Lillian have it, but I did kind of wrinkle it up the best I could before letting it loose.

BILLY-GOAT TACTIC

If all a postal clerk ever had to do was to try to put a Sears, Roebuck catalog in a post-office box he would deserve a halo as well as a raise in pay. We used to await the arrival of those monstrous catalogs with heavy, heavy hearts. The average-sized post-office box, in my time as a clerk anyway, was built more for the accommodation of a wren, thrush, or some other bird of similar size than it was for a catalog the size of a stick of firewood.

But they had to be put in the boxes. I didn't have the strength of arm to shove the things in, so I used to butt them in with my head. An hour or two of this billy-goat tactic left my head and temper in such a state that if I could have laid my hands on either Mr. Sears or Mr. Roebuck I would have done them in, and gladly.

Late in the summer, either because of merit or the fact that boxholders in my section were complaining of always getting mail that didn't belong to them, I was transferred to the general delivery window and placed in charge of the M to Z department. Being a general-delivery clerk is a hazardous business, because when people don't get letters when they think they should have letters they blame the clerk behind the wicket. I have had disappointed folks threaten to shoot me if I didn't come across with a letter.

Yes; let's give the post-office boys some more money. They're a deserving crew if there ever was one.

For the Chicken in Every Pot

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. MILLER of Maryland. Mr. Speaker, in these days of uncertainty, when the daily headlines report threats of economic, social, and even military disturbances, it is pleasant to be able to record a constructive and definite accomplishment—one of particular value to all lovers of good living.

Last Tuesday, in Salisbury, Md., the best way to cook a chicken was determined in the first national chicken cooking contest, held in that fine little city, in connection with the Delmarva Chicken Festival. The winner of the grand prize was Mrs. A. L. Karlik. For the edification and benefit of all, here follows her winning recipe as reported by the Baltimore Evening Sun. Although the recipe does not mention it, I am sure a chicken reared on the eastern shore of Maryland should be used to insure the most perfect results.

Mrs. Karlik's winning recipe:
One young plump chicken.
One lemon.
Two teaspoons salt.
One-fourth teaspoon black pepper.
One-half teaspoon paprika.
Melted butter or margarine.
Granulated sugar.

Split chicken in half, clean, and wipe as dry as possible. Rub entire surface with lemon. Sprinkle with salt, pepper, and paprika mixed. Coat well with melted butter or margarine and sprinkle lightly but completely with sugar. Lay chicken on broiler pan, without rack, skin side down (flatten as much as possible) and set under to cook evenly, and is done when meat on thickest part of drumstick cuts easily and there is no pink color near the bone.

"The Selfish Interests Who Still Oppose Unification Will Find There Is No Rabbit Blood in Louis Johnson—the President and the American People Everywhere Are Behind Him in His Fight To Compel a More Efficient and Economical Operation of the National Defense Establishment"

EXTENSION OF REMARKS
OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. BOYKIN. Mr. Speaker, sitting in the Chamber yesterday, I came across an article in the Washington Daily News written by our good friend, Jim Lucas.

We in this House know Jim Lucas. We know him as a hard hitter and square shooter. We know him as a factual reporter who neither colors or editorializes his news column.

The article was headed "Just repeating rumors," and at the conclusion of these remarks I propose to insert that article into the RECORD.

Mr. Speaker, I do not know anything whatever about the merits of House Resolution 227, introduced into this House several weeks ago. I only know that it proposed investigation of the B–36's.

The gentleman from Pennsylvania [Mr. VAN ZANDT], who introduced that resolution has himself openly declared—and I quote his statement—that "he merely repeated ugly rumors which had reached him," and "that he did not say whether they were true or false."

Mr. Speaker, I do know about the rumors. They were planted in the cloakrooms and hawked around for a week or two in a hush-hush sort of manner in an endeavor to find somebody that would give voice to them on the floor of the House.

Even prior to the time that House Resolution 227 was presented to the House, the rumors were attributed to the forces which oppose the cancellation by Secretary Johnson of the contract to build the 85,000-ton superduper naval aircraft carrier.

Mr. Speaker, I do not know anything about naval air carriers, per se, but I would be very stupid and even lacking in the sense that God gave me if I did not know something about boat and ship construction. You will pardon a personal reference when I tell you that in World War I the company which I headed was awarded the pennant for having built more oceangoing ships than the total of all other shipbuilders on Gulf ports.

I need not remind you all of my long years of service on the Merchant Marine and Fisheries Committee nor of the fact that I served on that committee both in the prewar and the postwar period of World War II.

To me, the idea of building a superduper aircraft carrier has always seemed fantastic. The ship itself was to be so long that it would not even go through the Panama Canal and we would have been called upon to dig another canal at the cost of nearly $2,000,000,000 in order to get it from the Atlantic to the Pacific without sending it around the Horn. As I understand it, this was supposed to be the first one of a half dozen or more of these supercarriers. In fact, it was said that when this one was completed, the Congress would have been called upon to build six more so that the Navy would have a counterpart of the first supercarrier in each of the seven seas.

Mr. Speaker, my son Rob, who served in the Pacific with the United States Air Force, tells me that that "great, huge flat-top would have been duck soup for any enemy bomb or even submarine."

But that is not all. The carrier was to have cost $189,000,000 minus all of its aircraft equipment. Moreover, when such an aircraft carrier goes into action, it requires the protection and service of a fleet of heavy and light cruisers and destroyers, a flock of submarines, tenders, tankers, and a host of repair and other vessels, totaling 140 ships. Conservative estimate is that they would cost nearly $1,500,000,000, and certainly such a program would meet with the approval of the sponsors of the Navy League.

Mr. Speaker, moreover, the fleet of vessels necessary to the protection of the superduper naval aircraft carrier would have to be manned by nearly 45,000 commissioned officers and enlisted personnel. Every one of these would have been submitted to the heaviest possible enemy bombing, submarine, torpedo, guided missiles, and other attack in order either to destroy and render useless the aircraft carrier itself.

Now, Mr. Speaker, the carrier was designed to carry 28 bombers, not the great, large, intercontinental, 10,000-mile-range superbombers like our B–36, but smaller, short-range bombers that its pilots could fly off its deck with a prayer in their hearts that the carrier would be there and not at the bottom of the ocean when they got back.

Mr. Speaker, contrast the efficiency of that supercarrier and its attending fleet of naval vessels, and so forth, costing more than a billion and a half dollars with 28 of the greatest and fastest land-based, intercontinental superbombers that the world has ever known.

These, the B–36's, are ships that rise right straight into the heavens—a full 8 miles—and there travel at speeds upward of 350 miles an hour, costing but several million dollars as turned out by the Consolidated-Vultee, and each one of them manned by but 12 men.

In short, the B–36 is both an offensive and defensive aerial weapon. The total cost of 28 of the bombers—each carrying an effective pay load—would approximate something like $85,000,000, and expose at the very utmost only 308 men to death and destruction by the enemy, rather than the 45,000 in the task force attending the supercarrier.

Mr. Speaker, the reason that I know Louis Johnson had good reason for canceling that carrier contract is because I know Louis Johnson, and have been knowing him—good—and for a long, long time.

I know him as a good American and a good man. I know him as a man of character and of integrity. I know him as a good father, soldier, patriot, citizen, and his long service as Assistant Secretary of War constitutes a record of which any man can and should be justly proud.

I have no understanding of, or toleration for, the campaign of vilification and slander which now borders on the mental assassination of both body and soul of Louis Johnson. That is the very thing that brought this country to grief at the loss of the service of Louis Johnson's predecessor in the office of Secretary of Defense.

The selfish interests now opposing unification are going to find they are in for a fight, that there is no rabbit blood in Louis Johnson, and, moreover, that the President and the American people are behind him.

Mr. Speaker, I said that Louis Johnson was a soldier and a veteran. He saw action with the Fourth, Fifth, Eightieth, and Ninetieth Divisions in the Meuse-Argonne offensive, and was decorated by France with the rank of commander of the Legion of Honor. It was because of the trust they had in him that his buddies who knew him elected him to national commander of the American Legion.

He served as aide to the Secretary of War from 1933 to 1937 and as Assistant Secretary of War from 1937 until 1940.

Mr. Speaker, now hear me well on this. There is probably no man in these United States who did more to formulate and carry out the most difficult program of industrial mobilization necessary to the prosecution of World War II than did the Honorable Louis Johnson, now Secretary of Defense.

Even during that time he favored an expanded and an invincible Air Force for these United States and in that, I am sure, lies the source of the repeated slanderous rumors and innuendos which now assail him.

Of course, Louis Johnson is a party man—he has always been a Democrat and what was more natural than that he should support his party and its standard bearer, President Truman, in the last presidential campaign.

The President of the United States was himself a veteran of World War I. He knew Louis Johnson through all the intervening years, and as chairman of the Truman Investigation Committee, had first-hand knowledge of the marvelous service Louis Johnson had performed in preparing the country for World War II.

Was it not natural for the President then to select the man who had served as Assistant Secretary of War with such distinction—and place him in charge of the National Defense Establishment in order to bring about the unification and economies that are so sorely needed in our Defense Establishment today.

Let us be honest in this matter. Why should not President Truman make Louis Johnson his Secretary of Defense?

Would any Member of this House appoint a man whom he did not know to be his congressional secretary?

Is anyone gullible enough to believe that a Representative to Congress would refuse to appoint a good, faithful, experienced, trusted, and able friend as his personal secretary just because that his friend had helped him get elected to Congress?

The paid vassals of the "kept press" and the spokesman for the notorious Navy League are the ones that started this reaction when Louis Johnson canceled the building of the carrier, and I, for one, welcome the exposure of their nefarious activities.

Mr. Speaker, I need not elaborate further on this question. Now, in order that my every friend and colleague sitting on both sides of the aisle may read, I present the article by our friend, Jim Lucas, entitled "Just Repeating Rumors":

All Representative JAMES E. VAN ZANDT, Republican, Pennsylvania, knows about the B–36 bomber contracts, which are up for a congressional investigation, is what he reads in the newspapers, he says.

Mr. VAN ZANDT started the ball rolling May 25 when he demanded an investigation of "ugly rumors" about B–36 contract irregularities. In a House speech the next day he referred to the "political contributions" of Floyd Odlum, Consolidated-Vultee chairman. He said he had ugly rumors that Air Secretary W. Stuart Symington will resign to head a huge aircraft combine, and referred to the fact that Defense Secretary Louis Johnson once was a member of the Convair board. Convair makes the B–36. He dealt with Mr. Symington's past connections with Emerson Electric Co., of St. Louis.

Mr. VAN ZANDT said at the time he did not know if the rumors were true. He merely said they should be investigated in view of the seriousness of their nature, the insistence with which they are going the rounds, and the confidence with which they are asserted.

The House Armed Services Committee voted June 9 to conduct the investigation and was given $50,000 to hire counsel. Joseph Keenan, former Assistant Attorney General, and James Gillen, of Maine, have been employed. The probe will get under way late this month.

Committee Chairman CARL VINSON, Democrat of Georgia, says he wants to locate and identify the source of the rumors, examine the performance characteristics of the B–36, examine the roles and missions of the Air Force and Navy, establish whether the Air Force puts too much emphasis on strategic bombing, study the procedures of the Joint Chiefs of Staff in developing new weapons, study the effectiveness of the strategic bombing, and other pertinent matters.

Mr. VINSON said Mr. VAN ZANDT would be the first witness. Mr. VAN ZANDT doesn't see why. He says he still has no proof and hasn't tried to get it. He thinks it would be improper for him to testify before his own committee.

"I made no charges against anyone," Mr. VAN ZANDT said. "I merely repeated ugly rumors which had reached me. I did not say whether they were true or false. I want to know their sources and who conveyed them. I asked for an investigation of these ugly rumors."

Mr. VAN ZANDT says he is preparing to turn over his files to Mr. Keenan and Mr. Gillen. They consist, he says, of newspaper clippings arranged in chronological order plus extracts from letters he says he has received since the investigation was announced.

Mr. Symington has denounced Mr. VAN ZANDT'S rumors as "lies." He categorically denied "Mr. VAN ZANDT'S basic innuendo, that the B–36 picture is riddled with politics, influence, and disregard for the military security of the country." Mr. Symington is anxious to take the stand and deny each rumor point by point. Also he is anxious for Mr. VAN ZANDT to repeat his statements from the witness stand.

Mr. VAN ZANDT says there's no need for that. He concedes he is in no position to prove anything and would be quite happy if the investigation establishes that all of the ugly rumors are false. He says everyone concerned should welcome a chance to clear the atmosphere.

Mr. VAN ZANDT said today he has canceled plans to take a flotilla of LST's to Point Barrow, Alaska, as part of his summer training as a Navy captain in the Reserve. He will remain here in Washington throughout the investigation, he said.

Administrative Procedure Act

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. WALTER. Mr. Speaker, my interest in the Administrative Procedure Act is continuously being stimulated by action, as well as inaction, of the Federal Communications Commission. In a recent statement to the House I observed that the Commission's penchant for delays had resulted in what appeared to be a deliberate slow-down by its legal staff, and it had thus avoided the requirement of the Administrative Procedure Act that the agency shall proceed with reasonable dispatch to conclude any matter presented to it. I stated then, and repeat now, that there is need for an inquiry into the causes and the ways and means whereby such avoidance is accomplished, and I intend to bring this information to the attention of the Congress in full detail as soon as the press of more immediate urgent business has somewhat abated.

Unfortunately, the Commission, or at least its legal staff upon which it relies for interpretation and construction of the Administrative Procedure Act, has not been responsive to the congressional intent nor the spirit of that act. The purpose of that act, as stated in the preamble, is "To improve the administration of justice by prescribing fair administrative procedure"; it is intended to uphold the law and yet lighten the burden of those on whom the law may impinge. The essential standard of fairness is applicable to the Commission, as an agency invested with executive authority; and it is equally applicable to those seeking such fair play from the Commission. Apparently that conception is not the Commission's. Its substantive rules, as well as general policy statements, are often so ambiguous that deciphering becomes a problem beyond the ken of lawyers, let alone that of laymen. For example, I might refer to a recent report of the Commission in the matter of editorializing by broadcast licensees which is couched in such legalistic abstractions and ambiguities that several of the Commissioners themselves felt impelled to state their additional or separate views because, as they said, the majority view leaves a licensee in a quandary and a state of confusion." It cannot be a government of law, rather than of men, if the persons regulated do not know and cannot determine what the regulation means, or if they must interpret at their own risk the meaning of an academic legal treatise released in the form of a regulation, a report, or a policy statement. Regulations and official statements of policy under the Administrative Procedure Act are intended as a guide for those regulated and not as an additional mental hazard for an industry already reeling from the impact of other constantly arising problems.

Moreover, in connection with the issuance of this very same report, I have been unable to determine, nor has anyone been able to advise me, whether it has the standing of a rule, regulation, or official statement of general policy adopted by the agency. The mimeographed release is entitled "Report of the Commission," but I am inclined to believe that the Commission intended it to be something more than enlightening, entertaining, or educational literature. It must have been intended as having some place in the scheme of regulation, and further intended that licensees, and persons subject to regulation, give heed to its contents. If such was its purpose, and I can find no explanation for any other, then the Commission again has avoided compliance with the Administrative Procedure Act by failing to publish it pursuant to law in the Federal Register either as a substantive rule or as a statement of general policy, formulated and adopted for the guidance of the public. Since the act further provides that "no person shall in any manner be required to resort to organization or procedure not so published," it is apparent that the Commission cannot legally expect licensees and other persons before it to abide by the dictum of the so-called "Report"; but, if past practice may be accepted as prognostication for the future, I assume that all those to whom it may apply will feel obligated to conform—provided, of course, that they can determine from the ambiguous language used what conformance means. I am hopeful that my proposed inquiry will shed light on the reasons for the employment of such a mode of regulation.

In a recent note in the University of Pennsylvania Law Review the Commission is severely criticized for its failure to properly construe and apply still other provisions of the Administrative Procedure Act. My curiosity being aroused, both because I am a Pennsylvanian and a member of the Judiciary Committee, I found that the criticism was based strictly on the legal premise that the Commission was misconstruing the intent and meaning of section 9 (b) of the act, which provides in substance that "no withdrawal, suspension, revocation, or annulment of any license shall be lawful unless, prior to the institution of agency proceedings therefor, facts or conduct which may warrant such action shall have been called to the attention of the licensee by the agency in writing and the licensee shall have been accorded opportunity to demonstrate or achieve compliance with all lawful requirements."

The purpose of this provision was to avoid costly hearings, both to the Government and to private parties, where it was possible to do so. This was a mandate from the Congress borne out forcibly by our committee reports and House debates. In detailing the scope and purpose of this provision of the act to the House, when the act was reported out of the Judiciary Committee, I, as chairman of the committee at that time, stated that the purpose of this section was to remove the threat of disastrous, arbitrary, and irremediable administrative action. Yet the very thing we were fearful of at that time comes to pass when the law is being administered by an agency content to relax within the confines meticulously mapped out by an ever-assertive, power-seeking legal department.

In order to maintain a greater club over station licensees, the Commission, by advice of its legal department, takes action on renewal applications in many cases rather than instituting revocation proceedings. The process is easier for the Commission since it throws the burden upon the applicant to prove why his license should be renewed instead of placing the burden on the Commission to show why it should be revoked. So, under section 9 (b), the Commission, upon advice of counsel, declares that licensees subject to renewal proceedings are not embraced within the same category as those subject to possible "withdrawal, suspension, revocation, or annulment" of facilities; and as a result the Commission need not afford renewal applicants the benefits of section 9 (b), namely, the opportunity to achieve compliance without a full-dress hearing. Disciplinary hearings which question particular activities of a licensee are in fact revocation proceedings in the guise of renewal proceedings, and the safeguards surrounding revocation must therefore apply to them; the law intended that they should. By denying renewal applicants the protection of section 9 (b), the Commission is reserving to itself the power to deal with licensees as it sees fit rather than as the law authorizes; and it thus defeats the very purpose for which the law was adopted. In this respect the law is not defective; it is misconstrued to feed the ego of legal satellites intent on maintaining the sword of Damocles over those persons who are subject to regulation by the agency.

I believe we should find out why, what is so clear when an act is passed, becomes so muddled when administered. The inquiry which I propose to make will, I hope, help to answer that question.

Make Stalin Sweat

EXTENSION OF REMARKS
OF
HON. EDGAR A. JONAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the July 13 issue of the Washington Times-Herald:

MAKE STALIN SWEAT

Only a bone-breaking, nerve-shattering attack on Russia with every weapon of diplomacy, economics, propaganda, and intrigue can save this country from open warfare with bombs and guns.

ONE OF US MUST CRASH

We all know perfectly well that the United States is locked in a death struggle with world communism. There can be only one end. One of us must crash. The vital question is, Which will crash? Only secondarily is it a question whether we can smash Russia without having to send planes and men in to do the job.

The more we put up with such conduct as this latest dirty-dog performance of the Reds in Berlin and in China the more certain we are making world war III. Every time the Russians get away with such things the more they are made bold to try another.

Just look at the record. At Yalta, our master minds allowed Stalin to intimidate them into handing over to him the keys to half the world as the price of his unnecessary and ineffectual "help" in the conquest of Japan.

The catastrophe started then has never ended. While we were pouring billions of dollars and incredible amounts of energy into an attempt—too late—to stop his conquests in Europe, he picked up the assets in Asia that we had made available to him. The railroad blockade of Berlin by the Russians was only to show the world Stalin's contempt for United States power.

The Berlin airlift itself was nothing but a confession of United States weakness and fear in the struggle for power, no matter how much we try to hide that by pointing to its excellence as a performance with airplanes.

As Churchill so rightly said, it merely showed Stalin that we could stand on our heads, indefinitely.

STALIN SHOWS HIS CONTEMPT

Now, he is needling us again with another blockade of Berlin. Truck traffic that ordinarily amounts to 450 vehicles a day has been cut back to 4 an hour.

Perishable goods paid for by the United States taxpayer, when all is said and done, are going to waste. People in Berlin are going hungry. And United States prestige before the world is going to pieces.

In China, just to demonstrate that the Berlin blockade is not an isolated incident but is part of the over-all pattern, a United States diplomat is brutally beaten. The idea is to show communism's contempt for us, east and west.

We are swallowing Stalin's insults humbly, whenever he chooses to dish them out, and you will notice that he has a regular schedule for doing so. As soon as we pacify him in one detail, he slaps us in the teeth on another.

It is long past time for us to quit standing on our head and instead to stand up on our feet.

A SOFT HAND WILL RUIN US

For better or worse, the United States of America has invested incredible treasure in blood and dollars abroad to check communism. Obviously we would have done the whole world much more good if we had put that vast treasure to work at home making this Nation an even greater living proof of the worth of individual enterprise and capitalism than it already is. But that our masters in the Government have chosen not to do.

Instead, they have poured our wealth out upon the Germans and the Greeks, the Turks and the British, the French and the Italians, anybody who has held out his hand and threatened to "go Communist." In short, we have undertaken to bribe the world not to commit suicide.

Yet, after all that, we risk ruin by playing soft hand with Stalin. We allow him to twist our noses whenever he condescends to do so. That's inviting our own national suicide and the world's with it.

Mr. Truman and Mr. Acheson say they want peace above all else. Mr. Truman claims his administration is dedicated to peace.

Gentlemen, you are inviting war, not peace. No power in history has ever insulted a people that it feared and no power on earth has ever kept the peace by being weak. Stalin would not blockade our trucks in Berlin if he thought you really want peace enough to fight for it.

You can fight for peace now without yet using the atom bomb. You can make Stalin howl for mercy if you will only use the terrible weapons that lie all around you.

Russia cannot live, economically, if the United States of America chooses really to clamp down.

THE ONLY WAY TO WIN PEACE

We can make the Moscow Politburo crawl and blow wide open every little tinpot imitation of it from Warsaw to London without firing a shot. We need only destroy their trade, corrupt their money, end their meddling in our domestic affairs, and kick their commissars in the face wherever they show up abroad.

Whenever they have one of our diplomats beaten up, as in China, let us beat up three of theirs in Washington. When they block our trucks into Berlin let us strangle whole nations of theirs dependent on us. We must do all this and more if we want to live.

Tough stuff, admittedly. But it is better than a shooting war. And if we allow our diplomats to be slapped, as in China, and our trucks to be blockaded in Berlin, we are going to end up in a shooting war anyhow, and probably not of our own timing.

The Late Honorable Hugh A. Meade

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr BLAND. Mr. Speaker, pursuant to consent to extend my remarks in the Appendix of the RECORD, I submit herewith a copy of resolution adopted by the Committee on Merchant Marine and Fisheries at a meeting held on July 13, 1949, relative to the death of Hugh A. Meade, of Maryland, general counsel for the committee and a former Member of this House:

Committee Resolution 6

Whereas on the 8th day of July 1949, the Committee on Merchant Marine and Fisheries of the House of Representatives suffered in the loss of Hugh A. Meade, of Maryland, general counsel: Be it

Resolved—

First, that the Committee on Merchant Marine and Fisheries recognizes in the death of Hugh A. Meade, general counsel, and during the Eightieth Congress a member of the committee, the loss of a devoted public servant, a sterling patriot, and a loving friend whose work was marked by industry, energy, ability, fidelity, zeal, and patriotism, and whose sound judgment and ability were of inestimable benefit to this committee;

Second, that the committee will ever cherish the memory of their association with Mr. Meade, and will find in the patience and

intelligence, with which he served as a member and as general counsel an example and inspiration;

Third, that the committee extends to the family which survives him its deepest sympathy in their sorrow; and

Fourth, that these resolutions shall be spread upon the minutes of this committee, printed in the CONGRESSIONAL RECORD, and that a copy shall be sent to the family of the deceased.

As chairman of the committee, I appointed an official delegation from the Committee on Merchant Marine and Fisheries to attend the funeral of Hugh Meade. The delegation was as follows: Hon. EDWARD A. GARMATZ, of Maryland, chairman; Hon. EDWARD J. HART, of New Jersey; Hon. DONALD L. O'TOOLE, of New York; Hon. VICTOR WICKERSHAM, of Oklahoma; Hon. ALVIN F. WEICHEL, of Ohio; Hon. EDWARD T. MILLER, of Maryland.

During my 31 years of service in the House, I have never known a man more faithful and diligent in the performance of his service than Hugh Meade. His untimely departure left a void which I never expect to see filled either in the point of devoted public service or in the hearts and minds of all who are privileged to have known him.

Communist Fellow Defenders

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarkable article dealing with the type of liberal who today is probably the most effective obstacle in this country to any effort to deal decisively with the Communist menace, at home and abroad. The article is by Norbert Muhlen from the New Leader of July 2, 1949:

PSYCHOPATHOLOGY OF "CONFUSED LIBERALS"

(By Norbert Muhlen)

"There are some neurotics in whom, to judge by all their reactions, the instinct of self-preservation has actually been reversed. They seem to have nothing in view but self-injury and self-destruction."—Freud.

In the year of Lenin's birth, the Communist fellow traveler and his place in the plot of revolution were described with precise prophecy by Dostoevsky in his novel, The Possessed.

"Our party," the madman Verkhovensky, underground organizer of the great upheaval, said 80 years ago, "our party does not consist only of those who commit murder and arson, fire off pistols in the traditional fashion, or bite colonels. * * * Among officials and literary men we have lots, lots, and they don't know it themselves. * * * Do you know how many we shall catch by little, ready-made ideas?"

The Possessed of 1949 may still secretly boast of a similar success. Among professional people, professors, Protestant clergymen, among artists, actors, authors, and millionaires the Communists still have lots who themselves don't know that they are being "had," and the Communist mind catchers processed great, noble ideas into little, ready-made ideas in order to catch them. On a point of fact, the bona fide fellow traveler (to be sharply distinguished from the secret party member with or without membership card) can be recognized by his sincere, stubborn refusal to admit that the Communists manipulate, and exclusively benefit from, his political behavior.

With the recent change in Soviet-American relations, with the increasing determination of the American public to resist Moscow after it had been seduced and tricked into submission to Moscow, with the new image of communism prevalent in this country, there was bound to evolve a new type of unwitting American auxiliaries of the Communist secret battalion. Actually, the fellow traveler of 1949 seems somewhat different from the fellow traveler of the previous era which ended between 1946 and 1947, and the Communists are using him in different ways for new objectives.

The traditional fellow traveler was caught by his discontent with one or several features of democracy, by his will to change, by his enthusiasm for social improvements; the Communist took control of his political actions by inconspicuous and elaborate techniques, and exploited, in ways which were not always easily discernible, him and his socially desirable ends as means for their own, quite different, dictatorial ends. This was the era of Communist penetration, advance and conquest in this country.

In the present era, however, the Communists, being forced to defend their positions against American counter measures. While their agents at home and their power abroad against American countermeasures. While the traditional fellow traveler has been a secret instrument and objective of Communist advance, the new one is mainly used as an open weapon of Communist defense.

While he once defended his cooperation with the Communists for a great many objectively good causes, he now has to defend the Communists themselves in the name of good causes—of peace and civil liberties. For the sake of peace he has to oppose American resistance to Soviet violence and war-mongering abroad, and for the sake of liberty he has to defend the right of Communists to conspire against, and spy on, the American Republic.

To put him into this role, to organize him into that part of American public opinion which opposes the present policies, to create the sixth column of voluntary non-Communist defenders of the Communist fifth column, the Communists had to twist his mind into a new turn. Different from the traditional fellow traveler who saw in the Soviet Union a successful social experiment, and in the native Communists a group of efficient radical progressives, the new fellow traveler is not so sure about both points, and he may even admit his dislike for both; what he has to believe and proclaim now is that neither the Soviet Union nor the American Communists are a threat to this country, and that they have a right to act the way they do, while we have no right to oppose them, even if we dislike them.

To borrow a mot coined years ago by Claire Booth Luce, both of them are "Commybuts"; after affirming that he was not a Communist, the old fellow-traveler used to add: "But the Soviet Union is a great step forward, and the Communists are fine people," while now he prefers to explain: "But we endanger world peace if we don't give in to the Soviet Union, and we endanger our democracy if we won't let our Communists alone."

Apparently there is a paradox in the fact that people sincerely believing in peace and liberty criticize every lawful, democratic, peaceful measure in defense of peace and liberty; and this paradox cannot be explained by surface reasons, such as lack of intelligence and honesty. We may assume that those Nobel prize winners of peace, literature, medicine, and physics, those eminent teachers of psychology, law, and mathematics, those great pianists and painters who sponsor the cultural Cominform congresses, who sign telegrams of welcome to the sacrilegious heresiarch of Canterbury, who become ward heelers for Mr. Wallace, who, in short, have turned into full-time fellow travelers, are not just politically naive, as is sometimes explained with a shrug of the shoulders. They are as intelligent—politically and otherwise—as the great mass of Americans who have learned the truth about communism through those human events which are, as Mr. Churchill recently reminded us, better teachers than are mere words. If the fellow traveler seems unable to grasp the meaning of the headlines, it must have causes above and beyond his rational, intellectual capacities.

Neither can the apparent paradox be explained by blaming the new fellow traveler's attitude on self-seeking calculations and moral baseness. In some cases it may be true that there are advantages for, say, musicians or ballet dancers to exhibit the same fellow-traveling opinions as their mighty newspaper critic who happens to go all-out for the party line. In a few other cases a fellow traveler may believe in the possibility of an ultimate victory of communism and wants to play safe while risking little, but the majority of the new fellow travelers are hardly motivated by opportunism, as so many actually had been in the previous years when among numerous and especially intellectual groups, fellow traveling had been the right—and rewarding—thing to do.

The strange contradictions of the fellow defender, as we should like to call the new fellow traveler, have deeper roots. In many cases, they are the products of a conflict, an insecurity, an anxiety which has been mobilized by and for Communist propaganda, and which leads to a rather clear-cut case of a political neurosis which we may understand like mental disturbances of a more personal character.

"The liberals always have more guilt feelings than other people," Dr. Margaret Mead, an American anthropologist, remarked at the World Congress for Mental Health in London, in August 1948. "The reason is that the liberals are the defenders of the minority rights per se, and therefore take every curtailment of these rights more seriously than other people, whether these other people might think these curtailments to be necessary or not." This feeling of guilt, latently existent in every liberal believer in peace and justice, is the psychological basis from which the Communists can proceed to the production of their fellow defenders.

To mobilize the conflict in the minds of the fellow defenders, they must lead them into the belief that their noble political principles are violated by the American treatment of communism; they have to see American resistance as a persecution of the Communist minority and a militaristic provocation of the Soviet power—in other words, offenses against the rigid principles of liberalism and pacifism.

It is an old political truism, stated by Edmund Burke, that principles which are utterly inflexible in all cases are bound to prove impotent and self-stultifying. "Let us be clear about one thing," explained Mr. Max Lerner (in 1940, it is true), "ideals and ethics are important in politics as norms, but they are scarcely effective as techniques." This in his introduction to the works of Machiavelli, who himself had set down in his last discourse: "A republic that desires to maintain her liberties needs daily fresh precautions. In a great republic, there are constantly evils occurring requiring remedies which must be efficacious in proportion to the importance of the occasion."

Oliver Wendell Holmes gave, in a famous opinion in the year 1919, the formula as to when the freedom of opinion may be constitutionally curtailed: "The question in every case is," he wrote, "whether the words

used are used in such circumstances and are of such a nature as to create a clear and present danger that they will bring about the substantive evils that Congress has a right to prevent. It is a question of proximity and degree." This formula, in its wise and very American pragmatism outlined the limits within which the principles of liberty and peace might be adjusted to the reality principle of self-preservation without damage to these political principles themselves; there is no general prescription, no all-around recipe valid in and for every case; but—just as in the life of individuals—a healthy society finds its way to preserve itself as well as its political conscience, as this country has shown in the last 3 years.

Whoever read the reports of the Canadian spy case or the revelations of Soviet undercover work in this country must be aware of the fact that disloyal officials are able to bring about the "clear and present danger" against which the Government must protect itself by investigating its employees and eventually firing those who seem sufficiently suspect. Whoever followed the accounts of Soviet aggressions and their techniques in latter years, whoever knows the blueprints for world conquest designed and used by the Comintern and the Moscow leaders, whoever heard a radio commentator report on the violent advances of the Soviets in Europe and Asia, must be aware that, if unchecked, the Soviet power will create the "clear and present danger" of war, against which this country must defend itself by building up its power to resist.

In contrast to genuine pacifists who believe, and always have believed, that no danger whatsoever could justify a war, and that armed preparedness always attracts war; and in contrast to sincere liberals who defend everybody whose civil rights they believe infringed upon, the fellow traveler defends only the Communists, and opposes armaments only when directed against the Soviets. He did not protest when Nazis or alleged pro-Nazis were curbed in this country; nor did he ask for an understanding with the Third Reich, or for Mr. Roosevelt to travel to Berchtesgaden and to "settle his differences" with Hitler; as a matter of fact, he was in heartfelt agreement with every measure against Hitler Germany which curtailed the Bill of Rights or which meant war. And this significant difference in his attitude proves that it is not a particularly rigid conscience but his distorted estimation of the Soviet realities which makes him a defender of the Communists. This difference is the test of the fellow defender as a product of Soviet propaganda.

While there is today at least as much evidence of concentration camps, persecutions, suppression of every liberty, militarization and mass killings in Soviet Russia as there was known abroad about the same things in Hitler Germany, the fellow defender refuses to accept it fully, and prefers to accept the words, signs, symbols, and appeals of Soviet advertising which, the realities to the contrary notwithstanding, seem to him close to his own way of thinking. He sees the Communists as prodigal brothers rather than mortal enemies.

There is often an element of personal experience in this attitude: After cooperating with the Communists in progressive and anti-Fascist causes and committees, he is reluctant to break every sentimental tie with them, just because their comrades in this country advocate treason, or because their party in Hungary or in Bulgaria murders dissenters. "We don't know the whole story," he is likely to acquiesce. "After all, there is an immense difference between the Communists and the Nazis."

He seeks doggedly for reasons—rationalizations of deeper, purely emotional feelings, as a psychoanalyst would immediately (and correctly) suspect—to show that, if all is said and done, the Brown Fascists were much worse than the Red Fascists. He might have personal reasons to feel more threatened by the former than by the latter; and he might have a certain feeling of identification with the Communists. Their propaganda has linked him closely to themselves, making him believe that he will be the next victim. Here again, we see a victory of Communist advertising over American realities; despite the lack of evidence that Communist opinion has been suppressed or that liberals unjustly accused of being Communists have been wronged, he is caught by the Communist scare appeal.

To quiet his doubts about the realities and to appease his critical powers, the Communists have developed for his use a technique of distortion based on the formula that the mote equals the beam, the mote being of course in the eyes of America. By a sort of conditioned reflex, mentions of Soviet faults are immediately associated, and thus crossed out by mentions of American faults; their size, their context, and the chance to correct them, those coefficients are eliminated. Just as the hypocrite suffers from a black-out of self-criticism, the fellow defender, an inverted hypocrite, suffers from the enjoyment of his chronically fact-blind, badly inflated bad conscience.

He is, like Prof. Theodore Brameld, a sponsor and defender of the Waldorf Parade, unable to make up his mind between American and Communist positions, methods, goals; he resents the "oversimplified conclusion that we are faced with a black-or-white, either-or choice." As if this choice had not been created by what is called Marxism-Leninism-Stalinism and its Moscow practitioners, he blames those Americans who have chosen to defend the democratic "or" rather than the dictatorial "either" for their "destructive attacks."

The fellow defenders, the third sex of contemporary politics, turn their feelings of fear, confusion, and guilt into aggressiveness against self-evident facts which, were they not distorted by Communist advertising claims, would cut off their argument at once. With the Soviets attacking and this country resisting, so-called neutrality of liberals means support of the Soviets.

Our analysis shows that it is not legitimate concern for liberal and pacifist principles which makes the fellow defender protest against our policies, but his distorted, unrealistic image of the Communists, his emotional unwillingness to see them for what experience and evidence show them to be. Since the majority of the country has recovered from this somewhat hysterical blindness to the Soviet facts, the propaganda of Soviet harmlessness would have little chance to affect larger groups. Therefore, defenders must seem concerned with the preservation of allegedly threatened civil liberties and allegedly endangered peaceful relations to mobilize the national bad conscience which can be disturbed more easily than the national faculty of rational perception.

While it is certain that the number and influence of American fellow travelers have considerably decreased since the war and first postwar years, probably to less than half of their previous strength, their potential influence should not be underestimated. They represent a morbid self-criticism which, in times of strain, might prove infectious. If, according to Gunnar Myrdal, the American dilemma consists in the inability to live up to the high moral precepts on which the Republic is founded, the democratic dilemma may show itself in occasional difficulties to uphold peace and liberty in defense against their moral enemies. The fellow defender, cultivated by Communist propaganda on the soil of democracy and its discontents, will be a relatively lonely figure as long as the democratic dilemma exists not as a real fact, but only in his imagination.

Address by Sean MacBride on the Partition of Ireland

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. HINSHAW. Mr. Speaker, recently Mr. Sean MacBride, the Minister of External Affairs of the Republic of Ireland, visited in this country. During the course of his tour of the Nation he addressed a dinner in Los Angeles which had been arranged for by my good friend and distinguished constituent, Joseph Scott, prominent Los Angeles attorney and national president of the American League for an Undivided Ireland.

Mr. MacBride in his address clearly set forth the position of the Republic of Ireland regarding the question of partition, which is the sole remaining obstacle in the path of complete harmony and unity in the relations of Great Britain and Ireland. I feel that this excellent discussion of the matter should be brought to the attention of my colleagues in order that they may have a better understanding of this troublesome problem, which is constantly upsetting the relations between Great Britain and Ireland and adversely affecting Ireland's participation in vital international affairs.

The text of Mr. MacBride's speech reads as follows:

When I was first invited to come to the United States to take part in the Easter celebration and to celebrate the coming into operation of the Republic of Ireland Act, my first reaction was to decline. I felt that this was one day, more than any other, when I would have liked to have been in Ireland.

Then I began to think. Centuries of history flashed through my mind. It was always toward the west and the setting sun—to this land—that our people came when driven from their own shores by economic circumstances, by famine or by oppression. It was here that they came for shelter. It was here in the New World, too, that they worked and toiled to build this great Republic from which we derived so much inspiration. It was in this land that Mrs. Tone, the widow of the leader of the 1798 rising, came for shelter and died; it was here that Emmet's brother ended his days; it was from here that the Fenian movement was born and directed. It was here, too, that both my mother and my father came in the early days of this century, at the time of the Boer War, to enlist support for the cause of Irish freedom.

These quick flashes of history made me realize that if the Republic of Ireland was being internationally recognized on Easter Monday, 1949, it was largely as a result of the inspiration, the initiative and support of the freedom-loving people of the United States. Hence, I followed the old trail that so many of our forebears followed—to be with you on this historic occasion.

The Republic of Ireland Act came into operation on last Easter Monday. The true significance of this event is that today for the first time in the history of the world, the Republic of Ireland is internationally recognized and takes her place as such among the nations of the earth. That is an important milestone in the history of our struggle for independence.

It is not the declaration of the Republic or of our independence, for this was already

done, but it is the recognition of the Republic of Ireland internationally. An Irish Republic was first proclaimed as far back as 1798 by the United Irishmen. This first republican uprising, symbolically enough, originated in Belfast and was led in the main by Irish Presbyterians; in addition to being the mainspring of our first republican movement, they also fought for Catholic emancipation and freedom of conscience, thus laying the foundation of our present-day republic. Since then, the cause of Irish independence and of Irish republicanism have been synonymous. In this century on Easter Monday, 1916 the Irish Republic was again proclaimed and subsequently ratified by the will of the Irish people. But it is only today that the Republic of Ireland has been internationally recognized as such.

The Republic of Ireland Act is not the property of any one party in Ireland. By generous and wise leadership on all sides this measure received the support of all parties in our Parliament. This in itself was an important development.

In the eighteenth century, when the American people and the Irish people first began their struggle for the establishment of democracy and liberty in their respective countries, republics were few and far between; democratic principles as we know them today were practically unknown. Our respective peoples were, therefore, not only fighting for the freedom of their countries but were blazing the trail in the struggle for the establishment of democracy and the assertion of the rights of men.

The ebb and flow of the struggle for the establishment of democracy has not been an even one. You in the United States won your battle long before we did. Indeed we have not yet won ours fully for a portion of our country still remains cut away and occupied against the will of the overwhelming majority of the Irish people.

The continuance of the undemocratic partition of the historic Irish nation precludes us from rejoicing as fully as we should like to on this occasion, for there yet remains one final step in the road to the achievement of our national objective.

In that most memorable speech before his execution on the 19th of September 1803, Emmet made one request:

"I have but one request to ask at my departure from this world; it is—the charity of its silence. Let no man write my epitaph; for as no man who knows my motives dare now vindicate them, let not prejudice or ignorance asperse them. Let them and me rest in obscurity and peace; and my tomb remain uninscribed, and my memory in oblivion, until other times and other men can do justice to them.

"When my country takes her place among the nations of the earth, then, and not till then, let my epitaph be written. I have done."

THE PARTITION OF IRELAND

The nation of which Emmet spoke was the historic Irish nation and not merely a portion of it. In our Constitution our national territory is defined in the following words:

"The national territory consists of the whole island of Ireland, its islands, and the territorial seas."

When we finally succeeded in gaining control of our affairs in 1921, Britain retained six of our northeastern counties, which incidentally include the industrial areas of our nation. Since then our historic nation has been divided. We regard this as an undemocratic anomaly which cannot survive in this area.

Of all democratic rights the right to national self-determination is the one which is most fundamental. It is on this right that most other democratic rights ultimately rest; it is this right which is now being so flagrantly violated in the countries behind the iron curtain by Russian imperialism. It is that self-same right for which we are seeking recognition in the case of Ireland.

To put it very simply, we are merely seeking to establish the right of the Irish people to determine their own affairs without interference by any outside power. That, I think, cannot be said to be an unreasonable attitude.

If the democratic right to national self-determination is to apply to any country there is no country that fulfills the requisite conditions more clearly than Ireland. There are three well-established tests laid down to determine what constitutes a national entity:

1. The natural boundaries of the country. No country in the world can claim more absolutely defined natural boundaries than those made by the seas that surround our island. These cannot be subject to dispute.

2. A distinct national history. Few countries can claim a more clearly defined and age-long national history, dating back to long before the days of St. Patrick.

3. A homogeneous population. Our people are of the same color and speak the same language. Few countries have a more homogeneous population. True, there are Protestants and Catholics, but people of different Christian religions live in amity together in every country in the world. If that were to be a basis for the partitioning of a country, then every country would be split up into numberless small fragments.

I know of no other test whereby a national entity may be determined. Ireland complies more fully with this test than any other nation I know of.

But even if the application of this right were to be denied in the case of Ireland, and a completely new concept were to be accepted whereby a small minority could, with the help of an outside power, establish a separate state irrespective of the will of the people, the partition of Ireland still remains indefensible. In approximately more than half of the area which has been cut away, there is a majority which ardently desires union with the rest of Ireland. Why, then, should these areas be forcibly detached from us?

I know that a section of opinion in Britain likes to suggest that this is a problem to be settled by Irishmen and that Britain merely play the part of the "honest broker." I only wish this were true, but I am afraid that it is a somewhat superficial and evasive viewpoint.

The partition of Ireland was originally effected, and is now maintained, by virtue of an enactment of the British Parliament. British customs operate the artificial border. British troops occupy the area which has been cut away. British finances are inextricably mixed with those of the Belfast Government. Britain has never even give a clear indication that she desired to see partition ended. These are the realities of the situation.

There is now a growing volume of liberal opinion in Britain which realizes that the continuance of this state of affairs is not merely undemocratic, but that it is a short-sighted policy. It is being realized that, were it not for a survival of the colonial psychology, British policy would aim at securing the friendship of Ireland. Every conceivable method of dealing with Ireland has been tried except the obvious one of acquiring the friendship of Ireland on a basis of equality.

Contrary to a frequently expressed belief, there is a tremendous fund of good will in Ireland toward Britain. Indeed there are so many factors in common that were it not for definite obstacles such as partition, our two countries would have been much closer together.

I recognize that, largely because of artificial stimulation from outside, a section of our people in the six-county area which has got away from us feel that if partition were ended they might in some way be penalized. While I do not think there is the slightest danger of this, we realize that that fear is there, and we therefore are quite prepared to meet it by giving whatever guaranties that may be reasonably required. Our Constitution does provide very complete guaranties for minorities, just as complete as those contained in your Constitution. But if it were thought necessary, these could even be strengthened. We are also prepared to consider a federal solution whereby the minority in the Belfast area could maintain their own legislature with limited functions.

The first step, however, will have to be the transfer by Britain of the powers which she has presently retained in her own Parliament.

ATLANTIC PACT

There has been a good deal of confusion regarding our attitude to the Atlantic Pact. Most of this was unintentional but some of it may have been intentional. Ireland, as an essentially democratic and freedom-loving nation, is anxious to play her full part in preserving Christian civilization and our democratic way of life. We are, therefore, in complete agreement with the objects of the pact but there are some tangible reasons which preclude us, however, from becoming signatories.

The pact includes a military alliance between nations that adhere to it. In our case that would involve a military alliance not merely with the United States but with Britain. As already explained, we regard the occupation of a portion of our country by British military forces as an infringement of our territorial sovereignty and as a denial of the elementary right to national self-determination. We resent Britain's intrusion in our affairs and in our territory just as much as the people of Poland resent the intrusion of Russia in their affairs and in their territory. In these circumstances no Irish government could envisage a military alliance with Britain while partition continues.

A further difficulty arises by reason of the provisions of the Atlantic Pact itself. In the main, it provides for the defense of the "territorial integrity" and "political independence" of the participating nations. Unless, therefore, it was clearly recognized by all the participating nations, including Great Britain, that Britain had no territorial claims in Ireland and that insofar as Ireland is concerned the "territorial integrity" and "political independence" were matters which concern solely the Irish nation, by adhering to the pact the Irish government would in effect be sanctioning and guaranteeing Britain's rightful occupation of a portion of Ireland.

There are also strategic considerations standing in the way of our participation in the Atlantic Pact. The defense of a small island such as Ireland can be undertaken effectively only by a single central authority, having at its back the firm support of a decisive majority of the population of the whole country. In the economic field it would otherwise be essential to integrate the productive capacity of the Nation as a whole under a democratically elected central government.

In addition, there is a deep resentment among our people against the undemocratic practices used to insure the continuance of the unnatural division of our country. In the light of these circumstances no Irish

government could hope to find the necessary support from the people for a policy involving joint military commitments with the power which continues to lend the cloak of its sanction to evils of the very same nature which it is the object of the Atlantic Pact to oppose and prevent. I again wish to emphasize that we have no feeling of bitterness or hatred toward Britain based upon our past history. I think it is necessary to do so because often the mere statement of Britain's position in relation to Ireland sounds as if it were anti-British propaganda. I have no wish to engage in anti-British propaganda, but I do desire to make our attitude known.

We are most anxious to develop genuine friendly relations with Britain. Such friendly relations are in the interests of both countries as well as in the interests of the United States and other nations interested in the concept of Atlantic cooperation. It does occur to us in Ireland that if cooperation is to be achieved among any set of nations the first step to bring about that cooperation must be the elimination of points of friction. If the Atlantic nations desire our cooperation, which we are willing and anxious to give, we consider that they should be prepared to examine with us the obstacle which stands in the way of achievement of cooperation. If this were done I believe a solution could be found; if I were proved wrong, however, nothing will have been lost in trying to find a solution.

Barred from membership of United Nations Organization by Russia and with a portion of our country occupied by Britain, we live in hope that the democratic nations will help us to bring about a solution of what we consider to be an indictment of democratic rule in our own case.

Constructive and sincere statesmanship points to the necessity of ending once and for all the centuries-old conflict between Ireland and Britain. This would make an actual contribution toward strengthening the internal harmony and cohesion of all of the nations concerned with the survival of the democratic world.

I am glad to have had an opportunity of addressing you and thanking you on behalf of the Irish people for your unswerving loyalty to our small country. It was you and your forebears who helped the Irish people to make the progress which has already been achieved. You did this by your own unflagging faith in the destiny of Ireland and by your refusal to turn your back on the principles of liberty and democracy. We on our side are proud of your achievements in the building of this mighty American Republic. You were ever foremost in its defense whenever outside forces threatened its security. Even in the darkest hours, when liberty and justice were threatened, either here or in Ireland, you never broke faith with your tradition. When the light of our national being within Ireland's own shores was almost extinguished by the powerful conqueror, you preserved the flame and kept alive the faith that Ireland would one day take her rightful place among the community of nations.

In this interim period—with so much already achieved—we in Ireland want to assure you of our gratefulness for your contribution and that we are not unmindful of your toil and your sacrifices.

Our message to you is to be good and loyal citizens of the land you have helped to build. We pray that, consistent with your duties as United States citizens, you will be mindful of the Christian civilization and of the principles of liberty which are our common heritage.

May the Almighty watch over the destinies of our two nations and bring them ever closer together.

Arizona Project Cost Not Out of Line

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. MURDOCK. Mr. Speaker, the columns of the CONGRESSIONAL RECORD, like the columns of the daily press, have been filled with a mass of material on the Colorado River controversy between Arizona and California. By far the largest portion of this propaganda has emanated from the California side of the river. Under leave to print, I hereby call the attention of my colleagues to a brief but well-prepared statement of the Arizona viewpoint, as found in one of Arizona's leading papers, the Arizona Republic, for Sunday, July 10, this year. This statement is by an authority on irrigation matters, J. H. Moeur, who is an official of the National Reclamation Association and therefore well acquainted with the entire reclamation achievement and program of development throughout the 17 Western States. The article is as follows:

ARIZONA PROJECT COST NOT OUT OF LINE

(By J. H. Moeur)

California agencies, in their desperate attempt to defeat the central Arizona project have disseminated propaganda that is deceptive and misleading.

The agencies always maintain that their primary objection to the central Arizona project is based on the fact that there is a dispute over the right to use the water of the Colorado River. If their opposition were confined to this one problem, the question might not be difficult to solve; for a reasonable solution is set forth in the proposed O'Mahoney-Millikin amendments to the central Arizona project bill, S. 75. With these amendments, the bill would authorize the project and yet give ample opportunity to California or any other State to bring a suit if any such State thought its water rights were jeopardized by the authorization bill.

The sincerity of the California agencies in the position that they take on the question of water rights is open to serious question. Do they honestly want a determination of this matter in court? Or, do they, as many people believe, seek this method as an excuse to delay not only authorization of this project but any similar project on the Colorado River, so that California, in the meantime, may build up its use of Colorado River water?

That this is their true objective is evident by the loud and repeated criticism of the central Arizona project from an engineering and economic standpoint. In recent statements they have gone so far as to contend that the authorization of the central Arizona project would so deplete, or as they express it, "dry up," reclamation funds that other reclamation projects would suffer thereby. This is an absurd position to take; is not borne out by the record, and is inconsistent with the very things that California is now doing.

THE TRUE FACTS

The central Arizona project bill proposes the construction of a dam at Bridge Canyon in Arizona. The report discloses that, by construction of this dam there can be generated a tremendous amount of electrical energy, approximately one-third of which will be used by the irrigation features of the project, leaving two-thirds available for commercial sale, all of which can be absorbed in Arizona. The undisputed evidence shows there is a great demand for this electrical energy in the Southwest. As a matter of fact, Arizona agencies have applied for all of this commercial power. The proposed price to be charged for this power is 4.82 mills per kilowatt-hour, and in that rate is included an irrigation subsidy of 0.72 mill per kilowatt-hour.

With this aid from power, plus revenue derived from the sale of water, the project is self-sustaining and self-liquidating and will repay to the United States Government the entire cost of the reimbursable features in the period of 70 years, and, of course, in addition thereto, will carry all maintenance, operation, and replacement charges.

Compare this with already authorized reclamation projects in the West. In the Central Valley of California the rate charged for power is 5.30 mills per kilowatt-hour with an irrigation subsidy of .68 mill. The Colorado-Big Thompson rate is 5.10 mills per kilowatt-hour with an irrigation subsidy of .89 mill. Missouri Basin is 5.51 mills per kilowatt-hour and the irrigation subsidy is 2.47 mills per kilowatt-hour. Does this make the central Arizona project absurd or out of line with other existing projects?

Authorizations for flood-control projects to date have been made in a sum in excess of $7,500,000,000; the total appropriations under these authorizations have been slightly less than $2,000,000,000. Actually these authorized projects, due to increase in costs, will beyond doubt cost much more than the amount originally authorized (Corps of Engineers—Department of the Army—June 22, 1949). The estimated cost of reclamation projects already authorized totals in excess of $2,000,000,000. This does not include the Missouri Basin development—the firm price of which has not been fixed but which is estimated at $2,700,000,000. Appropriations have been made for these projects to date in the amount of approximately $1,500,000,000 (see Report of Bureau of Reclamation Status of Authorizations and Appropriations, June 1, 1949).

IN LINE WITH ECONOMY

Authorizations should not be confused with appropriations. When a project is authorized, construction work on that project must proceed in accordance with appropriations. Most projects require several years for construction. The central Arizona project, with full appropriations, will require from 5 to 7 years for construction; and these appropriations are made by Congress from year to year in line with the national economy and from money available for that purpose.

For instance, although a number of reclamation projects had been authorized, appropriations were curtailed during the war years of 1944 and 1945. But, it is of particular significance to note that appropriations for reclamation construction have increased since 1939 from the figure of $44,391,654 for that year to the sum of $225,527,313 for the year of 1949.

From these figures it is obvious that the authorization of the central Arizona project would not in any way affect appropriations for already authorized projects; nor would it affect authorization of other worth-while projects. Indeed, it will only emphasize the necessity for full development of reclamation projects, particularly multiple-purpose projects. The power generated at Bridge Canyon Dam will obviate the necessity for generating that same power by use of oil, coal, or gas, and result in tremendous conservation of our natural resources. This is true of all multiple-purpose projects.

Reclamation interests in the West have long recognized that when these multiple-purpose projects are developed power should

aid irrigation. It is interesting in this connection to examine a few of the facts and figures in connection with the Central Valley project of California. Senator HAYDEN, in his testimony before the Senate Committee on Interior and Insular Affairs on S. 75 in June of this year, submitted a tabulation that reflects that in the State of California flood-control projects have been authorized in the total amount of $722,919,500. Of this amount, only $165,450,000 have been appropriated to date. Of these California flood projects, $337,733,000 are identifiable with the Central Valley project of California, and of this amount, $53,415,000 has been appropriated to date. Another tabulation submitted by Senator HAYDEN, at the same hearing, showed Federal reclamation projects in California already authorized for construction totaled $694,981,137. Of this amount, there has been appropriated $354,808,274. Of these reclamation projects $558,146,000 are identifiable with the Central Valley project of California, and funds appropriated for these projects through 1948 total $272,803,972.

CALIFORNIA ASKS BILLIONS

Money expended for flood control is not reimbursable. A portion of that authorized for reclamation is not reimbursable. There has been authorized to date on projects in the Central Valley of California, either for flood control or reclamation, a total sum of $895,919,000. The balance is either charged off as nonreimbursable or is paid for by power. But this is not the whole story. The Central Valley project of California is only partially authorized, and, when fully authorized, will cost many times more than that already authorized. Reliable sources estimate that when that project is fully complete the total cost will be in the neighborhood of $3,800,000,000 on the basis of 1946 costs.

This year, before the Eighty-first Congress, there were two bills seeking authorization of different features of this project: One was H. R. 165, known as the American River project, with a total estimated cost of $113,365,000; the other, H. R. 163, authorizing the construction of the Sacramento Canal system, with a total estimated cost of $81,402,000.

Apparently California is not bashful in the matter of seeking authorization for its projects which in the ultimate will cost many times more than the central Arizona project, and, to say the least, their position in asking for these projects in their own State is inconsistent with their opposition to the central Arizona project.

Arizona has never opposed the development of the Central Valley of California. Arizona believes that all western projects that are self-liquidating, within reasonable terms and time, are worth while and deserve support and, without question, are in the public interest. It has been emphasized again and again that the building of new reclamation projects creates new taxable wealth and returns to the United States Treasury many times more than the initial cost of a project within a reasonable period of time.

So, again, we are forced to the conclusion that California agencies, in telling these half-truths and disseminating this false and misleading information, must have their tongues in their cheeks, knowing full well that their own projects, for which they seek authorization and support, depend upon the same principle for their justification. Therefore, their opposition is only a smoke screen to try to defeat, or at least delay, authorization of the central Arizona project.

The need for the central Arizona project is undisputed. Without the supplemental water which this project will provide, the economy of the State will be seriously impaired with the resulting reduction in the contribution which this State now makes to the national economy.

Rugged Days for the Majority Leader

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, July 15 (legislative day of Thursday, June 2), 1949

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Rugged Days for the Majority Leader," written by William S. White and published in the New York Times magazine for July 3, 1949. I may say that printed with the article is a very handsome picture of our distinguished majority leader. I am sorry that the RECORD does not carry photographs, but I ask that the article be printed, without the photograph.

The VICE PRESIDENT. The unanimous consent obtained by the majority leader was that no statements should be made in connection with matters inserted in the RECORD. The Chair feels obliged to enforce the rule.

Mr. HILL. Mr. President, the statement has already been made. Therefore there is nothing the Chair can do about it. [Laughter.]

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RUGGED DAYS FOR THE MAJORITY LEADER—SENATOR LUCAS IS TRYING TO PUT OVER THE TRUMAN PROGRAM WITH A PARTY UNITY ONLY IN RARE CASES

(By William S. White)

WASHINGTON.—The public career of SCOTT W. LUCAS, of Illinois, the Democratic Senate leader, might be summed up currently by a slight paraphase of an old spiritual. Nobody knows the trouble he's seen.

At best, the life of a Senate majority leader is one of tribulation running a close race with prestige and power. But for "SCOTTY," as President Truman calls Senator LUCAS, tribulation is often well out in front.

As commander of a political force more numerous in theory than in fact, he again and again is compelled by the folkways of the business to take the offensive against a force nominally inferior but actually stronger.

In other words, Senator LUCAS theoretically leads 54 Democrats, but actually can be sure, day in and day out, of hardly more than 40. Firmly and consistently arrayed against him is an overwhelmingly majority of the 42 Republicans—say 35 at the very minimum—plus whatever roaming bands of southern Democrats may elect to go along with them on individual issues. The handful of irregular Republicans who cross over occasionally to Mr. LUCAS are of uncomfortably small help to him.

Though President Truman won the last election, he did not win control of the Senate—if by that one means an effective majority carrying out the President's programs. In the real sense, the President's control is the stuff of legend and of dreams and in such circumstances it is perhaps not surprising that the majority leader of the Senate has become worn and haggard. His task, to put it plainly, is heartbreaking and though Senator LUCAS has not suffered quite so dramatically as the phrase would imply, he has lost some of his ordinarily robust health in the fevered days since the Democrats returned to the majority side of Congress last January.

The sour jest of his alleged control of the Senate was neither the last nor the most punishing of a series of mischances to make sport of him.

Against all his better judgment and sometimes his own urgent recommendations, he has been driven by the harsh necessities of politics into legislative forays for which his only reward has been failure and the scorn or anger of some who helped to drive him into these hopeless positions. All this in the year before he stands for reelection to the Senate.

Twice, at least, he has been overruled on major matters or disavowed by President Truman—once when he wanted to hold back the civil-rights filibuster fight until the Senate accomplished other legislation on which southern Democrats would go along with him; more recently, when he sought to put a flat limitation on what the public could really expect from this session of Congress.

The result has been, as Mr. LUCAS himself is only too aware, that a large part of the public has come to think that it is only the leaders of Congress who somehow seem to stand, stubbornly and without reason, against that action which the White House so often demands. Mr. Truman, understandably, has never been willing publicly to forego a single major item of the vast program he sent to Congress. But the repeated proddings from the White House have not made it easy going for the President's lieutenants on the Hill. Spirit and high intention are all to the good, but legislative battles are still won by the man with the most votes.

But there is more to it. A Senate majority leader, unlike the Speaker of the House, does not enjoy the help of strong and Spartan rules by which he can cut down and all but silence the dissident. Nor does the Senate leader have in his grip the strategic baubles by which a Speaker can quickly and generously reward the faithful or, by withholding them, swiftly and mercilessly punish the rebellious—such baubles as advancement in the hierarchy of the House through good committee assignments.

A Senate leader's party associates may thumb their senatorial noses at him just about as they please without real pain of peril. He cannot even control from one hour to the next the order of business on his own floor. No one may tell any Senator how long he may talk, or about what, or when. If, for example, the pending business is a treaty pledging the United States to war in some circumstances, there is nothing at all to prevent "Senator Blank" from rising, in the midst of such foreign debate to speak for 10 minutes, or 2 hours, upon the misfeasance of the Department of Agriculture in regard to the hog raisers of his sovereign State.

Then there are the committees. No Senate leader can get action on anything on the floor until he has got action in a committee. And a committee chairman is very powerful in his own right, almost unchallengeably so, and woe to any majority leader who goes to him to demand anything at all. This is simply not done in the Senate.

So it is that a controlling party, from the President down, may be deeply pledged to many things and still not get them done. If the committee chairman himself is amenable, his colleagues may have quite other notions—not to mention the wary Republican opposition, which is not interested in making the Democratic train run on time. And if the Democratic colleagues themselves are amenable, there remains the larger hazard of floor debate, where it is so easy to sink an issue in the quicksand of rules that were made for deliberation, and even for obstruction, but never for speed and dispatch.

A Senate leader may wheedle and argue; he may thrash about and twist and turn in his frustration. But he does not success-

fully give orders unless these happen to be welcome to the ostensible followers. He is good when circumstances have put enough firm votes back of him, as a football coach is good when he has a 240-pound line and the best backs in the State. A leader is bad when he hasn't got the votes, although there sometimes may be some collateral argument as to why he hasn't got them.

Frustration for Majority Leader LUCAS does not stop with this unpalatable and central fact. A big, hulking man—6 feet 3 inches, with the fine physical coordination of a former athlete—he recoils with unusually acute sensitivity from the other slings and arrows that inevitably come his way.

In the filibuster fight that he did not want so soon, Mr. LUCAS, who was trying to reform the Senate rules so that future filibusters might be broken and the civil rights bills brought forward, fell haplessly and simultaneously under the lashings of his southern colleagues and the counter blows of "liberal" associates who thought he was not pressing hard enough. When the voice of a GEORGE, of Georgia, was not raised in sad bass reproach at how far Mr. LUCAS was going, the angry treble of the pro-civil-rights press was heard intoning that Mr. LUCAS was not going nearly far enough. Thus caught "in the middle" in the most genuine and agonizing sense, Mr. LUCAS lost the battle to restrict the filibuster, lost the civil rights war, and then had to be taken off to the hospital for 3 weeks to recover from exhaustion. There (and since) his mail was heavy with the censure of the disappointed, but light with messages of approval for an effort well made.

Mr. LUCAS winces under these condemnations from right and left a good deal more than did his immediate predecessors in the post of majority leader. Senator TAFT, of Ohio, the real, if nontitular head man in the Republican-controlled Eightieth Congress, was supported by an iron, chill, self-control which in no circumstances ever had a visible chink. Mr. BARKLEY, of Kentucky, now the Vice President, in his rather short period as leader during the first Truman Presidency, was sustained by a thick outer layer of philosophic resignation and a lively sense of humor.

Moreover, Mr. TAFT, from 1947 until the roof fell in in November 1948, led an eager Republican array which, so long out of congressional power, had returned lean and disciplined and hungry for place and responsibility.

Mr. BARKLEY'S final months as majority leader came in the last blinding light and then the afterglow of the war when it was widely thought that Mr. Truman probably was going quietly and decorously out as soon as he had fulfilled his constitutional duty of standing in for his dead chief, Franklin D. Roosevelt. The pressure was not nearly so heavy then; the occupant of the White House had yet to prove himself and Congress pretty much ran its own show.

It was the misfortune of Mr. LUCAS to come to power in the morning after of what was to Mr. Truman's partisans—Mr. LUCAS among them—a totally unexpected election-night triumph. Too much, far too much, was expected by them all; the intoxicating hopes and assumptions of November began only slowly to give way to the recognition that in the United States Senate a Republican-Southern Democratic coalition had not fallen with the election returns.

Senator LUCAS, it now appears, understood rather early the implications of this menace to the administration's program. He sensed in time—had not the President overriden him—that the armistice was likely to be brief and that it would be well to hurry on to what could be accomplished before challenging the southerners to formalize, on the civil-rights issue, their latest alliance with the Republicans.

But as the first disappointments and disillusions began to appear, and Democratic majorities at times began to vanish suddenly into hostile coalition majorities, Mr. LUCAS began to make some little trouble for himself—how much is open to dispute.

In the first place, the Senator was, and is, a victim of what Hollywood calls typecasting. A very tall man with a hawklike, saturnine face, a sort of dark, Mephistophelean handsomeness, he looks a little angry even when he isn't and this often tends to set men against him. Then, as is common with men new to power and responsibility in the Senate, he had a tendency to fight every issue with a zealous violence that irritated that august and complex body.

Though he swears to friends almost daily that he is now taking it easy when matters go against him, Mr. LUCAS' mannerism in debate still imputes more vehemence than he feels. His voice often sinks so low it can hardly be heard at all, then, suddenly, rises to a harsh, pounding volume, while his cheeks sink into black, sardonic lines.

In these scenes, quite unintentionally, he presents an almost menacing figure, his heavy fists raised as if to strike. His words, meantime, seem to rise, half-strangled, through a fog of bitter indignation. "The eeeble (able) Senator * * *," he will cry, his eyes all but closed in a scowl.

So it began to be said that Mr. LUCAS had a temper too high for a majority leader; that he sometimes unnecessarily alienated other Senators; that he was insufficiently sensitive to one of the most individualistic and temperamental bodies of men in the world.

The Senator himself was hurt and honestly amazed at all this. By nature an intense partisan and coming from a tough political area centering around Chicago, he had never thought to pull a punch. Able to "take it," he had, as an individual Senator, always zealously handed it out. He saw no reason to stop. Moreover, deeply committed to most of President Truman's program, he saw it as his first function to persuade and, that failing, then to blast administration measures through the Senate.

The hostile estimates of his leadership were so incredible to him that he knew no way even to begin to cope with them. Far from being a tough, highly tailored, unforgiving know-it-all, he is, in fact, a man of vast tolerance, full of sympathy for the frailties and weaknesses of men, and quite humbly conscious that of these he has his share.

A little lost at times, but certainly not for lack of good will, Mr. LUCAS to the more pretentious Members of the Senate is like a fullback (he was, in fact, an end) who suddenly finds himself caught up in a meeting of the college's Marcel Proust Club.

He has not the piercing intellect of Mr. TAFT, nor the easy eloquence of CLAUDE PEPPER, nor the unquestioning self-assurance of HUBERT HUMPHREY. Not for him, either, the brilliant ability of HARRY BYRD to summon up supporters with a smile and a casual wave of the hand.

But, quite apart from the unmeant angry mannerisms, he is a formidable opponent in debate, and on his good days nobody goes out of the way to take him on. He has the sustaining strength of a fixed political credo, and so does not suffer from vain and spirit-consuming self-examination about where to stand on an issue.

On foreign affairs—a field in which he has remained in the wings, while leaving the spotlight to the principal actors of the Foreign Relations Committee—Mr. LUCAS for many years has been a powerful and sincere supporter of anti-isolationist policy, though he comes from a State where there is always considerable danger in holding such a position.

Although not exactly a New Dealer, he has a long record of moving with the main stream of successful American political action since the early days of Franklin Roosevelt. Mr. LUCAS, not a creative politician, did not dig the channel; nevertheless he is no Johnny-come-lately to the stream.

He entered the majority leadership, in his fifty-eighth year, as only a second-term Senator. It was, therefore, a rather quick climb as things go in the Senate, but one more or less routine. He had served before as the Democratic whip, meaning the party leader's principal assistant, and it was only natural that he got promoted—a promotion, incidentally, which he went after quite frankly, for there is nothing coy about him.

He came to Washington from Havana, Ill., his home, in 1934, as a Member of the House of Representatives, with about the average background, including a law degree from the small Illinois Wesleyan University. He drew rather quickly ahead of the common run with that same quality of playing for keeps against which some of his colleagues now shake their heads.

He has been a courageous Senate leader—showing patient good will to the rebellious southerners but never allowing friendship to sink to toadyism, and marching loyally with his administration colleagues without permitting the more extreme of them to call the tune.

He calls his wife "Mom," is speechlessly proud of his prep-school son and is just the sort of man to be found in countless reasonably well-heeled American country clubs.

He would be a good man to go hunting with, a good man to play poker with, a good man to go to an American Legion convention with, a good man to have a glass of bourbon whisky with, and an excellent man to have around if trouble started. He would be a good man, also, to have around if anyone started abridging the Bill of Rights.

Having said all this, it is, perhaps, hardly necessary to say that he is a good sport about criticism—unusually good for a man engaged so endlessly in politics at its most punishing. In the language of baseball, of which he is, of course, fond, he never really complains to the umpire who calls them. About the strongest protest he ever makes about unfavorable publicity is the mild complaint: "You fellows got me wrong on that one, I think."

A Dynamic Program for a Dynamic Republican Party

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 15 (legislative day of Thursday, June 2), 1949

Mr. WILEY. Mr. President, some time ago it was my pleasure to address the National Federation of Women's Republican Clubs in Madison, Wis., on the theme of a dynamic program for a dynamic Republican Party. At this time, for its possible interest to my Republican as well as my Democratic colleagues, I ask unanimous consent that the text of the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A DYNAMIC PROGRAM FOR A DYNAMIC REPUBLICAN PARTY

I should like to submit to this splendid gathering of leading Republican women some 12 specific suggestions on a dynamic

program for a dynamic GOP. These suggestions are respectfully submitted on the basis of my own experience and evaluation of our present and future political situation. I know that my able listeners will in turn review them on the basis of your own broad background in political work. Here they are:

1. LOCAL ORGANIZATIONS

The Republican Party in 1950 and future campaigns must have a revitalized organization up from the grass roots of the Nation. As you know, there is absolutely no substitute for effective grass-roots organization in every voting ward and precinct in the Nation. One of the troubles with us in the past has been that we have tended to concentrate on GOP headquarters in Washington or in State capitals, or in a few of the larger cities. Our opponents have, however, shown us that we must have effective workers in practically every apartment house, every city block, every rural route if we are to win.

2. DOORBELL RINGING

Another obvious fact and one that must be reiterated is that our opponents have shown us that we must know how to use some "elbow grease." We must get out and work, we must ring doorbells, we must personally speak to our friends and neighbors, we must make telephone calls, write postal cards and letters. In other words, it is a very grave mistake to assume that simply by making out a few financial checks or printing a few pieces of literature, the party can gain victory. On the contrary, we must all be workers, meeting folks person to person, holding mass meetings wherever possible. We must try to convert folks who are not yet converted. We have spent too much time in the past talking to ourselves, so to speak, instead of getting out and talking to others who need to hear our message.

3. CONTINUOUS CAMPAIGNING

We have got to learn the lesson that the fight for the 1950 elections are being waged right now. We can't get the mistaken idea that 3 weeks before the 1950 primaries and a few weeks before the general election, we can all of a sudden get busy and start printing literature, start making radio speeches, and issue press releases. While men and women do change their minds in the weeks preceding election, they are in the continuous process of forming opinions right now. Thus, we have got to antidote the notion right now that the Republican Party is not concerned with the great mass of humble folks. We've got to antidote the notion that the party is antilabor, or that the Republican Party has forgotten the interests of America's farmers. That's a job, in other words, to be handled right now, not 6 months from now, not 1 year from now, but today.

4. SPECIFIC PROGRAMS FOR SPECIFIC GROUPS

We've got to plan our program in terms of each of the important groups in our Nation. What are those groups? They consist of America's 18,000,000 veterans, the 10,000,000 in the United States aged 65 or over, the farm group, the laboring group, the white-collar group, the businessmen, the housewives, the teachers, America's various religious and racial groups, and so on down the line.

Naturally, each of those groups has its specific interests, and it must be up to us to determine what those interests are and how we can serve those interests consistent with our basic ideals. Now please don't misunderstand me. I am not suggesting that we sacrifice ideals and cater to pressure groups simply for the sake of getting votes. On the contrary, I am saying that we must find out the legitimate interests of each group and then determine how we can coordinate those interests from the standpoint of a national program.

It is the public welfare with which we are most concerned, rather than the welfare of any single segment of our economy. However, we have seen in the past how the New Deal and Fair Deal administrations have talked the language of each of America's individual groups, have understood their problems, indicated sympathy with their dilemmas. It is up to us, therefore, to approach this problem realistically and to think in terms of each of these groups in a sincere, conscientious, helpful way. But always, I repeat, it must be from the standpoint of the role of that group in relation to the national well-being.

5. EFFECTIVE PUBLIC RELATIONS

One of the things that we must learn is how to use each of the new media of this technological age. Now, what do I mean by that? Too often in the past we have concentrated upon printed literature or upon long, boring radio monologs. It is up to us, therefore, to utilize dynamic, varied approaches. What do I mean?

A. Snappy, fast-moving television programs, as that particular medium advances and more and more sets become available to our people.

B. Variety radio programs featuring questions and answers with a peppy, interesting dialogue, drama skits, and so on.

C. Magazine reprints handsomely illustrated with simple messages, as well as other varied media.

6. SIMPLE TALK

One of the problems that we have always had is that our Republican Party tends to talk over the heads of the American people. We invariably use four- or five-syllable words like "regimentation," or "paternalism," or "bureaucracy"—meaningful words to be sure, and yet words which "lack a punch," which aren't simple enough to be understood by the humblest folks. I don't mean that we can talk or should talk down to the American people. On the contrary, our people have enough intelligence to understand our message.

But we should have learned that the greatest teachers have always used the simplest language, words of one and two syllables, words that are homey, words that convey a powerful memorable impression. We must concentrate on particular issues instead of spreading our fire over dozens of issues. This is all a part of effective straight-shooting public relations.

7. PSYCHOLOGICAL WARFARE

Now, my friends, in connection with these points, may I submit that the Republican Party must learn to master the strategy and technique of psychological warfare if we are to gain victory and maintain this Nation free. Let us take a brief look at the 1948 campaign. You and I recall that a change of something like 25,000 votes in three States would have elected Mr. Dewey. For many months previously, the Nation and the GOP had been treated to the phony psychology "that it was in the bag." The Republicans, as we know, by and large accepted the victory as a foregone conclusion and went to sleep. Not so the master psychologists who were back of President Truman's campaign. They analyzed the potential strength of both parties. They knew that every leftist group, every radical group, had to be pulled into the Democratic net in order for the Democrats to have a chance to win.

Of course, you remember that when Mr. Wallace announced his candidacy, the public-opinion polls indicated he would get up to six or eight million votes. So the Democratic planners started operating on those groups and they pulled most of them back into their ranks. They knew that those segments of labor that could be controlled by the labor leaders were already in their net. They knew that the millions employed in Government could be kept in the net by the assurance that if Truman were reelected their jobs would be safe.

On top of this, they knew they had hundreds of thousands of "favored sons" who were getting contracts and largesse from Government, and would, because of their personal interest, remain loyal. But here is the astounding fact, that when they had added up all these totals, the Democratic planners saw that the election was still not in the bag, so they went to work again. And where did they go to work, and how did they go to work? Well, here is where human psychology came into play.

They operated on the white-collar workers and on the farmers by instilling fear. Yes, they put on a repetitious campaign of fear—very quietly through every channel that could be utilized. They used a whispering campaign telling the farmer that if Dewey were elected he, Dewey, would reduce the prices that a farmer was getting for his commodities. (Parenthetically, I might say here that their campaign among labor was to the opposite effect, "Elect Truman, and he will cut the cost of living.") And among the white-collar workers they spread constantly the misrepresentation that "if Dewey is elected, your wages will be cut."

How did they do this? Very simply. They used the same pattern that Hitler used when he wanted to take over, as he did, country after country in Europe. Tell a big lie, tell it often enough, divide, and conquer. Well, what was the result? The election proved the result. The change in the farm vote and the white-collar vote did the job. Now, you remember that President Roosevelt said when he came into office, "The only thing we have to fear is fear itself." This interjection of fear into the campaign by the master psychologists is what we've got to fear, and what we've got to meet. It may not be the very same fear in the future. It may not be the same kind of rumor or propaganda, but it will be thought through by these master psychologists, and we'll have to be prepared to meet it this time. We can't sit back on our haunches and simply say it's in the bag.

You saw the effect of the same technique in relation to the Taft-Hartley law over radio, through the columns of the newspapers, by word of mouth, by public speeches. You heard the repetitious statement: "The Taft-Hartley law is a slave-labor law."

Here again the masters of psychological warfare succeeded in selling a phony bill of goods to the people—by lies, by fear mongering, by repetition of a single false theme. There is quite a challenge, my friends, to you and to me.

8. FUTURE THINKING

Let us continue now in relation to other problems of the GOP. Another thing that our Republican Party must do if it is to gain victory in 1950 is to talk in terms of the future to our people. It is all right to look at the lessons of the past. It is all right to learn from the past, but America is concerned with the problems of tomorrow. What, therefore, can we tell the young college graduate about his job of tomorrow? What can we tell the man of 45 or 50 years of age about the security he is going to have 10 years from now? What can we tell the veteran about the sort of business conditions he will face 5 years from now?

In other words, we've got to think in terms of the future, plan for the future, develop legislation for the future. It is no use crying over the milk which we have spilt in the past or which the administration has spilled. Let the dead past bury the dead, except insofar as we can learn some simple concrete lessons therefrom.

9. GRASS-ROOTS GOP FORUMS

Every leader who has ever been a real leader knows that in order to gain allegiance of his followers, he must encourage them to participate in his organization. Too often in the past we Republicans have handed down policy from above, from Washington, D. C., from the Congress, from the Republican national headquarters instead of developing policy from below.

We've got to give the average Republican a chance in his county, in his region, in his State to express his constructive suggestions regarding the party's program. I don't mean that it is not being done in large part right now. Just a few weeks ago at our State Republican convention in La Crosse, the grass-roots GOP voter had an opportunity to express himself. We need more conventions like that one—county conventions, regional conventions, and State conventions—not mere talkfests, but arenas for a constructive discussion of ideas, and then proposal of specific programs.

10. WOMEN'S ROLE

It is commonplace for a Republican speaker in addressing a GOP women's organization to say that our women must be given a larger role in GOP policy, strategy, and appointments. And yet, I feel that a look at the objective situation shows that the women of the Republican Party can and should play a larger role.

I am not simply tossing a bouquet to you when I say it was the women of this Nation who, enraged against OPA black markets, voted a Republican Eightieth Congress into being. Yes, it was the women of the Nation who have time and again courageously overturned the political apple-cart when their men folk were lagging in action. It is up to us, therefore, to mobilize the women of America more effectively than ever before into the GOP women's organizations. It is up to us to give women their proportionate role in GOP policy making, in GOP appointments, in GOP leadership. This is, of course, now being done to a considerable extent.

But is there one among you who can say that Republican women are being given today their due recognition by party leadership? I doubt it, and that is why I say that it is up to you, to me, to demand and to get an increasingly large role for women in GOP leadership.

11. POLITICAL CLINIC

Another thing we need to do is to hold a political clinic in every one of the States of the Union. It is up to us to determine exactly what is wrong with us in each of those States, to diagnose why we did not get a majority or why our majority was not still larger. We need, in other words, to make a realistic appraisal of our assets and liabilities. Who are our strong leaders and who are our weak ones? What issues mean the most to the people of this State and that State? What elements in the record of the party find the greatest endorsement or the greatest criticism by the rank and file of people?

We cannot attempt to diagnose the ills in a particular State 3,000 miles away. A political doctor in New York cannot diagnose for a political illness in Wisconsin or Oregon or Arizona. It is up to the people who are on the ground floor, so to speak, who are in the home bailiwick, who know their problems best to come up with the right answers.

12. CONSTRUCTIVE LEGISLATION

Basically, one of the greatest challenges to the Republicans is to advance a series of constructive bills in the Eighty-first Congress. Mr. Truman went up and down this country complaining that the Eightieth Congress was the worst Congress ever, that it had failed to act on some of his political nostrums. It is not enough to point out that the Eighty-first Congress—a Democratic Congress—has faults. Too often in the past, our approach has been entirely negative. We have contented ourselves with proving that there is corruption in Democratic Party ranks, etc. The people do want to learn such facts, but they are more interested in learning if we ourselves have any constructive program. Now, what elements should be in our program? Let me suggest the specific following points:

Endorsement of Hoover reports

(1) We must back the Hoover Commission reports for Federal reorganization and economy to the greatest extent possible. These reports are not a panacea that will accomplish the millennium. They have flaws here and there, and yet they present the greatest opportunity we have ever had to achieve Government streamlining and efficiency.

(2) We must fight for a balanced budget and must combat the idea of deficit financing. One of the most effective instruments we have thus far is Senate Joint Resolution 108, which has been unanimously endorsed by the Senate Republican Policy Committee. Under this resolution, of which I am proud to be a cosponsor, from $2,000,000,000 to $4,000,000,000 will be cut from the Federal budget by slashing appropriation bills from 5 to 10 percent. Of course, care must be exercised in making these cuts. At the same time we recognize that fortunately the American dollar is worth more today than it was 6 months or a year ago, and therefore we can naturally expect that a dollar spent for procurement of foreign supplies will stretch that much farther.

Tax reform and reduction

(3) We must fight for tax reform, and to the greatest extent that our budget will allow, tax reduction. In the Eightieth Congress a comprehensive tax reform and reorganization bill, H. R. 6712, was passed by the House, but because it was so late in the session it died in the Senate. There were some objections to that bill, but at least it sought a worthwhile objective—a revision of our confusing and chaotic tax statutes.

One of the necessary elements in tax reform is to get rid of certain nuisance excise taxes completely. I need hardly tell this audience that the women of this Nation are up in arms against the ridiculous taxes on cosmetics, purses, baby lotions, and a hundred other necessities. We all recognize that Uncle Sam needs revenue, but surely he is not so poor that we must tax the lotions that are used to soothe a baby's back.

Sound social security

(4) We must pioneer, as the Republican Party has always pioneered, in sound security plans. We have, of course, clearly indicated that we are not going to try to encourage our people to become leaners on Government, expecting hand-outs at every turn of life, from the cradle to the grave. The Republican Party, however, which played so magnificent a part in the earliest work on bank-deposit insurance, on social security, etc., must not let the Democrats pose as the only proponents of security for the average man.

It is, for example, quite obvious that the old-age-pension system in America is a travesty. How can our old folks possibly exist on pensions which are as low as $4 a week? At the same time, we want to make sure that in working out equitable security plans we do not place the American free-enterprise system in a financial strait-jacket by an impossible burden of taxes which our people cannot possibly support. The Democrats can glibly promise security for all, but it is up to us to point out that any security plan must be sound financially. One such plan should, of course, provide grants-in-aid to the States for improvement of our already high health standards.

Such an approach is completely opposed to the administration's idea of socialized medicine. We oppose Federal centralization of power over the physicians of our Nation. At the same time, it is clear that the Federal Government should encourage voluntary health insurance plans, and voluntary expansion of health facilities just as it is now encouraging hospital construction.

Little Hoover Commission

(5) One of the most constructive bills in this Eighty-first Congress is S. 1946, which would set up a little Hoover Commission to analyze the relations between the Federal, State, and local governments. This bill would, for example, analyze the whole system of grants-in-aid to States, just how much Uncle Sam can provide in aid, what taxes Uncle Sam should levy, and what taxes the States should levy so that there would be no duplication or overlapping as there is now. This bill (of which I am also proud to be a cosponsor) offers a tremendous opportunity for straightening out the chaos that exists in overlapping functions and authority between the Federal Government, the 48 State governments and the over 150,000 other units of government in the United States.

These then are some of the elements in a constructive Republican Party program. There are many more elements, but, of course, time is unavailable to discuss them in detail—a strong, open, nonappeasing foreign policy, true unification of the armed services without censorship, however, of the independent views of officers in the various branches, a flexible increase in the minimum wage and other necessary steps.

Alternative between GOP and Democrats

What alternative do we then present between our party and the Democratic Party? The alternative is between—

Decent, honest republican government versus corrupt government, where public office is not regarded as a public trust.

Sound, solvent government versus a deficit-spending government.

A government of checks and balances versus a government in which Washington, D. C., attempts to dictate to the citizens of all the 48 States.

An economic system leading to a higher standard of living, ever greater freedom, and civil liberties versus a system leading down the road to state socialism with civil liberties becoming more and more of an unhappy memory.

We ask our American people, "Which way do you choose, the Republican way, the American way—or the alien way, founded upon synthetic ideas imported from abroad by the ruling administration?"

We have reviewed, then, some specific proposals for our future strategy. With some of them you may agree; with some you may disagree. But that, after all, is a part of our free and open discussion. Let me emphasize that the greatest opportunity of the Republican Party is to demonstrate vigorous, energetic, virile leadership. We need to sell dynamic ideas in a dynamic way. We need the spirit of youth, and when I say that I do not speak in terms of the number of calendar years that a person has put in—rather the youthful outlook, the youthful approach, the fighting spirit. This is a quality which men and women of all ages can have and which our party desperately needs.

Spirit of self-dedication

We need, moreover, a spirit of self-dedication to the cause of freedom and the national welfare. All of the techniques I have enumerated would be meaningless and wasted unless they were employed on behalf of selfless objectives—peace, prosperity for all the American people—on behalf of their liberty and their well-being.

Unemployment in Bridgeport, Conn.

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. LODGE. Mr. Speaker, Bridgeport, Conn., an industrial city in my district, is suffering from widespread unemployment. All of it has not been caused by the so-called economic recession. Much of it is due to the administration-sponsored move of the Chance Vought division of the United Aircraft Corp. from Stratford, Conn., to Dallas, Tex., and the failure of the administration to make this plant available for reoccupancy.

Between six and seven thousand skilled workers have been thrown out of work by this Government decision.

This move has resulted in the loss of many other jobs in all forms of business in the entire greater Bridgeport-Stratford area and for miles around. It has resulted in the loss of needed revenue not only to the men and women employed in the aircraft industry who have been deprived of their livelihood but also to thousands of others who depend for their living on the purchasing power of these workers. The butcher, the grocer, the baker, the filling-station operator, the landlord, the local hardware man, the owner of the corner drug store, the merchant, and the banker have all felt the depressing impact of this Government-inspired action.

I shall not discuss the reasons for the removal of this plant. We are faced with an alarming condition which requires urgent action. In the present situation the Federal Government has a moral obligation to act and to act quickly. Here we have unemployment created by the administration. And yet time marches on and nothing has been done even to make this plant available for reoccupancy. The executive branch of our Government is so hopelessly snarled that no one has been able even to ascertain what agency has title and control of this vital plant. The people have been very patient. My patience has been sorely tried.

The administration created this problem. The least it can do is to cut the necessary corners, unravel the bureaucratic red tape, and without further delay make this plant available for sale or rent.

The Government's obligation to take effective action is equal to its responsibility in depriving the Bridgeport-Stratford community of this source of gainful employment.

Lip service and crocodile tears are no substitute for dynamic and successful action.

In connection with this distressing situation, I am pleased to insert two timely editorials which appeared on July 12 and July 13, respectively, in the Bridgeport (Conn.) Post:

THANKS FOR NOTHING, HARRY

Bridgeport as an industrial community has been harder hit than some other Connecticut cities as shown by applications for unemployment compensation.

The reason for this is not any backwardness on the part of employers in the Bridgeport area, nor for that matter any noticeable let-up in the ordinary industry of the community. Bridgeport was delivered a body-blow by President Harry S. Truman and his coterie of Fair Deal advisers who wangled the Chance Vought factory out of Stratford and down into Texas. It was a nice political job to get the big air plant where the Democratic votes grow.

It has been covered up with all kinds of mendacity and plausible reasons, but the fact simply remains, it was ordered done by the Fair Deal gang. One excuse given was that the Texas location would be safer than the Stratford location in case of an enemy attack. Of course that is all a lot of high-falutin' nonsense, because under present conditions any factory anywhere in the world can be attacked by air. Moscow isn't safe just because it happens not to be located on the Atlantic Ocean—as every Bolshevik knows. And Texas is no safer than Connecticut.

It was a nicely engineered political job that took 6,000 factory jobs outside of the Bridgeport area. When the President looks down his nose and mourns about unemployment, we for one would like to tell him a few things. He handed us plenty in Stratford.

BUREAUCRACY AT WORK

Here in brief is the history of the Truman administration's attitude toward getting a new tenant into the abandoned Chance Vought plant at Stratford:

Fiddle, faddle, procrastination, delay, excuse, evasion, and do-nothing.

For our part, we are heartily sick and tired of the statements coming from Washington about the difficulties in the way of disposing of this plant. The Government had no such difficulty in getting Chance Vought in there in the first place. It had no difficulty in moving Chance Vought to Texas when it wanted to do so. The only difficulties that have arisen since are difficulties which block the way toward use of this plant and toward the giving of work to thousands of displaced workers.

One large company which manufactures planes for the Army wants to come in, so it says. It has outgrown its present plant in New Jersey, and there's no room there for expansion. Chance Vought seems made to order for this concern. But when we ask why they cannot move in, all we get is an array of excuses.

If you want any job badly done, turn it over to the Washington incompetents. They will make a mess of it if it is humanly possible to do so.

Displaced Persons Situation

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report sent out by Elizabeth E. Heffelfinger, member for Minnesota, of the Republican National Committee, on her recent trip to Europe where she especially studied the displaced persons situation. It is reassuring to have her favorable reactions:

It's good to be home again. My month in Germany was well worth while because the special courtesies given me by General Clay, the International Relief Organization and the United States Displaced Persons Commission enabled me to obtain a very good picture of what is taking place in that political battleground of the world.

There are 500,000 displaced persons left in the United States zone in Germany, 40,000 of whom are Jews. By September the Jewish relief groups will have sent most of the group to Israel. I visited many DP camps and returned on an IRODP ship, the Army transport *Maurine Marlin*, which brought 847 Ukrainians, Latvians, Estonians, Lithuanians, Polish, Czech, and Hungarian immigrants to our country. That return trip was an experience I shall never forget and I was very much impressed with the caliber of that new American group with whom I worked. During the morning I conducted a kindergarten class, then served good Army food in the cafeteria, and in the afternoon I lectured, through an interpreter, on different phases of our American life. They were intensely interested in every aspect and were particularly interested in our two-party political system. Their hatred of Russia is intense and they feel as a group that Russian communism is far more insidious than German nazism.

The IRO, United States Displaced Persons Commission, assisted by the 11 volunteer agencies are doing a magnificent job and I was tremendously impressed by their keen understanding of the many problems which daily arise. Most of the DP's have been in camps for 4 years. The living conditions are crowded and the 2,000 calorie diet a day is monotonous. The extra rations provided for children, however, have made them a fine healthy group. In most instances several families must live together in one room separated from each other only by heavy paper. Some have been able to find jobs outside the camp and are on a free living basis but with 4,000,000 more people in the American zone in 1949 than in 1939, you can easily see what the unemployment problem is.

Besides the DP problem, the United States zone of Germany had to receive under the Potsdam Agreement, 2,000,000 Volkedeutsch (ethnic Germans) from Czechoslovakia and Hungary. I saw the results of that hideous Potsdam Agreement when at the suggestion of General Clay I visited some expellee camps which are set up to care for the Germans brought over from Czechoslovakia and Hungary. Military government officials feel that if something isn't done about getting those people out of Germany the entire situation may become the tinder-spark for a third world war.

However the immediate task is to take care of those 500,000 DP's still remaining in Germany. Our laws are cumbersome and involved and Australia and Canada are getting many people whom I would like to have seen coming into the United States. It takes months to process a DP for entrance into this country, during which time individuals in the United States who send in applications for entrance are apt to become discouraged and in many instances cancel them.

I flew into Berlin with General Clay and his staff immediately following the first ratification of the Bonn Constitution by the United States, France, and England and the Christian Democratic and Socialist Democratic parties of Germany. In Berlin the opportunity was presented me to visit with officials in the German Government and in relief organizations. With the return of governmental responsibility to the German people and the subsequent relinquishing of authority of our military government it has been necessary to guide and encourage the Germans to develop along democratic principles. Our military government under General Clay has done an outstanding job and for President Truman to accept his resignation at this time is

regarded by many in Germany as a "tragedy." News of the lifting of the blockade was greeted with "What are the Russians up to now? * * *" and "Will Germany again be flooded with money counterfeited by the Russians?" We need tried, experienced people at the helm in Germany if we are to prevent another war. There is at present too much friction between the military government in Germany and the State Department in Washington for any good to come out of the situation.

Returning from Berlin I was privileged to be allowed to ride the famous airlift. It was a remarkable procedure. As a plane arrived at Tempelhof Airdrome a truck met it and in 11½ minutes 10,000 pounds of coal were unloaded and the plane swept. As the last bag was lifted out of the plane the motor started and the plane was on its way back to Frankfort. Planes left every minute and a half, it was on one of these that I returned. Too much cannot be said for those valiant men who piloted those planes.

ELIZABETH HEFFELFINGER.

Address of Society of Mayflower Descendants

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, July 15 (legislative day of Thursday, June 2), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by E. N. van Kleffens, Ambassador of the Netherlands, before the Society of Mayflower Descendants, on November 22, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY E. N. VAN KLEFFENS, AMBASSADOR OF THE NETHERLANDS, BEFORE THE SOCIETY OF MAYFLOWER DESCENDANTS ON NOVEMBER 22, 1948

When I was pursuing my studies in law at the ancient University of Leyden, much longer ago than I care to think, there was hardly a day when I did not pass through a little, narrow street, with houses whose fronts seemed to bend over as if they were petrified old men. That was the Kloksteeg, Bell Alley in English. Today, it still is exactly as it was then, back in 1913. So if ever you walk through it, you will see what I used to see daily, and that is a very simple memorial stone placed near a door. When you read the inscription, you will at once realize why you, as a member of this society, have to approach that stone with reverence, for to all, and to you in particular, this is hallowed ground. The inscription reads: "On this spot lived, taught, and died John Robinson, 1611–25."

Yes, this is the place where for 11 years your ancestors found a haven of protection and security when, before they left Europe for good, they fled to Holland because of persecution in Britain. It was long before the Stadholder-King, William III, gave England her bill of rights, and there was no question in that country at that time, of protecting essential human rights as we recognize them today. You had either to conform, or else bear the consequences.

You know how it all came about. I know of no more precise and concise exposition than that given at Leyden University 24 years ago to a group of American students by the late Professor Eekhof, and so you will perhaps forgive me if I quote from his lecture, omitting here and there a passage which seems to me of lesser importance. I must be brief, for I do not want to tax your patience to the uttermost.

Professor Eekhof then said: "In the early years of the seventeenth century in the country about the borders of Nottingham, Lincoln, and York, a movement began, that accepted the ruling of the Church of England in articles of faith, but refused her judgment in points of discipline. They entered into a covenant to walk with God and with one another, in the enjoyment of the ordinances of God, according to the primitive pattern in the Word of God. A party was organized in Scrooby, about 10 miles west from Gainsborough, containing two prominent men: The layman, William Brewster, and the minister, John Robinson. Church discipline, which forbade their meetings, imposed a persecution upon them. After many trials they fled to Holland, and in August 1608, the whole party was safely in Amsterdam. There were there already two other English separatist parties, so Robinson, afraid there might come controversy, took the decision to move to Leyden. A formal petition was presented to the authorities, registered in the court daybook February 12, 1609, in which Robinson asks in the name of 100 persons, men and women, freedom to come to Leyden and also to carry on their trades, without being a burden in the least to anyone." The decision of the burgomasters was "that they refuse no honest persons free ingress to come and have their residence in this city, provided that such persons behave themselves and submit to laws and ordinances. The coming of them would be agreeable and welcome." And even when the English Ambassador Winwood complained, the authorities stated that the charge brought against the English was unjust.

So they stayed in Leyden from 1609 to 1620, taking up the commerce and the handicrafts of this busy town. They prospered and rose steadily in the esteem of the burghers. John Robinson bought a house "De groen poort" (the green gateway) in Bell Alley in 1611, at present the Jan Pesynhofje, where the congregation also met for worship. Bradford and others acquired the rights of citizenship of the city; Robinson, Brewer and Brewster became members of the university.

And then came the time for their emigration to America. Times in Holland were hard, the truce with Spain came to an end; how likely they were to lose their language, and their name; how little good they could do in reforming the Sabbath; how unable to give such education to their children as they themselves had received; they had a great hope and inward zeal of laying some good foundation for the propagating and advancing of the gospel of the kingdom of Christ in those remote parts of the world: yea, though they should be but even as stepping stones unto others, for the performing of so great a work, and many other reasons as Governor Winslow and Bradford tell us.

So in July 1620 half of the company decided to leave Leyden, as Bradford says, "that good and pleasant city which had been their resting place for nearly 12 years." The Pilgrims sailed by canal boats from Leyden, past the Hague to Delfshaven, where a little ship of 60 tons—the *Speedwell*—was ready to sail; the wind being fair, they went aboard and their friends with them and truly doleful was the sight of that sad and mournful parting as Bradford says; but the tide, which stays for no man, called them away, though loath to part; and their reverend pastor John Robinson, falling down on his knees, and all with him, with tearful eyes commended them with most fervent prayers to the Lord and His blessing. The *Speedwell* sailed away from Delfshaven and arrived in Southampton. Now in August 1620, the two ships *Mayflower* and *Speedwell* sailed from Southampton; but the *Speedwell* sprung a leak, and they had to return to Dartmouth. Again the voyage was resumed, but again the *Speedwell* sprung a leak and they returned to Plymouth, from which place September 16, 1620, with 102 passengers, the *Mayflower* went off to the New World. After a difficult journey and terrible storms, when a mainbeam of the ship was broken, which could be mended by a jackscrew, they came to Cape Cod."

I realize, of course, that some of the main elements of this story are very well known to you. If, nonetheless, I read that story to you, it is, first, to put the Leyden episode into its proper place, and, secondly, because I believe that so great an epic deserves being told each year in a gathering like yours. "The wood of the *Mayflower*," said John Masefield, "is changed into a forest of family trees;" should not this story be told and kept alive under their shadow?

Let me now once more take you to Leyden, where in 1611 John Robinson had bought from one Johan de Lalaing the house called the Green Gateway to which I referred. Robinson died there in 1625. In 1663 the house was pulled down together with some adjoining houses; on the site an almshouse was built, which is still in existence today. And the building giving access to that almshouse, the exact spot where John Robinson and your ancestors lived, has next to its front door the stone whose inscription I read to you in the beginning.

There are many records extant relating to your forbears' stay in Leyden. One of them contains a statement of the Leyden magistrates, declaring that never any lawsuit or accusation had been brought against any of them. They obviously were not only God-fearing, but also law-abiding people.

Nor did the relations between the Pilgrims and Leyden cease with their departure. There was in that city during most of the seventeenth century an English church, and from 1617 until 1661 the minister of that church, one Hugh Goodyear, kept up quite a correspondence with the Pilgrims in America, a correspondence rediscovered at Leyden in 1921, and published there with reverent care. Goodyear corresponded with Ralph Smith, the Mastersons, with Mr. Aspinwall, notary in Boston, and others. In that collection you will find a letter written by Gov. Thomas Prence in 1634, with the first seal of Plymouth on it. And it also shows that in 1639 one Francis Higgenson, Jr., was sent to Leyden to study there at the university, the first of the many students from this country (there were exactly 100 of them in the first quarter of the eighteenth century) who studied at my old university. This Francis Higgenson went back to Harvard as a teacher in what then was the brand-new Harvard College. Perhaps the most eminent American student, descended from the *Mayflower* group, Leyden ever had, was John Quincy Adams, sixth President of the United States, who matriculated on January 10, 1781.

Small wonder that there are, at Leyden, several visible tokens of abiding American awareness of that city's part in your forebears' peregrinations. I mentioned, in the beginning of my talk, the old memorial stone in Bell Alley. Quite close stands the venerable fabric of St. Peter's Church. Go inside, and visit the baptismal chapel, where you will find a tablet, erected in 1928 by the General Society of Mayflower Descendants in the United States, to commemorate John Robinson who, the inscription reads, "guided and developed the religious life of the Pilgrims of the Mayflower," adding that "his undying spirit still dominates the consciences of "a mighty nation in the land beyond the seas." There also is a tablet which in 1891 was affixed on the outside of the same church by the National Council of the Congregational Churches of America, and

recalls how at Robinson's prompting the Pilgrims went forth to settle New England.

Small wonder too that Leyden and its university received its share in the Tercentenary Celebrations performed on Plymouth Rock in 1920. There was a pageant, featuring, next to Leyden citizens and their wives, 20 Leyden University professors, each, in the language of the official program, bearing a torch, so that Leyden brings most light of all. Speaking at that sacred place, the President of the United States truly said on that occasion: "Hands of men alone did not build what was founded here; it was but a visible sign, the human symbol of a purpose which we may not understand, but for whose beneficence all men must give tribute and praise, and voice undying gratitude." That my country through Leyden should have fostered and favored so great an undertaking is a source of deep pride and satisfaction to all from the Netherlands, a bond forever between your great country and mine, and a justification for my presence here tonight.

The Brannan Agriculture Plan

EXTENSION OF REMARKS
OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, July 15 (legislative day of Thursday, June 2), 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a report of an interview which appeared in the New Hampshire Sunday News on July 3, 1949, regarding the Brannan agricultural plan. The interview was by Mr. Fred Beane, the farm editor for the News with Prof. J. R. Bowring, assistant professor of agricultural economics at the University of New Hampshire.

Incidentally, I see that Mr. Henry Wallace now claims the Brannan plan as his baby. He says that Mr. Brannan and the administration are muscling in on his plan.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF NEW HAMPSHIRE ECONOMIST FINDS FOUR WEAKNESSES IN BRANNAN AGRICULTURAL PLAN—CLAIMS PROPOSAL LACKS OVER-ALL INCOME STABILITY

(By Fred Beane)

DURHAM, July 2.—At least one economist in New Hampshire has dug deeply into the Brannan plan of correcting the ills of American agriculture in one fell sweep, made up his own mind, and is willing to tell others. He is Prof. J. R. Bowring, assistant professor of agricultural economics at the University of New Hampshire.

Professor Bowring, while crediting the Brannan plan with being "a worth-while contribution, reemphasizing the need for a forward looking farm policy," finds several weaknesses in this proposed balancing of the economic picture in America by rigid provision of guaranteed high income to farmers.

Thus, the UNH professor points to what he considers extreme weaknesses in the Brannan philosophy in the following four conclusions he has made.

First, he says, "stability in agricultural income cannot be maintained without disequilibrium and misuse of resources, unless comparable measures are undertaken to maintain nonagricultural income."

Second, he points out, "consumer benefits under the proposed agricultural plan are dependent on many more factors than the price-elasticity of demand for food."

Third, he maintains, "rigid support prices for grain may defeat the purpose of increased production and consumption of nonstorable foods," and finally, he adds, "surpluses of storable crops may be an asset in quantitative terms but only at a great cost."

Professor Bowring has been studying the Brannan plan ever since its detailed program was made public some weeks ago. He points out that control of farm income and no regard for nonfarm income, could bring on definite "disparity" between the two groups in certain areas. He says there's danger that with use of national average prices, regional fluctuations will not be reflected.

Again, he points out that demand for food by consumers may be affected as much by changing family income, rent, cost of clothes, heat, education, entertainment and other factors, as on the food price level of certain perishable commodities, allowed in quantity to seek their own market level.

Then too, he claims if the consumer managed to buy food at lower figure and make a savings, he might well decide to use this advantage to help out on the family car or some other need, not in the food list, and so not buy more food, although at lower cost.

Professor Bowring also sees the possibility, he says, of "putting prices on the political level, instead of as an economic tool, to direct production and consumption," and he adds, "a time lag involved may interfere with production plans of producers."

The Durham economist, having considered all points in the Brannan plan, gives New Hampshire soil tillers and their brethren in the cities who have to buy the food, his conclusions on the workability of the Brannan plan, in the following discussion—

The new Brannan proposals for an agricultural price policy have reopened for discussion the role of government in relation to national income, agriculture's share of the national product and the control of price in directing resource use. To this end it is of value and subsequent statements will undoubtedly reemphasize the meaning of parity for agriculture in terms of consumer welfare and nonfarm income.

The six main arguments given in favor of this farm and price stabilization program according to the statement by Secretary of Agriculture Charles F. Brannan, April 7, 1949, are as follows:

1. To help prevent a recession by maintaining farm purchasing power.

2. To provide a market for industrial goods and help maintain employment.

3. To maintain high level production of farm products.

4. To encourage conservation of resources.

5. To maintain stocks of raw materials for purposes of national defense.

6. To maintain the family type farm as a source of democratic strength and economic security.

Few will not agree that these objectives are worth while. The first two, however, are broader than a discussion of a farm program implies. They state categorically that agriculture shall be used as a medium for pumping purchasing power into the economy, and that income stability in this sector will be a powerful influence in maintaining stability at the national level.

This means that demand for nonagricultural goods by the farm population will exert a considerable influence on prices and production in those industries, which in turn will be reflected in maintained demand for agricultural products.

It is essential, therefore, to understand more clearly the relative effects on the two sectors of the economy if such a dichotomy can be envisaged. The basis of the new plan is that a certain total agricultural income be maintained which will represent an equitable purchasing power for agriculture.

The formula for this equity or parity is based on farm purchasing power of cash receipts during the 10 calendar years 1939 through 1948, and thereafter the base is to be the first 10 out of the last 12 years. The ratio of these cash receipts to the estimated minimum income standard for 1950 would then be applied to each farm commodity to arrive at current parity prices.

Total income to agriculture would be guided by the cost of things farmers buy. Can the price of things farmers buy be indicative of economic conditions in the nonagricultural population? Certainly there is the danger that with the use of national average prices, regional fluctuations will not be reflected, resulting in disparity between agriculture and nonagriculture in those areas.

More favorable agricultural prices will attract human and physical resources into agriculture, increasing the cost and the supply of agricultural commodities, just as they would move out of agriculture if the opposite condition existed. It is necessary, therefore to emphasize the difficulties of maintaining a balance between one part of the national economy with price stability and the other less homogeneous part without such stability.

If the agricultural program is to be used to reduce business cycle fluctuations, then to ensure success it is necessary that comparable measures be undertaken with emphasis on the nonagricultural economy.

An attractive phase of the program is that nonstorable commodities such as whole milk, eggs, farm chickens, and meat animals shall be supported at the new price standards but that the market price will be allowed to find its own level. Consumers will thus benefit from reduced prices and producers will receive in cash the difference between the support standard for commodities produced and the average selling price for these commodities in the market place.

The basic assumption here is that the market price will be less than the support price; otherwise there would be no additional benefit to consumers under this system. The extent to which the market price will fall is dependent on the supply and the elasticity of demand. The price will be more responsive to an increased supply in relation to an inelastic demand than to a commodity with an elastic demand. The extent of the benefits to consumers, therefore, must be dependent on some further knowledge of elasticities of demand.

The elasticity of demand for food is not merely the result of isolated decisions on the part of consumers which vary with the price of food. It is a function of available income, the cost of rent, clothes, heat, education, entertainment, and so on. A decrease in income or an increase in rent coincident with a decrease in the price of, say beef, may well mean that no increased beef consumption would result.

Even with no change in the price of other consumer expenditures a fall in the price of a food may be absorbed as savings for use elsewhere. Particularly is this true where the proportion of income spent on food is high. It cannot be stated categorically, therefore, that the market price of nonstorable foods released from the support program will automatically fall to a level which will increase consumption. Is the price of milk the most important determinant of the consumption of milk, for example, or is it economically dangerous to isolate consideration of individual foods or groups of foods in the consumer's budget?

A further example of the pitfalls in this argument is the reiteration of statements such as the following:

"Another price-support method which should be available for use on perishable commodities is the direct Government pur-

chase program * * * it is necessary for the Government to make direct purchases and divert supplies from normal trade channels.

"Those commodities not included in the group I or priority list should be supported in line with or in relation to group I commodities, taking into account the available funds and authorities, the ability of producers to keep supplies in line with demand, and other relevant factors."

The establishment of acreage allotment, marketing quotas and agreements is a tool for controlling supply. A condition for reduced price to consumers is that supply should exceed demand, until a market price is established at some level where they tend to be equal. Yet at what level is this equilibrium and how soon can market supply restrictions be imposed or "supplies diverted from normal trade channels."

This is of great interest to the consumer if he is to benefit from the program. The spread between market price and support price or "production payment" must be a limiting factor both in the cost to the taxpayer and his proposed benefits as a consumer.

Another branch of the consumers whose demand on the agricultural commodity market should not be overlooked are the consumers of raw materials. This group includes farmers buying the major proportion of their feed. There is differentiation in the price-support methods between storable and nonstorables. Storables include cotton, corn, wheat, and other grains, tobacco, oilseed crops, dry beans and peas, wool, and peanuts. This storable group is not included in the market-price production payment scheme. Their prices are supported at the agreed parity level.

Consumers of these products, therefore, such as dairymen or poultry farmers, cannot expect to buy at less than this level. They must operate within the margin of the feed price support and the price of their finished product. This introduced rigidities which may not be conducive to increased production, and may even reduce consumption of grains on psychological if not economic grounds.

The plan proposes to recommend to Congress certain adjustments in support prices for one or more of the group I commodities such as corn, cotton, wheat, tobacco, whole milk, eggs, farm chickens, and meat, animals—hogs, beef cattle and lambs, in order to maintain feed ratios or feed-value relationships. This may tend to put prices on the political level instead of as an economic tool to direct production and consumption, and the time lag involved may interfere with production plans of producers.

The accumulation of stocks of storable commodities has proved embarrassing to the Government in the past and may well do so in the future in spite of the effort to maintain stocks of raw materials for purposes of national defense. The inclusion of storable grains at least in the open market price plan may be necessary if the program for meats, eggs, and milk is to have meaning.

The aim of a parity income for agriculture as an antidepression measure is one phase of the problem. The other is the effect on the agricultural industry as a production machine. The use of price to augment parity income must be reflected in the behavior of producers. To maintain high level production of farm products is a worthy objective but should that level follow a pattern established during the last 10 years when exports played a more important part in the disappearance of farm products?

The answer in the new plan is not that price will reflect changes in demand but that marketing quotas and acreage allotments will be encouraged as a means of stabilizing supply and that the cost-price ratios conducive to the production of meat, milk, and eggs will be established by order and changed only on recommendation of Congress.

Anyone familiar with the acreage allotments scheme knows that this is an ineffective method of controlling production even if it may be one way of increasing intensity of agriculture. Certainly the increased role of central directives appears to place more responsibility in the Secretary and Congress and less on decisions of individual farmers.

In summary, the Brannan plan is a worthwhile contribution and reemphasizes the need for a forward looking farm policy. However, stability in agriculture income cannot be maintained without disequilibrium and misuse of resources unless comparable measures are undertaken to maintain nonagricultural income. Consumers' benefits under the proposed agricultural plan are proposed on many more factors than the price-elasticity of demand for food. Rigid support prices for grains may defeat the purpose of increased production and consumption of nonstorable foods and surpluses of storable crops may be an asset in quantitative terms but only at a great cost.

The Maritime Strike in Hawaii

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Friday, July 15 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Truman Refusal to Act Means Suffering in Hawaii, Mainland," published in the Long Beach (Calif.) Press-Telegram of July 13, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRUMAN REFUSAL TO ACT MEANS SUFFERING IN HAWAII, MAINLAND

Some months ago President Truman, in his fight against the Taft-Hartley Act, declared a labor law does not need a clause permitting the President to act in a strike affecting the national welfare.

The President asserted, and was widely quoted, that the Nation's Chief Executive has "the inherent right to act" in such an emergency through virtue of his office.

After the war Hawaii became one of the most highly unionized areas under the American flag. Labor strength there is largely concentrated in Harry Bridges' CIO International Longshoremen's and Warehousemen's Union. This organization has reached out from the waterfront into the vital sugar and pineapple industries.

On May 1, the 2,000 stevedores belonging to the ILWU struck, effectively tying up the shipping on which Hawaii is absolutely dependent. The union demands either a wage increase of 32 cents an hour, bringing the hourly rate to $1.72 (10 cents less than the rate for stevedores on the Pacific Coast), or arbitration of the dispute. The situation has been made worse by refusal of the employer group to arbitrate. A deadlock resulted.

The Territory has suffered severe economic damage, business has been curtailed, the tourist trade has sagged, unemployment has mounted, some foods such as butter and eggs are in short supply, and relations between labor and management have been seriously exacerbated.

Some ILWU chieftains have been accused of preaching a "hate the boss" campaign; some employers have been charged with being "labor haters and baiters." The entire strike has aroused much bitterness. The Communist issue also has played its part. Senator BUTLER, of Nebraska, urged that Statehood for Hawaii be deferred until the Territory stamps out Communist influence which, he said, was personified by the Bridges union.

In the past few days, the seriousness of the situation has intensified. It has become critical in many aspects and the American mainland is being called upon for more foods so that there may be no danger of starvation in Hawaii.

Here was the opportunity for the President of the United States to invoke and use that inherent power of which he had spoken so confidently, to stop this disastrous strike in Hawaii, one which has brought about a critical situation in the islands.

But the word from the Truman administration is that the strike in Hawaii is only a minor incident and therefore does not deserve the attention of the Federal Government. Most west coast business interests will disagree with this judgment, but, at least Mr. Truman was protecting himself from the charge of extending the authority he says he had some 2,500 miles beyond the mainland.

It was not, however, necessary that he go to extreme lengths on his own authority. Senators KNOWLAND and MORSE proposed measures that would permit special arbitration by a board under Federal auspices. The union agreed to the proposal. The stevedoring companies were reluctant, no doubt because of the history of their dealings with Harry Bridges. In any case, however, a means would have been established for bringing the disputants together before an unbiased body. But the Administration has shown no interest. And Hawaiians and their customers on the mainland suffer.

It will be interesting to see whether the Truman administration remains as lighthearted on this serious issue as it is on others.

German Occupation Policies a Farce

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 13, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, E. L. Delaney, of radio station KPRO at Riverside, Calif., has been and is rendering the people of that community a real public service. On July 5 he had an outstanding broadcast on the German occupation situation. I am including it as part of my remarks:

Few persons in this country ever heard of a German monologist and humorist named Karl Perkert. Recently in a music hall in Frankfurt am Main this humorist drew hearty laughs from his audience with the following story:

A young German went to the American military government in Munich, asking to be directed to the denazification bureau. He said he wished to get his clearance papers. The man was told that the bureau was closed, and why had he not applied there a year or so ago?

"Because a year ago," replied the German, "I wasn't a Nazi."

That may not evoke any laughs in this country. On the contrary, it is rather tragic.

For when analyzing it we find it is an indictment against the United States. It shows all too clearly that while we may have purged the ideologies of Hitlerism from the majority—although it is doubtful if a majority of the people had such ideas—some activities of our army-of-occupation officials have retarded rather than advanced the cause of democracy. They have spawned a belief or at least a feeling among some of the Germans which, in effect, is that perhaps they were no worse off under the Nazi regime.

The reason for that is not difficult to find. It is extremely unpalatable for some to hear, however, after it is found. Instead of practicing the tenets of democracy, as we know it in this country, some of our military administrators have adopted many practices of the totalitarian regimes. Instead of setting examples of justice and real Americanism, they have, in many instances, reverted to the most inhuman policies of the police state. They receded to methods which the Germans and other peoples of Europe were led to believe had been stamped out with the arrival of the Allied forces.

Directives were issued to the military and civilian personnel of the American zone, impressing on them the fact that each and every one of them, were ambassadors of democracy. That America was being judged by their conduct and the manner in which they performed their duties. The State Department bureaus reiterated this and the Voice of America stressed the importance of adhering to democratic principles.

But more and more it becomes apparent that it takes something besides directives to uphold national prestige. Nor can that be purchased with Marshall-plan appropriations, European recovery programs and Atlantic alliances. The beneficial results of those may be nullified by the inconsiderate acts of a minority.

Curiously enough, there appears to be a change in the thinking and in the morals of some among the occupation forces—both military and civilian personnel—immediately they find themselves in a foreign environment. The codes and precepts of America are put off like a damp raincoat. Certain ones revert to what we must record as the basest and most reprehensible acts of the savage. For certainly the cruelties and violations of human rights which have been ascribed to some of our American ambassadors are enough to bring shame on us as a Nation. Unfortunately we and others form our opinions of the people of alien lands by those of their country with whom we come in contact.

We have heard evidence, pro and con concerning the tortures inflicted on the inmates of German prisons by Americans. The investigations ordered by the Washington authorities have not absolved from blame those whom it was obviously intended to whitewash. The trials of war criminals in Germany bring no credit on the United States. When Senator JOSEPH MCCARTHY, of Wisconsin, walked out of the Senate committee investigating the Malmedy trials he declared that the committee was attempting to whitewash a shameful episode which is now part of our armed forces history. Senator MCCARTHY, a marine veteran of World War II, went on to say that the "investigation had degenerated into such a shameful farce that I can no longer take part therein."

Furthermore, Senator WILLIAM E. JENNER, of Indiana, inserted in the CONGRESSIONAL RECORD recently an article from the Christian Century entitled "German Bishops on War Crime Trials." In that article the aged leader of German protestantism. Bishop Theophilus Wurm, of Stuttgart, is quoted as commenting on the denials made in Washington that the Germans were not tortured to obtain confessions of alleged crimes. "Never," declared the bishop, "will the people of Schwabisch Hall, who in the night heard the cries of pain of the tortured beyond the prison walls, be made to believe that those investigators were servants of justice and not servants of revenge."

Recently the Catholic bishop, Hans Meiser, charged in Munich that the United States authorities had used brutality and religious interference against inmates of the war crimes prison in Landsberg, which is near Munich. The bishop said he had protested to Gen. Lucius Clay against the abuses in the Landsberg prison last December. Promises to investigate had produced no results. He said that both Protestant and Catholic clergymen had charged the American officials with brutality. He declared also that chaplains who protested were discharged. He cited the case of a man named Muhlbauer who was chained upright to his cell door until he fainted. Then he was revived with cold water and forced to sign a statement that he had not been abused.

What an indictment against our form of justice and against those who were supposed to be laying the foundation on which to build a democracy patterned after that of the United States. Is it any wonder the music hall humorists tell of the man who said he was not a Nazi before—but having learned of what the Americans do—he now has strange ideas about their form of betterment for the world? For it was that disregard for human rights which caused millions of Germans to oppose the Nazis even when they were in supreme power in their country.

It may be some solace to the outraged feelings of decent Americans who become aware of these undeniable truths, that in a large number of cases where such shameful outrages were committed, the principal offenders and interrogators were former Europeans who had been admitted into the armed services and were not what we prefer to regard as representative Americans.

However, they were in the uniform of our country's defense forces and under the authority of our officers. Hence the odium is on the United States.

There are numerous well authenticated instances of inhumanities inflicted on German prisoners. The reports rendered by Judge Edward van Roden, of Pennsylvania and Justice Gordon Simpson, of the Superior Court of Texas, who had been sent overseas by former Secretary of the Army Kenneth Royall to review 129 death sentences by military courts, being but a few of the proofs given Congress that some of our "ambassadors" of democracy went about their missions in peculiar fashion.

The facts they found and revealed on their return were known to thousands of Germans, long before the American public were acquainted with them.

Is it any wonder that some of the people in the western zones will harken to the siren songs of the Soviet propagandists—especially to those who recite and substantiate for their audiences such instances of inhumanity as committed by persons in American uniforms?

Then too the Germans are aware of the inconsistency of the trials for mass executions by SS troopers, while the most horrible massacre of war prisoners during the entire war—that of 11,000 Polish officers in the Katyn Forest in Russia, is never referred to by the judges or prosecutors on the war trials tribunals.

The Germans know, as does the world by this time, that those 11,000 officers were slaughtered on orders of the Kremlin and the execution was carried out by Red murderers. If the United States condones that massacre—the Germans may well say there is little to choose between Nazi justice and what we are trying to inculcate in their minds.

Also our utterly stupid procedure toward denazification, as inaugurated in 1945, was a disillusionment to many in Germany who hoped and expected to observe justice and fairness in American policy. The figures tell the story. Originally 3,277,790 were listed for denazification and in the meantime barred from any but the most common labor. Relatively few of them were fitted for that, being doctors, lawyers, scientists, teachers, or others of similar occupation.

Of that original number, in excess of three and a quarter million, 11,357 were cited as major offenders. The final sifting acquitted all but 968. Less than one-half percent of the original number. Many of those were kept in concentration camps for months and even years with no charges brought against them.

The evacuation of Poles from their natal land by the Nazi war lords, and the mass movement of Ukrainians was a war crime meriting penalties. The expulsion of nearly 12,000,000 Germans from East Prussia, and from Czechoslovakia, of the Hungarians from Czechoslovakia and the almost complete obliteration of the Estonians, Lithuanians, and Latvians, by the Soviet dwarfs into insignificance the evacuations by the Germans during the war. Yet these far greater mass expulsions have the tacit approval of the United States.

The Germans were given stern reminders that they must work and pay their way in the program of rehabilitation of Europe. Then they witness the utterly insensate dismantling of factories in which they might work out their salvation. They observe that thousands of their people are made idle. The lame excuse that the factories (with rare exceptions) were producing war potential is arrant nonsense—which they know as well as do we. We must remember that German universities have been teaching economics and industrial science for generations. Thousands are able therefore to detect the spuriousness of the reasons advanced for the destruction of the plants.

If that is the way American democracy functions, they may well reason, then what is the difference between it and the arbitrary rule of a minority which they suffered under the Nazi regime?

While the Berlin airlift was a dramatic and stupendous achievement—demonstrating American air strength, initiative, and resourcefulness let us not forget one thing. The thinking Germans as well as intelligent Americans realize that it was nothing less than abysmal folly on the part of the leaders of the western powers in not demanding and obtaining a land corridor into the city of Berlin isolated deep in the Soviet zone. That monumental blunder does not enhance the American record for political sagacity.

There would be no difficulty in implanting the concept and precepts of democracy in the Germans if we practiced them ourselves. That is much the thought expressed by Gen. Lucius Clay on his return recently. He was there long enough to know. The bias brigade and malcontents will disagree with him and with these words, but history will not.

The Threatened Steel Strike

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, July 15 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, a while ago, first the Bethlehem Steel Corp., second largest steel producer in the coun-

try, and then the Youngstown Sheet & Tube Co. announced that they would go along with the President in agreeing to go before a presidentially appointed fact-finding board designed to help management and labor in the steel industry reach agreement on issues which were threatening to cause a strike. I am now informed that Republic Steel and United States Steel have just agreed to cooperate with the President, according to word which has this moment come over the wires.

I am extremely pleased by this action, which means that at last the entire steel industry is demonstrating industrial statesmanship. Of course, the Big Three were nudged a little by public opinion, which had deplored their previous unrelenting attitude of holding firm.

Yesterday, I sent telegrams to United States Steel, Bethlehem Steel, and Republic, the so-called Big Three, urging that they demonstrate in this instance that free American enterprise and free American labor can together reach mutually satisfactory agreements and relationships.

This morning, the Washington Post carried an editorial entitled "Unbending Steel," in which it forthrightly put forward the basic issues in this dispute as they reflect industrial maturity and industrial statesmanship. I ask unanimous consent that that editorial be printed at this point in the RECORD as part of my remarks.

I am delighted with the outcome.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNBENDING STEEL

The reasons given by the United States Steel Corp. for rejection of the President's proposal appear to us to be singularly inadequate and ill-judged. Mr. Truman had suggested a board of inquiry to investigate the wage dispute with the steel union and make recommendations for its settlement before the end of a 60-day cooling-off period. United States Steel's alternative is that the President should invoke the emergency provisions of the Taft-Hartley Act. In so doing the company indirectly acknowledges that a strike would create a national emergency calling for Government intervention. Even Senator TAFT admits that the President has a perfect right to appoint such a fact-finding board and maybe "ought to appeal to both sides to make a further attempt to settle things." United States Steel's last minute announced willingness to cooperate on condition that the proposed fact-finding board makes no recommendations is equivalent to a second rejection of the President's proposal.

By calling on the President to follow the procedures laid down by existing law for dealing with disputes imperilling national health or safety, United States Steel and the companies following its lead may have hoped to embarrass him and gain public support for retention of the emergency provisions of the Taft-Hartley Act, including resort to injunctive relief. However, if a large proportion of the steel industry is forced to close down for any length of time, public demands for compulsory arbitration of labor disputes creating national emergencies may well eventuate. That method of settling differences between management and employees would be as unpalatable to the steel companies as it would be to the steel workers' union.

As the President said, when appealing to the Big Three—United States Steel, Republic, and Bethlehem—to reconsider their rejection of his proposal, "It is obviously more sensible to attempt to prevent such an interruption (to steel production) before it starts, than to wait and have the Government step in after a prolonged interruption has reached the point where it does imperil the national health and safety." Moreover, the case against fourth-round wage increases and the reasons advanced for company refusal to consider demands for a retirement pension system under the reopened wage contract would lose none of their cogency from repetition. Nor would the recommendations of the proposed fact-finding board be binding on assenting companies. In short, the dissenting steel companies stand to lose much more than they are likely to gain by a policy of noncooperation precipitating a strike.

By taking a stand in favor of industrial warfare as the solution of labor disputes, the heads of the "big three" have shown themselves to be poor strategists. Not only that; they have shown a surprising disregard for the consequences of inviting a strike at a very critical stage of industrial readjustment. If a large part of the steel industry should be forced to suspend operations, it would aggravate the downturn in business by throwing thousands of men out of work, including not only the strikers but sooner or later the employees of steel-consuming industries. The loss of consumer-purchasing power resulting from strikes in basic industries puts a severe strain on the economic life of the country at any time. Under present conditions it would not only accelerate the current downturn in business but it might convert what appears to be a temporary recession into a real depression.

A statesmanlike grasp of the problems confronting the executive heads of the big steel companies would have precluded hasty action based solely on a consideration of immediate issues. That is not equivalent to saying that the heads of the steel industry should submit meekly to the demands of their employees for wage increases and other benefits as the price of peace. But they ought to be willing to try all reasonable means of reaching a settlement before resorting to a tug-of-war that would merely postpone the day when a compromise of some kind will have to be reached. Meanwhile a prolonged strike would inflict heavy losses on the industry, the steel workers, and the public at large.

Socialism Under the Guise of Welfare Legislation

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks a timely editorial that appeared in the Milwaukee Sentinel:

WELFARE LEGISLATION

(By E. F. Tompkins)

The Eighty-first Congress behaved with great unwisdom in passing a new Federal housing bill.

By its abject action, it has advanced—and perhaps confirmed—state socialism in the United States.

Events will show that the general welfare has not been served.

Another housing measure was not needed to meet any existing emergency.

Temporary dislocations in metropolitan housing—the so-called housing shortage, caused by war conditions and official ineptitude, and aggravated by rent controls, were rapidly being corrected; and the great majority of American farmers are amply able to look out for themselves.

But these essential facts were ignored by the propagandists for public housing—intentionally so, of course.

For, under its previous legislation and at a gross expense of billions of dollars, the Federal Government had contributed relatively little toward a solution of "housing problems," and it would have been politically inexpedient to acknowledge what industry had done, or what States and communities are capable of doing.

By subsidizing State and local authorities, the New Deal had established rather extensive colonies of privileged tenant voters in crowded urban centers, and had assisted in eliminating some slum areas.

But these performances were wasteful in expenditure and created a special problem: Federalized projects failed to provide for the removal of thousands of displaced persons who were compelled to vacate the substandard premises that were razed and whose own adversities were increased.

Moreover, except for Quonset huts and ramshackle cabins and barracks in undesirable locations, the Federal Government erected little wartime housing; and—apart from financially hazardous benefits to veterans plus a few more slum clearances—its showing in the postwar period has been hardly better.

Particularly, the New Deal's socialized housing has been of no value, and has, indeed, operated adversely, to the productive, self-supporting and overtaxed middle class, which is compelled to make its own investments in the procurement of family dwellings.

The genuine improvement in housing since 1945—and the improvement has been more than substantial—is due entirely to the efforts of free enterprise, carrying on in spite of bureaucratic restrictions and political obstacles.

As a substitute for competitive capitalism and individual initiative, federalized housing has been and will continue to be a fraud.

The new Federal housing legislation not only retains the unseemly defects of the old, but also introduces into our economy still more damaging elements.

Conjoined as it must be with continued rent controls, it will hamper free enterprise in building construction, force private investment out of the rental-housing field, and make housing shortages, calling for yet more public housing.

Quite evidently, the discouragement of investment has been calculated, since the housing bill itself contains socialistic substitutes for venture capital.

The first of these is a 40-year program for direct Federal expenditures in the forms of grants, loans, and subsidies.

The base cost to the Federal Government cannot, under the provisions of the bill, be less than $14,000,000,000; the ultimate cost is incalculable.

The second and more deleterious feature of the bill relates to State and local finance.

State and local housing authorities will borrow money on tax-exempt bonds which will be unconditionally guaranteed by the Federal Government.

Necessarily, the Federal Housing Administrator will be the Nation's housing dictator. And, in case of default, the Federal Government may foreclose on any project, itself becoming the landlord.

Not only will tax-exempt guaranteed bonds drive or draw private capital from private enterprise: State and municipal governments will be encouraged, and even subsidized, to make themselves vassals of

Washington at a costly sacrifice of democratic home rule.

There are at present 700 local participating housing authorities which are expected to borrow $1,125,000,000 a year in the next 6 years—a total of nearly $7,000,000,000 to be added to the floating debts of States and cities and to the contingent liabilities of the Federal establishment.

And there is no reason to assume that the process will end then.

Some day taxpayers will have to liquidate the unforeseeable debts, unless a nationalist socialist government is to confiscate all the mortgaged properties and repudiate its own guaranties.

Supplementary Convention to Broaden North Atlantic Pact

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Monday, July 18 (legislative day of Thursday, June 2), 1949

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me in support of Senate Concurrent Resolution 52, the so-called Thomas-Douglas resolution, calling for a supplementary convention to broaden the North Atlantic Pact.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR PAUL H. DOUGLAS, OF ILLINOIS, IN SUPPORT OF THE THOMAS-DOUGLAS RESOLUTION (S. CON. RES. 52) CALLING FOR A SUPPLEMENTARY CONVENTION TO BROADEN THE NONAGGRESSION PACT

1. WHY THE NORTH ATLANTIC PACT IS DESIRABLE

The resolution which is sponsored by Senator THOMAS and me is not a criticism of or a substitute for the North Atlantic Pact which was signed on April 4 and which is being submitted to this body for ratification. On the contrary, as my votes will show, I am personally a supporter of this pact, since I believe that our security would be directly threatened were Russia to attack and take over the countries of western Europe. We cannot afford to have a hostile police state face us directly on the Atlantic at the same time that it controls all of Europe. For if that happened, we would be directly threatened and Communist prestige in Latin America and all over the world would be increased. It would mean that we would be the next subject of attack. We could not afford to let this happen when Nazi Germany was the aggressor. We cannot let it happen now when Communist Russia is the aggressor.

We had all hoped that the United Nations would prove strong enough to be able to check aggression and to provide relative safety for all. But in practice, Russia has taken advantage so many times of the veto clause in the Charter of the United Nations and has been at once so aggressive in her actions and so bitter in her attitude toward us that it is obvious she would refuse to let the Security Council take action against her even if she were openly the aggressor. In order to prevent western Europe from being absorbed by the Russian police state and to protect our own safety, we have, therefore, been forced to draft and ratify the North Atlantic Pact.

This pact is not a proposal for aggression. It is, instead, a proposal for mutual help in the event of attack by others. While I realize that there are risks which our country runs in any such venture, they seem to me to be far less than the great dangers which we would suffer if we refused to act. For then it would be possible for Soviet Russia, like Nazi Germany, to pick off the countries one by one and finally build itself up to the point where it would gravely threaten the very safety of the people of the United States and of democratic government. I, therefore, will not only support the North Atlantic Pact, but it is also my intention to vote for added appropriations to help the nations of western Europe to arm more effectively. All this, I repeat, is not for purposes of aggression, as is sometimes falsely charged, but to provide a better common defense.

The pact and the rearmament of Europe when taken together would appreciably increase the chances for peace. If western Europe were divided and politically isolated from us, the warlike elements in Russia would be tempted to attack some of the smaller countries in the belief that no one would come to their aid. This would inevitably lead to war.

But if Russia knows that the United States, Great Britain, France, Italy, and the other democracies are firmly joined together, she will be far less likely to take the aggressive and consequently war will be much less likely to occur. If the Kaiser had known in 1914 that his invasion of Belgium and his attack on France would range against him not only Great Britain but ultimately the United States as well, he would in all probability not have plunged Europe and the world into war. Had Hitler known that his invasion of Poland would bring Great Britain and finally the United States against him, I doubt whether he would have taken the fatal step. It was the belief on the part of both the Kaiser and of Hitler that America would stand docilely by and let them complete their conquests which helped to lead their nation and, in part, the world to destruction.

Similarly if Russia were to believe that we would isolate ourselves from the rest of the world, the Russian undercover agents would be quick to promote revolutions and the Russian troops would be quick to march. Our ratification of the North Atlantic Pact serves notice on the Kremlin that it cannot get by with any such policy, and it should, therefore, act as a deterrent to war and should definitely serve to promote peace.

2. WHAT THE THOMAS-DOUGLAS PROPOSALS DO

But much as I favor the North Atlantic Pact, I do not believe it should stand alone. I believe we should also show that we are opposed to aggression everywhere that it is threatened and not merely in western Europe, Greece, and Turkey. I believe we should make a strong effort to make the United Nations a more effective agency to resist aggression. It has recently done splendid service in reducing tensions in areas numbering one-fifth of the world's population. It has five teams of conciliators and observers in the field. I refer particularly to its work in promoting agreements between the Jews and Arabs over Palestine and between India and Pakistan over Kashmir. It has helped to make the Dutch more reasonable in Indonesia, although the real test on this matter still lies ahead. It was through the United Nations that Russia could sue for peace by lifting the Berlin blockade without losing too much face in the process.

The United Nations is now about to set up its own guard force to protect its missions in the field which will establish the principle of an independent world police force.

The United Nations is also valuable as a forum for discussing conflicting interests and for creating world public opinion. It has maintained a semblance of unity in a world torn by ideological differences and reconstruction problems. The cluster of welfare and economic agencies which have grown up around it are, despite all difficulties, doing good work. Its trusteeship department is giving hope to millions of colonial peoples. But due primarily to the Russian attitude and the right of the large states to a veto in the Security Council, it cannot stop aggression against the wish of a great power. The resolution which Senator THOMAS and I have introduced is designed to help it do just that. Building on suggestions originally advanced by Mr. Hamilton Fish Armstrong and by the American Association for the United Nations, and carrying out the principles of the Vandenberg resolution of July 1948, it calls for our taking the lead in submitting a supplementary convention to all members of the United Nations. The nations which sign this convention would thereby agree that, if any nation took the aggressive and the Security Council refused to act, then the signatory powers would agree to take concerted action against this aggressor upon the vote of two-thirds of the members of the General Assembly, including three of the so-called Big Five. Furthermore, such an agreement would itemize in advance the specific forces which each nation would set aside to restrain such an aggressor and hence would create the nucleus of an international police force.

It should, of course, be emphasized that such a supplementary convention would not interfere with a nation's right of self-defense which is expressly reserved under article 51 of the United Nations Charter. This right of self-defense can be exercised either individually by a country or collectively through such arrangements as the North Atlantic security pact or the pact of Rio de Janeiro for South and North America.

3. THE MERITS OF AN INTERNATIONAL NONAGGRESSION PACT UNDER THE UNITED NATIONS

What then may be said to be the merits of this proposal?

1. It aims to universalize the principle that aggression is a crime against the law of the world and should be put down by a police force. The aggressor, under this resolution, would not merely be attacking another country and hence starting a war against a nation or alliance. It would instead be attacking the peace of the world and could be put down by a police force organized to preserve the peace.

Such a proposal would make a great moral appeal to millions of people all over the world who are opposed to aggression and believe it should be stopped by law, but who shrink from the idea of alliances as the best method of protection. Ultimately, if the world is to survive and prosper, there must be an effective world system of law which by putting down aggression will enable the peoples to live in peace. Such a system of law should be as universal within the world as our national systems are operative within a country. Necessary as regional alliances are to furnish protection, they should not be a permanent substitute for that universal system toward which, despite all difficulties, mankind is nevertheless groping. The method proposed by Senator THOMAS and by me would conserve the Pan-American and North Atlantic Pacts but would move out beyond them toward a universal pooling of force and law to prevent aggression everywhere.

The proposed universal pact has this further advantage over a regional alliance in that the decision as to whether or not an act of aggression has occurred is to be made by a comparatively neutral body rather than by parties who are more immediately concerned. It is, therefore, more likely that justice will be done. Our policy is peace under the rule of law. That is why we joined

the United Nations and have sought to make it effective. That is behind our national foreign policy and the regional alliances. It is what Senator THOMAS and I are seeking to further under our resolution.

2. It would reassure countries which are outside the North Atlantic Pact by letting them know that we have not deserted them and would strengthen their hands in resisting Russian or other aggressors. Among these countries may be mentioned the nations of the Near East and of the Pacific. There is grave danger that in our present zeal to prevent Russia from taking over western Europe, we may ignore the danger of Russian expansion in Asia and the Near East.

While we have been checking Communist expansion in western Europe, the Chinese Communists have rapidly been taking over that country. While they will have a hard task to digest that huge country and may develop separatist tendencies which will cause them to split with Moscow, it would be unsafe for us to depend on these possibilities. There is, indeed, a strong likelihood that they may soon intensify their campaign within Indonesia and India and that their armies may within not too long a time threaten these countries from without. Iran is apparently in constant danger of this type and were it not for the Truman doctrine Turkey would be similarly exposed. A universal pact of this nature would be open to these regions. It should furnish them with approximately as great protection as a series of regional pacts between us and geographical groups of nations. But it would do so without being exposed to the criticism that it was provocative toward Russia. It would consequently be easier for these countries like India, Siam, Korea, and Indonesia to join an inclusive agreement than an exclusive one, since it would expose them to less criticism from their own people.

3. Such a pact would have, as a matter of fact, great propaganda value in India, Indonesia, and the democracies of the Southwest Pacific such as the Philippines, Australia, and New Zealand. Russian propagandists in the Pacific are actively misrepresenting American purposes and the motives behind the North Atlantic Pact. They are representing the pact as a purely European and American concern in which the signatory nations are only influenced by their national interests. This contention is untrue but the Communists have had more success than they deserve.

Such a supplementary convention as is proposed would serve to reassure these people that we are still seeking to prevent war in their area of the world as well as in the North Atlantic. Peoples and countries such as India who might wish to be neutral in a struggle between the United States and Russia would then have a direct interest in a general pledge which would make them not merely beneficiaries but also partners in the prevention of aggression. The free world should thus get effective allies and the overall strength of those who want to live in peace would be especially helpful in the case of India, the Indonesian Republic, Burma, Siam, and any democratic government which may develop out of French Indo China. These peoples and nations tend to feel hostile toward those nations in western Europe which have governed these countries. The color prejudices which the white races have unfortunately carried to Asia are barriers which already hamper us in getting these peoples to side with the free nations against Communist aggression. This has been partially offset by our unselfish policy of giving the Philippines their freedom. But it is still an impediment and a ground for suspicion. I do not pretend to be an expert on southwest Asia, since my division did all its fighting on the small islands of the Pacific. But from what I can learn, I believe it will be fatal if we permit the people of those countries to believe that the struggle there is merely as to whether Russia or the United States and the European imperialisms will dominate that area. Under those circumstances they are likely to say that they do not care which side wins. The best hope would seem to be in convincing the people of southwest Asia that the United States does not want to dominate them and that we will help them to prevent the Russians or anyone else from taking them over. Under the proposed plan, they would become full-fledged partners in the pact and would contribute to their own protection. By recognizing them, we will strengthen the newly developed nationalisms of this area to resist foreign aggression so that they may lead their own lives. In this way, Russian aggression could be exposed in its real light; namely, as an imperialist attempt by a foreign power to crush the nationalism of south and southwest Asia. It would prevent the Russians from disguising themselves as a native movement to free the yellow and brown races from white domination.

In this connection of course it is vitally important that we do not permit the Dutch again to break faith with the Indonesian nationalists. That would be fatal and would almost inevitably deliver Java and Sumatra to the Communists. But if nationalism can be recognized in Indonesia and in French Indo China along the lines which have been worked out in India, and if we can help to throw around these countries the generalized protection proposed in our resolution, we shall have gone far to enlist the forces of nationalism and the peoples of the east on our side, and this side, I again repeat, is merely the side of peace and orderly self-development.

4. WHAT WILL RUSSIA DO?

The first question which everyone is likely to ask about such a proposal is, "What will Russia do?" It will be seen that Russia and its satellites would be invited to join the universal pact along with all the other nations and would be equally eligible for membership.

But would she? Here let it be said that if Russia did join, she would subject herself to a common rule of law. Along with the other nations she would be willing to be judged by the assembly and if found guilty by two-thirds of its members, would agree to abide by the decision. If Russia were to agree to such a proposal, it would be a big step forward toward peace. It would give great reassurance to people everywhere and it would establish the United Nations as a powerful international agency. By freeing the United Nations from the veto it would clothe that body with real power and responsibility. I believe Russia and her satellites should be given this chance to cooperate and we can only pray that she would turn over a new leaf and sign the convention in good faith.

Yet it is more probable that Russia would refuse to consent to the two-thirds rule and hence probably would not join. Russia has again and again said that she would not consent to any weakening of the veto power and it is hard to picture her changing this policy.

But what harm would be done by this? The non-Communist nations would in all probability join in such a universal pact and we could build mutual protection with them. Moreover, Russia's refusal to join would distinctly weaken her in the propaganda war which she is waging for the loyalties of mankind. It would be difficult for her to explain away her unwillingness to abide by a collective decision and in consequence she would still further lose prestige in Europe, the Americas and the Near and Far East. Such a proposal, therefore, even if unsuccessful in attracting Russia would be of great propaganda as well as practical value to us.

But even if Russia refused to sign the proposed supplementary convention she would still be a member of the United Nations with all the rights and privileges which she now possesses. In this case we would have a league of peace inside the United Nations. The outer rim of members would still be under the veto provision but the inner core would be subject to the more effective two-thirds rule. Those who chose to enter the inner group would really be progressing from the first to the second degree of international cooperation.

5. THE VALUE OF AN INTERNATIONAL POLICE FORCE

For the United Nations to be effective, it must have ready a sufficient police force to put down at least small acts of aggression. Unless it has this its decisions will tend to be ineffective. We had all hoped that an international police force would have been created before this but again due to Russian opposition, this proposal has been strangled. Because of Russia's veto power, it is evident that she will continue to prevent the creation of such a force and will keep the United Nations helpless except for its moral force and the small guard detail which I have mentioned.

But the device which Senator THOMAS and I are advocating gets around this difficulty. We do not ask the United Nations as such to set up this international police force. We are merely asking that those who sign the supplementary convention designate the military units which they will furnish upon the call of two-thirds of the Assembly. In this way, the Russian veto will be inoperative and the United Nations can be furnished with at least a portion of the force which it needs. It should also be noted that the force involved will be designated in advance. This last point is very important. For if merely a general pledge is given to provide troops, planes, etc., but no specific units or elements are designated, the delay in assembling the force will be so great that the effectiveness will be lost. By designating the precise elements in advance, the assembling of the international force will be greatly hastened and its effectiveness increased. The size and composition of this force will, of course, be arranged by negotiation and conference with the other powers and the advice of the Senate can and should be used in this connection.

6. SUMMARY

The Thomas-Douglas resolution seeks to give to our country and to the world the security and cooperation which we thought we were getting when we helped to create the United Nations. For it should never be forgotten that the Charter of the United Nations declares that the first purpose of the United Nations is "to maintain international peace and security and to that end, to take effective collective measures for the prevention and removal of threats to the peace and for the suppression of acts of aggression or other breaches of the peace and to bring about by peaceful means and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace."

That is what we agreed to when we ratified the Charter. But due to structural defects in that Charter and to the Russian attitude, we have failed to realize that purpose.

If the Thomas-Douglas resolution were adopted and carried out we would be able to carry out these purposes. We would not try

to do this as some propose by scrapping the United Nations in a fit of petulance or disillusion. Rather we adopt the more constructive attitude of building within the structure of the United Nations an open association of nations organized to preserve the peace by pooling force against any country which by a two-thirds vote including three of the Big Five, has been adjudged the aggressor. No nation is excluded if it wishes to come in. The gates are open. The United Nations can continue as before, but within it will be created a still firmer core of nations pledged to use pooled force against aggression and hence serving to deter it. A greatly needed step in the way of building up an international police will, at the same time be taken. Both Senator THOMAS and I hope that these suggestions will be seriously and sympathetically considered by the Senate, the administration, and the people of this country. We believe they have merit.

For the sake of completeness, I attach the text of the Thomas-Douglas resolution:

"Senate Concurrent Resolution 52

"Whereas the United States by repeated declarations and actions has clearly committed itself to the principle that the peace of the world can only be preserved by the use of pooled forces to resist and to deter aggression; and

"Whereas in furtherance of this principle the United States has cooperated wholeheartedly in the formulation and activities of the United Nations, in the pact of Rio de Janerio which was designed to protect the American hemisphere from attack and is now considering ratification of the North Atlantic Security Pact which is similarly designed to protect from assault states bordering and adjacent to the Atlantic; and

"Whereas all the members of the United Nations are bound to refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the purposes of the United Nations, and to give the United Nations every assistance in any action it takes in accordance with the present Charter to carry out its purposes; and

"Whereas one purpose of the United Nations is to maintain international peace and security and to that end to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of the peace; and

"Whereas the Charter permits member states to supplement the provisions of the Charter by regional or general arrangements for collective self-defense, and such an arrangement can give the General Assembly powers normally exercised by the Security Council; and

"Whereas the General Assembly of the United Nations is capable of meeting on short notice and acting promptly and justly to determine the fact of aggression when the Security Council is prevented from taking action against aggression because of the voting procedures requiring unanimity of the principal powers to authorize military action; and

"Whereas the Senate Resolution 239 of June 11, 1948, in addition to favoring the association of the United States with regional arrangements in accordance with the purposes and principles of the Charter, urged the United States to make clear its determination to exercise its right of collective self-defense under article 51 should any attack occur affecting its national security; to contribute to the progressive development of regional and other collective arrangements; to make maximum efforts to obtain agreements to provide the United Nations with armed forces as provided by the Charter; and to reaffirm the policy of the United States to achieve international peace and security through the United Nations; and

"Whereas the national security of the United States may be affected by attacks in areas other than the Atlantic area: Therefore be it

"*Resolved*—

"(i) That the Congress reaffirm its faith in the United Nations as the cornerstone of the international policy of the United States and as an institution which can progressively be made more adequate to assure the security of its members;

"(ii) That to this end the Congress pledges its support to a supplementary agreement under article 51 of the Charter open to all members of the United Nations, by which the signatories agree, if the Security Council is prevented from fulfilling its duties, to come to the aid of the victim of attack if requested to do so by a two-thirds vote of the General Assembly, including three of the permanent members of the Security Council;

"(iii) That such an agreement should specify the forces that each signatory agrees to maintain, under the spirit of paragraphs 1 and 2 of article 43, for immediate use of the United Nations (a) upon call of the Security Council, or (b) upon call of the General Assembly by a two-thirds vote, including at least three of the permanent members of the Security Council;

"(iv) That such an agreement should specify that if a matter pertaining to a threat to or breach of the peace, or act of aggression, is on the agenda of the Security Council, and the Security Council is prevented from fulfilling its duties, the signatories who are members of the Security Council will take such steps as may be required to remove it from the agenda of the Security Council; and

"(v) That such an agreement should come into force when ratified by a majority of the United Nations including three of the permanent members of the Security Council.

"Such an agreement shall not in any way impair the inherent right of the parties to engage in self-defense under article 51 of the United Nations Charter, individually or through other collective arrangements consistent with their obligations under the United Nations Charter, or the North Atlantic Security Pact, or the Pact of Rio de Janeiro."

S. 1008

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. CARROLL. Mr. Speaker, since the passage of S. 1008 by the House of Representatives last week, there has been considerable discussion of the effect of the so-called Carroll amendments to this bill. These amendments are identical in purpose to the Kefauver amendments approved by the Senate. The sole purpose of the Carroll amendments is the preservation of the Robinson-Patman Act, which has protected small business against monopolies for more than a decade.

A clear explanation of the necessity for the Carroll amendments appeared in the editorial columns of the July 14 Washington Post. Under leave to extend my remarks, I wish to include the following editorial from the Washington Post, which I commend to the attention of every Member of Congress who desires to protect our antitrust laws:

TO END CONFUSION

Both the House and the Senate have now approved bills designed to remove doubts as to the legality per se of noncollusive delivered price systems and absorption of freight charges. As amended from the floor, the House bill is similar to that recently passed by the Senate. If enacted, this declaratory legislation should put an end to the confusion resulting from different interpretations of court decisions outlawing basing-point systems and allay the fears of businessmen that the practice of absorbing freight charges in good faith to meet competition might subject them to prosecution for violation of the antitrust laws.

However, both the House and Senate have insisted on certain protective restrictions limiting businessmen's freedom of action to meet competitors' prices by absorption of freight charges. The Senate inserted an amendment proposed by Senator KEFAUVER to the O'Mahoney bill providing that freight absorption to meet a competitor's price could not be used as a defense in any suit charging that such absorption would substantially injure competition. The House bill, as reported out of committee, omitted this amendment, but it was subsequently modified to include a provision (considered by Senator KEFAUVER to be better than his own amendment) intended to protect small-business men against discriminatory kinds of pricing banned by the Robinson-Patman Act. In others words, the House amendment would make it illegal to absorb freight charges, in any case, if such action violated the provisions of the Robinson-Patman Act. In our opinion, this qualification was essential to avoid weakening the Robinson-Patman Act. That certainly was not the purpose of the House in approving a clarifying measure. In trying to clear up the confusion about the legality of delivered pricing systems and freight absorption neither the House nor the Senate has any intention of removing safeguards against monopolistic or discriminatory practices banned by existing laws.

Brannan Farm Plan

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on the Brannan farm plan which I recently prepared at the request of the International News Service:

I agree with what Secretary Brannan says as to the need for a strong price-support program. In fact I am sure that there is agreement among our people generally on that point.

Both political parties have repeatedly endorsed price supports in their platforms and in Congress such legislation has had bipartisan support. The latest legislation placed on the statute books—the Aiken bill, titles II and III of the Agricultural Act of 1948—was worked out jointly by Secretary Anderson and his associates in the Department of Agriculture, including the then Assistant Secre-

tary Brannan and a subcommittee of the Senate Committee on Agriculture headed by Senator AIKEN, of Vermont. In the same Congress the members of the House Committee on Agriculture, both Democrats and Republicans, unanimously agreed in reporting a bill to extend the existing price-support program—with slight modifications—for a year. This measure, which became title I of the Agricultural Act of 1948, constitutes the program in effect during 1949.

Because we have had comparatively little experience in price-support operations during periods of low or declining prices, there are naturally differences of opinion concerning the method, level and extent of supports. In my opinion most of these differences must finally be resolved through the process of trial and error and it may be a long time before even reasonably satisfactory results are attained.

The Brannan plan does not contain any new or revolutionary ideas. Everything included in it is either in existing legislation or has been the subject of considerable discussion in agricultural circles. Yet it created a sensation. It has been more widely discussed than any farm plan ever proposed. A survey of the comment and discussion indicates that this great interest is due at least in part to two things: the plan's unquestionable political appeal and its questionable economic soundness.

The political appeal is very well described in an agricultural supplement to the April 18, 1949, issue of the League Reporter, published by the American Federation of Labor's League for Political Education, from which I quote as follows:

"In presenting the new farm program to Congress, Secretary of Agriculture Brannan did the following:

"1. To farmers generally, he offered an over-all Government-guaranteed and Government-subsidized income at the attractive levels of wartime.

"2. To consumers and labor he offered lower prices for meat, milk, fresh vegetables, eggs, butter and other perishable farm products and that represents the major part of the consumers' cost of living items.

"3. To southern cotton and tobacco growers he offered a Government-guaranteed and a Government-subsidized program for cotton and tobacco that would give the farmers who produce these commodities a better income than that provided by the so-called 90 percent parity formula which they have been demanding.

"4. To the Midwestern Corn Belt he offered increased Government-subsidized, Government-guaranteed price support levels for meat animals (and most corn is marketed in the form of meat).

"5. To producers of fresh vegetables and fruit he offered for the first time a real and permanent place in the Government-guaranteed and Government-subsidized price support system."

The article is too long to quote in full but the following paragraph is also of interest, particularly in view of the comparison made between the Brannan plan and the OPA, and the British system of food subsidies.

"The new program of a direct payment to the farmer and lower prices to the consumer is similar to the system used during the war under OPA and is similar to the British system which also uses direct payments of tax monies to the farmer."

It may be assumed from the above that the program has been enthusiastically accepted in labor political circles. This is confirmed by articles lauding the plan in many labor papers and by the active and dominating part taken by labor leaders at the recent Democratic rally at Des Moines.

But before this plan is accepted by farmers and by the public they will want more information that has been made available so far. One question as yet unanswered is: What will it cost? As described by its advocates the plan sounds like legerdemain, but it isn't. If farmers are to have high incomes and consumers low food prices, someone will have to pay the bill. What will really happen in that case is that the Federal Government will pay a part of everybody's grocery bill.

Secretary Brannan says he frankly does not know what the cost will be. Probably no one knows but I believe we can get some general ideas. Various interested and competent parties and organizations have made an effort to secure information on this point.

The department of agricultural economics of the University of Illinois has said: "It could easily be as much as the total Federal budget before the war." The same department, taking hogs as an illustration, has estimated that hog supports alone might cost $700,000,000 annually, and hogs represent only one-seventh to one-eighth of the output of our farms. The American Farm Bureau Federation, after a study of the cost of the plan as to milk alone, estimated it would amount to $2,480,000,000 annually. Other estimates as to the cost of the entire program have ranged from two billions to ten billions per year. Since the advocates of the plan have compared it to the British food-subsidy program, it might be well to point out that its cost in 1948 was $2,272,000,000. Our population is three times as large as that of Britain, so the cost of a similar plan here could run to more than six billions.

Secretary Brannan has frequently said that his plan would cost the Treasury no more than existing programs. In his article today he refers to the potato program as a horrible example and expresses the belief that his plan would be better on potatoes. His own figures, however, show that under the same circumstances it would be more costly. He estimates that in 1948 it cost the taxpayers $225,000,000 to support prices to potato growers at $1.75 per bushel. He says if his plan had been in effect the price of potatoes to consumers would have fallen to about a dollar a bushel. He doesn't say what it would be to the producers, but counting transportation, handling and marketing charges, it would be considerably less, probably 50 cents. Let's call it 75 cents. That would mean that to support prices to growers at $1.75 as was done last year, payments of $1 per bushel would be required. Since potato production was 445,000,000 bushels this would mean a cost to taxpayers of $445,000,000 plus administrative costs, or double what it actually did cost.

Of course I am not defending the past potato program with its waste and destruction. It was a hang-over from the war and could not be changed before this year without breaking wartime pledges and commitments. Potato growers themselves recognized the situation and recommended that changes be made in the program this year. These changes have been made by the Department of Agriculture and it is certain that the cost will be nothing like it was last year. Whether it will be satisfactory in other ways can only be determined by time. The point is that we have gotten away from the much criticized and expensive wartime program.

This brings up another point. Farmers have never asked for more than fair prices based upon the cost of the things they buy. They want farm prices to be in a fair relationship with other prices. That is the meaning of parity, a concept which has been accepted by farmers and nonfarmers alike. If parity prices are fair prices to producer and consumer, why should consumers pay less? Why should they expect Uncle Sam to pay part of their grocery bill? Yet that is what the Brannan plan implies. Do we want to establish that principle as a part of our Government policy in peacetime? And if we did establish it, would it be possible to ever get rid of it? The British food subsidy has increased every year since 1939 and every suggestion of even reducing it brings about a political crisis. Would the result be any different here?

What the farmer wants is a farm program which gives him fair prices in the market place—fair to him and fair to consumers. He does not want a dole from his Government. He does not want his income to depend on annual appropriations out of the Treasury. He doesn't like the uncertainty which this would entail and, more important, he doesn't want it from that source in any event.

Farmers have fought long and hard for the principle of parity and for fair prices in the market place. They know that there is much yet to be done in working out a satisfactory program. They want to cooperate in making it better and in keeping Government costs as low as possible.

I do not think that anyone has the final answer to the problem of farm price supports. I believe, however, that we are on the right track if we continue title I of the present act for at least another year and devote our efforts in the meantime to finding an acceptable substitute for the Aiken bill. I am satisfied that if the problem can continue to be considered in Congress and in the Department of Agriculture on a nonpartisan basis, as has been the case in past years, that with the help of farmers and all others sincerely interested persons a program fair to both farmers and consumers will be worked out.

Government as a Power To Destroy

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mrs. BOLTON of Ohio. Mr. Speaker, on March 27, 1878, the distinguished Senator from the State of Georgia, Benjamin Harvey Hill, spoke in that august body. It is interesting that after preparation in the University of Georgia he was admitted to the bar in 1845 and practiced law in La Grange, Ga., and served in the Georgia House of Representatives in 1851 and in the Georgia Senate in both 1859 and 1860.

In 1856 he was a Presidential elector on the American Party ticket and on the Constitutional Union Ticket in 1860. He was a delegate to the State convention in 1861 and an advocate of the Union. However, when the secession ordinance was adopted he, like many others, accepted the fact of secession and served as a delegate to the Confederate Provisional Congress in 1861 and as a Senator in the Confederate Congress from 1861 to 1865.

It is interesting to further note that 10 years later he was serving in the United States House of Representatives from which he resigned to enter the United States Senate in 1877. Unfortunately, he died in 1882 before the end of his first senatorial term.

The following excerpt from a speech he there delivered is so pertinent to our present-day situation that I place it before you, Mr. Speaker, with the hope that

all Members on both sides of the aisle will give it their thoughtful attention:

THE DREADED CORPORATION

(Excerpt from a speech made by Senator Benjamin Harvey Hill in the U. S. Senate, March 27, 1878)

But, sir, I have said I do not dread these corporations as instruments of power to destroy this country, because there are a thousand agencies which can regulate, restrain, and control them; but there is a corporation we may all dread. That corporation is the Federal Government. From the aggression of this corporation there can be no safety, if it is allowed to go beyond the bounds, the well-defined limits of its power. I dread nothing so much as the exercise of ungranted and doubtful powers by this Government. It is, in my opinion, the danger of dangers to the future of this country. Let us be sure we keep it always within its limits. If this great, ambitious, ever-growing corporation becomes oppressive, who shall check it? If it becomes wayward, who shall control it? If it becomes unjust, who shall trust it? As sentinels on the country's watchtower, Senators, I beseech you watch and guard with sleepless dread that corporation which can make all property and rights, all States and people, and all liberty and hope, its playthings in an hour and its victims forever.

The Naval Record of Capt. James E. Van Zandt, United States Naval Reserve, Speaks for Itself

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. HÉBERT. Mr. Speaker, let us keep the record straight. In the interest of fairness and accuracy, I wish to place in the RECORD the naval record of Capt. JAMES E. VAN ZANDT, United States Naval Reserve, the gentleman from Pennsylvania. That record speaks for itself.

I am moved to take this action because of the recent attacks made on the gentleman from Pennsylvania [Mr. VAN ZANDT] and his naval record. These attacks followed the introduction of House Resolution 227 by the gentleman from Pennsylvania. That resolution provided for the creation of a select committee of the House to investigate the military aircraft procurement, the B–36, and related subjects. The resolution, as the gentleman from Pennsylvania [Mr. VAN ZANDT] told the House at that time was based upon the ugly rumors and reports concerning military aircraft procurement and especially the B–36.

These ugly rumors and reports had been circulated for weeks, even months, and had been printed in newspapers and magazines. Every Member of the House had heard these rumors and read these newspaper and magazine reports. We were all disturbed by them. Yet, it was the gentleman from Pennsylvania [Mr. VAN ZANDT] who initiated an investigation to establish the truth or falsity of the rumors and reports, which added up to grave charges. But for motives known to themselves, certain people have sought to ridicule the action of the gentleman from Pennsylvania [Mr. VAN ZANDT] by belittling his naval record in both world wars.

JIMMIE VAN ZANDT is not a member of my party, but I believe that his motive in offering the resolution calling for an investigation of our national defense is as pure as the patriotism shown by his naval record.

Those of us who have known JIMMIE VAN ZANDT these past many years understand his devotion to his country and his advocacy over a period of 30 years for an adequate national defense. He has consistently championed a well-coordinated evenly balanced and powerful single Department of National Defense. It was his bill introduced in the Seventy-sixth Congress that planted the seed for unification of our armed forces.

Enlisting in the United States Navy in April 1917, as an apprentice seaman, Representative VAN ZANDT has maintained from that time active status as a member of the United States Naval Reserve. As an Enlisted Reserve he traveled weekly for many years from Altoona to Pittsburgh, Pa., a distance of several hundred miles, to attend drills.

As an indication of his interest in the Naval Reserve for the past 32 years, Congressman VAN ZANDT was awarded the Naval Reserve Medal with two bronze stars symbolizing the fact that he has had 30 or more years in the Naval Reserve, and has attended more than 95 percent of the required number of drills annually, and completed his summer training cruises.

The Navy Department has furnished me with a transcript of Representative VAN ZANDT'S service in the United States Naval Reserve covering a period from 1917 to date. He is at present a captain in the United States Naval Reserve and commands Volunteer Naval Reserve Officers, Brigade W–1, at the United States Naval Gun Factory, Washington, D. C.

At this point I wish to call attention to the transcript of Representative VAN ZANDT'S naval service:

ENLISTED SERVICE

1917, April 30: Enlisted in United States Navy as apprentice seaman.

1919, August 22: Honorably discharged as quartermaster first class. Served in U. S. S. *New York*, U. S. S. *Albany*, U. S. S. *Santa Paula*. Served in various ships of the armed draft detail, New York, N. Y.

1921, July 29: Enrolled in United States Naval Reserve Force as quartermaster first class; no active duty other than for training.

1925, July 28: Honorably discharged as chief quartermaster. Served yearly training periods in U. S. S. *Wolverine*, U. S. S. *Reina Mercedes*, U. S. S. *Topeka*.

1925, July 29: Enlisted in United States Naval Reserve as chief quartermaster; no active duty other than for training.

1929, July 28: Honorably discharged. Served yearly training periods in U. S. S. *Lardner;* U. S. S. *Dallas;* U. S. S. *Charles Ausburn;* U. S. S. *Putnam*, U. S. S. *Brooks*.

1929, July 29: Reenlisted in United States Naval Reserve as chief quartermaster; no active duty other than for training; served one period of training duty in U. S. S. *Breckenridge*.

1934, July 10: Discharged under honorable conditions.

1934, August 11: Reenlisted in Naval Reserve as chief quartermaster; no active duty.

1938, August 10: Discharged under honorable conditions.

1938, September 1: Reenlisted in Naval Reserve as chief quartermaster.

1941, June 1: Enlistment terminated to accept appointment as lieutenant, United States Naval Reserve.

OFFICER SERVICE

1941, June 2: Accepted appointment as lieutenant, United States Naval Reserve.

1943, September 25: Appointed lieutenant commander for temporary service.

1944, September 28: Appointed commander (spot).

1945, November 29: Commander for temporary service.

1946, March 21: Appointed captain for temporary service.

1946, September 23: Commander.

1946, December 23: Released from active duty.

1946, December 23: Captain (entitled to have highest grade and rank in which served during World War II, Public Law 305, 79th Cong.).

SHIPS AND STATIONS

United States Naval Training Station, San Diego, Calif., from September 3 to 10, 1941.

U. S. S. *Plunkett* (convoy escort duty to Iceland), from December 19, 1941, to January 24, 1942.

Seventh Amphibious Force, southwest Pacific, LST *465* and LST *457*; LST *465*, duty under instruction, November 1 to December 7, 1943; LST *457*, commanding officer, December 7, 1943, to February 1, 1944 (combat duty); from November 1, 1943, to February 1, 1944.

LST Division 40, commander (U. S. S. LST *459*) flagship (combat duty) from February 1 to October 4, 1944.

LST Group 19, commander (U. S. S. LST *474*) (combat duty) from October 5, 1944, to January 19, 1946.

Executive Office of the Secretary, Civil Relations Division, Washington, D. C., from March 19 to December 4, 1946.

Designated to command the Organized Surface Battalion 4–4, United States Naval Reserve, at Altoona, Pa., from January 1 to February 28, 1947.

Authorization to be associated with a division of the Organized Reserve in a drill pay status. March 18, 1947.

Authorization to be associated with a division of the Organized Reserve in a drill pay status. August 22, 1947.

Volunteer Officers' Division W–1, assignment to in a nonpay drill status. October 31, 1947.

Authorization to be associated with a division of the Volunteer Reserve in a drill pay status. December 2, 1947.

Assumed command Volunteer Officers' Division W–1. December 3, 1947. Terminated March 22, 1948, by reason of transfer within the Volunteer Reserve.

Assigned as commanding officer, Volunteer Brigade W–1. Assumed command March 23, 1948. (Assigned as relief instructor to Volunteer Brigade W–1, U. S. Naval Gun Factory, Washington, D. C., effective March 23, 1948.) Pacific Fleet, October 22 to November 17, 1947. Tenth Naval District, November 26 to December 6, 1948.

DECORATIONS

Legion of Merit with combat V.

Bronze Star Medal with combat V.

Naval Reserve Medal with two bronze stars.

World War I Victory Medal with "Transport" clasp.

American Defense Service Medal with a bronze "A."

American Campaign Medal.

European-African-Middle Eastern Campaign Medal.

Asiatic-Pacific Campaign Medal with one silver star and two bronze stars.

World War II Victory Medal.

Philippine Liberation Ribbon with two bronze stars.

In the fall of 1941, VAN ZANDT, then a lieutenant, Naval Reserve, was called to active duty and served on the aircraft carrier *Saratoga* an l the cruiser *Chicago* visiting all bases in the Pacific. December 8, 1941, he was transferred to the destroyer *Plunkett* in the North Atlantic convoy and escorted ships to England, Iceland, and Russia. He resigned his congressional seat, asked for and obtained assignment in the forward Pacific area, where he remained until January 25, 1946.

While in service Representative VAN ZANDT was twice promoted, each time in recognition of his courage, and leadership, his skill, navigation and gunnery efficiency, and each advancement carried with it additional responsibility which he readily assumed.

As commander of LST Group 19, he landed Navy, Marine and Army combat units, and serviced them, at Lae, Finschhafen, Cape Gloucester, Saidor, Admiralty Islands, Hollandia, Aitape, Tanahmerrah Bay, Waake-Sarmi, Biak, Noemfoor, Cape Sansapor, Morotai, Leyte, Mindoro, Lingayen Gulf, Parang, Tarakan, Brunei Bay, Balikpapan, Yokohama.

The daring, valor and efficiency with which he carried out the foregoing tasks won from Capt. R. M. Scruggs, USN., commander, Flotilla No. 7, (LST) the following commendation:

You have made a record for D-Day participation and troops and cargo carried, that, in my opinion, no other flotilla can equal. You have been bombed, shelled and torpedoed, but the fires were extinguished, the holes plugged and not a ship has been lost.

While a lieutenant commander, VAN ZANDT was awarded the Legion of Merit (combat) medal by Vice Adm. T. C. Kincaid, commander, Seventh Fleet, which citation reads:

For distinguishing himself by exceptionally meritorious service as commander of a division of LST's engaged in sustained operations against the enemy in the forward areas of the Southwest Pacific from December 1943 until July 1944. As an echelon commander of assault waves and resupply groups, subject to enemy air attack and gunfire he courageously and aggressively led his ships in carrying out their assigned tasks and thereby contributed materially to the success of amphibious operations in the Bismarck Archipelago and New Guinea. His splendid performance of duty was in keeping with the highest traditions of the Navy of the United States.

As the commander of Group 19, Flotilla 7, of the Seventh United States Fleet, Representative VAN ZANDT was awarded the bronze star medal with a combat (V). The citation follows:

For meritorious service in action against enemy Japanese forces while serving with the Seventh Amphibious Force in the Pacific war area, from July 1944 to August 1945. Actively participating in amphibious landings in the Philippine Islands area, Captain (then Commander) VAN ZANDT ably led the ships of LST Group 19 during the assault on White Beach, Lingayen Gulf, on January 9–10, 1945, resolutely beaching his vessels in the face of enemy fire and successfully unloading equipment and supplies despite the constant danger of artillery fire by day, mortar fire by night, and strafing attacks by enemy planes during the 24-hour beaching period. Through his inspiring leadership, sound judgment, and zealous devotion to the fulfillment of this vital mission, Captain VAN ZANDT rendered invaluable support to our forces on the beachhead during the early critical stage of the operation and contributed immeasurably to its over-all success. His gallant conduct throughout was in keeping with the highest traditions of the United States naval service.

Mr. Speaker, a study of Representative VAN ZANDT's naval service over a period of 32 years should reveal to anyone that he is not an armchair Naval Reserve officer and that the rank of captain he holds today was earned by his loyalty to his country and devotion to duty.

I commend Congressman VAN ZANDT's naval record to all fair-minded people, for it is an eloquent answer to the carping criticism of those who make such attacks for reasons known but to themselves.

Mr. Speaker, I assure you I have made these remarks and observations solely on the basis of fair play and justice. Partisanship does not enter into consideration when unjustified attacks are made on any Member of this House and his motives impugned whether he be Democrat or Republican. If he is an American that is enough for me, and I believe JIMMY VAN ZANDT is a good American.

Observations of a Reservist

EXTENSION OF REMARKS
OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. SIKES. Mr. Speaker, there is in the July issue of the Reserve Officer Magazine a most interesting article which points to the heart of much of the difficulty encountered in maintaining a first line Army Reserve organization. It is entitled "Observations of a Reservist," and is written by Capt. David Brinegar. I recommend its reading, and further, I recommend that something be done about the things pointed out.

OBSERVATIONS OF A RESERVIST

(By Capt. David Brinegar, Ca-Res)

The Reserve program badly needs some fundamental changes.

It needs, for instance, a change in the pay plan, so that any officer who attends a training session can do so with the assurance he will draw pay.

It also needs some revision in the promotion policy, so that both officers and men can be kept interested in their own advancement. The present policy is discriminatory and cumbersome, and in respect to officers fails to recognize that there are thousands of officers who barely missed terminal promotions on separation and who today have developed strong resentment of the entire Reserve program because no step has been taken to show them how they can make up the week or month or 2 months they lacked for terminal promotion.

It needs, too, better administration from the top levels. May I say here that so far as I have seen, the administration at the unit and senior instructors' levels has been excellent. But at the Army and the Department of the Army levels there has been a lot of prejudice and confusion.

Most of all—because the material aspects are never so important in maintaining morale as the simple aspect of individual self-respect—the Reserve program very badly needs an end to the short-sighted, perverse, clannish discrimination it still feels among Regular Army personnel.

I am making these observations out of experience with the Reserves both before and after World War II. I am an active member of an active T/O unit—I use the word in a descriptive sense, and not in the sense it is used when one says active duty. I believe I have been normally aware of the problems of the Army and have done my small best to help their solution at the unit level.

Let us examine these major points I have made, one by one.

The theory behind the present pay policy, I have been told, is that it provides an incentive to officers to get out 60 percent of their units.

Nothing could be more remote from the facts.

The present pay plan, as I have seen it, operates something like this with an average T/O unit:

1. Personnel are told (circa the fall of 1948) that "we're going to get paid from now on." This is modified almost immediately with the statement that there isn't money enough to pay all units so a priority system has been set up within the Army area. But since, let us assume, our unit is within the proper priority, expectation of pay remains.

2. Faithful personnel show up every training session—and, in instances such as mine, seek other duties to not only make up an occasional missed night but also to augment the hours of credit.

3. Comes pay time and it is discovered that through the fault of none of the faithful, interested persons present night after night, no officer can get paid because not enough personnel have attended.

4. The officers whose fidelity to the program has been at a fever pitch for 3 months begin to lag in their interest. It becomes harder and harder to get personnel out to training sessions.

5. The downward spiral continues, until the program is hopelessly impaired and only those few who will go regardless of pay still attend.

If the present pay plan had been devised deliberately with the idea of clearly killing attendance of commissioned officers—and sometimes I think it was—it could hardly have achieved this purpose more thoroughly.

I dare say that whoever devised that pay plan would rise in wrath if his own military pay should depend on the uncontrollable actions of other personnel within his unit.

Reservists cannot be driven to meetings—they must be led. Thus far the leadership, from the standpoint of the high brass who devised the pay regulations, is pretty poor.

My own experience with the promotion polic· was that I was separated in May 1946 (terminal leave expiring in August) with only 1 month and 5 days to go for promotion. At that time I thought my situation comparatively rare, but I since have found that virtually three-quarters of the officers I know were approximately as close, or closer, to a boost in grade when they entered the Reserves.

Today—3 years later—I still have been told of no way to make up that month and

5 days. In fact, today I appear to be farther from promotion than I was the day I was separated. And as for my friends most of them are even farther than I, because they have just said to heck with it and have put forth no bother about the Reserve program at all.

And we are little better off than those persons who are trying to fit themselves into the cumbersome and intricate Reserve promotion system.

I have often thought how different the attitude of almost every officer toward the Reserve program might have been if, on separation, he had been handed a statement signed by some proper authority, preferably The Adjutant General, saying in effect: "You have missed terminal-leave promotion by 35 days. Here is how you can make up those 35 days and obtain your promotion."

In my own instance, as in many others which have come to my attention, I had been eligible under previous regulations concerning time in grade for the promotion, but had missed receiving the boost because of the imminence of my return home.

Many officers were victimized in a different way. During World War II commanders varied widely in their concept of ratings. I know of one officer of exceptional ability who during his first 2 years invariably received a Very Satisfactory rating because his commander, a tough old Cavalry colonel, considered it the highest rating which should be given for anything short of miracles. This officer, with ample time in grade for promotion and with a fine record in every respect except for the technicality of those ratings, virtually had his interest in Reserve work killed. No letter from any of his rating officers was acceptable in lieu of the average set by the regulations.

It still is not too late for the Department of the Army to back-track on its promotion policy. An immediate directive setting forth some common-sense plan—reverting to my own case, I would consider that I had more than made up those 35 days in 2 years of Reserve work—would bring thousands of good officers back into the Reserve program. A clearer forward policy could preserve the gains and keep the preponderance of all officers "age in grade."

Administrative changes are badly needed. Reserve officers in my area have been bombarded by questionnaire after questionnaire, asking for duplicate information, all of it obtainable from a quick consultation of 201 files.

Within the units the Department of the Army has provided for inadequate professional assistance on administrative problems. There should be room for at least one and perhaps two full-time enlisted clerks with every large T/O unit, or for paying Reservists to assume those duties without regard to limitations on training-period attendance.

I have found that the senior instructors (I have served under two) and the unit instructors and their enlisted staff are uniformly zealous and competent, working many overtime hours to see that units are accommodated. The trouble is not at the unit level or the senior instructors' level in most cases; it is at the level of the Army or the Department of the Army, where poor planning of Reserve work has been the rule rather than the exception.

In fact, in my own section of the country, Reserve work has been held together by the senior instructors and their staffs despite the bungling of higher echelons, and I am offering no one's opinion except my own when I make that assertion.

We had one visit from a well-intentioned and competent, though slightly misinformed, general, who took the attitude that the Reservists were at fault for all the ills of the Reserve program, including lack of attendance. The corrective measure he proposed was to establish week-end camps where Reservists would spend virtually all their free time, taking their wives and children along. I can only observe that with the class of Reservists with whom I associate, that would be the final blow to the whole program. If any unit attempted to pre-empt that much of my time I would have to withdraw from it unless it also provided money enough to support my family. Which, of course, the Reserve program does not do.

The Reserve officer needs a feeling of unity with officers of other components. In my own judgment, the only way this can be achieved is to cease considering Reserves, Regulars, and Guardsmen as "components" of the Army, and to begin considering all of us simply as Army officers. Whether we are on active duty temporarily or permanently, occasionally or frequently, or not at all, is simply a difference in our duty status, just as it was a difference in our duty status during the war whether we were in The Pentagon or on a battle front.

In my time overseas I ran into two exceptionally obnoxious Regular Army officers, one a mustang and one a West Pointer, who delighted in referring to all officers other than Regulars as "emergency officers" and who publicly thanked God there would come a day when "these emergency officers" would be back in civilian clothes and the Army would be like it was prior to World War II.

That attitude was extreme and exceptional; and yet there seems to exist more than a breath of it in the general attitude of the Department of the Army toward the Reservists.

Regulations could not be drawn to protect amply any officer seeking an Army or Navy career. He could be protected from summary separation, from unjust shelving, from lack of suitable assignments, from virtually everything else. He could be given that protection without in any way encouraging him to feel he was of a better or different breed than the competent officer who did not happen to have an active assignment. This is the only sensible attitude in an area of total war.

Concerning active assignments, I should add that it is imperative if Reservists are properly trained that an officer be able to obtain short periods of active duty virtually on 24 hours' notice. And I have known of an instance where an officer waited 5 months for a reply to a request for active duty.

Certainly if the Army could do nothing else with an officer it could send him to a school for 2 weeks. Many officers cannot take active duty at the time their units take it, but would be glad of a brief training period if, for instance, they could go in for a couple of weeks right after inventory time in January, or right after income-tax time in March, or at the tag end of the family vacation in midsummer.

From a high-policy level, the Reserve program has taken a terrific beating, leaving raw sores and gaping wounds all over its none-too-strong body. Sometimes it has seemed to us Reservists that there were people high in the Department of the Army who would like to see us beaten to death.

The facts are, of course, that the so-called Regular Army has been and probably always will be a teaching organization. Statistics published in the Reserve Officer indicate that it is not even a first-line shock-troop organization. The equally so-called Reserves have borne the brunt of our last two wars, along with their guardsmen comrades. I know of no effective way to change this scheme of things. However, I resent deeply being shoved around, patronized, dodged, and sometimes chastised by any class of personnel which on the fact of the record has so little reason to be patronizing.

Address by Hon. Hubert H. Humphrey, of Minnesota, at Dedication of Statue of Gen. Jose Artigas

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Monday, July 18 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at Montevideo, Minn., on July 10, 1949, during the Fiesta Day dedication of the statue of the Uruguay national hero, Gen. Jose Artigas.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Montevideo and Minnesota can well be proud of the Fiesta Day celebration. On this annual occasion, the good people of this community send greetings to their sister city of Montevideo in the Republic of Uruguay. In Washington, where it is my privilege to represent you, I am proud of the international vision, the very real spirit of international friendship, which you show every year in this celebration. Following out the spirit of the name of your city, and the name of your sister city of Montevideo, you look out across State boundaries, across national boundaries, across oceans, to another American community thousands of miles away, but still in this American family of nations.

It seems to me a particularly happy fact that this city and the great capital of Uruguay have become identified with each other. The bonds between the Republic of Uruguay and the United States have long been particularly close and cordial. There is a long-established tradition of solidarity and identification of ideals between our two countries. Many of us have become very well informed about the progressive qualities of the friendly people of Uruguay, and by now all of us know that Uruguay has long enjoyed a democratic and truly representative type of government. But, in addition to the similarity of institutions and ideals between Uruguay and the United States, a most significant aspect of that relationship is the spirit of complete sovereign equality between Uruguay and the United States. There is no question of the large nation intimidating the smaller nation. In other parts of the world, the relationships between big countries and small countries may be based upon fear and threats. But in the relations between Uruguay and the United States there is a frank collaboration upon a basis of juridical equality—the equality of freemen in two free democracies. Here, the small nation and the large nation are bound together in agreement for mutual and reciprocal defense, the Rio Treaty, which is a landmark in inter-American relations. Here, the large nations and the small nations as one have joined in the organization of American states and in the United Nations. This relation can truly be considered a forerunner of the world of the future. If the relations among all countries of the world were on this lofty plane, there would no longer be any need for the heavy burden of armaments and the concern about future peace and security.

Today, as a further symbol of the understanding between the people of Montevideo, Minn., and the people of Montevideo, Uruguay—as a further symbol of their com-

mon humanity, the patriotic citizens of Uruguay have sent us this handsome statue of their great national hero, Gen. Jose Artigas. General Artigas is the George Washington of Uruguay. At a time, in 1811, when great courage and determination were required to fight for the cause of liberty, Artigas led that great struggle in Uruguay. The site of this impressive statue can remind us of the Valley Forge of Uruguay, which was known as the Exodus of Ayui—when thousands of Uruguayan patriots followed the banner of Artigas into temporary exile rather than submit to the hand of oppression. We can be reminded of the great victory of Artigas at Las Piadras, which marked the first great achievement of independence. Here indeed was an intrepid warrior, a symbol of liberty, and this statue should serve as an inspiration to the people of this community.

It is particularly pleasing to me to see here today the distinguished Uruguayan representative, Ambassador Jose Mora, and his esteemed senora. I know that he will feel as I do that in taking part in the Fiesta Day celebration in Montevideo, he has truly felt the heartbeat of these United States. That in experiencing at first hand the warm hospitality and open friendship of the people of Minnesota—of Montevideo—he has come to know thousands of sincere good neighbors.

Atlanta Racial Study

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a news clipping from the Washington Star of July 10. I think it would be of interest and information to those who are not at all familiar with our problem in the South, but who derive great pleasure and satisfaction from presuming that they are.

YANKEE SCHOOLBOYS GET SURPRISES IN ATLANTA RACIAL STUDY

ATLANTA, July 9.—Four Yankee schoolboys from North Andover, Mass., got two great surprises in a 4-day canvass of this city on civil rights.

The first, they reported today, was:

"So many colored people seem not really interested in the whole question of civil rights and their own status."

The second was:

"Most of them (the Negroes) did not seem to mind segregation, but they thought that it would be better for all concerned to maintain it."

QUESTIONED AND LISTENED

The four New England visitors are 17-year-old students of Brooks School at North Andover. They are Morgan H. Harris, Jr., Geoffrey Kimball, John S. Keating, Jr., and Guilford Dudley III.

They came South seeking to "know something of the people and the conditions." They went to all parts of the city asking questions and listening.

"We talked to churchmen and waiters," they said in a joint report—"to housewives and the school girls, to taxi drivers and to businessmen. We talked, talked, talked."

They were not surprised to find white residents against social equality between the races. But they were impressed, they said, by "the arguments and the sincerity of these people."

"The white people of Atlanta to whom we spoke," they related, "did not seem to mean a racial superiority, a destructive racemania of the Nazi type.

FOUND NO PERSECUTION

"They not only merely respected the colored race, but wanted it to develop to the fullest extent possible. But they seemed wholeheartedly to believe that it would be better and more practicable if socially and culturally both races, in their own interest, continued to develop on their lines—with the same freedom and the same respect for each race.

"To call people who maintained such views 'racialists' or even 'Nazis' seemed to us utter nonsense. There was nothing destructive but merely constructive in their approach.

"There was no element of persecution but merely human feelings of understanding and development in their approach."

The four students signed their report "the New Voter," the name of a publication at their school. They were accompanied to Atlanta by F. P. Wiener, a faculty adviser.

They wrote out their report as a news story printed in the Atlanta Constitution.

My Part in America's Future

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. HARVEY. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD I include an essay by Miss Barbara Curlett, of New Castle, Ind. This essay won first prize in Indiana in a contest conducted by the Veterans of Foreign Wars and is entitled "My Part in America's Future."

MY PART IN AMERICA'S FUTURE

America's future has held no greater challenge to the youth of any period in its history than it holds today. As a high-school student planning for the future, I cannot help but wonder what it has in store for me. I believe that every youth has in his power the means of perpetuating his own future, if he has the will to use that means.

Much criticism is given today by the older citizens to the younger generation. Yet, the experts tell us that as a whole the youth of today are much like youth of any period in this Nation. Although we may appear to be gay and frivolous most of the time deep inside of us is the desire to do the right things.

The youth of today face the age-old problems of seeking security and happiness. We seek security and yet will grow into a world of insecurities.

My future will be governed largely by the foundation upon which it is built. Just as an architect would never expect to build a sturdy house upon a weak foundation, I cannot hope to build my future unless it is built upon a strong foundation. But what is this foundation of which I speak? It is a strong belief in God and that He will guide me.

The greatest problem of today and the coming years is that of world peace. If peace is but an interval between wars, it will never become a lasting reality. Yet, I believe that peace is a state of mind and living that can be made a lasting thing.

The adults in our world in countries with the desire to dominate others, have caused the past wars and will cause the future ones. Yet, if our country engages in another war within 5 to 10 years, or even sooner, the majority of the ones who will fight and die will be the youth of today; this has always been true, but need not remain so. I hope to contribute my part toward making the world a peaceful one. I believe that first, in order to have world peace, I must seek peace within myself, my home, and community. If everyone would dedicate himself to seeking peace in this way the world would not have an insecure future.

My part in America's future is to become the best type of citizen that it is within my power to become. I must not believe only in democratic ideals, but put them into daily practice.

The events in America's future are unknown to us. We as citizens of that future must have faith that the answers to its problems will be found. If we should become too pessimistic or worrried about the future we will be unable to take care of today's problems.

I feel my part in America's future can be made one of the best by living a life with a balance between the religious, physical, mental, and social factors in it.

Our Nation needs people who are religious, not to the point of fanaticism, but have a practical belief in God and His power to aid us. Religion is a practical part of our lives if lived by the example of Christ. A sound religious belief will set the standards for my actions as a future citizen.

Our Nation needs people who are physically well. A country cannot hope to progress unless its health standards are progressing. With the use of medical knowledge and plain common sense my second goal, that of being physically fit, will also be a great factor determining my part in America's future.

The third factor is mental well-being. We must have healthy minds to become the best citizens. I must resolve to use the knowledge learned in books and from others to develop my own thoughts to make the best decisions. The practical application and wisdom gained from knowledge helps to make a better citizen. A well balanced mind will be of great importance in my part in America's future.

The last factor is that of a well balanced social life. I must learn to live with others of different backgrounds and ambitions in a cooperative way.

It is hard to separate the four factors, for each is dependent upon the others. I cannot neglect any of them without lessening my worth as a future citizen.

Since I have resolved to try to be a worthwhile citizen, the thing that I most fear is the state of indifference. Regardless of what the future brings, I must be willing to face life's problems with the will to solve them. If I should be blind to the apparent problems in America, they will conquer me.

Aristotle once said, "None of us liveth to himself. We are members of one another." My part in America's future will be greatly dependent upon the lives of others. I will, no doubt, be a small part when you consider the vastness of our Nation. Yet I hope that it will be at least a small part in making America's tomorrow brighter than her yesterdays.

Ours is a youthful Nation. Many of its great citizens contributed much in their youth. As the Nation was built by youth, so will the future be determined by the young people of today.

I will play my part on the stage of America's future and I hope that when the curtain goes down upon my life, it will fall upon a life of worth and goodness.

Address by Hon. Edward Martin, of Pennsylvania, at Evacuation Day Ceremonies at Valley Forge

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, July 18 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the evacuation day ceremonies held by the Valley Forge Historical Society at Valley Forge, Pa., on June 18, 1949.

There being no objection, the address was ordered to be printed in the RECORD as follows:

It is fitting that we assemble in this beautiful and historic Valley Forge Park to mark the one hundred and seventy-second anniversary of the departure of the Continental Army.

On this sacred soil were put into practice some of the great traits of the American way of life. Here the endurance of our troops was tested by suffering and hardship. Here the humility and faith of the American soldier was exemplified by Washington in prayer. Here patriotic self-sacrifice in the cause of liberty reached its noblest manifestation.

It is fitting that these exercises are held under the auspices of the Valley Forge Historical Society. As individuals and as an organization you are devoted to the perpetuation of American ideals.

You know the story well but let us briefly review the Colonial situation in 1777. The outlook for the Colonies was not promising. The Continental Congress had no money. Many of the people sympathized with the mother country. There was no unity among the colonies to inspire an army's confidence.

As an example, the choice of a site for the winter camp was made only after a bitter argument.

The Pennsylvania Supreme Executive Council, meeting in Lancaster, warned the army that if winter quarters were chosen outside of Pennsylvania, this State would furnish no more troops and no more supplies. It demanded that the army be encamped near Philadelphia. Thus Valley Forge was selected, not because of its value as a camp site, but because it was in Pennsylvania.

The army moved from Whitemarsh to Valley Forge, westward over smooth country, a distance of only 13 miles. Yet Washington's, tired, discouraged, poorly clothed, half-starved men needed more than a week for the march.

Well-equipped and trained men of World War II could have accomplished that march on foot with full equipment in half a day. Ill luck, cold weather, bad management and fear made this short march the most painful and most difficult ever undertaken by the Continental forces.

It would never have been accomplished except through the efforts of the inspired and determined George Washington.

The Signal Corps had guessed that the weather would be clear and warm and that the men would have no need for shelter. The tents and baggage were many miles away at Trappe. Through 4 days of snow, driving sleet and bitter cold, the troops huddled around their fires.

General Washington brought only a little army of 11,098 men to Valley Forge, a total of 62 regiments, with an average strength of less than 200 men. Even companies in World War II were larger.

There were great names among the generals at Valley Forge. They included the Commander in Chief, George Washington and Maj. Gens. Baron DeKalb, Greene, Marquis de Lafayette, Harry Lee, Mifflin, Baron Von Steuben, Sullivan, and Stirling.

The brigadier generals included Armstrong, Count Louis L. Duportale, Glover, Huntingdon, Knox, McIntosh, Muhlenberg, Patterson, Poor, Scott, Smallwood, Varnum, Wayne, Weedon, and Woodford.

Many of the leaders who were with Washington at Valley Forge rose to fame and greatness in the early days of the Republic.

Alexander Hamilton, later Secretary of the Treasury, was aide to General Washington.

So was Colonel Trumbull, a famous historical painter.

John Marshall, the great Chief Justice of the Supreme Court, who breathed real life into the Constitution, served in the Virginia Infantry.

James Madison, the real authority on the Constitution when it was drafted, who later became President, also served in the Old Dominion Infantry.

James Monroe, the President who gave us the famous Monroe Doctrine, was on the staff of Gen. Lord Sterling.

Other officers and men were later Senators, judges, and business, educational, military and spiritual leaders.

They took a commanding part in the Government of this Nation for years, and their descendants have been stalwart in support of the sacredness of individual freedom. Right now we should be thrilled and helped through the knowledge that those heroic spirits still look down upon this historic field.

Washington's men suffered a long, terrible, and bitter winter here at Valley Forge. They arrived on December 19, 1777, 76 days after the disastrous battle of Germantown. They were tired and discouraged. The outlook for independence was not bright.

At one time barely 5,000 men were fit for duty in that terrible winter. There was little food, clothing, or equipment. This small army, the last hope of the Revolution, was rapidly thinning out. Yet they continued to train under the masterful leadership and discipline of Von Steuben. They learned to obey and to suffer as men, soldiers, and patriots.

They were the first volunteer army of the world made up of men who wanted to fight for their own ideals of political freedom. Their secret weapon was freedom. When they came to Valley Forge the morale was low, but they left in confidence.

When the British withdrew from Philadelphia, Washington's troops began to leave Valley Forge on June 18, 1778, exactly 6 months after their arrival. When they marched away they left, either in hospitals or unmarked graves, between 3,000 and 4,000 of their comrades. One-third had made the supreme sacrifice. History has never recorded a finer example of devotion to duty.

Stedman, the English historian, who was a soldier under Howe, Clinton, and Cornwallis, said of the men of Valley Forge:

"The Americans had neither money nor credit, but they learned to stand in need only of a few things; to be contented with the small allowance that nature requires; to suffer as well as to act. Their councils animated by liberty, under the most distressing circumstances, took a grand and high-spirited course, and they were finally triumphant."

From Valley Forge to Yorktown is a long and historic road marked with great and gallant milestones.

In this day of vast armies, the total number of men who served in the Revolution is interesting. In 1790, General Knox, then Secretary of War, reported that the number of Continentals on the muster rolls, serving enlistments, reached a total of 231,959. Militia serving at different periods numbered 58,747 names. Men came and went. At no time did the Colonies have a massive field army.

Yet during the Revolution 1 out of 10 served with the colors. In World War II about the same percentage served with our armed forces. Then, as now, the Army was composed of a cross section of our country.

We had a real crisis in 1777. We have a terrible crisis now. Do we have the same courage possessed by Washington? Are we willing to suffer and sacrifice as his Army did here?

In this sorely troubled period our heritage of individual freedom should give us courage and strength to do our duty as it did our fathers at Valley Forge.

What are some of the problems confronting us?

One of the first is the growing power of centralized Government with its mounting costs, which is sapping away our economic strength and curtailing our liberties.

Washington's army fought for individual freedom and the right of a free people to govern themselves.

These ideals, for which they suffered and died, are threatened by the present tendency toward an all-powerful Central Government, maintaining its control by unrestricted and extravagant spending.

Expansion of the power of the Federal Government wipes out local authority and in the end will destroy the principle of home rule, which is self-government.

There is grave danger to American freedom in the high cost of government. Too many of our people are demanding that government do things for them that they should be doing for themselves.

Too many Americans believe that the Government can guarantee security without effort on their part. They forget that the Government can give nothing that is not paid for by the people.

To retain our freedom and to help the rest of the world America's financial strength must be maintained at the highest level. That cannot be done unless we reduce the cost of government.

We must curtail demands made upon the Government. We must not join in pressure groups who want to spend the taxpayers' money for their own special benefit.

We must reject all proposals for sectional advantage at the expense of the whole country.

As a nation we must live within our means by restricting government functions to those we can afford.

If we do these things we will bring down the cost of government and do it quickly.

Let us resolve, therefore, to do more for ourselves and ask less from the Government.

Looking back to the days when Washington was President we find that 1 person out of 4,000 was employed by the Government. If the same ratio prevailed today we would have 37,000 on the Federal pay roll. Instead more than 2,200,000 are working for Uncle Sam.

That is one of the reasons why the cost of Government is so high.

Another grave problem is the growing menace of communism—the philosophy which denies God and would destroy all the ideals we hold sacred.

Communism is a real threat to American freedom. It is a challenge to the American way of life and the economic stability of our free enterprise system.

It finds fertile ground in mass discontent and spreads its poisonous doctrine through hate and prejudice.

Vigorous and courageous patriotism is the strongest weapon against communism. We must preach to young and old the advantages of our freedom and our economic plan.

We must teach that freedom is man's most precious possession and that freedom of the individual has made America the material, spiritual, and cultural superior of any nation on earth.

The course of history has placed upon the American people the responsibility for peace and progress in the world.

The jet-propelled plane, the rocket, and the atomic bomb have changed the whole picture of offensive and defensive war.

The world must live in peace or bring about its own destruction.

Enduring peace cannot be achieved by force. It can be realized through truth, honor, justice, and devotion to high moral and spiritual standards.

But until these ideals have world-wide acceptance we must face facts that cannot be ignored.

It will take billions of dollars and hundreds of thousands of men to erect a frontier of freedom and stability in the western European countries.

Our task is made more difficult because 25 percent of the French vote communistic. This gives Russia a much stronger fifth column in France than Germany had in 1940. We know what happened there.

How much will we be able to spend to make the Atlantic Pact work for peace, freedom, and prosperity? Should there be additional pacts to defend ourselves against the ravages of communism in other parts of the world? Even with our great resources and our know-how, do we have the ability to maintain large armed forces 10,000 miles from our base of supplies?

Is there danger of spreading ourselves too thin? We have some vastly important decisions to make in our relations with the world. They must be made now.

One thing is certain. If we extend financial aid to the world we must curtail spending at home.

Materially we must speed up all along the line. We must have greater production resulting in lower prices. American living standards must remain high. Skills in craftsmenship must be greater and management more alert. Thus we may retain our standards of living in competition with the world.

Another thing we must remember is that disaster does not come as the result of war but through the selfish squabbles during peace. No nation can have freedom unless its people are imbued by the old-fashioned virtues of honesy, thrift, courage, tolerance, love of God, and self-sacrifice. The latter is patriotism which cannot be bought.

Governments sometimes become cruel and tyrannical. This is always true when there is government by men instead of government by law. Constitutional limitation of government must be strictly enforced.

Also remember that our rights of individual freedom are divine. God, not man, is the author of liberty. Freedom cannot be guaranteed to continue in America. We must attain a spiritual greatness that leads us to practice those virtues of tolerance, thrift, and fair play, and blot from our hearts hatred, jealousy, and revenge.

We have a rich heritage. To retain it America must have faith, confidence, and courage.

Memories of the heroic past enrich our patriotism. As long as we remember with appreciation Lexington, Valley Forge, Yorktown, Gettysburg, the Argonne, the Bulge, Iwo Jima, Okinawa, and the other places where thousands of Americans died, our Republic is safe.

When we forget sacrifice on the field of honor then our Nation, as the founding fathers planned it, is in danger. We must always diligently study the greatness of our past to develop strength for the future.

Remember there are stronger influences for peace than guns.

As far as numbers were concerned the savage Indians in this section were many times more powerful than William Penn's forces. But good will and peace were established in Pennsylvania because William Penn's real defense was honor, justice, and respect for law and order.

The same principles will serve the cause of peace today. If they are truly practiced with work, courage, sacrifice, and faith in God, they will maintain peace for us and the world.

Statement on Economy by Hon. Hubert H. Humphrey, of Minnesota

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Monday, July 18 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement on economy issued by me.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON ECONOMY

It would be well to take a look at the budget by considering the budget dollar. Out of every budget dollar collected, 34 cents is directed to national defense; 16 cents to our international programs of rehabilitation and relief; 13 cents for veterans' benefits and veterans' care; 13 cents for interest on the public debt, which is primarily a war debt; 6 cents for social welfare, health and security; and 18 cents of the budget tax dollar is required for the general administrative expenses of Government, including such departments as Treasury, Labor, Interior, Commerce, Federal Works Agency, Interstate Commerce Commission, Federal Trade Commission, Securities Exchange Commission, and others. It should be noted that in this 18 cents of the budget dollar, all of our programs for agriculture, soil conservation, land reclamation, flood control, REA, and public works are included.

This means, then, that 76 cents out of every budget dollar is dedicated to national defense, European recovery, veterans benefits and hospitalization, and interest on the public debt. Only 24 cents of the budget dollar remains for other essential public services.

All of us can agree that we want economy in government. But real economy, which will provide relief to the taxpayers and permit, as some would suggest, balancing of the budget, cannot come at the expense of social welfare, health, security, and other public services.

There does seem to be room, however, for a saving to taxpayers in the national defense item in our budget, which takes 34 cents out of every dollar, without jeopardizing services and the security of the people. This is consistent with the recommendations of the Hoover Commission which categorically stated that a minimum of $1,000,000,000 can be saved in the national-defense establishment without in any way jeopardizing the defense of this Nation. The more optimistic members of the Hoover Commission insist that a minimum of $3,000,000,000 could be cut from the national-defense budget without in any manner weakening or jeopardizing the security or defense of the Nation.

One basic answer to our economy drive is a courageous and intelligent application of the basic recommendations for Government reorganization and economy suggested by the Hoover Commission in its exhaustive reports. Action on this program is already under way. It must be kept in mind, however, that for the Hoover Commission reports to be fully put into effect, the Congress must legislate the recommendations into law. It is my opinion that here will be the test of the courage and the sincerity of the Congress and will be the direct test of whether or not we really want economy. The Hoover Commission visualizes Government economy not merely in budget cuts but rather in the efficient use of the taxpayers money for the services which are required of the Government by the people.

This approach is the practical and the constructive one for promoting efficient administration and sound economy. Over-all budget cuts that are taken without study and without due consideration to essential services are at best haphazard measures. Waste in Government and inefficiency in administration can only be eliminated by proper reorganization of the executive departments. Those who are proposing budget cuts would be performing a real public service if they spent their enthusiasm and their effort upon improving and reorganizing the basic structure of Government.

The Senate Committee on Expenditures held extensive hearings on the matter of Government economy. Certain pertinent and vital information was brought to the attention of the committee. First of all, the over-all budget for the fiscal year 1950 is estimated to be $41,858,000,000. This figure includes expenditures for proposed legislation not yet enacted. Of the total budget, there is a sum of $8,966,000,000, which is irreducible since it is fixed by statutory law and cannot be touched by the Congress without breaking contractual obligations and seriously imperiling the credit of the United States through a reduction of the interest requirements on the public debt.

There is a second item of $5,097,000,000 which may be termed relatively fixed expenditures. This item includes such governmental expenditures as old-age and survivors insurance, old-age pensions, veterans' pensions, agricultural price supports and basic governmental research, along with grants to States which have committed themselves to making appropriations on the promise of the Federal Government matching those funds on the basis of an agreed-upon legislative formula.

There is an additional sum of money in the amount of $6,547,000,000, which is included in the 1950 budget, to meet prior commitments and contract obligations of the Government.

These three fixed-cost items total $20,610,000,000. The figures were presented to the Senate Committee on Expenditures in Executive Departments on June 1 and 2, 1949, in the course of hearings on Senate Resolution 94, by the Assistant Director of the Budget, Mr. Frederick J. Lawton, along with budget examiners, Mr. Howard Stone and Mr. Lynn Johnson.

It is obvious that with a total budget of $41,858,000,000, of which some $20,610,000,000 is fixed and cannot be curtailed, there is a balance of only $21,248,000,000 where over-all substantial cuts can possibly be made. I present this analysis because all too often there is an assumption that budget cuts can be effected by merely slashing off 5 or 10 percent of the total aggregate budget. Those who talk in terms of a 5-percent cut have assumed that the 5 percent would be from the $41,000,000,000 budget. It is now crystal clear, however, that the 5-percent cut, which has been so much in the news, could be made only on the figure of $21,000,000,000.

This $21,000,000,000, however, includes much of the national-defense budget, European recovery funds, and appropriations for

the operation of the executive and administrative agencies. I believe that the American people do not wish to cut back the pensions to veterans and to their older people. I believe that we are going to keep faith with the law in providing funds for the railroad retirement fund, the social security insurance system, and the payment of the interest on the public debt. Likewise, I believe that the American people desire to complete those public works projects which are within one stage of completion. Failure to complete such projects would result in a gross economic waste. I also believe that the Federal Government should fulfill its financial obligations to States, which have appropriated moneys in order to obtain Federal assistance provided under previous Federal law.

The problem of cutting expenditures is, therefore, a complicated one. Very wisely, the rules of the Senate place the responsibility for studying the budget on the Senate Appropriations Committee.

It should be noted that to date out of the $41,000,000,000 total budget there is still approximately $30,000,000,000 of budget requests in the Senate Appropriations Committee. It is the responsibility of the Senate Appropriations Committee to review these budget requests in light of the anticipated revenues of the Government and the Federal obligations as cited in the above paragraphs. Some of the Members of the Senate who talk most about economy in Government are members of the Senate Appropriations Committee. They have an opportunity in that committee to translate their talk into positive legislative policy.

It should be noted that both the Senate and the House follow in the vast majority of cases the recommendations of the respective House and Senate Appropriations Committees. Seldom, if ever, is the appropriation bill reported out of the Senate committee or the House committee substantially increased on the floor of the House or the Senate. Budget matters are complex and difficult. Therefore the Members of the Senate and of the House place great reliance and trust in their respective Senate and House Appropriations Committees. It is in these committees that there is ample time for testimony and hearings. It is in the Appropriations Committee that every item of the budget request is meticulously analyzed and studied. It is in the Appropriations Committee that budget cuts can be made without seriously endangering Government service. It is the Appropriations Committee which has the technical staff to review budget requests and to properly evaluate them.

It is for this reason that efforts made upon the floor of the Senate to drastically cut the budget are generally rejected.

Those of us who have not been privileged to sit through the months of hearings on budget items hesitate to use the financial meat axe on appropriations bills because we have no way of knowing what the effect will be upon Government services, many of which are vital to the life of our people and to the security of our Nation. Hence on two occasions efforts on the floor of the Senate to cut the budget by 5 percent were rejected.

It should be noted, however, when the Senate Appropriations Committee presented the appropriations bill for the Justice and State Departments—which appropriations bill was 7 percent less than the request of the Departments or of the Budget Bureau—the Senate quickly passed the bill. Here is positive evidence that a courageous policy on the part of the Appropriations Committee, which is equipped to do the job and under obligation to prepare the appropriations bill, receives the full support of the Senate. It is action such as this which I term to be responsible performance.

There is no one who has a monopoly on the desire for economy in government. I am prepared to vote for economy in government, but I hesitate to cast an uninformed vote in response to a political maneuver from the floor of the Senate. I believe that the recent 5 percent and 10 percent across-the-board appropriation cut resolutions offered on the floor of the Senate represent irresponsible fiscal management and irresponsible government policy. Economy in government does not come in seeking headlines or in giving speeches about politics and waste.

Those who are sincere about economy in government have their opportunity in the next few days. That opportunity will be afforded when the budget request for the armed services is presented to the Appropriations Committee. The armed services budget can be carefully scrutinized. The report of the Hoover Commission states quite frankly that a minimum of $1,000,000,000 can be taken out of the armed services budget without jeopardizing one iota of our national security.

Also, there is the proposal for European recovery, or ECA funds. I do not recommend any major cut in this appropriation. We are winning the cold war and this is no time to pull our punches. Europe is recovering. This is no time to take away the medicine that makes possible this recovery. However, the cost of items has been reduced not only here, but in other parts of the world. It is now estimated that the over-all cost of goods purchased under the ECA program is down approximately 6 percent. This means that out of a $5,000,000,000 appropriation, there can be a reduction of at least $300,000,000. It will be up to the Senate Appropriations Committee to carefully investigate the facts and to report the appropriation which it believes to be necessary.

There is also an item for the independent offices. Here, too, there is a possibility for saving. It is my considered judgment that with careful scrutiny of the armed services, with a reanalysis of the ECA request in terms of lower cost of goods, and with careful analysis of the requirements of the independent offices of the Government, that approximately $2,000,000,000 can be saved. This will be sufficient to ballance the budget.

If the American people want economy they had better speak to the members of the Senate Appropriations Committee and to the members of the House Appropriations Committee. It is in these committees that the appropriations bills are prepared. If the American people want long-range economy that is fundamental and does not jeopardize essential Government services, they should require and demand of their Congress the passage of the basic features of the Hoover Commission report.

Make no mistake about it—some people do not want these things. There will be some projects cut off and some people displaced from their jobs. You cannot have economy in government and have every pet project in every village, town, city, county and State. I would suggest to the chambers of commerce and to the civic leaders who call upon their Senators and their Congressmen for this project and that one, for new public works and for new aid to their municipalities and their States, that they must make up their minds what they want. You cannot dredge every river and have your own pet public works program—which may be vitally needed in your city—unless you are willing to pay the bill.

I have had the experience of receiving letters on Monday from prominent citizens urging me to vote for economy. I will receive letters on Friday from the same people requesting me to fight for an increase in the budget appropriation before the Appropriations Committee and on the floor of the Senate for Indian schools, for a hospital, for research, for a public-works project, or some other item. Frankly, I become a little confused. It appears that everybody wants economy but not where it affects them. The same organizations and people who write to me about economy—and the letters are pointed and direct—will wire me a week later asking that I resist the cut in the Veterans' Administration, or in the Reclamation Service, or in some other agency. I have had dozens of letters from my fellow Minnesotans protesting the closing of a VA office, and then have other letters from the same people wanting to know why I do not vote for a budget cut. I have had letters from people in Minneapolis asking for additional appropriations for the Upper Harbor project, and then within a week receive letters from the same people wanting to know why I do not support a cut in the budget—in other words—economize.

I have had many inquiries as to my position on taxation. I am opposed to any further increase in Federal taxes for the fiscal year 1950. My opposition stems from two points of view: First of all, we are beginning to see signs of a mild business recession. I believe that an increase in taxes at this time would be unwise. Secondly, it is my considered judgment we must reexamine the tax structure. Many taxes, commonly known as excise taxes, which were levied during the war, should be repealed, or at least modified.

I thought you might like to know how I look at these matters. I have stated my opinions frankly and honestly.

Not Intellectually Honest

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. SMATHERS. Mr. Speaker, under unanimous consent, I insert in the RECORD a fine editorial which appeared in one of our State's outstanding newspapers, the Key West Citizen. This paper has rendered great service to the people of its community and, with editorials like this, to others throughout the State.

I feel confident that the reading of this editorial will be beneficial to every Member of the House.

NOT INTELLECTUALLY HONEST

Not everbody who stands up and shouts for academic freedom, freedom of speech and religious freedom mean what they say. It takes more than words to fight for the principles of freedom.

Not long ago, Senator WAYNE MORSE, of Oregon, pointed out that "academic freedom is not synonymous with license to destroy that freedom" because one must have a free mind to be a teacher and to lead students to the discovery of truth. Mr. MORSE was pointing out that Communists "do not possess free minds but rather are indoctrinated by a philosophy." They are not looking for the truth; they are trying to persuade other people to accept their idea of the truth.

The same observation applies to some of those who pretend to be for freedom of speech and freedom of religious worship. They are for freedom only when the views expressed coincide with their own and for freedom of religious worship only when they

can regiment the individual's acceptance of religious ideas.

It is worth noting that President Eisenhower, of Columbia University, and President Conant, of Harvard, recently served on a committee which advised that Communists be barred from the teaching profession and that while the doctrines of communism be taught in American schools they should not be advocated by those who pretend to teach others how to arrive at true conclusions.

The Communists and some of the other advocates of so-called freedom, are not intellectually free. They begin with acceptance of a conclusion which they propagate and support by specious arguments. They are utterly uninterested in anything except the propagation of their pet theory. They have no business in positions which require an objective search for the truth and the discriminate discussion of the facts bearing on the subject under inquiry.

The Political Parade in Congress

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, July 18 (legislative day of Thursday, June 2), 1949

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column entitled "Political Parade," by George Rothwell Brown, published in the Washington Times-Herald for today.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

POLITICAL PARADE

(By George Rothwell Brown)

Republicans in Congress who have been going along like sheep with President Truman's so-called bipartisan policies have only themselves to blame when they are paid off with a slap in the face.

The Republican Party has suffered heavily in public support, and it will continue to lose elections until it stops being a spineless "me, too," party.

Mr. Truman's thinly veiled attacks on the Republicans—not mentioned by name but clearly by inference—in his recent fireside chat on how to pull yourself up by your own bootstraps, reflected not one shred of gratitude for the fact that only by Republican votes was he spared that most crushing blow yet aimed at his international share-the wealth program.

Last week the Senate Appropriations Committee, by a 9-9 tie vote, narrowly missed writing into the ECA bill the amendment proposed by Senator KEM, of Missouri, which would have refused further foreign grants-in-aid under the multi-billion-dollar Marshall plan to any European nation which continued a policy of socialization of industries after the passage of the act.

It was aimed at the reckless, ignorant, and improvident Socialist-Labor government of Great Britain, which is only a prep school for communism, and which only the American taxpayers are keeping in office.

The interesting thing about this vote in the Senate Appropriations Committee is that the nine votes in favor of the Kem amendment were cast by six Democrats and three Republicans and that the Truman administration warded off defeat on the vital issue involved only because the other five Republicans on the committee voted with only four Democrats against the Kem amendment.

The President was turned down by a majority of his own party on the committee. Republican votes saved him.

Saved him for the time being, at least. This question cannot be evaded, whether the American people, hugely in debt and going broke fast, who cannot afford a welfare state themselves, shall be taxed indefinitely to keep in power a discredited British Government that has wrecked and ruined a great country and brought its people to increasing deprivation and misery.

In some form the sane and sensible proposition that the United States can no longer afford to sustain the sinking ship of British socialism will come before the Senate when the ECA bill reaches the floor.

There are too many Republicans in the Senate who give lip service to the American free-enterprise system but who give it a kick in the slats in secret whenever they get a chance.

A vote on this issue in the open Senate will show them up. Let's have it.

There are other things which the Senate committee and Congress should look into, in the interest of the overburdened taxpayers who are footing the bills.

How much of all these billions being poured out is being wasted? Is anybody in Congress looking into this phase of the dole system? Why not?

For example, a current official release of the Economic Cooperation Administration gives a list of the foreign purchasing agencies at present functioning under ECA.

It reveals that France is maintaining in the United States 17 separate missions under ECA, located in 9 separate offices in New York, Washington, and Baltimore, and 1 in Baden-Baden, Germany.

Presumably these 17 French missions in the United States are completely staffed and are maintained at no inconsiderable expense.

It smacks of international boondoggling on a lavish and wholly unnecessary scale, since Britain has only one such mission in the United States, a very modest one, for obtaining the usual lion's share.

No Common Ground

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, July 18 (legislative day of Thursday, June 2), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "No Common Ground," published in the Wall Street Journal of July 13, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO COMMON GROUND

The Associated Press the other day quoted Senator TAFT as commenting:

"The British have a planned economy and it just hasn't worked. They'll have to work out their problem for themselves by changing their system or doing something else. We can't be expected to give them more than we already have."

That statement is all right so far as it goes. But Senator TAFT has taught the country to expect from him unusual insight and courage. It seems to us that the mere suggestion of letting Britain stew in its own juice is not up to that standard.

The juice in which Britain stews is a potent brew, the name of which is economic totalitarianism. It will corrode whatever it contacts. And the British may be in a position to splash it around a wide area.

Britain already is discriminating against American goods—even though Washington winks at the procedure—which is contrary to her promises. Meanwhile we continue gifts. That seems foolish.

Britain is looking to the creation of exclusive bilateral trading contracts, which will further shut American goods out of the countries which make the agreements with Britain. Further than that the parties to these agreements will by their very terms be forced to adopt many of the trade restrictions and quota arrangements that the British have adopted. So we are doing more than condone restrictions against American interests. We are condoning by subsidy an extension of totalitarian economics, which is patterned after the Schacht methods of the Hitler regime. That seems more than foolish. It seems to us immoral.

Whether Britain nationalizes her own industries and commits her own people to a low standard of life would be Britain's business, if it stopped there. It does not stop. As a large trading nation Britain must attempt to create other economies in the image of her own.

All of these bad results seem to us to grow out of a policy based on the mistaken conception that there is some common meeting ground for an economy organized on totalitarian lines and one organized for the purpose of the utmost freedom in the exchange of goods.

If it was not clear from the beginning, it surely should be clear now that there is no such common ground. The two forms of economic organization seek different ends by wholly different means.

Under such circumstances merely saying that Britain can expect no further help from this country seems wholly inadequate. Not only should help be withdrawn but it should be made clear to the world that the United States disapproves of the policies and the methods which Britain pursues and will do its best to check them.

If you see a man pointing a gun at the neighbors, it hardly discharges your duty to say, "Certainly I shall never give that man another gun." The least you can do is to indicate your disapproval of such conduct.

It was not just Hitler with whom "you could not do business." It was any other form of the managed economy which to reach its end must be totalitarian. The more quickly we learn that and act accordingly the less money we will waste and the more quickly we will give other countries the courage and security to work out their own recovery.

Gift of Land by Paul Mellon to State of Virginia

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, July 18 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, last Saturday there was published in the press an interview with Paul Mellon, who gave 420 acres of land to the Commonwealth of Virginia for research purposes. This

article, written by John W. Ball and published in a recent issue of the Washington Post, gives an interesting background of the great Mellon family. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PAUL MELLON GIVES VIRGINIA 420-ACRE FARM FOR RESEARCH

(By John W. Ball)

MIDDLEBURG, VA., July 15.—Paul Mellon, of Upperville, today gave his adopted State a 420-acre farm near Middleburg to be used for grass- and forage-crop research by Virginia Polytechnic Institute.

The gift includes this year's crops which Mellon has partly harvested, four houses, and other buildings, all equipment, and work stock so research can get going immediately.

The gift is about equal to an earlier gift of $125,000 by the late Andrew Mellon's son to help finance the grass research project.

"Although not a native of Virginia," Mellon told a large audience at Middleburg, "during almost 15 years of residence here I have come to love this State. I wished to do something for it, and it occurred to me that anything I could do to improve Virginia's soil and to further the economic well-being of a large portion of its citizens would be fitting and most gratifying."

Mellon's forebears, best known as bankers and industrialists, originally were farmers, Mellon said. In fact, when his grandfather, Thomas Mellon, father of the late Andrew Mellon, Secretary of the Treasury in the 1920's, decided to go to the city, his father made every effort to deter him. As Mellon told the story yesterday:

"My great-great-grandfather (Archibold) was a farmer when he migrated from Ireland early in the last century. My great-grandfather (Andrew) and my grandfather (Thomas) as a boy followed him shortly after.

"My great-grandfather cleared with his own hands the land in Pennsylvania that he first settled on, and with his own hands he built his house."

He told how his grandfather studied Murray's Latin Grammar and read Shakespeare's plays while following the plow.

"When my grandfather was 17 (in 1830) his thirst for education had become such that he gave up farming in a rather violent manner. His father wished him to remain on the land, and offered him a farm of his own."

He then quoted the early Mellon's idea of the professions, reading from his grandfather's autobiography: His grandfather's father felt, the former wrote, "that for me to abandon the honest and noble pursuit of an independent farmer, and become a doctor or teacher or miserly dependent preacher, or what in his eyes was worst of all, to enter the tricky, dishonest profession of law, was a proposition which seemed to him too preposterous to contemplate."

Nonetheless, his grandfather Thomas went to the city, studied law, and became a judge. "Later," Mellon added, "he became a banker and founded his own bank in Pittsburgh—and in recent years we have heard some pretty hard things about that profession, too.

"I do not claim to be a dirt farmer," Mellon said, "or a knowledgeable cattleman, or a soil scientist; but the soil is in my blood, and I feel a deep debt of gratitude to the soil of America."

In accepting the gift Dr. Walter S. Newman, president of VPI, declared he wished "to congratulate Virginia for having such people and qualities that it attracts men like Paul Mellon to become residents."

Chancelor John R. Hutcheson, of VPI, related the advances Virginia has made in recent years in agriculture. Potato yields have increased from 102 to 140 bushels to the acre, he said; tobacco from 685 to 1,161 pounds; cotton from 259 to 422 pounds; peanuts from 810 to 1,208; wheat from 12 to 18 bushels; corn from 22 to 35 bushels, etc.

Hoover Commission Reports

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 18 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement issued by me relative to the Hoover Commission reports.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

HOOVER COMMISSION REPORTS

The Commission on Organization of the Executive Branch of the Government—commonly known as the Hoover Commission—was established July 7, 1947, through the enactment of Public Law 162. This law declared as its purpose that it was "to be the policy of the Congress to promote economy, efficiency, and improved services in the transaction of the public business of departments, bureaus, agencies, boards, commissions, offices, independent establishments, and instrumentalities of the executive branch of the Government."

To achieve that purpose, the statute authorized the appointment by the President of a bipartisan Commission on Organization of the Executive Branch of the Government to consist of 12 members. The President appointed the following persons: Herbert Hoover, chairman; Dean Acheson, vice chairman; Arthur S. Flemming; James Forrestal; George H. Mead; George D. Aitken; Joseph P. Kennedy; John L. McClellan; James K. Pollock; Clarence J. Brown; Carter Manasco; James H. Rowe, Jr.

It is important to note that the Hoover Commission is a bipartisan organization of 12 men, 6 Democrats and 6 Republicans. Likewise, it should be noted that this Commission was established by an act of Congress and with the full support and active participation of the President. Furthermore, the Commission was authorized a sizeable sum of money to carry out its investigation and was authorized to hire or secure the best available administrative talent in the Nation. The work of the Commission was divided into many subcommittees, which subcommittees included representatives acquainted with the area of Government to which they were assigned for appropriate investigation.

The major part of the investigatory work was undertaken by groups known as task forces. These task forces operated under the general supervision of the 12-member Commission and its chairman. The task forces were well staffed with trained administrative personnel from accredited governmental research, institutions, and agencies. One institution that played an important part in the work of the Hoover Commission was the Brookings Institute, long recognized as a reputable professional research agency.

The task forces performed the meticulous and detailed work of administrative investigation. The reports of these groups were then submitted to the bipartisan Commission. This Commission was likewise well staffed with trained administrative personnel. All reports of the task forces were carefully gone over and evaluated. Following the analysis of the task forces reports, the Hoover Commission drew up its own recommendations pertaining to the agencies of Government. These recommendations were generally unanimous, having the support of the representatives of both political parties and, with but one or two instances, the full support of all members of the Commission.

The Hoover Commission submitted 19 reports, including a summary report. Life magazine recently stated, concerning the work of the Hoover Commission:

"No previous program has had the care, the pertinacity, the intellectual honesty and sheer brilliance which have gone into the making of the Hoover report."

It is my considered judgment that the report is a magnificent blueprint for lasting good government.

If its recommendations are adopted and vigorously supported, the reorganization of Government which will follow because of the adoption of the reports can save, according to very conservative estimates, a minimum of $3,000,000,000 per year. To say the least, this is substantial economy without jeopardizing much needed and vital Government services.

The following agencies or services of Government were thoroughly investigated and recommendations for their reorganization were submitted to the President and to the Congress:

1. General management of the executive branch.
2. Personnel management.
3. Office of General Services.
4. The Post Office Department.
5. Foreign affairs.
6. The Department of Agriculture.
7. Budgeting and accounting.
8. The National Security organization.
9. Veterans' affairs.
10. The Department of Commerce.
11. The Department of Treasury.
12. Regulatory commissions.
13. The Department of Labor.
14. The Department of the Interior.
15. Social security, education, and Indian affairs.
16. Medical services and activities.
17. Government business enterprises.
18. Part I—Overseas administration.
    Part II—Federal-State relations.
    Part III—General governmental research.
19. Summary report of the proposed recommendations and proposed legislation.

All of these reports and recommendations have now been submitted to the Congress and are in the hands of your Senators and Congressmen. These reports and the recommendations included therein have, in accordance with congressional procedure, been referred to appropriate Senate and House committees for action.

The report of the Hoover Commission contains some 300 major recommendations. A large percentage of them can be and will be effected by administrative action and through reorganization plans.

Some 18 major pieces of legislation must be passed by the Congress, in addition to the general executive reorganization bill, before the Hoover report can be fully carried out.

The Congress has been at work on these recommendations. The Senate Committee on Expenditures in Executive Departments has already approved the general reorganization bill and the General Services Agency bill. These were considered basic and fundamental legislative enactments.

The reorganization bill, which enables the President to transfer activities and agencies and to reduce the formless tangle of big departments and bureaus which report directly to him, has been adopted by the Eighty-first Congress and signed by the President. Al-

ready the President has submitted to the Congress seven basic plans of reorganization. These include the establishment of a Welfare Department, the reorganization of the Labor Department, reorganization of the Post Office Department, reorganization of the National Security Council and the National Resources Board, reorganization of the Civil Service Commission, reorganization of the United States Maritime Commission, and Reorganization Plan No. 7 transferring the Public Roads Administration to the Department of Commerce.

All of these seven reorganization plans will be law unless vetoed by the Congress. The above-mentioned reorganization plans of executive departments represent but the first step in executive reorganization as authorized under the Reorganization Act of 1949. I am proud to say that I was privileged to serve on the Senate committee which drafted this act, which worked out its details, and which presented it to the Congress. I supported and voted for this important basic reorganization law. It is to be expected that additional reorganization plans will come down from the President under the authority of the reorganization statute.

A second major piece of Hoover Commission legislation has been adopted by the Congress until the title of General Services Agency. This legislation was drafted by the Senate and House Committees on Expenditures in the Executive Department. Again I report that I was an active member of that committee and aided in the preparation of the legislation. The General Services Agency consolidates the following Government Bureau and agencies: Bureau of Federal Supply, War Assets Administration, Federal Works Agency, and National Archives Establishment.

The Senate bill dealing with the establishment of a General Services Agency was known as S. 2020. The House bill was known as H. R. 4754. These two bills were consolidated into one, which has been passed by both Houses.

The General Services Agency, as established under this legislation, will be charged with the responsibilities for the procurement or purchase of all Government supplies, for the utilization and disposal of all Government property, for maintaining a modern, up-to-date inventory of all Government property and facilities, along with control of Government transportation and communications services and facilities, as well as the maintenance of a modern system of records and accounting.

It is estimated that the enactment of this one measure will produce an economy in Government operation of approximately $450,000,000 a year.

Other Hoover Commission recommendations are in the process of being acted on. The Senate has passed the Tydings bill, S. 1843, giving the Defense Secretary authority to strengthen unification of the armed services. This bill also provides for modernized budgetary and fiscal procedures. This is extremely important, because the Military Establishment spends over one-third of the Federal budget. The Secretary of Defense has estimated that the enactment of this bill into public law will permit savings of $1,000,000,000 per year, in the management of the national defense program. A word of caution, however, is in order. The Tydings bill faces serious opposition in the House. It will need the all-out support of every advocate of reorganization.

The Senate Committee on Expenditures in the Executive Departments has approved the establishment of a National Commission on Intergovernmental Relations. This bill follows the recommendations of the Hoover Commission.

The Congress has passed and the President has signed a measure, S. 1704, to strengthen and improve the organization of the State Department. This bill was passed without a single dissenting vote in both Houses. It was the first major measure embodying the Hoover report recommendations to be enacted into law.

Other items of legislation embodying the Hoover Commission reports are now in congressional committees. For example, the Commission bill on general management of the executive branch based upon the Hoover Commission report has been presented to both the House and the Senate. The Senate bill is S. 1942 and the House bill is H. R. 2613. Likewise, there is a bill on the Federal Personnel Service, and another to establish a veterans' life insurance corporation. These have recently been submitted to the Congress.

The biggest business in the world—the Government of the United States—can no longer be managed with the political instruments of the eighteenth and nineteenth centuries. Government in the United States is no longer a simple thing that can be left to political chance and mediocre administration. A twentieth century economy propelled by the boundless energy of mass-production industry and constantly accelerated with new advances in the field of science cannot be managed or regulated with the mechanism of hodgepodge, unplanned, unrelated administrative establishment. The need for governmental reform and organization is imperative. It is a matter of sound economics and literally life or death for American political and economic survival. When 20 percent of the national income is utilized by the Federal Government, it is time to take stock of the means and methods which are employed in the use and expenditure of such a vast sum.

We must provide for our own citizens, but the cost of our Government is running perilously high. Our task is to obtain the maximum use and production use of every budget dollar. Economy in government does not necessarily mean spending less. It basically means obtaining the most that is humanly possible out of every dollar committed to public service. The question of economy in government could well be stated not in terms of dollar appropriations, but in the use of those appropriations. The effective use of public revenues is directly concerned with proper organization of administration. Modern tools of government are no longer matters of academic theory. They are absolute essentials if we are to continue our program of social welfare, public improvement, and international leadership.

It is for these reasons that I strongly support the basic recommendations of the Commission on Reorganization, commonly known as the Hoover Commission. This is not a partisan issue. It is not one of mere dollars or of the number of Government employees. It is an issue that runs deep into the very survival of free government and a free economy. Either we learn how to manage government, or the bigness of government will overwhelm us. Either we learn how to properly utilize the vast sums of public revenues and how to appropriately control and manage their use, or we will bleed our economy into an impoverished condition.

Influence Peddlers

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, July 18 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Influence Peddlers," from today's Washington Post.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INFLUENCE PEDDLERS

Sale of influence by former Government officials is an abuse of long standing, although the pickings were not so rich in the days when the Federal Government was one of limited powers and its expenditures were measured in terms of millions instead of billions of dollars. Today the Government is in the market as a heavy buyer of many kinds of goods and materials. It has a host of regulatory agencies whose officials make decisions that vitally affect the fortunes of private industry. The former Government employee who knows from personal experience how the governmental machinery works and has maintained close contacts with former colleagues, can render valuable service—in a perfectly legal way—to private corporations and organized groups by helping them to obtain contracts, securing a hearing for grievances, or possibly lobbying for changes in regulatory laws.

Mr. Thomas Corcoran, President Roosevelt's close confidant, who at one time served as a special attorney for the RFC, obtained more than $65,000 from a single concern that had been advised as to how to go about securing an RFC loan. Prior to our entry into the war, he drew down $100,000 in fees in 1 year on four defense contracts. The chief effect of these disclosures seemingly has been to increase the number of former Government officials who are selling their inside knowledge and exploiting their personal contacts. Senator BUTLER's demand for a congressional investigation of such activities is hardly necessary, since the practices of which he complains are matters of common knowledge. Moreover, it is highly improbable that any of the seven lawyers whom he has singled out for special mention as seekers of influence have committed illegal acts, however "questionable" their activities may be from the viewpoint of the public interest. The shocking aspect of the so-called "influence racket" is that it is so well entrenched that men who have had distinguished records in public life recognize no impropriety in going before Government agencies with which they were once connected to represent private clients.

It appears to us, therefore, that the time has come to pass restrictive legislation such as Senators BUTLER and LONG advocate, forbidding such officials to represent private firms or clients before Government agencies for at least 2 years following their withdrawal from Government service. A law of this kind would serve two purposes—it would tend to discourage (though it would not eradicate) the abuses at which it is aimed, and it would have a salutary effect on men still holding office. For the knowledge that their public records may commend them to private interests has undoubtedly influenced the decisions and conduct of some public officials. They may unconsciously favor private interests that are looking around for men to fill important positions or to represent them in a legal capacity. The insidious effect of this kind of external pressure would be greatly weakened by the proposed legal restriction.

If too many restrictions were imposed on retiring officials, the Government would find it difficult to recruit competent personnel to man its agencies. But it is quite feasible to impose legal restraints on the specific activities that are chiefly responsible for the flourishing state of the "influence racket" in this city. We feel sure that the public at large would welcome such action.

Appointment of John Foster Dulles To Be Senator From New York

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, July 18 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask permission to have printed in the Appendix of the RECORD a splendid editorial from the Nashville Tennessean of July 14, in which the appointment of Mr. JOHN FOSTER DULLES as a Senator is called a great contribution to peace. The editorial was written by the able Silliman Evans, president and publisher of the Tennessean, after he heard Senator DULLES' maiden speech in the Senate on July 13 last.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GREAT CONTRIBUTION TO PEACE

WASHINGTON.—The maiden speech of Senator JOHN FOSTER DULLES as a stanch proponent of the Atlantic Treaty gives strong justification to the opinion that Gov. Thomas E. Dewey did the Nation and the cause of peace a great service in appointing this advocate of the bipartisan foreign policy to the upper House of Congress.

Mr. DULLES has been an official adviser for years at every conference devoted to shaping that policy. His experience and acumen have been at the service of several Secretaries of State. The position which he, though a member of the Republican Party, occupies in the American delegation to the United Nations is evidence of the high regard the administration has for his abilities.

The writer of this editorial was fortunate to have been present Tuesday in the Senate Chamber, temporarily located in the old Supreme Court chamber, to hear this maiden speech, which was both brilliant and profound. The new Senator from New York warned that failure to ratify this 12-nation treaty would drive the Communist offensive against western Europe and bring all our European plans crashing to the ground by encouraging the Germans to turn toward a Soviet alliance.

Ratification of the pact is essential to further progress toward European peace and stability and is as well an assurance that we will not lose what ground we have already gained in that direction.

As a measure of Senator DULLES' sense of responsibility and creative contribution to our foreign policy, it should be recalled that when the pact was first proposed he was troubled by some misgivings.

While applauding the objectives, he warned that great care must be exercised in drafting and interpreting the pact lest it serve as an excuse or provocation to bring on the very aggression it was designed to discourage.

The careful wording of the treaty, on which he was consulted, has erased these misgivings. He is now convinced that it is a purely defensive arrangement which Russian suspicion cannot twist into a threat to Soviet security and that it will contribute materially to the strength and security of the contracting nations.

Mr. DULLES, in the debate with Senator TAFT which followed his maiden speech, handled himself impressively under a barrage from one of the most skilled parliamentarians and determined opponents in the Senate.

The junior Senator from New York thus performed well in his first appearance in that role and, in doing so, showed himself ready to play an important part in securing approval for our participation, along with the other nations of the Atlantic community, in this strengthening of determination for peace in the world.

The Atlantic Pact

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, July 18 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful editorial entitled "A Strong Alliance First, Maybe Federation Later," from the Courier-Journal of Louisville, Ky., of July 11, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A STRONG ALLIANCE FIRST, MAYBE FEDERATION LATER

The North Atlantic Pact, an alliance of 12 western democracies to resist aggression, is an immediate possibility in the struggle to preserve world peace. So, too, is the American program of helping to strengthen the armed might of the signatories. Both are practical measures that would implement the hope of the world for peace by creating such great unity of power that any would-be aggressor (and the only potential one in these times is Soviet Russia) would take second thought and probably never risk destruction by warring against it.

These are valid points to remember as the Senate begins its debate on whether the United States should ratify its adherence to the pact. Two hopefully idealistic groups in the Senate are offering alternatives or amendments to this practical program. One bipartisan group, headed by Senator MUNDT, urges a vetoless world alliance backed by an international army recruited from the smaller nations, owing its allegiance to the Atlantic Council, and pledged to outlaw atomic warfare along the lines proposed by Bernard Baruch. Russia might join if she liked—though no one faintly familiar with current history believes she would. And few persons, we dare say, believe that the United States would now surrender its own power of veto, or that an utterly new military organization recruited from essentially nonmilitary states could provide any hope of protection against the threat of Russian aggression.

The other group, headed by Senator KEFAUVER, represents the ideas of the Atlantic Union Committee, headed by Owen J. Roberts, former Supreme Court Justice. It stems from the decade-old Union Now program of Clarence Streit for a federalization of the Atlantic democracies not unlike that of the 48 States of this country, and it would leave membership open to non-Atlantic republics like the Philippines and to other nations as they achieved a democratic status. The Atlantic unionists argue that the North Atlantic Pact should be approved first, federalization of the signatory countries achieved later.

Of the two, it seems to us that the Kefauver-Roberts-Streit program is by far the more realistic. The difficulties confronting it in this nationalistic and badly divided world are enormous, but in seeking to build a federal structure on the cornerstone of the democratic kinship of the Western Powers, great and small, it holds great hopes for the future.

The present, however, is what the Senate must immediately consider. The first necessity is to ratify the North Atlantic Pact, to ally ourselves with 11 other nations pledged to resist aggression, and so beyond all tempting doubt inform Soviet Russia what she faces if she disturbs the peace of the world. The second necessity is for both the House and the Senate to provide the funds with which to strengthen the military establishments of this great combination of allies, and so to make it a real and not a paper power. This is the hard and costly and not guaranteed road to peace, but in 1949 it is the only road open to travel. And it may lead, in time, to that free federation of the world of which men dream.

Wage-Hour Legislation

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. GOSSETT. Mr. Speaker, our colleague, the Honorable WINGATE LUCAS, of Texas, has been a serious student of wage-and-hour legislation. No one has worked more diligently with this problem than he. His tireless and patriotic devotion to duty in this matter has been a source of inspiration to his friends. Because of his expert knowledge of this subject, I am sure we will all benefit from the address delivered by him to the Riverside Lions Club of Fort Worth, Tex., on last Friday, July 15. I therefore take pleasure in offering his speech for insertion in the RECORD at this time:

NEEDED: COMMON SENSE IN WAGE-HOUR LEGISLATION—AMERICA MUST FACE THESE FACTS

In inviting me to speak on this pressing problem facing the country today, I assume that you know that I shall speak honestly and candidly upon the subject although it is not a pleasant task always to tell the truth. I cannot evade my duty. Today I feel compelled to relate to you some facts which have received too little emphasis for too long a period of time.

To my mind, the most important problem faced by the American people today is the instability of our domestic economy. The signs have never pointed in so many directions all at once. What has caused this instability? Why does this tremor of uncertainty shake our entire economy?

The answer is, in my judgment, that there is a chronic instability in the manner in which we are governed. The Federal Government in its unnumbered and endless ramifications reaches into the very management of every enterprise in the land. The National Government is, of course, a political organization which is necessarily subject to the whims of those in control. I do not imply that ours is not a government of laws, but I do assert in the interpretations of those laws, by those authorized to administer them, there has been and there still is a constant shifting, seemingly always away from the intent of the Congress which enacted them. Often, I grant, Congress has delegated too much power, but worse, too often powers delegated are abused, and perverted. Is it any wonder that businessmen, compelled to look to Washington every day before planning for the next, are demanding

that executive powers be clarified, defined and limited?

Today I am going to talk about just one of the laws which has been perverted in its enforcement beyond anything ever dreamed of by those who enacted it. The statute was one of the great forward steps taken by our Nation, humanitarian, practical, and sound. But in its application, as I will show you, it has promoted confusion and disturbance. It has simply not been utilized to achieve the goal of its authors.

I speak of the Fair Labor Standards Act, commonly known as the wage-and-hour law or the minimum-wage law, which was enacted in 1938. In essence, the law provides for 40 cents an hour for all workers producing goods for interstate commerce and for time-and-a-half after 40 hours a week, with certain exceptions. Its purpose was to promote efficiency in manufacturing and prevent the unfair competition of some employers who forced wages below minimum standards, and to spread employment. It was intended to be more than an employees' law, more than an employers' law, for it meant to provide a floor to our national income, a steady source of purchasing power. This is an example of Federal regulation of the highest order. Experience had shown that the States could not prevent the shipment in interstate commerce of sweatshop goods, and therefore could not protect the workers thus exploited or the employers who desired to pay decent wages. President Roosevelt, in his message requesting passage of the law for those who toil in factories proposed that "only goods which have been produced under conditions which meet the minimum standards of free labor shall be admitted to interstate commerce. Goods produced under conditions which do not meet rudimentary standards of decency should be regarded as contraband and ought not to be allowed to pollute the channels of interstate trade."

When the Congress debated the measure, Senator (now Justice) Black, said that it was not intended to and did not attempt to fix minimum wages and maximum hours in all the varied local businesses in the Nation, nor was it an effort to regulate wages and hours in the various service employments. The reasons for this limitation were, first, that the bill "rests squarely upon the interstate commerce clause" of the Constitution, and, second, because it was the prevailing if not unanimous sentiment of the reporting committee that "businesses of a purely local type which serve a particular local community, and which do not send their products into the streams of interstate commerce, can be better regulated by the laws of the communities and of the States in which the business units operate."

Mrs. MARY NORTON, chairman of the Labor Committee, in the debates in the House, more explicitly defined the scope of the proposal. She said that the bill leaves local business to the protection of the laws of the several States, and that despite purchases in other States local business was excluded. Not even by the "wildest stretch of imagination" and "regardless of any possible administrative interpretations" such businesses as the "local groceryman, druggist, clothing store, meat dealer—any merchant, in fact—laundry, hospital, hotel and even transportation companies operating solely within a State" were "absolutely not" in any way affected by the bill.

And the bill was passed, marking the beginning of a new era in commerce, guaranteeing to employees in interstate industries a certain, minimum income, and to their employers protection against the unfair competition of those who would press down the workingman to conditions of near-servitude; but more important, it provided purchasing power to support our national economy. It fulfilled the axiom that "good wages make good business" which we all recognize as the soundest philosophy.

These are the highest objectives and worthy of being sought by any people. But they have not come to the American people without blemish, for this great socioeconomic program, inspired by the highest ideals, has been dragged into the mire of political battles. It has been pushed around by pressure groups; it has been manhandled by maladministrators; it has been perverted beyond the preconception of the statesmen who sired it; it has been polluted by politics.

It has degenerated into a machine by which all industry, not just the large manufacturer, but the little retailer right down the street, can be harassed, threatened and intimated. It is an instrument of torture to the small-business man; in fact, there is hardly a man in business today who may not wake up tomorrow to find that he has been sued, under the interpretations that have been given to this law, for more than he is worth, including double damages, and even criminal charges might be brought against him. And, unless the Congress clarifies the law, he may find that he is utterly defenseless in court.

But you may wisely inquire that if this law is so beneficial, why should it not be made to apply to every business? It is simply impossible for the Federal Government to impose a single standard on all purely local businesses. This was tried under NRA only to result in abject failure. Even if it were constitutionally possible to legislate in this field, no national law could regulate the buying habits of the people, and retail and service establishments could not meet public demands by remaining open for business only 40 hours a week. President Roosevelt recognized this when he spoke of goods produced by those who "toil in factory," and added "there are many purely local pursuits and services which no Federal legislation can effectively cover." How then, could he have meant the clerk behind the counter in the clothing store?

Let us see if the Administrator is content with accepting the wisdom of President Roosevelt. Despite these past bitter failures, the most alarming extension of coverage by the Administrator has been in this area of local neighborhood business. The entire approach of the Administrator to the retail and service establishment has always been wrong. He should have sought to effectuate the plainly expressed congressional purpose that the law should not apply to local business. Instead of doing this, the Administrator has continuously created and applied artificial tests, which ignore the realities of local business, in an effort to bring under the law many retail and service businesses. This has been simply another strand in the whole skein, the ultimate purpose of which was to extend the hand of bureaucracy into the management of every plant, store, shop—into the operation of every business enterprise in America.

Under what pretext has the Administrator swept these businesses under the act? I will cite but one of many. The law includes employees engaged in "any process or occupation necessary to the production" of goods for commerce. Let me show you how that phrase "necessary to the production" has been treated. A custodial employee of a local real estate company was found to be in interstate commerce because some of the tenants of the building in which he worked were producing goods for interstate commerce. He was found to be *necessary* to such production (*Kirschbaum* v. *Walling* (316 U. S. 517)). Employees of a local coal dealer were held to be in interstate commerce because some of the customers were manufacturers (*West Kentucky Coal Co.* v. *Walling* (153 F. (2) 582)). Listen to these other interpretations: The act applies to employees of a local stationery store, one of whose customers is a local grocer within the same State, if the stationery printed for the grocer is later used to write a letter going out of the State (3 CCH Labor Law Reporter 4th ed., par. 25, 160.47). Employees of a local window cleaning company (*Martino* v. *Michigan Window Cleaning Co.* (327 U. S. 173)). Employees of a local nursery (1944–45 Wage and Hour Manual 125). Employees of a local automobile dealer (*McComb Adm.* v. *Deibert* (16 Labor Cases, pp. 64, 982). Employees of a local laundry (*Phillips* v. *Star Laundry* (149 F. (2) 416)). Employees of a local scrap iron dealer (*Bracey* v. *Luroy* (138 F. (2) 8)). Employees of a local architectural firm (1944–45 W. H. Man. 138–139). Employees of a local exterminator service firm (3 CCH Labor Law Reporter, 4th ed., pp. 25, 150.385). Employees of a local typewriter service and repair company (3 CCH Labor Law Reporter, 4th ed., pp. 25, 180.81). Employees of a local fertilizer company (*McComb* v. *Super-A Fertilizer Works* (165 F. (2) 824)).

Do you not agree that it is essential, nay vital, to our stability that clarifying legislation be enacted? Under such decisions as these, no one knows whether or not he is subject to suit. Every employer is vulnerable. At any time the Administrator may extend his control over your business, and you may find demands on your desk that you pay allegedly accumulated back wages to your employees of hundreds or even of thousands of dollars and your employees most likely will be entirely satisfied. But that won't satisfy the Administrator. I am amazed, after studying this law and the tortuous decisions that have been made under it, that Congress has sat idle for 11 years without bringing it up to date. No such social experiment as this, on such a broad scale, could have been perfect from inception, and no one, not even the Administrator, denies that the law needs revision.

But how does the Administrator want this law clarified? It should be immediately assumed that he wants more power. That is the nature of a bureaucrat. He wants to cover everyone and every business establishment in the land. In testifying before our committee, the question was put to him as to who was exempt, in the bill he was supporting? The response was "The local barber—probably!" But I though even that was doubtful, because the barber's razor likely came from Massachusetts, and his soap from New Jersey—"stream of interstate commerce," it is contended—and his customer might be a traveling man!

Not content with all-inclusive coverage, the Administrator endorsed a flat 75 cents minimum wage. The Secretary of Labor wants a bill requiring a minimum of $1. Not another witness came before our committee who did not concede that even 75 cents would create unemployment, at least temporarily. Students of this subject all realize that this is too great a tampering with our unstable economy. Instead of increasing the national income, it would certainly decrease it, for the relationship of wages to production cannot be forced into such an unbalance in many industries without extensive lay-offs and closing of plants. It is unthinkable.

In order to carry out the intent of the Congress which enacted this law, and, if I may say so, the intent of the present Congress, I have introduced a minimum-wage bill. It has received almost unanimous acclaim among those who are being attacked so vigorously under the present statute, the retailers, the small-business people. My bill exempts "any employee employed by any retail or service establishment, more than 50 percent of which establishment's annual dollar volume of sales of goods and services is made within the State in which the establishment is located. A 'retail or service establishment' shall mean an establishment 75 percent of whose annual dollar volume of sales of goods or services, or of both, is not for resale and is recognized as retail sales or services in the particular industry."

This you see provides the particular industry test, for what way is fairer to determine an exemption than by having a competitor or another in the same line of business testify as to what is retail in that particular industry? Congress should reaffirm and settle once and for all, as is proposed in the Lucas bill, the exemption which is intended local neighborhood businesses to have.

In order to be realistic about the figure which should be legislatively established as the minimum wage I compared the cost of living in 1938, when Congress declared 40 cents as the minimum, with the cost of living in 1949. The resulting figure was approximately 65 cents, and near enough thereto to cause 65 cents to be chosen as the round figure upon which to start. More important than the sum of 65 cents an hour is another feature of my bill, that which ties the minimum wage to the cost-of-living index. My bill provides that the minimum wage shall vary, in whole pennies, annually, as the cost of living varies, and as costs rise wages rise, but as costs decline wages decline. But in no event—in order to maintain the floor under our national income—in no event shall the minimum wage go below 50 cents an hour. Under such a provision the workingman is guaranteed minimum standards, notwithstanding inflation or depression. The employer is assured labor costs in keeping with the times and is protected against unscrupulous competitors. And America gets a constant income of the same value—above 50 cents—in comparison to other costs. And the controversial question of the minimum wage is removed from the realm of party politics.

Good wages guarantee good business. Contented employees assure greater production. But when wages are so high as to be disproportionate to production, employment falls off. The loss of just one job is the loss to the community of that much buying power. Therefore, the soundest objective we can hope for is stabilized employment. I have heard of no proposal for maintaining steady employment in interstate industries more reasonable than that of adjusting the minimum wage to the variations of the cost of living. It is, to my mind, the only answer to this great national problem.

At the same time, let us keep in mind that the minimum wage fixed by law was never meant to be the American living wage. It is a subsistence wage from which the worker may rise to higher standards. It is, as Roosevelt phrased it, the "rudimentary standard" to guarantee labor health and decency, to prevent the sweatshops which feed into our society undesirable citizens, burdening the community with juvenile delinquency, disease, and all the other evils of dire poverty. No employer has a right to continue in business if he can survive only on sweated labor. And such an employer's competitors deserve protection against sweatshop competition in order that they might pay their employees decent wages and remain in business.

The present attempt to expand and enlarge the coverage of the Fair Labor Standards Act and to require a minimum wage which is unrealistically disproportionate to production and economically unsound is just one part of the alarming picture confronting Congress at the present time. This request for power would not only add thousands to the Federal pay rolls, and millions to our budget, but would so increase the hazards of doing business as to reduce immeasurably our tax receipts. But, as I say, this is just one phase of the greater picture which makes thinking people gasp.

Congress is faced with demands for legislation which if enacted would extend the state into fields never heretofore entered by a truly democratic government. Under the guise of combating communism we are drawing more and more close to it. Pressure groups are relentlessly driving us into socialized public housing, federalized education, socialized medicine, and other forms of pure statism, and small men in public office are bowing obsequiously to those whose aim is to destroy democracy. Can democracy survive if all power is to be reposed in the Central Government, which is to provide every citizen with such a security as to bring lassitude to all? Benjamin Franklin, one of the great thinkers of all time, said that "He who surrenders his liberty for temporary security deserves neither and in the end will lose both."

Resist and resist we must these demands to increase Federal power. Let me quote you from the writings of Thomas Jefferson:

"I see with the deepest affliction the rapid strides with which the Federal branch of our Government is advancing toward the usurpation of all the rights reserved to the States, and the consolidation in itself of all powers, foreign and domestic; and that too, by constructions which if legitimate, leaves no limit to its power * * *. When all government, domestic and foreign, in little as in great things, shall be drawn to Washington as the center of all power, it will render powerless the checks provided by one branch of government on another, and will become as venal and oppressive as the government from which we separated * * *. What an augmentation of the field for jobbing, speculating, plundering, office building, and office-hunting, would be produced by the assumption of all the State powers into the hands of the General Government * * *. It is not by the consolidation or concentration of powers, but by their distribution, that good government is effected * * *. The way to have good and safe government is not to trust it all to one, but to divide it among the many, distributing to everyone exactly the functions he is competent to do. Let the National Government be entrusted with the defense of the Nation and its foreign and Federal relations; the State governments with the civil rights, laws and police, and the administration of what concerns the State generally; and the counties with the local concerns of the counties; until it ends in the administration of every man's farm by himself * * *. What has destroyed liberty and the rights of man in every government which has ever existed under the sun? The generalization and concentrating of all cares and powers in one body."

These immortal words were given us by the author of the Declaration of Independence, the great mind who conceived democracy as we have known it here in America. How can free men, thinking men, disregard them?

To my mind, the skyrocketing costs of Government represent the most threatening challenge to our democracy today. In 1929 our Government spent three billion eight hundred million. In 1938, under the free spending, antidepression program of Roosevelt, we spent seven billion three hundred million. Today, in the year of our Lord nineteen hundred and forty-nine our budget is forty-one billion nine hundred million! And this does not include sums for the new housing bill, already approved, and for socialized medicine, socialized education, the new farm program, expanded social security, rearmament of Europe and parts of Asia, and many other programs. These will add at least twenty billion to the cost of Government to the taxpayer. Ask yourself, can you afford a 50-percent increase in your taxes?

While taxes are already too high it is inevitable that they must be increased, tremendously increased, if we adopt these new programs to inaugurate the welfare state. Under present taxes the Government's income is about three billions a month and Government spending will average, this next year, between three and one-half and four billions a month. Last year our deficit was nearly two billions and on the basis of present expenditures and income, not counting new programs, I cannot see how it can be kept below five billion next year. It will be suicidal for our Nation to enter into these programs of socialization of our own form of government while we are at the same time subsidizing what purports to be democracy all over the world. How long can a government stay on the brink of bankruptcy? We can secure little encouragement by looking to England. Do you want new taxes? Do you want inflation? Do you want repudiation of our debts? Take your choice. Unless we retrench, we must take one or even all of them.

What a time for statesmen. Statesmen! Statesmen who fear neither big business nor big labor; who bow to neither big-pressure groups nor selfish classes in our society. What a time for common sense in Government.

These are momentous days, and what a time for little men to hold our fate, small men who care only for their political fortunes as against the last best hope on earth, American freedom! What a time for the courage of the martyrs, the fortitude of our founders. What a time for men.

God give us men—
Strong men, courageous, and sincere;
Men far beyond the pale of fear;
Men who hold their lives not dear
When liberty's banner's sinking.

God give us men—
Men of principle, tried and true,
With love of freedom ever new;
Men whose courses ne'er pursue
Expediency's false lights blinking.

God give us men—
Men honest in their every act;
Whose honor is a public fact,
Dealing with pretense without tact
And damning treachery without winking.

"God give us men!"

The Courageous Finns

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. MACK of Washington. Mr. Speaker, the Finns are among the world's most courageous and liberty-loving people and they are preserving their liberties now by standing up against their ancient enemies, the Russians. The Soviet Union, despite its efforts to do so, has not been able to conquer the freedom-loving spirit of the Finnish people because the Finns have had the courage to stand up against Russia's Communist regime and say, "So far shall you go, but no farther."

Under leave to extend my remarks in the RECORD, I include a most informative article on Finland by Joseph C. Harsch that appeared in the Christian Science Monitor, for which he is a special correspondent. The article follows:

FINNS HOLD THE SOVIETS AT ARM'S LENGTH

(By Joseph C. Harsch)

HELSINKI.—One of the more interesting things about Europe in this transition year of 1949 is the similarity of attitude toward Soviet Russia of the peoples who live at the

opposite ends of what has come to be called the iron curtain.

I already have reported on, and described at some length, the extraordinary indifference of the Yugoslavs toward Cominform propaganda and Moscow blusterings. The Yugoslavs are not intimidated. And I found far less emotional dread of Russia there than you can find almost any day in western Europe or New York or Washington.

The same goes for Finland. The Finns aren't intimidated, either. On the contrary, they are so indifferent to both the blandishments and the complaints from Moscow that a visitor from the West finds himself constantly trying to understand how a country of only 4,000,000 persons, living on Russia's northern doorstep, can dare to be quite as hardy as it is.

At first it almost seems like foolhardiness, and one wonders if perhaps the Finns are living in a dream world which is going to explode under their noses at any moment.

DEFIANCE PERSISTS

The Finns are probably the only people in history who ever had a Communist minister of the interior and a Communist-controlled secret police, got rid of both, and act as though they were totally independent of Russia.

There are several reasons behind this ability of the Finns to survive as free people. Some Finns subscribe to what they call the romantic theory—that Russia rather respects them for their sturdiness and enjoys the luxury of allowing one independent country to survive on the Soviet frontier.

Perhaps there is something to that. Russian logic is a strange thing, unfathomable to a westerner. Perhaps also Finnish independence is tolerated, as some Finns think, because Lenin spent part of his exile in Helsinki and is said to have felt an affection for the Finns.

It would seem more plausible that the reason is compounded of two much more practical considerations. The first is that Finland is productive. It is paying its reparations to Russia on schedule; it is delivering commodities Russia needs under a trade agreement. All this would be lost were the iron grip of communism to be fastened on a resentful people.

The second is that without the slightest doubt the Finns would fight if they were invaded by the Soviet Army, or "coordinated" by a coup d'état on the Czech model.

That is to say, Russia could not have as much production out of Finland if Russia had more political control over Finland. The two are mutually exclusive. Moscow has had to choose between Communist control and Finnish goods. So far, at least, it chooses the Finnish goods.

To say that the Finns would fight does not mean that they could defend their entire country as they did in the 1939–40 winter war. The big coastal guns at Porkaala are in Russian hands, and those guns bear on Helsinki. Also, the garrison at Porkaala could cut the road and rail line between Helsinki and Turku—the two main ports and industrial cities of the country—within an hour after hostilities had broken out. And the Finnish Army has been reduced under the peace treaty to a level of impotence.

Certainly, if the Russians chose to use force, they could have whatever cities or strategic centers they wanted in Finland in a very short time.

DRAG ON COMMUNISTS

But the Finns never would submit passively to an occupation or a Communist regime. Almost every Finn has a rifle; many of them more than one. Finns have been fighting Russians for a good many hundreds of years—and liking it. Finns know their forests and swamps and lakes. Finns enjoy living out of doors.

Most of them, obviously, would take to the woods with the greatest pleasure and resume the ancient feud with Russia. Their attitude toward Russians is both primitive and vigorous. And they regard a Cominform Communist as being a Russian.

The Finnish Communists themselves only claim a membership of 34,000 persons, and it is to be doubted that their real strength even approaches this figure. Perhaps in some countries communism gains from its ties with Soviet Russia. But so strong is the basic anti-Russianism of Finland that Russia is actually a millstone around the neck of the local Communist Party.

Were Russia to undergo a right-wing revolution and reemerge under a czar, communism probably would become a much stronger force in Finland than it is today. The Finnish inclination is to move away from whatever Russia is.

In other words, Finland is today a strong item of documentation for the theory that the best defense against Russia and Communist expansion is the readiness of a people to fight for their independence. It isn't that the Finns could fight successfully. They haven't a chance. But they would fight.

The descent on Czechoslovakia did not threaten a general war for the Russians since the Czechs were not prepared to fight. But Finland, like Yugoslavia, is a different kind of story. The moral would seem to be that self-reliance and freedom from defeatism are the prime ingredients for the independence of any country wishing to remain master in its household.

This doesn't mean that the Finns are out of danger. There are two dangers in their path. The first spring from the degree of their own present confidence. It was more than a year ago—April 1948—that they defied Russia by turning the Communists out of their Government and liquidating the Communist-controlled secret police. Moscow blustered, but did nothing.

Then there was the period of anxiety over possible Russian reprisals when Norway and Denmark were brought into the Atlantic Pact. Many people dreaded that Russia would retaliate by clamping down on Finland. Again Moscow blustered. And again Moscow did nothing more.

POLITICAL STRUGGLE

To many Finns this means that they were safely out of the woods, so safely out that they can indulge the luxury of long-deferred local politics. So far the non-Communist parties have maintained a common front against communism. It has taken the form of a Socialist government supported by the Agrarians and the Conservatives.

While the danger from Moscow was obvious, Agrarians and Conservatives gave loyal and unquestioning support to the Socialist government. But this has put a strain on their tolerance. No political party enjoys responsibility without a voice in the government, or patronage. Both would like a share now, and political maneuvering has begun.

If Agrarians and Conservatives should force a government crisis and the Socialists went into opposition, then the Socialists and Communists would be associated at least in that they would be occupying the opposition benches together. And there might well be serious strikes. In that case Socialists and Communists would also be associated on the picket lines. That would be a dangerous association. The Communists would welcome it. Finally, strikes would delay reparations shipments to Russia, providing Moscow with an excuse for direct intervention.

The other danger is economic. Finland, like its bigger neighbor, Sweden, is in economic trouble due to the decline in world prices. The export of wood pulp and newsprint has fallen off disastrously. Production cost, due partly to wage increases, are higher than American costs. American newsprint already is underselling Finnish newsprint, even in Europe.

LABOR OPPOSITION

The first available remedy would be to devalue the Finmark, which is probably badly overvalued at present. But labor is opposed to that since it would increase the cost of imported consumer goods. Such an increase would amount to an indirect cut in wages.

Those are two big and difficult problems. They must be overcome successfully if Finland is to make good its march away from Soviet influence. It remains to be seen whether Helsinki will overcome them successfully.

But as of today Finland is morally free, internally independent of Russia, and safe from communism. Finland is an iron-curtain country only in that the Russian base at Porkaala and the terms of the peace treaty make Finland militarily indefensible. What saves this country is an almost unanimous will to fight, even though the end result would be inevitable defeat.

I was unable to find any Finn who believed there could be virtue in appeasement. They don't understand the word, any more than the Yugoslavs do.

Prosperity and Deficit Financing

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the New Hampshire Morning Union of July 15, 1949, entitled "Prosperity and Deficit Financing." The Union is published in Manchester, N. H.

PROSPERITY AND DEFICIT FINANCING

President Truman's about-face on fiscal policy, in which he has abandoned his demand for a balanced budget and public-debt reduction, with a tax increase if necessary, and has pulled out all the stops on deficit financing, is causing widespread concern.

Reports from Washington indicate that Congress is being flooded with letters from the folks back home calling for a halt in expanding Federal financing. The people apparently are wiser than their national leaders. Many have become convinced that the Government is rife with waste and inefficiency and that continued deficit spending can only lead to disaster.

In general, Mr. Truman's address to the people on Wednesday night contained the same mixture of false economics and politics that marked his economic message to Congress. His effort to place the responsibility for the present plight of the Government and the business recession on the tax cut last year and the refusal of Congress to adopt his anti-inflation program was too absurd to merit attention. The absurdity is deepened by the fact that with the exception of his abandonment of his former demand for a tax increase, he asks practically the same program now to meet deflation.

Mr. Truman is right in insisting that we are not in a depression but in process of economic readjustment that was bound to come. But he is unable to get away from the idea that the Government must play the dominant role in our economy, and that

prosperity depends on Government spending. That is a dangerous doctrine. The Government produces nothing. It is a distributing agency. And when it distributes more than it takes in, the result must inevitably be to weaken our economy. We have indisputable evidence of this fact today in Socialist Britain.

It is hoped that Congress will reject this dangerous doctrine. Had Congress not rejected Mr. Truman's appeal last January for a raise in taxes, an expansion of spending, and wide powers for the Government to control every segment of our economy as a check to inflation, there is no doubt that we would be in a depression today. Congress wisely refused to adopt that program. Now the same proposals are offered by Mr. Truman, with the tax increase eliminated, to curb deflation.

Under Mr. Truman's reasoning, production and purchasing power are not dependent on hard work, on the right of the people to spend their own money, and on private investment to expand industry. They are dependent on the Government taking the money away from the people by taxes and borrowing and handing it back as benefactions. That philosophy never has worked and it won't work today. Its only result is to lead down the blind alley to a socialized state.

Why 4,000,000 Are Unemployed, the Cause and the Remedy

EXTENSION OF REMARKS
OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. WHITE of Idaho. Mr. Speaker, my office has been flooded recently with letters and telegrams imploring that the Congress do something to save our metal-mining industry. A drop of approximately 40 percent in the prices of lead, copper, and zinc has closed hundreds of mines and thrown thousands of miners out of work.

A few months ago, similar drops in prices of many agricultural products had our farmers badly worried. This is not merely the concern of our miners and farmers. It vitally affects our entire economy because agriculture and mining—the production of raw materials—form the arch which supports our domestic economy. Agriculture's income is always one-seventh of our national income, and every dollar of. loss to agriculture causes a loss of $7 to our national income. In normal times, mining's income is one-fourteenth of our national income, so every dollar lost to mining brings a loss of $14 to our national income.

No segment of our society can escape the effect of this inexorable economic law—it affects the retailer, the wholesaler, the manufacturer, and the wage-earner alike. Labor may think it can escape this law by keeping wages high, but the percentage of reduction in our national income will be reflected in unemployment.

In acknowledging these letters and telegrams, I have endeavored to point out the underlying causes of economic maladjustments and suggest a remedy.

Pseudo economists and enemies of our system of Government will tell you that American capitalism and free competitive enterprise are responsible for "booms and busts" but it should be evident to everyone after reading the appended letters that unsound monetary and fiscal policies of Government are entirely to blame.

The instability of world currencies is responsible for the economic chaos that exists throughout the world today. In many countries all limits on the amount of currency issued have been removed; and while the United States has not yet gone to that extreme, we are rapidly approaching it. The redeemability, which acted as a final check, is gone; and without that, the other limitations can be easily overridden.

Currency that is not redeemable is fiat money; and the only way that fiat money or managed currencies can work is through collectivism, or completely government-controlled economy. This means complete coercion of individuals, controlled production, rationing and price fixing.

Socialism, communism, fascism, and all other forms of absolutism come into being and are sustained by a debauched currency. They cannot compete or survive in a free world and a free economy that operates under a sound monetary system; and however much loyal Americans may deplore the drift toward socialism, all efforts to reverse that trend will be futile until we replace our so-called "managed currency" with sound redeemable currency. The letters follow:

ARIZONA METALS CO.,
Kingman, Ariz., July 7, 1949.

Hon. COMPTON I. WHITE,
House Office Building,
Washington, D. C.

DEAR MR. WHITE: I am fully in accord with the contents of your letter dated the 13th of June. And I appreciate very much your support of the Murray-Engle bill, H. R. 976, and hope it will come before the House for a vote without more delay.

The copy of your letter to Bitco, Inc., which you sent me with your letter, is the best analysis of the money system of our country that I have read at any time. You have stated the situation more clearly and understandingly than I have yet elsewhere seen.

I would like very much to have about three copies of that letter—preferably on paper showing your letterhead if that is convenient—to send to some interested friends. Address the same letter to the same addressee—or to me as you prefer.

The base metal mining industry will surely be hit hard unless something is enacted to save it. A combination of the Murray-Engle bill and a tariff adjustment would restore the industry and greatly strengthen our national security.

Sincerely,
ARIZONA METALS CO.,
RALPH R. LANGLEY, *President.*

HOUSE OF REPRESENTATIVES,
Washington, D. C., June 6, 1949.

BITCO, INC.,
Wallace, Idaho.

GENTLEMEN: Reference is made to your recent telegram regarding a protective tariff for lead and zinc and urging my support of the Murray-Engle bill (H. R. 976; S. 240).

I am in favor of restoring the tariff on lead, copper, and zinc; and the Public Lands Committee, of which I am a member, has favorably reported the Engle bill. However, there is some doubt as to whether this bill will pass the Congress and be approved by the President.

While restoration of the tariff and enactment of the Murray-Engle bill will be helpful, I do not believe they will prove to be a solution of the mining industry's problems. Most of our troubles stem from the fact that we are operating under a so-called managed economy and managed currency, which is now subsidizing imports 60 percent and discounting exports 37½ percent; and, to make matters worse, we are permitting the ECA to ignore the clear intent of the stockpiling bill by trading agricultural products for foreign minerals, thereby using the taxpayers' money to wreck our own mining industry.

The first requisite of a sound economy is a sound monetary system. An unsound monetary system, such as is now current throughout the world, is more fruitful of human misery than war, pestilence, and famine, and has brought more injustice than all the bad laws ever enacted.

I will endeavor to show by simple arithmetic just what has happened to our money. From 1837 to 1934, 23.22 grains of gold constituted $1, and that was the amount of gold you could demand and receive, in suitable denominations, for every dollar of currency presented at any bank. Prior to 1934 our laws required that we back our currency with a monetary reserve of 40 percent, which for more than a century and a half had been universally recognized as the minimum reserve required to maintain currencies at face value and insure redemption on demand. Thus, it became axiomatic that currency was worth two and one-half times the reserve back of it, and whenever the monetary reserves of a country dropped below 40 percent the value of its currency fell proportionately.

Since there are 480 grains in an ounce, and 23.22 grains of gold constituted a dollar for the 97 years preceding 1934, simple division shows that this fixed the price of gold at $20.67 per ounce.

In 1934, the amount of gold constituting $1 was reduced to 13.71 grains—a reduction of 41 percent; and, again, simple division shows that this fixed the price of gold at $35 per ounce.

In 1945, Public Law 84 was enacted, reducing the monetary reserves from 40 to 25 percent. This caused a depreciation of the already depreciated dollar of 37½ percent, and caused prices to advance 60 percent. But because this occurred at the time price controls were eliminated, most people blame the advance in prices to the elimination of price controls rather than to the enactment of Public Law 84. As a matter of fact, if 1945 price controls had been kept in effect after the enactment of Public Law 84, every business in the United States would have been forced into bankruptcy.

From 1934 until the enactment of Public Law 84 in 1945, the amount of gold constituting a dollar was 13.71 grains. By reducing this 37½ percent, we find that the dollar is equivalent to 8.57 grains; and again by simple division, we find that it requires 56 of these depreciated dollars to equal in value an ounce of gold. Therefore, the price of gold should have been advanced to $56 per ounce. This would not increase the value of gold nor further depreciate the dollar, but would merely adjust the price of gold to the already depreciated value of the dollar. Rather than wasting our time talking about devaluation of the English pound, we can bring all foreign currencies into correct parity with the dollar simply by advancing the price of our gold to $56 per ounce. This also would have the effect of increasing our monetary

reserves to 40 percent thereby preventing further depreciation of the dollar and lessening the danger of a major depression.

But instead of raising the price of our gold to $56 per ounce, we are permitting foreign nations to buy our gold at $35 per ounce. This overvalues foreign currencies 60 percent and has the effect of subsidizing imports 60 percent, and discounting exports 37½ percent. This also permits foreign investors to buy our choicest industrial stocks at 37½ percent discount and sell them at a 60 premium. Small wonder that the stock market is no longer a barometer of American business and that our choicest industrial stocks are listed at 60 percent or less of their real value.

When you recall that the 1929 depression was precipitated when European banks permitted their monetary reserves to fall to 21 percent, you can appreciate the inherent danger in Public Law 84 of 1945, which not only reduced our monetary reserves to 25 percent, but left the door wide open for further reduction. And, as a consequence, our dollar is worth even less than 37 percent in foreign exchange.

For example, an American $20 gold piece will buy three times as many French francs today as can be bought with $20 of American currency. That is why you hear about an acute shortage of dollars in Europe because anyone fortunate enough to convert foreign currencies into American dollars can make from 60 to 75 percent on the transaction.

It is very evident that the objective of those responsible for this situation is to drain away our wealth so that we can no longer consume the major portion of our own production. Then many of our industries will be forced to seek foreign markets. So long as the American manufacturer has a good home market, he is not interested in foreign trade. He believes in paying good wages and good prices for raw materials because the factory worker, the miner, and the farmer are his best customers.

But once the American manufacturer is forced to seek foreign markets, wages and the prices of raw materials are merely items of cost to be kept as low as possible; and he is no longer interested in a protective tariff. Then foreign goods from slave-labor countries can flow into free-trade America to pay interest on foreign bonds; and American industry becomes a more profitable investment for the international bankers.

The only foundation on which a sound economy can be built is a sound monetary system, for unless money is sound, stable, constant, and dependable, nothing can be sound or dependable. Money is sound only when it is redeemable in something of a universally recognized and accepted value; and since there is not enough gold in the world to insure the redemption of currency, silver must be joined with gold at fixed and proper ratio to supply a monetary reserve adequate to insure the redemption of currency at face value on demand.

This will give money a value of its own, entirely unaffected by the credit or lack of credit of the countries in which it circulates; and will thus eliminate most of the trade barriers between nations. The right of redemption will not only restore confidence but will place in the hands of the people an effective brake against Government extravagance and unsound monetary and fiscal policies.

There never was a more opportune time to make a concerted drive for a return to sound money and bimetalism; and the American mining industry should spearhead such a drive. To procrastinate may be fatal; for until we adopt a sound monetary system, all of the present frenzied efforts to achieve world peace, economic stability, and national security are just so much sound and fury signifying nothing.

Sincerely yours,

COMPTON I. WHITE.

Joint Resolution To Establish a National Children's Day

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. DOYLE. Mr. Speaker and colleagues, on June 20, 1949, I had the pleasure of filing in the records of this distinguished legislative body House Joint Resolution 277 which was referred to the Committee on the Judiciary. The resolution is as follows:

Joint resolution to establish a National Children's Day

Whereas the national interest requires that the children of the Nation receive the most careful and sympathetic training and guidance in order that they may develop as good citizens and community leaders; and

Whereas the national interest requires that attention be called to the social, recreational, political, educational, cultural, and spiritual needs of the children of all communities of our Nation; and

Whereas the national interest requires that the great value of children to the home and to the Nation be recognized and emphasized; and

Whereas the national interest requires that children develop individual responsibility toward their homes, churches, schools, and all community organizations during their formative years: Therefore be it

Resolved, etc., That the President of the United States is authorized and requested to designate the first Sunday in May of each year as National Children's Day and invite the people of the United States to enlist the participation of all community, civic, religious, social, and business organizations in such observance as will promote the intent and purpose of this resolution.

There was filed in the United States Senate the same text of House Joint Resolution 277 known as Senate Joint Resolution 110, by Senator KNOWLAND, joined in by Senators YOUNG, LANGER, and HUMPHREY.

Two days subsequent to June 20, 1949, at the International Kiwanis convention at Atlantic City, N. J., there was unanimously passed resolutions endorsing these two resolutions and in like manner approving the following outline of the purposes of a Children's Day in America:

A CHILDREN'S DAY IN AMERICA

I. POLICY

1. To build for world peace.
2. To promote democratic idealism and the American way of life.
3. To prepare for better community citizenship.

II. PURPOSE

1. To center attention on the social, recreational, educational, cultural, and spiritual needs of children in all communities.
2. To exhibit and demonstrate all available community facilities that can be used for an all-year program to meet the children's needs.
3. To develop individual responsibility toward the home, church, school, and all community organizations.

III. PROJECT

1. To nationalize a Children's Day through an act of Congress (not a legal holiday).
2. To designate 1 day in the year to be called Children's Day.

(a) Preferably the day before National Family Week, which is climaxed by Mother's Day.

3. To initiate action through each community organization in support of Children's Day.

IV. PLAN

1. To request all community organizations from the local level to the international level to support the project through their organizations.
2. To ask that these organizations present this idea to the Congress.
3. To enlist the support of all community, civic, religious, social, and business organizations in similar action that will assist in nationalizing Children's Day.

V. PROGRAM

1. Morning: "Open House," or "Community on Exhibition."

(a) All organizations, institutions, and agencies to hold an open house for parents to visit and become aware of program and become acquainted with personnel.

2. Afternoon: "Playtime"—fun and fellowship for all.

(a) Games, sports, contests, etc.

3. Evening: "Party Time" or "Team Time" (optional).

(a) Either in the home or community.

VI. PROCEDURE

1. Appoint a special committee for Children's Day (or a community civic committee) from coordinating or community council, or an already established community committee.
2. All groups to be represented on said committee.
3. Appoint a continuing committee to evaluate the project, make a report to each group, and maintain a file throughout the year in all other group projects of special interest to continue interest, such as, Boy's Week, Girl Scout Week, 4–H Clubs, etc.

VII. PERSONNEL

1. All leaders, workers, influential people in civic, religious, and business work.
2. All parents.
3. All children.

As it always takes some person or group of persons with objective outlook, high resolve, and vigorous determination and purpose to carry through on such matters, it is a pleasure for me to relate that the person who has chiefly taken initiative in this matter is Mr. James Roberts, of Lynwood, Los Angeles County, Calif. For many years, this citizen has worked to the end that the objectives of House Joint Resolution 277 shall receive due emphasis by the people of our great Nation. Throughout Los Angeles County, Calif., numerous chambers of commerce, Kiwanis Clubs, Lions Clubs, Rotary Clubs, and other civic organizations had endorsed the purpose of the National Children's Day prior to my filing of House Joint Resolution 277 or Senator KNOWLAND filing Senate Joint Resolution 110 and others, namely, YOUNG, LANGER, and HUMPHREY. As the resolutions themselves, supplemented by the outlined suggestions hereinabove set forth clearly

indicate, the worthwhileness and importance of the purposes of these resolutions, I take pleasure in commending them to your attention.

I will say that I had the pleasure of accompanying James Roberts to familiarize the President of the United States with these resolutions and the President expressed great interest in the proposal and asked that his secretary be furnished with copies of the resolution and any other material.

As soon as practical, we hope to further call this important matter to the attention of the respective committees to which it has been referred and your understanding and vigorous support of these resolutions is respectively requested.

Catholic Prelate Throws Back Charge Israeli Destructive to Church Holdings

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include the following article and letter which appeared in the California Jewish Voice on Friday, July 8, 1949:

CATHOLIC PRELATE THROWS BACK CHARGE ISRAELI DESTRUCTIVE TO CHURCH HOLDINGS

NEW YORK.—It was learned today from a number of members of an American Christian Palestine Committee mission to Israel, which had recently returned from a study tour there, that the charges voiced by the Vatican radio last month—accusing Israeli troops of destroying church property and mistreating Catholic nuns at the Monastery of Ain Karem—had been emphatically denied by Father Terence, patriarchal vicar of southern Palestine.

In a letter written to Rabbi J. Herzog of the Israeli Ministry of Religious Affairs, Father Terence stated: "I have investigated the matter, and the Franciscan Sisters in Ain Karem tell me that nothing has occurred which, to their knowledge, would substantiate the exaggerated and inaccurate impression said to have been made public by the Vatican radio as reported in the Palestine Post of May 18, 1949."

(The Vatican radio had charged on May 17 that a group of Jews had invaded the chapel and residential quarters of the Franciscan Sisters at Ain Karem, near Jerusalem, and smashed a number of holy statues. The radio stated that the Sisters had previously been requested by the Israeli military authorities to leave the convent, which was to be requisitioned for troops.)

FATHER TERENCE'S LETTER

(Members of the study tour had brought back with them the text of the letter of denial written by Father Terence to Rabbi Herzog. The full text of Father Terence's letter follows:)

Rabbi J. HERZOG,
Director, Ministry of Religious Affairs, Department for Christian Communities, Tel Aviv, Israel.

DEAR RABBI: In some manner information has been communicated to the world concerning an incident which is said to have occurred or was to occur in Ain Karem.

One incident, the misguided effort of a social worker, has been made to appear as of great importance and the suspicious have drawn conclusions from it which are not warranted.

I have investigated the matter and the Franciscan Sisters in Ain Karem tell me that nothing has occurred which, to their knowledge, would substantiate the exaggerated and inaccurate impression said to have been made public by the Vatican radio as reported in the Palestine Post of May 18, 1949.

It is to be regretted that such stories received wide public attention in these days of intensive propaganda and thus build false impressions and create serious misunderstandings.

I shall call this matter to the attention of th Apostolic Delegation in Jerusalem and ask that a public statement be made.

With kind personal regards, I am,

Yours truly,

Father TERENCE, O. F. M.,
Patriarchal Vicar.

Britain's Financial Ills

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Exeter News-Letter of July 14, 1949, entitled "Britain's Financial Ills." The News-Letter is published in Exeter, N. H.

BRITAIN'S FINANCIAL ILLS

Britain's current dollar crisis is indicative of the competitive plane upon which the postwar economy is emerging. Britain is pricing herself out of the world markets and this under a regime of socialism wherein 1 out of 4 of 23,000,000 working people looks to the Government for his pay check. The level of taxation is 40 percent of the national income compared to 24 percent in this country.

Prices for British goods are higher all along the line compared to those in the United States. Figures on the downward scale of British sales are quoted to the effect that British cars shipped to the United States have dropped in monthly numbers from 2,500 to less than 300.

A bright spot in the British economy, however, is a recent $5,000,000,000, 5-year agreement with Argentina wherein among other items England will receive in the first year 300,000 tons of meat from the South American country and in return sell Argentina 5,000,000 tons of oil—this in part at the expense of American trade in South America.

The answer to Britain's plight is said to lie in increased exports to the United States and Canada, but appears improbable under present British costs of production. Formerly when coal was produced by private interests British industry could buy coal at $7 a ton compared to the present price of $9.25.

Britain's predicament can be blamed as much on the socialistic principles under which she is now operating as upon any other factor.

Truth—Self-Evident

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1949

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by C. B. Lister from the American Rifleman of July 1949:

TRUTH—SELF-EVIDENT

Ask the average American what we celebrate on the Fourth of July and he will reply, "We celebrate our independence from England." Ask how we gained that independence and the reply will be to the general effect that "Washington had a lot of frontiermen who knew how to fight in the woods and the British didn't so we licked 'em." All of which is a sad commentary on the teaching of the essentials of history to American youngsters.

In fact, our national independence from England did not come until years after the Declaration of Independence was given the world on July 4, 1776. What we really celebrate is that ringing statement of a fighting ideal—"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed. * * * And for the support of this Declaration, with a firm reliance on the protection of divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

It was neither the amateur armies of Washington nor the professionals of the French which defeated the regulars and mercenaries of George III. The Americans won because the ideal which they publicized and dramatized with blood and sacrifice captured the fancy of men everywhere. In the Declaration of Independence the British people read the expression of their own hopes and aspirations, begun with Magna Carta 500 years before, for the establishment of a government "deriving its just powers from the consent of the governed." King George III might have won a war abroad where the issue was to be decided by the best-trained troops. He could not win a war both at home and abroad where the issue was to be decided by an ideal—the ideal of the dignity and independence of the individual.

The real issue of the American Revolutionary War was not the political independence of the Colonies from the mother country. The real issue was the political independence of the individual. The fight was not between the British people and the American people—it was between the idea that man exists for the benefit of the State and the idea that the State exists for the benefit of the individual. It is the same battle that goes on today all over the world between the Communist and Fascist on one side and free men on the other side.

So let's get our thinking straight on this Independence Day. The message of the Liberty Bell ringing at Philadelphia on July 4, 1776, was listened to with rapt attention by men all over the world because it proclaimed the freedom of man, not because it announced the freedom of a few colonies from the mother country. Always, heretofore, America has had to fight only physical aggression. Now, for the first time, the American ideal, the edge we have always held

over our enemies, is under direct attack. The people of the world are being told that the whole clarion call of the Declaration of Independence was wrong, was rotten at heart, should be now buried and forgotten along with the men who died to establish and maintain it. Americans have always seemingly preferred eventual violence to eternal vigilance in guarding their liberties. But, as we celebrate Independence Day, 1949, we are engaged in a fight which cannot be won by armed force. Just as George III lost America because he depended on force of arms instead of force of ideals we can lose today's cold war by depending on the atom bomb and Air Force instead of teaching, preaching, and living the American ideal. Nor can the job be done by Harry Truman, Dean Acheson, Tom Connally or Arthur Vandenberg. It has got to be done, brother, by John Q. Public, which is you and not two other guys.

Fish Restoration and Management Projects

EXTENSION OF REMARKS
OF
HON. GEORGE H. WILSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. WILSON of Oklahoma. Mr. Speaker, there appears on the Consent Calendar today S. 1076 which is entitled "An act to amend the Migratory Bird Hunting Stamp Act of March 16, 1934." Immediately following this measure on the calendar is the closely related measure, H. R. 1746, entitled "A bill to provide that the United States shall aid the States in fish restoration and management projects, and for other purposes." I rise in wholehearted support of both of these proposed measures and state to the House of Representatives that I am of the opinion that these measures are both sound and that they have the support of sportsmen generally.

The Northwest Oklahoma Sportsmens Association which has member clubs throughout the Eighth District of Oklahoma which I represent has gone on record as supporting both of the measures which I have referred to. This organization which is affiliated with the Associated Sportsmen Conservation Clubs of Oklahoma and has a very large membership speaks for the majority of sportsmen in the northwest part of Oklahoma. The fact that S. 1076 and H. R. 1746 have the support of true sportsmen is in itself a splendid recommendation. I may add that every sportsman accepting membership in the Northwest Oklahoma Sportsmens Association solemnly pledges that—

(1) I will observe all State and Federal fish and game laws strictly to the letter; (2) I will specifically abide by the bag limit set by the State and/or Federal Authority; (3) I will not shoot any game bird while on the ground, unless such bird is wounded; (4) I will make an effort to kill at least 25 predators per year such as horned owls, blue darter hawks, crows, and stray cats; (5) I will never leave behind me in the woods or fields, any fire hazards in the form of cigarette stubs, cigar butts, smoldering camp-fires, etc.; (6) I will respect the farmers' rights, and carefully refrain from damaging fences, trees, livestock, or any other property of the owner or tenant. That I will also close all gates that have been opened by me; (7) I will make a sincere effort to make a sportsman out of the "game hog" by personal example and by verbal persuasion; (8) I will, in short, be a true gentleman-sportsman.

With the support of true sportsmen everywhere for this proposed legislation which would increase the fees for the Federal migratory bird-hunting stamp from $1 to $2 the House of Representatives should have no hesitancy in approving this measure. It will authorize the acquisition and development of wildlife hunting areas where hunting may be permitted, in addition to the development of inviolate sanctuaries. It will mean greater duck production and more shooting for duck hunters. That this measure has the support of State game officials as well I may quote from a communication previously received from Mr. Kelly E. DeBusk, Director of the Oklahoma Game and Fish Department and an able administrator, wherein he states:

The fees for the duck stamp would be increased from $1 to $2. This change seems necessary for the improvement of waterfowl conditions and it certainly has the support of those who regularly purchase migratory duck-hunting stamps. For many years such an increase has been advocated by the International Association of Game and Fish Directors. Our Department recommends that you give your support to this bill.

With reference to H. R. 1746 it is proposed that a program of Federal aid to the States for the restoration and management of the fish resources of the Nation be inaugurated. Over 11 years ago Congress passed the Pittman-Robertson Act with respect to other wildlife. Experience with this act has been so successful that extension of the principles of that act to the field of fish restoration seems indicated. The program would be paid for by the fishermen who enjoy the benefits of the program through a tax on fishing rods, reels, artificial lures, and baits, and flies. Equitable distribution of the funds among the States is provided and diversion of funds to other purposes is prohibited. I believe this program to be most worth while and in the light of experience with the Pittman-Robertson Act. I believe that the House of Representatives should favorably consider this constructive measure.

Manhattan Beach Veterans' Hospital

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. MULTER. Mr. Speaker, I am making a part of the RECORD the following editorial which appeared in the Brooklyn Eagle of July 17, with reference to the Manhattan Beach Veterans' Hospital:

PLAN TO CLOSE VETS HOSPITAL SHOULD BE GIVEN UP

The plan of the Veterans' Administration to close the Manhattan Beach Veterans' Hospital in the fall and transfer the 400 patients to other hospitals—before the new 1,000-bed Fort Hamilton Veterans' Hospital is opened—doesn't make sense.

That the veterans are opposed to the plan is not surprising since no reason was advanced for the necessity or urgency of the move. That they want something done about it is understandable.

Many of the patients live in Brooklyn, are married and have families. The transfer will work a hardship on them. This is no idle talk. The veterans say so themselves, in a letter enlisting the Brooklyn Eagle's support in their behalf:

"Our families will be affected from the anxiety point of view, and also from the financial viewpoint. Our families will be required to spend unnecessary funds and time to visit us."

Of themselves, the veterans say:

"Our treatment, which is necessary for complete rehabilitation, is to be interrupted and possibly discontinued for most of us. Many of us will be discharged, even though our treatment is incomplete."

The concern is evident. Unless there is some really compelling reason that has not been disclosed for the Veterans' Administration to shutter the Manhattan Beach Hospital in the fall, the immediate transfer plan should be junked.

The Eagle strongly urges that the institution be kept open until the new Fort Hamilton Hospital opens its doors in February. A delay of a few months in the administration's plans cannot possibly be serious enough to put the veterans involved to such great inconvenience. They deserve better treatment from their Government for which they sacrificed so much.

The following is a copy of a letter which I this day forwarded to the Veterans' Administration in the hope that it will postpone transferring veteran patients out of the Manhattan Beach Hospital until such time as they can be transferred to the new Fort Hamilton Hospital:

DEAR GENERAL GRAY: I understand the situation with reference to the Manhattan Beach Veterans' Hospital is that the Public Health Service is entitled to have the hospital back in accordance with the terms of the original transfer to the Veterans' Administration. In view of the fact that the new hospital at Fort Hamilton should be ready shortly I strongly urge that you make every possible effort to retain the Manhattan Beach facilities until the patients there can be transferred to the Fort Hamilton Hospital.

I am sure it is not necessary for me to point out the advantages to veteran patients and to their families in accomplishing that end.

Sincerely yours,

ABRAHAM J. MULTER.

The following article written by Ed Reid, which appeared in the Brooklyn Eagle on July 15, 1949, tells the story much better than I can:

MANHATTAN BEACH HOSPITAL VETS SEE NO SENSE IN TRANSFER PLAN

(By Ed Reid)

When they were drafted and when they volunteered they did not ask any questions.

When they were sent to the South Pacific, to England, to France, or Italy, they did not ask any questions.

When their limbs were blasted and riddled by bombs and shrapnel on the no man's lands of World War II they still asked no questions. They had their country to defend against the enemy. You don't question things like that.

But today these veterans are asking plenty of questions out at the Manhattan Beach Veterans' Hospital.

DUE TO CLOSE IN FALL

There are over 400 heroes out there, recovering from the effects of wounds received in battle. They have heard that their installation is going to close down in the fall. They have also heard that the new 1,000-bed Fort Hamilton Veterans' Hospital will not open until next February. They do not know what is going to happen to them.

They are worried and afraid—not for themselves, but for their families.

So they got together and drafted a letter which they sent to the Brooklyn Eagle. It read as follows:

"We, the undersigned, all patients at the Manhattan Beach Veterans' Administration Hospital, have been given to understand that this hospital may be closed to make way for a nonveteran installation. The closing of this hospital before the opening of the Fort Hamilton Hospital in Brooklyn will affect us in the following manner:

Our treatment, which is necessary for complete rehabilitation, is to be interrupted and possibly discontinued for most of us.

WOULD AFFECT TREATMENT

"Our families will be affected from the anxiety point of view, and also from the financial viewpoint. Many of us are local residents, and our families will be required to spend unnecessary funds and time to visit us. They realize that our treatment is of the finest here at this hospital and fear that transfer to other installations already laboring under crowded conditions will affect our treatment.

"Many of us will be discharged, even though our treatment is incomplete.

"The morale of the personnel here at the hospital is low, knowing that their jobs are in jeopardy. This low morale factor definitely has an effect on our treatment. All the personnel here at the hospital are veterans with families.

"The fine record made by this hospital in rehabilitation and medical treatment is known Nation-wide. A team such as this one should not be broken up. Teams like this are not built up overnight.

"The cost of a temporary move for patients and personnel to other hospitals would be tremendous to the Government. It would be much more economical to maintain this installation from 4 to 6 months, until Fort Hamilton Hospital is opened.

"Most important, it means Brooklyn will be without a Veterans' Administration facility, prolonging the waiting period of veterans who need hospital treatment.

"We hope to enlist your aid to accomplish the following objectives:

"Have the Veterans' Administration hold the closing of this hospital until Fort Hamilton Hospital opens.

"In this respect, have the Public Health Service consent to wait for the complete activation of Fort Hamilton.

"We feel that this can be accomplished very easily if someone would only take an interest in the veterans who gave up their time and health."

The letter was signed by numerous patients at the hospital.

DAV LODGES PROTEST WITH WASHINGTON

Melvin Stallman, Kings County commander of the Disabled American Veterans today made public a protest to Washington officials against the proposed closing of the Manhattan Beach Veterans' Administration Hospital.

Mr. Stallman urged that the institution be kept open until all patients are absorbed in the new Fort Hamilton Hospital. He also asked assurances that Washington authorities would not furlough hospital employees, most of whom are disabled veterans, until they can be absorbed in other Government facilities.

"The transfer of hospital patients," Mr. Stallman declared, "from Manhattan Beach to other scattered hospitals will create undue hardship upon the families of the veterans."

Necessity of Tools for Industrial Production

EXTENSION OF REMARKS

OF

HON. WALTER F. GEORGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, July 18 (legislative day of Thursday, June 2), 1949

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the RECORD a statement written by James H. McGraw, Jr., president, McGraw-Hill Publishing Co., Inc. The statement is entitled "A Message to American Industry, Seventy-sixth of a Series—Give Us the Tools—Your Only Chance of Getting Ahead."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

A MESSAGE TO AMERICAN INDUSTRY—SEVENTY-SIXTH OF A SERIES—GIVE US THE TOOLS—YOUR ONLY CHANCE OF GETTING AHEAD

Where is the brave new world so glowingly promised us by the politicians during and after the war? We were told then that postwar America would live 50 percent better than it had before. Why has that promise faded out? Why are men today discouraged and frustrated?

We have not yet made good 1944's promises because the American worker turns out no more in an hour now than he did in 1941. We are getting more total production in our country, but only because we have more people working, not because each one of us is producing more. American industry's ability to turn out more and more goods with less of each worker's time and effort has been stymied for eight long years.

Progress has been blocked because in some cases workers have not been willing to work as hard as they did before the war. In other cases unions restrict the use of labor-saving machines and methods. In some places obsolete building codes and ordinances prevent advances. In still other cases progress has been blocked by collusive practices between unions and manufacturers or operators.

But the biggest block to progress is the fact that our industry in the United States has been unable to provide our workers with all the new tools and equipment that they need.

Increasing productivity—that is, each one of us turning out more in each hour of work—is the key to higher living standards. Productivity depends directly upon the kind of tools workers use. His tools, more than anything else, determine how much a worker can turn out, and what his pay check will buy depends in large part on what he turns out—not on how long or how hard he works.

Look what happened in our country in the 40 years from 1900 to 1940. Productivity of the United States more than doubled. It doubled because:

Business investment in capital equipment gave workers new tools—tools that had three and one-half times as much power.

So Americans' living standard rose almost 50 percent while the average workweek was dropping from 61 to 43 hours.

Industry did continue to raise its output per man-hour, even in the depressed 1930's. But it did it because, with unemployment widespread, companies used only their most efficient equipment. Actually, the great depression saw industry fall far behind in the job of providing workers with new tools.

Then came World War II. Few new tools for peacetime industry were produced. As a result of depression and war, the United States fell behind in needed investment in new industrial facilities by more than $100,000,000,000.

Since the war business has spent almost $60,000,000,000 for new plants and equipment.

But the greater part of that money went to expand production to take care of the needs of our bigger population and to replace plants and equipment that were worn out and ready to be junked at the end of the war.

Only a small fraction of the $60,000,000,000 went to modernize equipment—the equipment that increases efficiency and improves productivity of the individual worker.

Right now industry is desperately trying to do the job of increasing efficiency of machines so that each worker can turn out more.

McGraw-Hill's national survey of business' needs for new plants and equipment shows that manufacturers plan right now to spend in the 5 years ahead three-quarters of their capital funds to replace and modernize facilities. The biggest part of the more than $55,000,000,000 industry plans to spend on its plants and equipment will go directly to improve efficiency of the individual.

If industry can carry through its plans—and expand them as it would like to and as it must do—the United States can catch up on its depression-wartime lag in progress within a few short years.

If American industry is allowed to earn the money to buy the equipment, it can raise the American standard of living 50 percent in our generation—in the next 25 years. No other nation can promise its people that much—and deliver on the promise.

But the promise can only be fulfilled by American industry. Wherever you turn, industry has dramatic new ways of doing things. Using oxygen by the ton, steel makers are increasing production from blast furnaces by 20 percent. New high-speed machine tools are doing three times the work of 1940 tools. A new coal-mining machine will multiply a miner's daily output 10 times. Diesel locomotives do the work of three steam locomotives on many jobs.

New products—and larger production of standard products—are already making their impact on American life. Two million Americans will get new television sets this year. Automatic washing machines, electric dishwashers, and home freezers are easing the daily tasks of thousands of housewives. Millions of homes that did not have them before the war now have telephones, automatic heat and refrigerators. Frozen foods, nylon clothing—these and many other things coming along now—will shape the real new world for Americans.

But industry can provide them only if it can keep on investing at least $15,000,000,000 a year now—and more in future years—in new plants and equipment.

Today Washington is taking a course which, if pursued, will make that investment by industry impossible. Government spending now strains our resources to the limit, and more multi-billion-dollar spending proposals are being piled on. But Government spending cannot improve American living standards. It never has, and it never will. Increasing Government spending now will

only block progress, because the Government proposes to pay for its plans by taxing away the profits industry is using, and must continue to use, to improve, and expand its plants and equipment—our only hope for greater worker productivity and higher living standards.

Better living can only be paid for with more production. And we can only get more production by increasing productivity—by each one of us producing more for each hour of work.

The first thing is to get the production—in peace and in war—for better living—for security. Industry is planning to provide it—and is using $13,000,000,000 of its profits this year to improve and expand its facilities.

The only sensible, the only safe national policy is to make it possible for American industry to do its job—not to terrorize private industry with proposals of ruinous taxation and paralyzing controls and threats of nationalization. For American industry is not a thing apart from the American people any more than is Government. American industry is the lifeblood of the American people and whatever makes industry do its work better contributes more to the common welfare than a bureaucratic government can ever hope to do.

JAMES H. MCGRAW, Jr.,
President, McGraw-Hill Publishing Co., Inc.

Catholicism Versus Communism

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader:

CATHOLICISM VERSUS COMMUNISM

Joseph Stalin, in an international conference, once asked sarcastically:

"How many divisions has the Pope?"

The head of the Roman Catholic Church has none, to be sure, but he is not without armaments. No one knows this better than the master of the Kremlin, for he realizes, as he has indicated on many occasions, that his chief adversary on the issue of communism is the frail ascetic who presides over the Vatican and its far-flung spiritual kingdom.

Yesterday, the Pope formally accepted the challenge of the Soviet dictator when he caused to be promulgated a papal decree of major excommunication against Roman Catholics who embrace communism. In effect, this means that an individual cannot be a Catholic and a Communist at one and the same time. A choice must be made.

In the countries of Europe, which are predominately Roman Catholic, this calls for a show-down between the two movements, for communism must win adherents from the Roman Catholic faith in order to expand. Likewise, it will tear the masks off atheists who have been masquerading as Catholics in carrying out the edicts of their Communist masters. If a person espouses the cause of communism, he automatically puts himself outside the fold of the Roman Catholic Church henceforth and no longer is entitled to its sacraments or comforts.

This crusade concerns itself with members of the Roman Catholic faith who "make profession of the materialistic and anti-Christian doctrine of the Communists." The church is not concerned with governments since it has lived under all forms. Because the Soviet Union and its satellites are promoting the spread of communism, this decree, however, to all intents and purposes, is a direct challenge to Moscow which pulls the strings on its puppets.

The increasing pressure Communists have been bringing on the Roman Catholic Church through persecution of clergy and laity is evidence that it is a major obstacle in the path of the Soviet Union. The battle between the two forces now has been joined. History well may record July 13, 1949, as one of its milestones.

Governor of Puerto Rico

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. MULTER. Mr. Speaker, the following article concerning the Governor of Puerto Rico appeared in the July 1949 issue of the Democratic Digest:

MAY WE PRESENT HIS EXCELLENCY THE GOVERNOR OF PUERTO RICO

It was a proud day for Puerto Rico, and for the United States, when, on January 2, Luis Munoz Marin was inaugurated as governor. Puerto Ricans were proud because their first elected governor was taking the oath of office; the United States was proud because his election was another proof of this Nation's belief in self-determination of peoples.

The Democratic Party was particularly proud because it was largely through action under Democratic administrations that such a gain had come to Puerto Rico.

Gov. Munoz Marin was born at San Juan, P. R., on February 18, 1898, the year in which the Stars and Stripes first flew over the island. Following his high-school education at the Colegio Moczo, he studied at Georgetown University, Washington, D. C., from 1912 to 1916. From that year to 1918 he served as secretary to the Resident Commissioner of Puerto Rico in Washington.

From 1918 through 1948 he was in the journalism field, and has been editor and publisher of several important daily newspapers in Puerto Rico. He also served in the secretariat of the Pan American Conference at Habana, Cuba.

He was a member of the Puerto Rican Senate in 1932 and became founder and president of the Popular Democratic Party in 1938. He was president of the Puerto Rican Senate from 1941 to 1948, and was elected Governor on November 2, 1948. The Governor is married and has one son and three daughters.

With the election of Luis Munoz Marin, Puerto Rico becomes the first among the Territories and possessions of the United States to elect its governor. It is interesting to recall the steps by which this important milestone in Puerto Rico's history was reached.

Puerto Rico was occupied by American troops during the Spanish-American War in 1898 and was ceded to the United States by the Treaty of Paris which ended that war. In 1900 the organic act passed by the United States Congress established civil government in Puerto Rico. Under its provisions legislative functions of the island were discharged by two bodies, namely, the house of delegates (whose members were chosen by the people) and the executive council (corresponding more or less to a senate). The executive council was composed of the heads of departments plus five citizens; both department heads and the remaining members of the council were appointed by the President of the United States. Until 1914 all department heads were Americans, but in that year, under the leadership of Democratic President Woodrow Wilson, a much more liberal policy was adopted and many Puerto Ricans were chosen for such posts.

In 1917, still in a Democratic administration, the organic act was amended to create a senate elected by the people. Appointment of department heads was vested in the Governor, a Presidential appointee, except for the attorney general and the commissioner of education, who continued to be appointed by the President.

In President Truman's administration, three more vitally important steps have been taken. In 1946, President Truman appointed the first Puerto Rican to serve as Governor of the island—Jesús T. Piñero. In 1947 the organic act was amended to provide for the popular election of the Governor, and in 1948 it was amended to empower the Governor to appoint all the members of his cabinet, including the attorney general and the commissioner of education.

Radio Reception at Ishpeming, Mich.

EXTENSION OF REMARKS
OF
HON. JOHN B. BENNETT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. BENNETT of Michigan. Mr. Speaker, under leave to extend my remarks, I include a letter from Mr. Ward L. Quaal, a former resident of my district, which discusses in detail the subject of radio reception at Ishpeming, Mich.:

CLEAR CHANNEL BROADCASTING SERVICE,
Washington D. C., July 15, 1949.

Hon. JOHN B. BENNETT,
House Office Building,
Washington, D. C.

MY DEAR MR. BENNETT: Knowing of your great interest in the Michigan Upper Peninsula and its people, I make reference to a recent letter sent to Hon. Rosel H. Hyde, Acting Chairman of the Federal Communications Commission.

The letter takes issue with my statement that Ishpeming, Mich., and vicinity does not receive adequate radio coverage, and goes on to imply that there are no areas in the United States which do not receive adequate radio service.

The Federal Communications Commission initiated the so-called clear-channel hearing because of the admitted inadequacy of broadcast service. Not a single witness who testified during the course of the 3-year hearing stated or inferred that present AM service is adequate. On the contrary, the inadequacy of present service was emphasized by most witnesses. As Chairman Wayne Coy stated on January 25, 1949, in Boston, "This is a big country and a lot of people live in it. Some 20,000,000 of those people have never had adequate radio service."

Sizable "white areas" do exist. The sizeable areas and populations throughout the entire country not receiving adequate service at the present time are spelled out in detail in the record before the Commission in FCC dockets 6741 and 8333 and in the hearings held before the Senate Interstate and Foreign Commerce Committee last year on S. 2231.

Let us inspect the service afforded my home community of Ishpeming, Mich.,

which the letter infers is adequate. The area receives primary service (i. e., satisfactory ground-wave service within the meaning of the Commission's Standards of Good Engineering Practice) during the day and night from its local station, WJPD. WJPD is not affiliated with a national network but is a well-managed, public-service-minded local station. It is virtually impossible for any 250-watt station to cover such wide areas as is asserted are covered by WJPD. Under the most favorable circumstances some 250-watt stations are able to deliver a satisfactory primary signal daytime over a radius of more than 30 miles (WSOO, Sault Ste. Marie, Mich., renders a daytime primary service of 37 miles) and a nighttime primary service of not more than 5 to 10 miles. For the most part, however, a 250-watt station is able to deliver a satisfactory primary signal daytime over a radius of not more than 20, or, at the most optimistic, 30 miles. In view of the fact that there are three other 250-watt stations operating on the same frequency (1240 kilocycles) as WJPD within a 187-mile radius of Ishpeming (WOBT, Rhinelander, Wis., is only 105 miles from Ishpeming) and in view of the poor conductivity due to unusual terrain and mineral deposits, it is impossible that WJPD could furnish an excellent primary service over 40 miles daytime and a good service over 30 miles area nighttime. WJPD does not render any satisfactory secondary (i. e., skywave) service within the meaning of the Commission's standards, let alone a secondary service over a 90-mile area daytime and 50-mile area nighttime.

The letter states that WDMJ, Marquette, Mich., renders excellent primary service both day and night to the Ishpeming area. WDMJ, a well-run small station, carries local features as well as the basic Mutual network program structure and renders a daytime service to Ishpeming, which is adequate for rural areas but not for city or residential areas. However, at night, because of the poor conductivity, static and interference from other stations, WDMJ does not provide the Ishpeming area with any degree of primary service. FCC exhibit No. 266, Docket 6741, shows that WDMJ serves from 5 to 10 miles at night and that at 10 miles, WDMJ's nighttime signal would be free of interference on only 2[illegible] percent of the nights. Marquette is about 15 miles from Ishpeming.

The letter states that WJMS, WGN, WMAQ, and WBBM furnish good secondary service both day and night to Ishpeming. WJMS is located in Ironwood, Mich., about 13½ miles from Ishpeming and operates with 1-kilowatt power. This station, a Mutual affiliate, does not render any satisfactory secondary service, day or night, to Ishpeming. WGN, WMAQ, and WBBM, all clear-channel stations located in Chicago and affiliated with MBS, NBC, and CBS, respectively, do furnish some nighttime secondary service to Ishpeming. However, it is a rarity when any one of these three Chicago clear-channel stations offers even a weak signal in the daytime, and an acceptable signal at night during the summer months. In winter, these Chicago clear-channel stations render fair secondary nighttime service to Ishpeming during those nights when the effects of the aurora borealis are not too great. The same is true of WENR and WLS, Chicago clear-channel stations sharing 890 kilocycles and affiliated with ABC, which are not mentioned in the letter.

The letter states that WJR, WCCO, KDKA, WLW, WBZ, and WTAQ furnish good secondary service nighttime. WJR, a Detroit clear-channel station affiliated with CBS, and WCCO, Minneapolis, also a CBS station, do not render a consistent satisfactory secondary service to Ishpeming. The same is true to an even greater degree, with respect to clear-channel stations KDKA, Pittsburgh, and WLW, Cincinnati, both NBC affiliates. To my knowledge, WBZ, Boston, an NBC affiliate, is seldom, if ever, heard in Ishpeming. WTAQ, Green Bay, Wis., does not furnish any secondary nighttime service to Ishpeming.

The letter states that WMIQ, WIKB, and WHDF furnish fair secondary service during the daytime. WMIQ and WIKB are both located in Iron Mountain, Mich., approximately 53 miles from Ishpeming. (WIKB is presently off the air pending approval of its application to move to Iron River, Mich.) Both are 250-watt stations—one is affiliated with MBS, and the other is unaffiliated. Neither of these stations furnish any kind of secondary service to Ishpeming, nor does WHDF, an MBS affiliate, located in Houghton, Mich., approximately 62 miles from Ishpeming.

Summarizing, Ishpeming receives primary service, both daytime and nighttime only, from one station—its local unaffiliated station—WJPD. It also receives daytime primary service from WDMJ, Marquette, Mich., an MBS affiliate. These are the only truly satisfactory services consistently received in the community. In addition, certain clear-channel stations affiliated with the four principal networks furnish occasional secondary nighttime service to the area. By the use of higher power on these clear-channel stations, these inadequate signals could be improved. I must emphatically disagree with the assertion in the letter that the Ishpeming area receives service "from 14 other radio stations," in addition to the service received from its local station. The facts are that Ishpeming does not receive adequate radio service. In the absence of better signals, it is forced to be content with what it can get, but this is no reason against improvement.

It appears to me that the Ishpeming area and the other inadequately served areas throughout the Upper Peninsula of Michigan and the rest of the country are entitled to at least four consistently dependable services, both during the day and the night. Higher power on clear channels is the only practical method of accomplishing this. The reasons for this viewpoint are set forth in the record before the Commission and the Senate Interstate and Foreign Commerce Committee. The operation of additional regional stations, as suggested in the letter, will merely increase radio service to city listeners who already have more than their fair share of service at the expense of the meager service presently afforded the underserved rural and small-town areas and populations.

With insignificant exceptions, no injury of any kind—technical, economic, social, or otherwise—will be done to other stations or to the public through the use of higher power on clear channels. On the contrary, the public, all classes of stations, and the industry generally will be greatly benefited.

Very sincerely yours,

WARD L. QUAAL, *Director.*

Error in Committee

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. CANFIELD. Mr. Speaker, pursuant to leave granted by the House today, I include the following editorial which appeared in the New York Herald Tribune for Monday, July 18, 1949:

ERROR IN COMMITTEE

A recent action of the Senate Appropriations Committee in cutting off pay allowances of $65 a month for cadets attending the United States Merchant Marine Academy and the State maritime academies in New York, Maine, Massachusetts, and California appears ill-advised and discriminatory. Out of their allowances, cadets must pay for uniforms, textbooks, various fees, dry cleaning, laundry, and a host of other expenses. Deprived of the funds, it is conceivable that a great many would be forced to resign unless their families are in a position to meet such expenses.

All those now in attendance at the five schools entered with the understanding that the allowance would be continued until they were graduated. The Government should not now default on such an agreement. Cadets at the United States Military Academy and at the United States Naval Academy receive similar allowances and no move has been made to discontinue these—as no move should be—because of the need of educating new officers for our armed services.

The recent war proved the need of a strong merchant marine and a strong reservoir of men to man it. The Senate committee's ruling, if enacted into law, will have the effect of narrowing the field of selection of potential candidates to those whose finances will permit attendance. Some friends of the maritime schools predict that such procedure would mean their end. It certainly is not in keeping with democratic procedure. The full Senate should correct the committee's error at once.

Planning Homes for Solid Fuels

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Anthracite Institute Bulletin of July 13, 1949:

PLANNING HOMES FOR SOLID FUELS

Nicely timed with the increased interest in solid fuel for new housing the Small Homes Council of the University of Illinois has just published a circular, Homes Planned for Coal or Coke, designed to give architects, builders, and home planners the latest findings on ways of simplifying the use of solid fuel in homes. The information contained in the circular was developed from a 3-year research project, under the direction of Rudard A. Jones, research associate professor of architecture and sponsored by Anthracite Institute, Bituminous Coal Research Inc., and the American Coke and Coal Chemicals Institute.

The circular demonstrates practical and simplified methods of handling solid fuel and ash in a home through the presentation of plans for a one-story basementless house, a one-story house with partial basement, a split-level house, and a two-story house.

With each plan, special features of fuel handling and ash removal are diagramed and discussed. Although each home shows a particular type of solid-fuel burning equipment, other stokers and hand-fired units may be used if slight changes are made and any of the principles may be successfully applied to all house designs. Many of the principles are not new, but the circular has the advantage of including under one cover all the best of the tried and proven principles along with new ones that have recently been developed.

Among the new ideas is an ash-set-out areaway, which affords the householder a labor-saving method of removing ashes from the basement as shown on page S2.

The areaway built outside the foundation walls of the house, is a cement box-like structure with a watertight lid. Ash cans may be set into the areaway from the basement through a door placed 30 inches up from the basement floor and even with the floor of the areaway. The householder opens the access door and places ash cans into the areaway without leaving the basement. The ash collector, in turn, opens the lid of the areaway and removed the cans. There is no need for him to enter the basement and both the householder and the collector save steps and time.

Important to the anthracite industry is the fact that this circular will reach 10,000 in the building trades—architects, building contractors, operation builders, and so forth—as well as reaching thousands of householders planning new homes, at a psychological time when practical economics have caused more of these people to give thought to the advantages of using solid-fuel heating equipment in new housing—particularly in the low-cost homes. Included in the booklet may be a simple principle or principles which will give many home planners the extra impetus required to convince them of the advantage of installing modern solid-fuel heating equipment in their new homes.

IT CAN'T SMOKE

New York city's board of estimate recently showed its recognition of the fact that anthracite can't smoke. The board had received a proposal from Dr. Edward M. Bernecker, administrator of the New York University-Bellevue Medical Center, that the city give up the Bellevue hospital power plant and instead purchase steam for the hospital from the New York Steam Co. In his letter Dr. Bernecker cited as one of his reasons for the change the fact that the "air pollution from the chimney discharges" kept the beds in the wards of Bellevue Hospital "constantly covered with a fine soot."

The matter was investigated by Deputy Controller Lewis F. Lang who reported to the board of estimate that air pollution at Bellevue was caused mainly by "privately-owned plants burning soft coal which emits heavy black smoke and fly ash." Mr. Lang pointed out that the chimneys at Bellevue were free of smoke and fly ash because the hospital plant uses anthracite. Mr. Lang's report also showed that the use of anthracite would be more economical than the purchase of steam with anthracite estimated to cost $420,872 annually against $870,465 for purchased steam.

The New York Times commenting on the incident stated that New York City through its action on the Bellevue proposal is considered to have turned its back on any significant reversal of the policy of generating its own steam for large hospitals and other major projects.

The inherent advantage of anthracite that "it can't smoke under any condition of use" has again demonstrated its value.

Limitations on Congressional Investigation

EXTENSION OF REMARKS
OF

HON. HOMER FERGUSON

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, July 18 (legislative day of Thursday, June 2), 1949

Mr. FERGUSON. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an article from the Michigan Law Review of April 1949, on the limitations on congressional investigation. This article was written by George Meader, a member of the Michigan Bar and the District of Columbia Bar, who formerly served with distinction as chief counsel for the Senate War Investigating Committee.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIMITATIONS ON CONGRESSIONAL INVESTIGATION

(By George Meader)

I. USEFULNESS OF THE INVESTIGATORY FUNCTION

Increasingly, Federal laws embodying far-reaching national policies are being couched in broad and general terms. The effect of this type of legislation is to place wide discretionary powers in administrative officials and to throw upon the courts an immense burden of interpretation in applying general principles to specific factual situations. There have been sensational instances of hasty passage of corrective legislation made necessary by court decisions interpreting a poorly worded law in a way Congress did not intend, such as the portal-to-portal and overtime-on-overtime decisions. Meanwhile, the practicing lawyer is at a loss to advise his clients of the effect of such legislation upon their lives and businesses until the attitude of the administrative officials and the courts becomes known. Even then, there is no assurance that such attitudes will remain fixed.

The administrative tribunal exercising legislative, administrative and judicial functions in derogation of our doctrine of separation of governmental powers has evolved and flourished in the last few decades largely because Congress has been unable to do more than to state a broad policy in general terms and create a commission to carry it out.

This situation has developed because our national economy has grown rapidly in size, organization, and complexity while Congress has remained static. Until Congress equips itself with a sizable and competent staff, it will not be able to write its legislation in clear and specific terms and recall to itself the legislative power it has lost in the last few decades.

The foregoing should not be construed to mean that quasi-legislative powers should not be vested in administrative agencies. The question is one of degree. For example, the decision of the Federal Trade Commission relating to the basing point pricing system in the cement industry, recently upheld by the Supreme Court, involves a basic national economic policy of an order that should be determined by the elected representatives of the people, rather than by an appointive commission acting under a broad delegation of authority.

Congress must be strengthened if the balance of separate governmental powers is to be restored. That strengthening may best be brought about by the development and effective use of the congressional investigative function.

August 7, 1944, President (then Senator) Truman, in announcing on the floor of the United States his resignation as chairman of the Special Committee Investigating the National Defense Program, said:

"In my opinion, the power of investigation is one of the most important powers of the Congress. The manner in which that power is exercised will largely determine the position and prestige of the Congress in the future. An informed Congress is a wise Congress; an uninformed Congress surely will forfeit a large portion of the respect and confidence of the people.

"The days when Webster, Clay, and Calhoun personally could familiarize themselves with all the major matters with respect to which they were called upon to legislate are gone forever. No Senator or Representative, no matter how able or diligent, can himself hope to master all the facts necessary to legislate wisely.

"The accomplishments of the Truman committee—and I am referring now to the other members of the committee and its staff rather than to myself—present an example of the results that can be obtained by making a factual investigation with a good staff. Similar accomplishments can be made by other special committees, as well as the standing committees of the Congress, and I particularly urge upon the Senate that it be liberal in providing ample funds for the prosecution of proper investigations. The cost of a good investigation is negligible when compared with the results which can be obtained."

No reference to the investigative power of Congress can be found in the Constitution, yet its existence is well established. Before our Nation was born, the English Parliament and the Colonial legislatures exercised investigative powers. The power of Congress to "send for persons and papers" is said to be a necessary adjunct to legislative power, since it enables Congress to inform and enlighten itself before enacting laws.

The basis for implying the existence of the investigative power of Congress furnishes the guide to its proper exercise as well as the direction of its development into a more useful instrument of a democratic system of government. In our modern, complex national economy, with its intricate and multitudinous interrelationships, regulations and controls can no longer be adopted by simple, broad generalities but must be based upon thorough knowledge of the detailed facts, the conflicting special interests, and the general public interest. The effects of proposed legislative action may thus be intelligently calculated, wise policies decided upon, and enactments stated in clear and unambiguous terms.

II. SPECIAL INVESTIGATING COMMITTEES

Although the Legislative Reorganization Act of 1946 did not abolish special congressional investigating committees by its terms, the Eightieth Congress did not create new special committees and the Senate drastically reduced the powers of an outstanding special committee, the Special Senate Committee Investigating the National Defense Program (the former Truman committee). The Senate of the Eighty-first Congress has allowed another special committee to expire, the Special Committee To Study the Problems of Small Business. The theory of the Legislative Reorganization Act was that standing legislative committees should do the investigative work of the Congress. Senate committees were given the subpena power to that end. However, it is not alone the power of a committee but the ability and energy of its chairman and its members in exercising that power which determine the

extent and vigor of congressional investigating activity.

The history of congressional investigations shows that, for reasons unnecessary to discuss here, standing legislative committees have not demonstrated great interest in conducting penetrating investigations. The practical effect, therefore, of stifling the creation of special investigating committees is to weaken, not to strengthen and expand, the investigative function of the Congress.

III. PROPOSED LEGISLATION

A further limitation of the investigative function of Congress is contained in proposals now before Congress to establish procedural rules for congressional committees designed to prevent abuses to witnesses and others in committee hearings and reports.

On January 5, 1949, Senator LUCAS, majority leader of the Senate, introduced Senate Concurrent Resolution 2 to establish certain procedural rules for congressional committees. This resolution is identical with Senate Concurrent Resolution 44, introduced by Senator LUCAS on February 25, 1948.

Companion resolutions to Senate Concurrent Resolution 2 were introduced in the House of Representatives on January 3, 1949, by Representative MCCORMACK, majority leader of the House of Representatives, and on February 2, 1949, by Representative SABATH, chairman of the Rules Committee of the House of Representatives.

Similar resolutions and bills have been introduced by Representatives HOLIFIELD and BUCHANAN.

For present purposes, it is sufficient to discuss the rules contained in Senate Concurrent Resolution 2, which is set forth in full in the appendix to this article.

IV. PROCEDURAL RULES FOR COMMITTEES

The gist of Senate Concurrent Resolution 2 is to give certain rights to any individual considering himself defamed by evidence presented to congressional committees, to give certain rights to witnesses, and to impose certain limitations upon committees, their members and employees.

Any person who believes that evidence given in a public hearing of a committee defames him or otherwise adversely affects his reputation may (1) file a sworn statement for the record; (2) testify personally in his own behalf; (3) require the committee to produce up to four witnesses in his behalf; (4) examine such witnesses, either personally or by counsel; (5) require the committee to procure the appearance of adverse witnesses; and (6) cross-examine adverse witnesses, personally or by counsel, but for not more than 1 hour as to each such witness.

Persons granted these rights may file a petition with the committee, whereupon it is mandatory for the committee, within 10 days, to fix a time and place for a hearing to be held within 30 days after receipt of the petition.

Witnesses before committees, in either public or executive hearings, are given the right to be accompanied by counsel and to have a copy of the transcript of their testimony.

A committee is prohibited from (1) receiving evidence not relevant to the subject of the hearing, (2) publishing reports except after majority approval at a meeting called upon proper notice, and (3) publishing a statement or a report alleging misconduct or containing other adverse comment regarding any person without advance notice to such person.

Committee members and employees are prohibited from speaking or writing about the committee for compensation.

"Committee" is defined to include a standing or select committee of either House of Congress, joint committees, and all subcommittees.

Senator LUCAS, in discussing the introduction of Senate Concurrent Resolution 44, announced on the floor of the Senate his support of the proper exercise of the investigative function of Congress. He contended, however, that the Senate War Investigating Committee's investigation of Howard Hughes had brought that committee and the Senate into disrepute and cited a number of editorials in support of that contention. He argued that requiring committees and their members and employees to be fair would enhance public respect for congressional investigations, thus strengthening them.

It can be conceded that the strength and value of a congressional committee is derived from its public acceptance and prestige and that unfairness of congressional investigators detracts from the reputation of a committee and the Congress. However, it is doubtful that the provisions of Senate Concurrent Resolution 2 will succeed in preventing abusive action by legislators. On the other hand, the proposed rules will seriously impair both the investigative and legislative work of Congress.

V. COMMENT

Senate Concurrent Resolution 2 seeks to give persons claiming to be defamed their day in court. A legislative committee is not a court and cannot effectively discharge its investigative and policy-making duties operating as a court, with pleadings, motions, arguments, and rules of evidence. Furthermore, Senate Concurrent Resolution 2 gives persons claiming to be defamed more than a day in court. No court in which allegedly defamatory testimony might be received would halt the trial of the case to permit the aggrieved person to intervene and offer evidence as to the damaging remark.

Courts retain control of their proceedings at all times. The discretion of the judge is the final authority in his court, subject only to appeal. A legislative committee, however, under Senate Concurrent Resolution 2 would have no discretion whatever as to whether a hearing should be held, who should be called as witnesses, the propriety of questions asked upon examination or cross-examination, or the contents of statements to be filed with the committee as a part of its record.

If the committee sought to exercise such discretion, it would be subject to the charge that it was not sincere in its purpose to give a fair and complete hearing. If the committee does retain such discretion, the rules have little meaning because a majority of a committee can now insist upon fairness if they can agree on what is fair.

The fees and travel expenses of witnesses, stenographic and printing expense, and other costs incident to holding such a hearing would be borne by the committee out of its appropriation. In a court, litigants must bear the costs of litigation. This acts as a deterrent to excessive litigiousness.

The effect of the rules proposed in Senate Concurrent Resolution 2 will be to take the control of its proceedings away from Congress and place it in the hands of individual citizens. Senate Concurrent Resolution 2 would provide a means for spotlight seekers to indulge their proclivities in congressional hearings almost without limit.

The testimony or evidence considered by a person to be defamatory might consist of an irrelevant, gratuitous remark made by a witness before a committee, which the committee could not anticipate or prevent. Nevertheless, under Senate Concurrent Resolution 2, the committee would be required to sit and hear a petitioner's statement and the statements of four witnesses called in his behalf and a cross-examination of the alleged defamer or defamers for hours, if not days. It is likely that the petitioner in replying to his defamer might give testimony leading the latter to believe he had been defamed; whereupon another petition would be filed, requiring a further hearing by the committee. This could continue indefinitely.

A trial of Communists in New York in which weeks were consumed examining the jury selection system in Federal courts should furnish convincing proof that there is a real likelihood that advantage would be taken of the procedural provisions of Senate Concurrent Resolution 2 as suggested above.

The time of legislators is now inadequate for intensive study of problems of legislation. The forum of a legislative committee ought not to become the battling ground of vituperation and attack and counterattack, converted from a policy-making agency into a court for trying slander and libel cases. This would not enhance the dignity and prestige of Congress and would render investigations and legislation worse—not better.

Corrupt, unintelligent or unfaithful action against the public interest might well go unexposed because of the delaying, filibuster-like procedure of Senate Concurrent Resolution 2. Any lawyer for the defense is well aware of the advantage of delay. Maj. Gen. Bennett E. Meyers, Commander John D. Corrigan, former Congressman Andrew J. May, Henry and Murray Garsson, former Congressman James M. Curley and the participants in the Teapot Dome scandal, as well as many others, would have welcomed the procedural opportunities which would have been extended to them by the provisions of Senate Concurrent Resolution 2, had it been in effect when their activities were under examination.

Senate Concurrent Resolution 2 is not confined to investigative committees ferreting out wrongdoing, but is equally applicable to all congressional committees and subcommittees. Suppose, for example, a petitioner, who is not required to be a citizen, claimed before the Senate Foreign Relations Committee that some testimony given at a committee hearing had detracted from his reputation because it implied inefficiency or bad faith on his part. Under Senate Concurrent Resolution 2, he could compel the Senate Foreign Relations Committee to sit and hear him, his witnesses and cross-examination of his detractors at length. An even more interesting case would be presented if the petitioner claimed that a member or employee of the committee had been the detractor and, under Senate Concurrent Resolution 2, claimed the right to cross-examine the Senator or a member of the committee staff.

Any rules, in addition to existing parliamentary rules, should be adopted, committee by committee. The Bender subcommittee of the Committee on Expenditures in the Executive Departments of the House of Representatives, the Ferguson Subcommittee of the Committee on Expenditures in the Executive Departments of the Senate, both in the Eightieth Congress, and the Un-American Activities Committee of the House of Representatives of the Eighty-first Congress, have adopted rules. Such rules, if found unworkable, can be amended by the individual committee. Rules enacted in a statute would have to be amended by statute, subject to Presidential veto. Rules adopted by concurrent resolution could be changed only by action of both Houses.

In any event, any rules, whether adopted by a committee or by the entire Congress, should clearly specify that they do not give rights which would permit a successful challenge to the validity of committee or congressional action or would constitute a defense to proceedings for punishment of a contempt of Congress. Unless this effect is specifically precluded, the whole subpena power of Congress is undermined. Thus, a useful means of obtaining facts as a basis for the enactment of wise legislation and for observing the administration of laws will be destroyed.

Section 5 of Senate Concurrent Resolution 2 adds nothing to present practices regarding attendance of counsel except that it gives a witness a right to have counsel present at a private hearing. Since section 5 allows an attorney to do no more than observe, unless the committee permits otherwise, the question of the value of this right naturally arises; the presence of one more person makes the control of the confidential nature of an executive hearing more difficult. As a general practice the Truman-Mead Committee permitted counsel to be present in executive as well as public hearings. Situations may well arise, however, where it would be preferable not to have counsel present at executive hearings. The decision on this matter should be left in the discretion of the committee.

Section 6 of Senate Concurrent Resolution 2 adds nothing to present law since a witness may now refuse to answer any question not pertinent to the inquiry.

Section 7 of Senate Concurrent Resolution 2 gives witnesses at private hearings a right to a copy of the testimony. Members and employees of a committee are subject to committee control for breaking secrecy, but a witness is not. If a committee loses control of the executive character of its actions the effect is to put an end to executive hearings, a useful method of informing Congress on matters which, for one reason or another, are not appropriate for public release. The temptation to leak confidential information to favored sections of the press is a strong one; human curiosity about something kept secret lends a quality of news interest to the material which its substance would not justify.

Measures should be taken by Congress to prevent leaks of confidential material, but furnishing a record of secret testimony to witnesses is not one of them.

Section 8 adds nothing to present rules since all committee action must now be by majority vote.

Section 9, requiring committees to give advance notice of adverse comment, is unwieldy. What constitutes adverse comment is subject to a wide difference of opinion. It is difficult enough under existing practices to prepare and obtain agreement of committee members on a report. The requirement of giving advance notice to an indeterminate class of persons and allowing them a reasonable time to oppose the committee's findings and conclusions would slow down and make extremely difficult the issuance of reports.

The Truman-Mead committee made it a practice to submit, on a confidential basis, a draft of a proposed report to Government officials and interested private individuals for comment as to the accuracy of the facts and the soundness of committee conclusions and recommendations. This is a salutary practice. It improves the quality of committee reports. However, the practice should be discretionary with the committee, not mandatory.

Section 10, prohibiting speaking and writing for compensation by committee members and employees, raises a question of basic policy applicable to all public officials. Payment for lectures or articles may be an avenue for improperly influencing the decision of a public official. Where this exists, it can be and should be punished under existing provisions of law. However, it is in the public interest that public affairs should be widely discussed. To prohibit payment to all public officials for lectures or articles might limit the amount of information available to the public concerning national affairs. In any event, the principle would seem equally applicable to all public officials. Such a proposal should be carefully studied and adopted as a general provision of law, if its desirable, rather than being confined to legislative committee work.

VI. CONCLUSION

It is agreed that "headline seeking," "smear tactics," and "witch hunting" are reprehensible activities on the part of legislators or any other public officials. It may be more difficult to find agreement upon what constitutes those activities in any give factual situation. There are existing sanctions controlling such abuses in present parliamentary rules, in adverse press and public reaction, and ultimately in the defeat of a legislator at the polls.

Recognizing that legislators naturally seek to keep their names before their constituents, it is the writer's opinion that the great majority of Congressmen and Senators do not engage in unfair conduct. It seems unwise to destroy the flexibility of operations in legislative committees in their formulation of national policies and to impose limitations upon the discretion and power of all legislators merely for the purpose of restraining abuses by a few Members of Congress. Senators and Congressmen are entitled to the trust and confidence implied in their election to what, in effect, is the board of directors of the largest and most powerful institution in the world. Their responsibility is great. They ought not to be limited by inflexible, time-consuming procedures in discharging that responsibility.

A very thoughtful and judicious discussion of procedural rules for congressional committees was written by Charles E. Wyzanski, Jr., United States district judge of Massachusetts, in the March 1948, record of the New York City Bar Association. Judge Wyzanski opposes the adoption of procedural rules for congressional committees until after further study, except that he suggests a witness should have the right (a) to have counsel present, (b) to file a written statement before the hearing is concluded, and (c) to have an accurate record kept of his own testimony.

The avenue for strengthening the investigative power of Congress, and thus strengthening Congress itself, does not lie along the path suggested by Senate Concurrent Resolution 2. Rather, progress toward improved legislation will result from the acquisition by Congress of a staff of able employees, primarily for its committees, to study and investigate the facts of any subject and to advise, counsel, and assist committees and individual legislators in enacting legislation. Congress needs help in obtaining facts, not restrictions making it more difficult. When legislation comes to be based more upon studies of fact and less upon generalities, emotions, and prejudices, our system of government by the people through elected Representatives will have proved itself workable in a modern, complex society.

Socialism—American Variety

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. GWINN. Mr. Speaker, what ails America?

Why do more and more of our citizens feel helpless and unable to take care of themselves in the midst of the greatest production of income we have ever known?

While acting as a good Samaritan, making gifts to socialist governments abroad, have we caught their socialism ourselves? Are we too washing our hands of personal responsibility to take care of ourselves and to do right voluntarily toward each other without compulsion? Or are we giving way to the management and control, the false promises, the corrupt politics of our own compulsory statism?

Let us avoid wishful thinking. Let us examine the recorded facts.

WHAT OUR GOVERNMENT TAKES FROM US

We know that our American Government has, in recent years, changed its character. It has become an overwhelming and omnipresent machine of controls and compulsions. It manages our money, credit, farming, rents and housing, foreign trade, social security, production, and education. It regulates, controls, and taxes all business to the point of extinction throughout all our lives. At death, inheritance taxes close the final chapter of exploitation. This Federal Government management and control of us costs us close to $50,000,000,000 a year out of our total income of about $200,000,000,000.

The Federal, State, and local governments combined take one-third of everything we produce. That means that, as a people, we work for ourselves only 2 out of every 3 days. With a 40-hour work-week, we have less than 27 hours, or about 3⅓ days per week to produce our food, clothing, and shelter, and to maintain our health and education. It cannot be done. So, as a consequence, the people cry out in increasing millions for the Government to do for them what they are unable to do for themselves in 3⅓ days' work per week. The only cure that Government proposes is that of extending Government management, increasing taxes, and thus reducing even further the number of days in which the people can work for themselves in the management of themselves, their property, and their happiness. Such management can only lead to scarcity and general poverty. Even so, in that state of abject dependence, the people worship the leader, the champion of their needs and wants, as in Russia.

WHEN IS A COUNTRY SOCIALIST?

Many enlightened scholars have expressed doubt as to whether any government can take more than 2 days in 10 from the people, or 20 percent of the nation's income, and still leave a people able to take care of themselves. Above that level, Socialist management becomes inevitable. We must remember that as recently as 1930, London and Paris managed only 21 percent of their national economy; Berlin managed 22 percent and brought on national socialism 3 years later. Moscow, after 13 years of socialisim, managed only 29 percent of the Russian economy. Can we be excused, if we fail to take to heart these facts and govern ourselves accordingly?

The present burden of our Government is already crushing the people now. Do you realize that we pay out more to Washington annually than we do to all of our 6,000,000 farmers for the food we eat? We pay in taxes 2½ times more to Washington to manage us than we pay in net income to all American corporations for all of their manufacturing, transporting, and other services to us.

A country is socialist whenever the central government manages the economy of the people instead of the people managing themselves voluntarily without government compulsion. With compulsion, freedom of action, of invention, of production, and of reward is gone. When work and rewards therefore are managed by the compulsion of the state that is socialism in contrast with freedom. It is political corruption that lives by more corruption with no healing power in it.

NUMBER OF AMERICANS MANAGED BY GOVERNMENT

Government already owns one-fourth of all the land in the continental United States. It has also become the biggest employer in the world. It now has more than 2,000,000 civilian employees. They receive a cold half billion dollars per month, and they with their wives, parents, relatives, and dependents are naturally interested in seeing the pay-roll receipts continued by keeping one and the same party in power. Since by conservative estimate each Government employee guides or controls at least four votes, our citizens fight for freedom against a monstrous central government having 8,000,000 voters with a direct monetary interest in keeping one party continually entrenched in power.

This is not the whole story. Many, many more million citizens have become dependent upon payments, benefits, subsidies, and hand-outs. Already one out of every six adult Americans receives checks regularly from Washington. A United Press dispatch sets the figure at 15,830,899. If each check went to a different family, it would mean that 42.7 percent or near half of the American families now balance their budget with money from Washington Each year our tax burdens increase. Each year others join the ever-increasing ranks of the 15,830,899 who are directly dependent on Washington's management of their lives in whole or part.

To make these payments the Government squeezes the very life blood out of the other half of the people who are still left to produce and pay the taxes. So we are now all managed, regulated, controlled, inspected, intimidated, threatened, subject to being jailed and generally bedeviled. Fear and anxiety drive many out of business entirely lest they run afoul of a thoroughly tyrannical and corrupt Government, itself infiltrated deeply by socialist and communist commissars who rule over us. Their rules and regulations, which they make themselves and administer arbitrarily, cover 47 volumes of thousands of pages that no single human being could read. They are so ridiculous and impossible of practical application and understanding that daily, except Sundays, Mondays, and holidays the agencies must issue a Federal Register of about 50 pages, 3-column, closely printed, containing amendments, corrections and additions, equally incomprehensible. Nearly every businessman is subject to the danger of fines or jail, humanly impossible to avoid.

These volumes cover such items as portal-to-portal pay. The longer one takes to walk to work in Washington the more pay he receives. Overtime on overtime!! No one understands that—not even the Supreme Court. Yet employers will all go broke when it is enforced. Then there are minimum wages and hours, fair-trade laws, fair-treatment laws and regulations and generally hell to pay all around. This is redistribution of wealth by the American complex.

THE FIRST MARXIST CONCEPT ADOPTED

The measures Marx outlined in the Manifesto include abolition of private property, a heavy progressive income tax, centralization of credit in the hands of the central government, extension of government ownership and production, and national control of the education of all children. Socialists the world over have acted in strict accordance with this 1848 dictum of Marx that "political power is merely the organized power of one class for oppressing another." Who can deny that we have followed and are now following these very precepts here in America?

The first and most important of these Marxist precepts came with our constitutional amendment of 1913, giving the Federal Government the right to tax individual incomes. Few persons then thought that it would become a transmission belt for the heavy progressive or graduated income tax prescribed by Marx. Congress debated then in terms of a 1- or 2-percent tax at most. A 10-percent tax was considered preposterous. Yet we have had taxes which exceeded 90 percent, and Washington today commonly takes more than three-quarters of the earnings of some of our most inventive and creative citizens. All of us are now liquidated to the extent of 33⅓ percent of all of our annual income in taxes which are added to the price of everything we buy from bread to houses. For example, gasoline enters into every item of living costs. Without excise taxes gasoline would sell, generally, for 14 cents a gallon; without income taxes, for much less than 14 cents. Taxes make living costs so high, especially to the low-income group, that they cannot manage for themselves. Think of it, free Americans clamor for the Socialist state, begging it for shelter, food, health, and education. We, too, have our cynical Goebbels who knows that if you tax and tax, spend and spend, you can vote and vote the people into socialism anywhere in the world. They can be fooled if you begin by feeding them the delusion that only the rich pay the taxes.

Plato described how exactly the same technique worked in ancient Greece. The "champion" of the welfare state is full of smiles and salutes, making promises in public and also in private, distributing land to the people and wanting to be good and kind to everyone. But said Plato he has another object:

which is that they (the people) may be impoverished by taxes, and thus compelled to devote themselves to their daily wants and therefore less likely to conspire against him. And the more detestable his actions are to the citizens, the more satellites and the more devotion in them he will require. * * * Thus liberty passes into the harshest and bitterest form of slavery.

All around our smiling, good-natured President are the tough guys who know their history. They work the techniques it shows will fool the people every time.

THE SECOND MARXIST CONCEPT

Washington took the second Marxist step in a big stride when it destroyed, or reduced by 41 percent all of our national monetary values in 1933. It went off the gold standard. By that act it robbed everyone of 41 percent of his or her savings up to that time. It started to enrich others by printing paper money and issuing it in exchange for nothing of value. All our people's savings were liquidated just as all socialist governments in Europe liquidated the property of their people. Thus 41 percent of the people's capacity to take care of themselves was destroyed by the Government forcibly taking away 41 percent of the value of their money and locking up all gold in the vaults at Fort Knox. Several millions of us became at once absolutely dependent on Washington.

THE THIRD MARXIST CONCEPT

This first became manifest of all among the old people when Washington adopted the third Marxist pattern some years later. It compelled the people to pay to the Government their future savings for old age and survivor's pensions. There are now already 2,736,800 people receiving old-age or survivors social-security benefits. They have actually become the wards of Washington and with 45,000,000 others who in this year of 1949 are being compelled to pay the Government most of their savings in taxes and thus must depend on Government for the management of all or a goodly part of their economic life.

Over a period of 12 or 14 years the unsuspecting citizens have paid their good dollars to Washington. The Government promised to reinvest for the security of all. It would be a Fair Deal. Instead of conserving and investing the people's savings, however, the Federal Government has spent and wasted nearly every dime of it on socialist experiments. It has dropped I O U's in the till—like any other embezzler—to take the place of the billions spent. The general taxpayers are further defrauded and liquidated by being compelled now to pay taxes to make good the Government's embezzlement. The original savings funds are gone, and, therefore, constitute no security to the old people.

The Government is actually paying them back by levying annually a second tax on the old people's present pensions and on the cost of their food and shelter and on the taxpayers generally to make good the present pension payments from a treasury that would be otherwise empty. As the people's capacity to pay increasing taxes weakens old-age social security is weakened.

Besides all this the old people, once promised security, are getting paid in the Government-inflated dollars worth only 50 percent of the good dollars paid in. The old and the sick are being exploited. They are desolate, hungry, and on the relief rolls, robbed and liquidated among the first even in America as was the case in every Socialist state abroad.

So 41 percent of the people's savings up to 1934 have been liquidated. The old people's savings have been wasted. The savings of everybody else since 1934 have

been cut in half by inflation and on top of this criminal mismanagement everybody is forced to pay out a third of his income in taxes.

MORAL CONFIDENCE GONE—MARXISM CONTINUED

In such a demoralized state of law and public morals, private lenders will not give loans and private citizens hesitate to borrow. So the Government walks into the vacuum created by it and starts doing business. By the end of 1947 Washington had made $10,109,000,000 in loans, one-fourth of all the loans our 15,000 private banks made. Washington furnished 70 percent of all the money that has gone into new housing since the war, because private lenders have come to have so little faith in the integrity of our Government that they refused to lend for private building. They could not invest with confidence in the future, not knowing what the Government would do on rent control or Government housing. This is what happens when, to use the exact words of Marx and Lenin, "centralization of credit in the hands of the state" takes place.

Private trade and investment in every Socialist nation are at a standstill for the same reason that free investment in housing and new business enterprises is stopped here. A moral collapse of the Government, causing the individual to lose faith in what his Government will do, breeds modern socialism everywhere. Since a Socialist government breeds and lives without any moral base, what is right and wrong is simply determined by an army of arbitrary commissars whose fanaticism is hardly subject to review. We are experiencing that situation now in agriculture, in export licenses, loans by Government, awarding of contracts to favorites, administration of rents to benefit tenants, allocation of space in Government houses to those who are faithful to the party, and so forth. Individual management and responsibility and, in fact, private enterprise in rental housing are dead and have been for 10 years.

It is false therefore to accuse private enterprise of failing to build and clear slums. The Government has been in complete charge for nearly 10 years. It has assumed full responsibility for conditions as they are. It is in complete control of all new housing. It owns a lot of slums itself either by direct ownership, by mortgage, by excess taxes, or by rent control that has caused abandonment of houses by owners. It is creating more slums. It owns a fourth of all the real estate in the 48 States and will take over a lot more of it soon by default of billions of mortgages it holds. But even so it can not make good its promises to build houses. The people will grow more desperate because private building for rent will not revive at all until confidence in Government and rights of property are restored. There is no 50–50, not even a 10–90 arrangement possible between socialism and freedom. One or the other must perish utterly. One is wrong and destroys confidence. The other is right and inspires confidence, invention, and production. One is compulsion, the other freedom.

SOCIALISM DEFINED

It is possible that most Americans have never stopped to define socialism. If we do not know what socialism is, how can we know when we have it? Socialism, simply stated, is Government ownership or Government management of the Nation's economy and the denial by the Government of the right and the capacity of individuals to manage themselves and their property. Socialists, fellow travelers, and Communists always move toward compulsion and violence and away from freedom. Socialism is directly opposed to American constitutional freedom and the inalienable right of the individual who produces property to dispose of it as he pleases. Socialism holds that its own nonproducing, uninventive, uncreative, compulsory, and corrupt bureaucracies are better suited to dispose of what the free mind and spirit of the individual alone can produce, than the individual himself. Socialism has absolutely no moral base on which to function. It operates by the rule of expediency. It lies and steals for its own ends. It is immoral and incomprehensible to a people disciplined in Christian tradition.

SOCIALISM AT WORK IN HOUSING BRINGS SCARCITY

The field of housing illustrates what is happening to morals and confidence under compulsion in a most dramatic fashion: Washington already is the landlord of some 537,000 American families. Allowing four persons to a family, we have 2,300,000 people who are beholden to our central Government for living space. The Housing Act of 1949 will add another 810,000 families in the next 6 years. The total then beholden to Government as a landlord will be 5,540,000 persons. That is more people than now live in any one of 42 States. As in Europe, the ruling party sees to it that the voting booths are placed conveniently in the basements of such Government socialized housing. Alas, we have witnessed how American voters living in socialized housing projects cast a 90-percent vote, or more, in favor of the controlling party that builds the houses.

We used to laugh when we heard about 80 or 90 percent voting in Fascist Italy for Mussolini, in Nazi Germany for Hitler, and in Communist Russia for Stalin. Now, it is becoming an American pattern for the big city vote to swing elections for the party that controls rents, builds houses, and, thereby, owns the votes of the favored tenants. We, too, allocate living space NKVD American plan in exchange for loyalty to the party and the votes that keep the political party in power.

For all this building, the Government induces big lenders to invest in the certificates of participation by exempting them from Federal income taxes. It compels the municipalities to exempt the housing projects from local taxes for schools, streets, police, and other services. It then rents the Government apartments at about one-half price and charges the bill to the general taxpayers. Since the individual investor has no such power over other people's money, he cannot compete in any field that the Government enters.

Thus, Government housing kills confidence, moral sense, and all possibility of equal opportunity, equality of taxation, and justice before the law. The individual quits cold. The story of house building in France is told by Bertrand de Jouvenel in No Vacancies. When the protection of property rights was abandoned, the Government simply expropriated and divided up what houses there were. New building has ceased for 33 years. Cannot we learn, either from our own experience or from that of Europe? Must we, as a nation, have our own experience by landing in the prison house of Marxism before we will learn?

RENTAL HOUSING DRIES UP

The general taxpayers are further liquidated. About 8,000,000 propery owners, having saved over the generations of free American enterprise $67,000,000,000 and invested it in 17,600,000 rental dwellings, are now forced by our Socialist-dominated Government to sell these dwellings at less than 60 percent of their values and quit business. Thus rental housing dries up just like the supply of shoes, shirts, dresses, and all sorts of foods dried up before OPA was repealed. Socialism never increases the supply of wanted goods. It always reduces the available supply.

In 1948, the "for-sale" dwellings were three and four times greater than in 1940. In August 1940, the New York Times advertised 6,322 houses, apartments, and apartment buildings for sale. In August 1948, it carried 23,036. The Chicago Tribune shot advertisements for sale of housing from 11,303 to 32,045; Los Angeles, from 18,930 to 78,925 for the same period. This fantastic increase in the number of houses, apartments, and apartment buildings offered for sale is found in every big city. We had, according to the Census Bureau, over 4,000,000 more dwelling units in 1948 than we had in 1940, but we had more than 2,000,000 less for rent than we had in 1940.

SOCIALIZED MEDICINE

Our Socialists propose to continue the march down the road to Marxist serfdom by bribing our doctors to socialize health and medicine from Washington just as the British Marxist government has done. The procedures are almost identical. Seven hundred and fifty-thousand doctors, nurses, and hospital personnel would enter our Government employment and cease the free practice of medicine. Washington would guide and control it all, drying up the voluntary source of skill, mercy, health, and hospitalization. Multiply 750,000 by 4 and you get another group who will vote according to the promises of appropriations for their particular benefit. The less fit will grab $8,000 a year in Government salary just as they grabbed 2,000 pounds a year in England.

There will be no more need to excel in skill and devotion to patients; there will be no more competitive effort for public favor. Payments by Government will be for quantity, not quality, of service. Yet, as a doctor in Nashville said recently, "Socialism is the syphilis of medicine. It is easy to take but rots the body to death." Government medicine is sterile. It never invents or discovers new cures. It can but appropriate and

try to take by force what the individual alone can give as a voluntary free servant of the people. He alone can have the heart of sacrifice and devotion and love of service. Without freedom in medicine, the art of healing itself disappears.

MINIMUM WAGES AND HOURS

The very devil himself devises humanitarian slogans, such as the minimum wage law, for example. In this manner, the Socialists hope to fool the people into thinking that goodness will come faster by compulsion of the Government than by the community spirit of free men. All Socialist compulsions are made to sound humanitarian. Its practical purpose, however, is always the same, viz, to rob or exploit one group to benefit another that has more votes. The Lesinski bill now before Congress proposes to make all employers engaged in interstate commerce pay the apprentice, the slow worker, the handicapped, the aged, the part-time worker, even the baby sitter, at least 75 cents an hour for 40 hours a week and $1.12½ for overtime.

This demagoguery disregards whether anybody can or will pay that or whether the worker can produce such value. The right to work itself is denied if the worker cannot induce somebody to pay the legal rate; otherwise, he must go on relief. He dare not take even 73 cents an hour. The bill in effect is a compulsory unemployment bill. It is planned economy. It is socialism in any country, including America.

FEDERAL CONTROL OF EDUCATION

In planning a Marxist America, our Government Socialists do not overlook the teachers and school personnel of America. There are a million of them. It is proposed to offer hundreds of millions of dollars for their allegiance to the party that makes the appropriation. If education is socialized by appropriations, influence, supervision, or control, then national elections shall go to the party promising to make the highest appropriations. With the control of the minds of our children centered in Washington, the last act in the tragedy of lost freedom will be over. God must be thrown out of education. Instead, the goodness of the pagan state will be taught in exchange for the favors it bestows. Private education in free schools ceases for sheer lack of funds.

SOCIALISM—AMERICAN VARIETY LIKE ALL OTHER SOCIALISM

The American people have deceived themselves far too long into thinking of our variety of socialism, just because it is ours, as being different from the Marxist slave state throughout the rest of the world. The fact is that our present Government trend is identical in principle to other central governments which manage their people and their people's property. But for its slower and more hesitant tempo, it is like the English nationalization and the French popular front. We simply have socialism, American variety, stealing from some citizens and corrupting other citizens with the proceeds derived from the first group. We are at about the halfway stop on the road to total socialism such as Italian fascism, German nazism, and Soviet communism. The Western Powers are not yet as rough and tough and cruel in the administration of the same socialism, namely, we do not yet torture or murder.

Thank God, here and there throughout our land there is a growing anxiety about the survival of our constitutional Government and a new appreciation of it that comes only from a real danger of losing it.

Our acceptance of socialism may have been caused, so far, by ignorance and unwitting apathy. This does not change the awful fact that the Socialist cancer has already spread widely in our political body. The only cure is a rebirth of the free spirit of men and women. It is like the free elements of light, heat, rain, and soil. Freedom is explosive energy, much more explosive than atomic energy. It is the precious possession of our American society. It must be our first concern, for on it society is wholly dependent for the very pressing essentials of food, shelter, and the opportunity for the good life. This question is that practical. Yet this creative and explosive substance that we call the free mind and spirit is so delicate that it cannot be managed, controlled, or made the subject of compulsion by other mere men. Under compulsion it dries up, and scarcity, even famine, follows. It has been so in the history of man since the beginning of time.

Our forefathers knew this. So they made the whole concern of our Constition that of maintaining, protecting and extolling the life, liberty, property and pursuit of happiness of individuals. That was the central function of our Government, which was instituted in the very beginning, for that purpose. History proved them right: The American way became a gospel to the peoples of all the earth for a hundred years.

THE CHALLENGE

Shall we extend further our brief interlude of American liberty, suspended as it has been between ages of darkness gone by and the age of darkness that threatens to follow us all?

That is the challenge of our moral decision. We dare not drift into the darkness of the Marxist atheist state god, his commissars and his tyranny. Instead, we must man the political trenches and the platforms which are the election districts throughout the land. In each district we must have captains of 10 and their auxiliary forces. Already our enemies are organized in the field literally with their captains of 10 in every industrial area. Just now they are winning the battle through lack of opposition.

We can win the freedom battle decisively. Vast unused forces and manpower wait to be enlisted and organized. There are 3,500,000 little-business men. There are 7,000,000 little-property owners being hurt and liquidated. There are farmers and laborers hurt by monopolistic pressures and restrictions. They want freedom and the right to work for themselves. There are millions of retailers, wholesalers, commission men, doctors, nurses, druggists, teachers, and preachers, all ready to fight for liberty again, if led by men who have convictions that burn in their hearts for the right as against the wrong. Liberty waits once more for volunteers like you, serving as the volunteer leaders and organizers of an American-freedom movement. Then socialism, even our own variety, shall be utterly destroyed, every root and branch of it. At the same time the victory over world sovietism will be won in this battle now drawn up right here on our own American soil. God give us strength to win that battle.

The Great Conflict

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. MULTER. Mr. Speaker, many times before I have called the attention of my colleagues to the fact that attacks upon any religion are always the forerunner of attacks upon all religions. The evidence is piled high about the Communist's attempts to destroy all religion.

I am pleased to call the attention of the House to the following editorial on the subject which appeared in the Herald Tribune of July 15, 1949, which is indeed apropos:

THE GREAT CONFLICT

In the evolution of human government, many of the sharpest, many of the most delicate, problems have stemmed from the relationship between church and state. Nearly every faith and every sect have known, at some time in their history, the poignant dilemma posed by the need of deciding what things can be rendered unto Caesar without detriment to the things that must be rendered unto God. But it is doubtful whether the lines have ever been drawn so clearly or the issue set forth in such fundamental terms, as in the solemn excommunication decreed by the Sacred Congregation of the Holy Office of the Roman Catholic Church against Communists the world around.

This is not a matter of anticlericalism, a struggle over some facet of church government. Nor is it a question which concerns merely a single phase of the activity of a single nation. It is not, in fact, primarily a policial question. The Communist dogma does not recognize the bourgeois division of responsibility which allots certain functions to the individual, the family, the church, the state. It is all-embracing, it is a Caesar who denies God and arrogates all power to himself. As such it has not only opposed churches as temporal organizations, but the creeds upon which they are based, offering its own challenge to the moral code, to the conscience of mankind. And it is for this usurpation that it stands condemned.

The most immediate impact of the excommunication decree will fall, of course, upon the predominantly Catholic countries of Europe, on both sides of the iron curtain. In some it will be a contest between the machinery of the police state, the physical power of Communist governments, and the awesome spiritual penalties invoked against those who adhere or succumb to them. In others, those same penalties will stand against those who have sought to compromise between the material promises of communism and the known disapproval of the church. In all, the inescapable need of

making an absolute choice may be expected to have far-reaching effects.

For the United States, the number of outright Communists or even fellow travelers who will be affected doubtless will be relatively small. Some of the broader implications of the decree, touching on the reading of literature describing Communist activities and Communist doctrine, may be of concern to many more. But the principal significance to Americans of the Vatican's decision is that it emphasizes in unmistakable fashion that an allegedly political movement has trespassed sufficiently upon the sphere of faith and morals to raise against itself the most powerful spiritual sanctions of a great religious organization. It illuminates the problem already confronting American government and society—the threat which is already testing and straining the liberal institutions of this country. The papal decree of excommunication demonstrates the scope and the force of the great conflict dividing the world today, and the need for the utmost vigilance by all Americans, whose principles and way of life have never before been confronted by such a massive struggle between such tremendous ideological forces.

The Fabulous Past—100 Years of California's History Is the Foundation of the Golden State's Promising Future of Hope and Progress

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. McDONOUGH. Mr. Speaker, the progress and development of California since the turn of the century and especially following World War I and since the end of World War II continues to astonish the world with record-breaking and precedent-shattering increases in population, industrial expansion, agricultural products, construction of homes, highways, schools, water development, and all kinds of public utilities; retail trade and per capita purchasing power, mineral production including peroleum, clay products, gold and other metals to the point that during this year in which California is celebrating its one hundredth anniversary the people of the great Golden State of California has every right to be justly proud of the great struggles of the past and to look forward with great hope for the future.

A brief review of some of the record-breaking progress made by California should be interesting to the Members of Congress.

POPULATION

California has shown a phenomenal population growth since the turn of the century. In 1900 there were 1,485,000 people in the State, a figure about equal to the population increase that has taken place in California since the close of World War II in 1945.

With a population of 6,907,000 in 1940, conservative estimates indicate that the State will reach a total of 10,382,000 by 1950.

The Graduate School of Business, Stanford University, recently completed a study of California's population growth and industrial prospects. Seven statistical methods were used and the 1960 population estimates ranged between 13,811,000 and 15,153,000. Final estimates, with allowances being made for reduced in-migration and a gradual decline in the annual growth rate, show an estimate that the State will have a population in 1960 of 14,015,000.

EMPLOYMENT

A recent study of employment trends made by the Pacific Coast Board of Intergovernmental Relations shows that the increase of employment since 1940 has been numerically greater in California than in any other State. Employment averaged approximately 1½ million higher during 1948 than during 1940 and substantially higher than during the peak of the war effort. A reasonably high level of employment in the State can be expected during the next decade on account of the continued expansion of agriculture, manufacturing, distribution, and service activities.

MARKETS

Markets are dependent upon income of the people. Per capita income payments in California have ranged from 24 percent to 39 percent above the national average during the past two decades. The per capita average for the States of the far West has exceeded the national average by 18 to 32 percent. Among the large urbanized and industrial States, California is only exceeded by New York in per capita incomes.

Customers of the western market not only have higher ability to buy but also a willingness to buy. It has been observed by one marketing authority that—

> This comes from people who own their own homes, who operate farms of stable production. * * * The West is an area blessed by a high percentage of home-owning population, a fertile soil, a mild climate, and progressive forward-looking inhabitants.

In the Western States, and particularly the Pacific Coast States, the markets far exceed the 14 percent of national total indicated by population and income, including the markets for farm products, lumber, mining and oil equipment, automobiles and equipment, construction, and homefurnishings.

RETAIL TRADE

Estimates of the dollar volume of sales by retail stores in California during 1948 are $11,600,000,000 or 7.3 percent above the total for 1947. This amount was more than 3½ times the dollar volume of retail sales in 1939 and 9 percent above the national total.

California's per capita retail sales averaged $1,164 or 31 percent higher than the national per capita average of $889 during 1948. The sales of durable goods continued to increase during 1948 with the largest gains recorded by motor vehicles, building materials, and hardware.

California leads the Nation in automobile registrations. During the past 3 years about 12 percent of the country's total sales of motor vehicles and equipment has been made in this State.

Being closely allied with population and income growth, it can be expected that the State's retail trade will continue its upward trend during the immediate future.

INDUSTRIAL EXPANSION

The postwar rush of companies to build new factories and expand their plants in California reached its peak in 1946–47 and has slowed down to a more adequate pace since then. The outlook, however, is for continued industrial development. It can be anticipated that there will be further growth of older established industries based upon raw materials; an inevitable expansion of the home-market industries that follow population and regional demands; a more than proportionate expansion of industries making products uniquely adapted to needs in this market (apparel, furniture, agricultural machinery, etc.); and a less inevitable but selective broad expansion along many fronts of manufactured products formerly imported into the western area, such as segments of the iron and steel fabricating industries, chemical industries, textile and apparel groups and components of automobiles and similar assembled products.

PRODUCTION

The most significant element in the long-term growth of the American economy has been the rising productivity of labor which may be measured in output of goods and services per man-hour. This has been due largely to the increased use of machinery, inventions, technological development and improved methods of distribution.

The Stanford University study of total production of goods and services in California—noted above—indicates that the output has grown at an almost constant rate since 1860, despite wide short-term fluctuations. The rate of increase has averaged 64.6 percent per decade, as compared with 44.6 percent for population. A further growth of 48 percent is predicted between 1948 and 1960 (or 41 percent for the decade 1950 to 1960) as against a 40-percent increase for population.

The anticipated 41-percent increase in economic expansion in the State during the 1950's may seem to be excessive. However, it should be noted that the estimated rate of growth is below that of the eight or nine past decades, and is more than a third under the average rate of growth for the entire period.

CONSTRUCTION

The volume of construction in California during 1948 rose to record-breaking levels of about $2,500,000,000 or 36.3 percent above the previous year and an increase of 244 percent over 1940 levels. Construction within the State during 1949 and the years immediately to follow should continue at a rapid rate in order to provide for the huge backlog which has accumulated in recent years for new plants, plant expansions, privately owned public utility installations, schools, highways, water development, street and sewer projects and housing.

STEEL CAPACITY

A recent survey by San Francisco's Federal Reserve bank indicates that steel capacity in California will reach 2.3 million tons in 1949, showing an increase of 180,000 tons over 1948. The potential, as indicated by the survey is that more than 2.7 million tons will be reached by 1950 representing an increase of 430,000 tons over 1949 and an increase of 610,000 tons over 1948. California steel capacity has increased more than two and a half times since 1941, when the State's rating was slightly over 1,000,000 tons.

Steel men recognize that the next great development to take place in western steel will be the diversification and improvement in facilities for turning out finished products. Already preliminary plans are being made for the additional electric furnaces in the area and one firm is planning to construct and equip a large open-hearth installation.

AGRICULTURE

The gross cash farm income of California's farmers during 1948 was approximately $2,200,000,000, the largest amount ever reported in the State's history. As one of the Nation's leading agricultural producers, the expanding economy in the West with its continued population growth indicates that the outlook for the State's farmers, in general, will be for continued development.

California's specialized agriculture has already taken a large part of the postwar readjustment which has more recently become apparent in the livestock and grain growing areas of the Nation. It has some further adjustments to make, but the long term outlook favors a further growth of this basic industry, particularly along lines which will serve the increased population of the West. Completion of the Central Valley and other water storage projects under way may not bring much new land under irrigation, but they will make possible more intensive use of areas already developed and a continued increase in productivity.

MINERAL PRODUCTION

California's mineral production in 1948 exceeded $1,000,000,000, with over three-quarters of this amount due to petroleum. Other large items included natural gas and gasoline, cement, stone, salines, clay products, gold, lead, and zinc.

Although production of petroleum from California fields may continue to increase during the next decade the western market may grow to the point where imports of oil will be necessary. Natural gas has already reached that point and sizable pipe-line projects are under way to augment this State's supply.

TRANSPORTATION AND UTILITIES

Economic trends of California's publicly regulated and privately owned utilities during the postwar years include a vastly expanded demand for services beyond that indicated by the population growth.

Between 1940 and 1947 the tonnage of railway freight originated or terminated in California increased by 90 percent; consumption of electricity gained 83 percent; use of natural gas expanded 74 percent; and telephone calls increased 62 percent. With a steady growth in population during the next decade, these services can be expected to continue a healthy growth in the years immediately ahead of us.

Schweitzer—Great Scholar, Theologian, Musician, Physician, Missionary

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Tribune of July 3, 1949:

FROM DARKNESS TO LIGHT

Many great, wise, good, and talented men have visited this land in the four and a half centuries foreigners have been coming to these shores.

It would be hard to think of one man who combines in his person as much greatness, wisdom, goodness, and talent—and humility—as a bushy-haired, white-mustached, 75-year-old missionary doctor who landed in New York last Tuesday.

He is Dr. Albert Schweitzer from Lambarene in French Equatorial Africa, come to talk about another man of many gifts—the poet philosopher Goethe—at Aspen, Colo.

We first heard of this remarkable man more than 30 years ago when we read a book by him which is still a classic—The Quest of the Historical Jesus. It was clear that the author was a man of profound erudition in history, theology, philosophy, and languages.

Later we learned that he was one of the greatest interpreters of Bach—on the organ as well as in letters.

But that indicated only two sides of this many-sided man. He could build as well as play organs. He could remove malignant growths from the body as well as help men to find peace of mind and loftiness of spirit.

For Schweitzer the scholar, theologian, philosopher, and organist became equally distinguished as a medical missionary in one of the most remote parts of Africa. He is as universal a man as was Leonardo da Vinci or Goethe—a remarkable achievement in an age of specialization.

But he soared to spiritual heights which other men of genius rarely succeeded in reaching—and remained humble all the while.

Thus when the reporters asked his opinion of this and that Schweitzer did not pontificate.

"One who comes out of solitude into the world can give no message to the world—just as those who come to us can give us no message."

When they pressed Schweitzer for his opinion on the atom bomb, communism, etc., he said "those questions do not exist in the forest." When the reporters persisted, Schweitzer modestly voiced his own personal philosophy: "Give all possible liberties to all peoples—spiritual and material." That was to be expected from a man who believes that he is:

"Truly ethical who shatters no ice crystal as it sparkles in the sun, tears no leaf from a tree, cuts no flower—the farmer who has mown down a thousand flowers in his meadow to feed his cows must be careful on his way home not to strike off in heedless pastime the head of a single flower by the roadside, for he thereby commits a wrong against life without being under the pressure of necessity."

Schweitzer would have each thing that grows and breathes move forward to its appointed destiny without undue impediment. That is what he understands as reverence for life.

It is given to few to understand, still less to live by, such a code. But when a man who has attained such emancipation from worldliness, such spiritual greatness, comes our way we can at least be glad that mortals are capable of such attainments.

Albert Schweitzer we welcome you. May your days with us be happy ones and may something of your spirit remain with us.

You Can't Do Business From an Empty Wagon

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, July 18 (legislative day of Thursday, June 2), 1949

Mr. O'MAHONEY. Mr. President, Dun & Bradstreet, the nationally known mercantile agency of New York, has recently distributed an old-fashioned lithograph illustrating the slogan "You Can't Do Business From an Empty Wagon." It has circulated this lithograph with a brief and pointed explanation of why this slogan should now be followed by businessmen everywhere in the United States.

I received this material from Mr. A. D. Whiteside, president of Dun & Bradstreet. I ask unanimous consent that Mr. Whiteside's letter, together with the statement, may be printed in the Appendix of the RECORD.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

DUN & BRADSTREET, INC.,
July 8, 1949.

Hon. JOSEPH C. O'MAHONEY,
United States Senate,
Washington, D. C.

DEAR SENATOR: We have had the most remarkable reaction from the distribution of more than 100,000 of the enclosed lithographic print.

Apparently the recession we have felt was due to a greater extent than we thought to the mental attitude of the businessmen of this country.

It may be that the underbuying which has resulted from this state of mind will reverse itself sooner than we had expected and that business conditions may reflect even better fundamental conditions than we had anticipated.

Sincerely yours,
A. D. WHITESIDE, *President.*

YOU CAN'T DO BUSINESS FROM AN EMPTY WAGON

The old peddler, once a mainstay of distribution in the United States, knew that important fact. His wagon creaked under the weight of housewares as he started out on Monday and rattled home empty by Saturday.

Knowing where to go and whom to sell at a profit is still a fundamental sales and credit principle.

Profits are made on goods sold and delivered. Profits are made on merchandise purchased and consumed. Profits are made on a confident approach to a market.

Pinchpenny buying of a dozen when a gross is needed is wasteful and expensive to the manufacturer, distributor, and consumer alike. Empty shelves create suspicion of fear. Full stocks of fresh merchandise stimulate confidence. Selectivity invites attention and action.

Inventories are dangerous when they are the result of wrong selection or poor timing. But good management means sufficient stock to meet the daily or seasonal needs.

Buy wisely, but confidently. Buy your known requirements and benefit by established quantity discounts. Act as if you knew you were going to be in business this year, next year, and the year after.

Stock and sell. Don't let the dust gather on empty shelves. You can't make a profit without a sale.

DUN & BRADSTREET, INC.,
WM. T. VAN ATTEN,
Vice President.

An Old Story

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gazette and Bulletin, Williamsport, Pa., of July 13, 1949:

AN OLD STORY

President Truman is following an old trick in his approach to the heavy-spending program of the Government. He is seeking to put the economy-minded citizens of the Nation on the defensive and take himself from that position.

Mr. Truman has been under fire for some months because of the wild spending spree encouraged by his administration. It is not pleasant to be constantly on the defensive. Trying to get off that spot, he used his "fireside chat" to rant and rave against the people who are trying to bring our Federal Government back to a sound financial basis.

He employed his best form to try and put the sound-thinking people in a poor light. It is the old story of a strong offense being the best defense. In his case, however, his offense is far from strong.

What is wrong with trying to have our Federal Government operate within its means? Trying to tag "selfish interests" onto those sincerely seeking to strengthen our Government falls flat, because it does not make sense.

Everyone knows you can't go on spending more than you take in and for that reason the people of the United States know our Government cannot go on spending more more than it takes in through taxes. Extravagant waste by Federal agencies is so well known throughout the country that any effort of Mr. Truman to try and paint a different picture are futile. It is generally known that Federal expenses could be greatly reduced without harming efficiency and service, if there was a sincere effort made.

Too many successful men and women are urging a reduction in Government for Mr. Truman to try and call them "selfish interests." Their interests are to have a strong Federal Government from a financial view, because they know a debt-ridden Government is harmful to the people as well as inefficient.

It is time Mr. Truman stopped being a politician and started being an efficient administrator and director. As President of these United States he is supposed to administer its Government in an efficient, business-like manner, but he certainly has not done any better as President than he did as haberdasher back in the years after the First World War. Remember then he went bankrupt and now, after another war, he is striving for a program that will bankrupt the Nation.

Failures always try to blame others for their plight and Mr. Truman is no exception.

Operation of United Air Lines at Salem, Oreg.

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. NORBLAD. Mr. Speaker, the proposal of the Civil Aeronautics Board to cancel the franchise of United Air Lines to operate at Salem, Oreg., seems more than absurd when we examine the large increase of business by that air line at Salem since the war. Passenger revenue at that station in June of 1946 was $8,000; in the same month of this year it had grown to $29,000. In June of 1946 there was no air freight handled at Salem by United; in June of this year it totaled 20,000 pounds. Air express shipments increased over 700 percent in this period and air mail 300 percent. In the face of these facts how can the CAB in any way even consider making a change in this growing and profitable service which is of such benefit to this highly important part of the State of Oregon. Under leave to extend my remarks, I include herewith an editorial from the Capital Journal on this subject:

FIGURES CONTINUE TO FAVOR UNITED

Salem awaits with interest what West Coast Airlines has to say about its proposed serving of the city. That air line seeks to take the place of United Air Lines, which has been tying in the capital with Mainliner transcontinental service since 1941. West Coast will present its case to Salem next week.

Meanwhile, a comparison of United's service in and out of McNary field in 1946 and now, continues to make the Civil Aeronautics move to oust the Mainliner outfit here seem completely out of reason.

In June 1946, United passenger revenue for Salem amounted to $8,020. The same month this year the company took in $29,700 in passenger revenue. That is an increase of well over 300 percent—not bad in any business.

What about air freight? United handles air freight, but West Coast, which wants to be substituted, does not. In June, 3 years ago, United did not handle air freight out of here. But last month United showed 17,300 pounds put on here and 3,500 pounds taken off in air freight. These figures are for only 1 month. That's better than 20,000 pounds.

In air-express shipments, the McNary field station of United showed an increase of 775 percent for last month over the same month 3 years ago. In air mail handled by the air line, the increase for the month over the same month 3 years ago was 300 percent.

These United figures merely substantiate the case that Salem is drawing up to keep the United Air Lines station here. The city's position would be jeopardized if adequate, transcontinental air service were not offered. A feeder-line service, like that of West Coast, could be in addition.

The city has the right to expect—and demand—that the basic Mainliner service of United be maintained and not discarded as the CAB is considering doing.

Mental Suffering Under Chinese Communists

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very revealing letter just received from a city in China which has been for several months under the Communists. The writer is a highly cultured western woman married to a Chinese professor. The letter is adroitly written to get by the Red censors. It tells volumes regarding what actually happens when a community is liberated by the Chinese Communists who were sold to America by their apologists as being just patriotic peasants bringing the blessings of modern democracy:

MAY 20, 1949.

It seems that new mail has arrived in X, and so I am sure our mail must leave too. When for weeks we do not get anything, we do feel that we are living behind a kind of curtain. * * * But lately Christmas parcels have been arriving. If the duty is too high and it is at least a 100 percent of the value put on the parcel, we are forced to return it to the sender. I had two pair of nylon stockings, but the duty I was asked to pay amounted to just half of our monthly salary. So I had them return the parcel to the sender.

* * * We met a minister who is now registered as carpenter, and because of that he has been doing quite a bit of carpentry jobs * * *. I go to church whenever I am free. It is a very nice change to be sitting again with old friends * * *. Reading a good English book is one of the most stimulating recreations I can get now. I had a parcel of clothes from my sister (and fortunately there was no duty on it) and that made me extremely happy. Beautiful underwear, lovely slips, an evening dress. Then I realized with force how very reactionary my thoughts were, how very feudalistic; for I should not be wanting to wear lovely things, I should not mind dirt, I should abhor books written by people with imperialistic backgrounds. I should with all my heart believe in lowering of cultural standards, I should emphasize the importance of giving a medical degree after 2 years of study, of abolishing literature, law, social sciences, languages, history, even biology and chemistry, etc. I should keep in mind that anything coming from your side of the world is tainted with dangerous prejudices and wrong attitudes,

and above all, I must remember that materialism is the end and goal of all. I must forget completely that science has advanced to the knowledge that our existence is "physio-psycho" determined. All those new-fangled ideas are the product of false thinking and can only be produced by selfish capitalists. Yes, I have to learn very much. My husband thought he was going to lose his reason, but he has now learned to look at things from the right perspective.

* * * We long for news, we long for ideas, we long for peace. This world is filled with suspicion and fear. Yet, there should be love and generosity. Fear comes from a guilty conscience. It is really a dreadful waste of time and life to do anything wrong.

Life is one big lesson. There are a few simple truths and the rest is the application of those truths. * * *. Everything changes constantly. Human beings and their words can't be relied on. Change, change, but that also may mean for the better * * *. Prices have risen so rapidly that our income is far too small for our needs. Of course, we are all supposed to lower our standards; I must learn that. So you see how much I am still lacking and how much I should learn yet.

British Experience Favors Balanced Services

EXTENSION OF REMARKS
OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. SIKES. Mr. Speaker, I have repeatedly emphasized before the House the importance of adequate national security through strong and properly coordinated armed services. For ability to speedily strike paralyzing blows in the event of emergency, I have urged strong air arms, both Army and Navy. But in order that we may keep the sea lanes open and follow through by ground operations to a successful conclusion, I have urged that land and sea forces likewise be kept strong.

There are those who think we have arrived at the stage of push-button warf re, but we have not. While our experts are planning for the future and whatever threat it may bring, we must remember we are living in the present and we must be prepared to defend ourselves and to win against present-day actualities.

In order that we may not be transported into a dream world of dependence upon one weapon or even one service, it is just as well that we occasionally refresh our memories with the hard facts of experience.

In 1946 hearings on unification of the armed forces were in progress before the Senate Naval Affairs Committee. A great volume of testimony was offered and much of it was valuable. Some that struck me as extremely important was submitted by Capt. J. P. W. Vest, of the United States Navy. I want to call it again to the attention of the House and I know of no better way than through the very able pen of Frank A. Kennedy, Washington columnist who recently featured my interest in Captain Vest's testimony in his column.

I submit therefore Mr. Kennedy's entire column, followed by an editorial showing the interest of the Jacksonville Journal, and finally I submit the Vest report before the Senate Naval Affairs Committee.

CAPITAL VIEW—SIKES PRESSES SEARCH FOR PERTINENT DATA SUPPORTING NAVY AIR ARGUMENTS

(By Frank A. Kennedy)

SIKES FINDS ANOTHER DOCUMENT

Congressman SIKES has rediscovered—and is preparing to reemphasize another official document which bears directly and pertinently on the status of naval aviation in the field of strategic air warfare.

Some weeks ago he obviously shook up the Joint Chiefs of Staff when he chided them for classifying as top-secret a document known as the Scanlon report which, according to his earlier information, described the superb air cover which the Navy provided during the occupation of Leyte in the Philippines in the fall of 1944. His colleagues on the Armed Services Appropriations Subcommittee may hear more about it in a more formal manner later.

The new document which the Crestview Congressman has unearthed carries no confidential classification at all—but it is just as pertinent to the current controversy between the Navy and the Air Force. It appears on page 337 of the hearings of the Senate Committee on Naval Affairs, Seventy-ninth Congress, second session, on the Unification Act. Like scores of other documents turned out by the committees of Congress, its contents attracted only casual notice and it was promptly forgotten. Perhaps there are not a dozen Senators and Congressmen now serving on Capitol Hill who ever heard of the testimony of Capt. J. P. W. Vest, Chief, Aviation Training Section, in the Office of the Deputy Chief of Naval Operations (Air). It is Mr. Sikes' intention to bring it to their attention.

CAPTAIN VEST'S TESTIMONY

Congressman SIKES has little doubt that the brilliant testimony of Captain Vest had a heavy effect on the Unification Act as it later was approved by Congress. Most of the major recommendations of this distinguished naval officer were incorporated in the measure. Mr. SIKES now believes, however, that the Vest testimony, if perused by Congress again, may serve to reinforce the judgment of many Congressmen who in recent months have become uneasy about the future of the Navy's air arm. Many of the Members were reassured by Secretary of Defense Johnson's directive to refit two of the 45,000-ton flattops for strategic air service. Mr. SIKES now wants to bolster these reassurances by reviving the Vest testimony—and perhaps coupling it with the top-secret Scanlon report later. In his testimony before the Senate Naval Affairs Committee, Captain Vest reviewed and compared the development of air power by the United States and Great Britain between the two world wars. He pointed out that the Balfour committee, in setting up the Royal Air Force in 1923, took the opposite course from the American Morrow Board. The Balfour group created the Royal Air Force coequal to the British Army and the Royal Navy. The Balfour plan had the practical effect of creating a caste system, with the Fighter Command the elite top outfit, the Bomber Command in a slightly lower level, with the Coastal Command and the Fleet Air Arm trailing woefully. Assignment to the Fleet Air Arm was for a 2-year period only, with the loss of many shore privileges. Few fliers ever sought a second hitch with the Navy.

The Balfour plan carried these glaring faults into aircraft design and procurement. The Fleet Air Arm was forced to operate mostly with the cast-off planes of all the other services, and the Coastal Command was only an outfit on paper.

MORROW BOARD

Captain Vest then turned to the American Morrow Board which, acting virtually on the same information as the Balfour Committee, took the opposite course. Between the two wars, American air power was developed separately within the frameworks of the Army and the Navy. There was no priority systems, either, for personnel or appropriations. The results, Captain Vest pointed out, were startling, especially as they pertained to the American Navy's air power. He gave due credit to the British Spitfires of the Fighter Command which were unsuitable, however, for operation from carriers. He showed how the American carrier planes were 10 to 15 years ahead of their British counterparts, and that the British had realized their mistake too late. It was only 6 months before the outbreak of war in 1939 that Great Britain changed her system, and organized her Fleet Air Arm along American patterns—too late, of course, for effective fighting until very late in the war.

NORWAY-CRETE-SINGAPORE

The Vest testimony further outlined the tragic consequences of the Balfour Committee blunders. The disastrous campaigns in Norway, on Crete and at Singapore followed inevitably, he said, because the Royal Navy was without effective air power, either for its own defense or to give air cover to British troops ashore on a hostile coast. It was pointed out, too, that the British Fleet Air Arm did not become an effective striking force until all its carriers had been equipped with the latest type of United States Navy fighters and torpedo aircraft, and until the American Navy's administrative practices were adopted almost in toto. Captain Vest expressed the same fear which Admiral Richardson uttered in other testimony, that unification might ultimately destroy the identity and effectiveness of naval air power, a fear which the Unification Committee presumably felt, too, in protecting the Navy's Air Command from complete absorption into the Air Force.

SIKES FOR UNIFICATION

Congressman SIKES is not trying to unscramble the unification eggs—quite the contrary. He always has favored the unification of the armed services, and his chief criticisms have been directed at the slowness with which effective unification is being accomplished. He believes, as always, in the necessity for dominant American seapower, and he subscribes to the Navy's view that the Navy's Air Command should be autonomous but with close liaison with the other two services. It is for this reason that he is assembling and bringing again to the notice of Congress the most authoritative opinions from the most competent sources to bolster the Navy's case. Both in the Vest testimony and in the undisclosed top-secret Scanlon report, he believes that he has found such information.

The Crestview Congressman can reinforce the Vest testimony out of his own experiences, too. Hundreds of British fliers were trained at Pensacola during the war, and Mr. SIKES had occasion to talk with scores of them. He can report their amazement and admiration at the American Navy's training system—so far in advance of the British system that comparisons almost were impossible. The Congressman does not intend to drag any of his British friends into the current controversy, but he is assuring his colleagues that some of the British opinions of their own set-up were much more caustic

than anything Captain Vest told the Senate Naval Affairs Committee. The formal British adoption of the American system early in the war was proof enough. Mr. SIKES is convinced, that the British conceded our superiority quite frankly.

MORE TO COME

Congressman SIKES presumably is unready to concede that he has completed his case for seapower supported by air power. He feels sure that there are other pertinent documents like the Vest testimony and the Scanlon report, secret and nonsecret. When it was offered in 1946, the Vest testimony interested only a few members of Congress and made no imprint on the public mind at all. Now it is extremely pertinent to the current controversy over air power—Navy versus Air Force. Mr. SIKES is looking for more of the same.

Capitol Hill apparently is convinced that the real showdown may come next winter, when the 1950–51 budgets of the armed services are presented to Congress. These new budgets now are in course of preparation but will not be completed until sometime in December. The undercover tug of war between the three services assuredly is in full swing now, but Congress is so vitally concerned with the situation that it seems clear that Capitol Hill, not the Joint Chiefs of Staff, will make the final decision. Congressman Sikes hopes that his accumulating data will help to shape it.

[From the Jacksonville Journal of July 10, 1949]

REPRESENTATIVE SIKES IS ON THE JOB

Jacksonville is deeply interested in the controversy in Washington about "unification" of the armed services. There has been much talk that the Navy's wings would be clipped if certain plans went through. This, obviously, would affect this area, because of the large naval air station here.

One Congressman who has been diligently pursuing the facts about the armed services is ROBERT L. F. SIKES, of west Florida. His research has been noted from time to time in the articles by Frank Kennedy, the Journal's Washington correspondent.

On this page today the Kennedy column is devoted entirely to Mr. SIKES' activities in connection with naval aviation. It is recommended reading.

The armed services controversy is by no means resolved, though it seems evident that Secretary of Defense Johnson is intent on "knocking heads together" and getting things unified. It would appear, also, that he is not deeply impressed by the power of naval aviation. His precipitate action in canceling work on the Navy's supercarrier gave a good slant on his attitude.

Secretary Johnson caught plenty of criticism for that. In fact, some Congressmen talked about an official investigation, but that has been postponed.

Apparently, though, the criticism did register. For subsequently Mr. Johnson approved modernization of two Essex-class carriers to cost upward of $100,000,000. Presumably the improved carriers would be able to carry planes which could carry the atomic bomb.

This may have mollified supporters of a strong naval air arm, though it did not undue the cancellation of the supercarrier. In other words, continued alertness is in order by Congressmen and citizens. The Nation wants a strong Navy, a strong Air Force and a strong Army. And it doesn't want one gobbling up the others.

Mr. SIKES' alertness is commendable. It will do much to influence the course of the military reorganization plan.

(The following statement was submitted by Capt. J. P. W. Vest, Chief, Aviation Training Section, in the Office of the Deputy Chief of Naval Operations (Air), for the Record of Hearings before the Senate Naval Affairs Committee on S. 2044 (amended):)

JULY 11, 1946.

My statement has been prepared to cover two distinct matters. Part I deals with the experience of the British with their combined Air Force organization and the resultant effects upon British naval aviation and the Navy as a whole. In part II, I shall attempt to describe some of the specific implications, as concerns naval-air training, of the proposal to divorce land-based aircraft from naval control.

PART I

My comments upon the British experience are based primarily on personal observation and contact. In the spring of 1941 I was sent to England as a naval observer and remained there until the spring of 1942. Subsequently, in 1943, I served as a member of the Allied Antisubmarine Board, a combined organization of United States and British naval and air officers, at which time I was able to continue my close observation of the British organization. I am aware that the British experience has frequently been cited in connection with our own consideration of the advantages and disadvantages of a unified air force; nevertheless, I have been so deeply impressed with the lessons which we may learn from this British experience that I shall venture to trespass upon the committee's patience by reviewing in some detail the history and results of the British organization.

Very early in my tour of duty in England I was impressed with the inadequacy and ineffectiveness of British naval aviation as compared with our own. Naturally I was at some pains to discover the underlying causes for the glaring defects noted, and took occasion to discuss the matter with a great many British officers, both naval and air. Invariably these discussions led back to the reorganization of the British Air Forces which took place following the First World War, when the decision was made to place control of all air matters in a single department. No one reading discussions which led up to that decision can fail to be impressed with the similarity between them and the claims now advanced as to the advantages of such unification or to the arguments we now hear as to why the Navy should be limited in its control of certain aircraft types. It is quite clear that those who considered the question and made the decision had the benefit of every argument pro and con which is currently being presented in connection with the proposed reorganization of our own Air Forces. The basic difference is that the responsible British statesmen of 1919 were dealing with a theory; we, on the other hand, have the tremendous advantage of the actual experiences, in peace and war, which resulted from their decision.

In World War I British military aviation developed two separate organizations: The Royal Flying Corps and the Royal Naval Air Service—the latter an integral part of the navy, composed of both landplanes and seaplanes. In 1919 these two were combined into the Royal Air Force, which, under the Air Minister, was assigned operation of all military and naval aviation. In retrospect it is interesting to note some later British comment on this action. I quote from an article appearing in 1945:

"The history of exactly how it was put over has never, so far as the writer knows, been authoritatively presented to the public, particularly the Admiralty's side. In the official history the subject will be seen to be very lightly skated over. It must, however, be remembered that the Prime Minister was to all intents and purposes a dictator. The Board of Admiralty appears to have been somewhat supine, but it was probably subjected to very severe pressure. Whatever the cause, the Board of Admiralty seems to have been either unable or unwilling to put up any effective opposition to the proposal to rob the Royal Navy of its air force."

The moving spirit in this reorganization was Air Marshal Sir Hugh Trenchard, the Chief of the old Royal Flying Corps, who became Chief of the Royal Air Force and later, as Lord Trenchard, served as Air Minister. This remarkable man, possessing great force of character and an unusually strong personality, completely dominated British aviation for nearly 25 years. One cannot help but draw comparisons between Trenchard and our own Gen. Billy Mitchell. They were contemporaries in age and position and the ideas they advocated were very nearly identical. The difference lies in the fact that Trenchard achieved his objective and was able to establish his unified and independent air force. In this country, the Congress rejected General Mitchell's proposals for a similar organization.

In 1919 Trenchard submitted the basic organization for the Royal Air Force, which was approved by Winston Churchill, then Secretary of State for Air. This document, which remained an effective guide for the Royal Air Force throughout the interwar period, contained a most significant paragraph:

"The principle to be kept in mind in forming the framework of the air service is that in the future the main portion of it will consist of an independent Air Force, together with service personnel required in carrying out aeronautical research. In addition, there will be a small part of it specially trained for work with the Navy and a small part specially trained for work with the Army, these two small portions probably becoming, in the future, an arm of the older services."

Mr. C. G. Gray, the foremost British aviation writer and a great admirer of Trenchard, makes a very pertinent comment on this statement in his history of the Air Ministry:

"For years while he was Chief of the Air Staff, Sir Hugh Trenchard had to fight against continual attacks from the Admiralty, which did its best to get the Navy side of the Air Force into its own hands. Sir Hugh was determined that the RAF should not be split until it had grown big enough and strong enough and had acquired a powerful enough tradition of its own to place it worthily alongside the two senior services. Consequently he purposely shelved his own forecast that the two small portions which worked with the Navy and with the Army would become arms of the older services and insisted on keeping the Royal Air Force one and indivisible. So well did he build the service that the Fleet Air Arm was not handed over to the Navy until early in 1939, and by that time the expansion of the Royal Air Force had reached such a stage that the small portion which was lopped off for the use of the Navy was hardly noticeable."

I do not believe we can find a better example of the inevitable result of assigning a naval function to an air force. With the best possible intentions on the part of the responsible Air Force leaders the Navy function must gravitate to a minor position with consequent neglect and deterioration. This will be true whether the function assigned to the Air Force is the whole or a part of the naval air function.

The organization as set up in 1919 was so unsatisfactory that the Navy brought continued pressure to bear for a revision which would restore to the Navy control of its own aviation. In 1923 the question was referred to the Committee on Imperial Defense, then headed by Lord Balfour. Here, again, we run into a remarkable parallel between the history of this question in this country and in England. In 1923 the Balfour committee considered essentially the same questions which were presented in this country to the

Morrow Board in 1924. The essential questions before each of these boards were:

(a) A united air force, and

(b) The control of naval aviation.

The same arguments in nearly identical words were presented in each case, but the two boards arrived at diametrically opposite decisions. The Balfour committee reaffirmed the status of the Royal Air Force in its unified control of all aviation, including naval aviation, with only minor concessions to the Navy's position. The Morrow Board decided against a united air force and in favor of the retention of naval aviation as a part of the Navy. From that time until the outbreak of the recent war neither country deviated materially from these decisions. At the time they were made the whole question undoubtedly appeared largely academic to all but those immediately concerned. It is extremely doubtful if the general public or even the majority of the legislators of either country could have foreseen at the time the consequences of these two diametrically opposite decisions.

Nevertheless, in retrospect it may be seen that these decisions had a controlling effect upon the development of both British and American aviation, and particularly naval aviation, during the entire peacetime period, and a most profound effect upon the wartime operations of both services. I think it is worth while to trace these developments in broad outline.

A most important point to be noted in the British program, as confirmed by the Balfour committee, was that responsibility for design and production of all military aircraft was assigned to the Air Ministry. This was in accordance with all the arguments advanced at that time (and now being heard in connection with our own discussions) as to the advantages and economies to be achieved through centralized control of research, design, and production. I am not prepared to estimate the scale of possible economies under such a system, although I am personally convinced that they are far less than represented by the advocates of unification; but I am quite clear as to the disastrous results stemming from 20 years of this system in Great Britain.

Let me emphasize again that the organization adopted there made the Air Ministry, which was in effect the Royal Air Force, exclusively responsible for all aviation research development, design, and production, including that for the Navy and Army air requirements. The Navy was permitted to submit its requirements to the Air Ministry and in theory was given a voice in the final decisions and relative priorities. In practice this did not work out, and over a period of years the Navy was forced to accept aircraft in types and numbers only as permitted by the Air Force. As a result of 21 years of this system the British aircraft position, as I observed it in 1941 after a year and a half of war effort, was approximately as follows:

(a) The Royal Air Force had developed, in barely sufficient quantities, probably the best fighter plane in the world at that time, the Spitfire. This represented the major effort and the major contribution of the Royal Air Force to national defense. There is no question but that radar and the Spitfire saved England from invasion during the battle of Britain, and provided one of the critical turning points of the war. Nevertheless, the design and characteristics of the Spitfire made it essentially a defensive weapon which reached its maximum value only when the British found themselves literally with their backs to the wall. It did not have the capability of carrying offensive war to the enemy overseas.

(b) Aside from the Spitfire and its near copy, the Hurricane, all British aircraft were at best second rate. In the bomber category the Wellington and Stirling, the mainstays of the bomber forces were so inadequate that the Air Force was unable to mount any sort of an effective bombing attack until they were replaced with improved models. These improved models, the Halifax and Lancaster, were not available in effective numbers until late in 1943, and even then were inferior in nearly every respect to our own Fortresses and Liberators. In the Coastal Command, which was assigned the mission of overwater reconnaissance and antisubmarine warfare (those functions performed by our own land-based naval aircraft) there was in existence a reasonably good four-engine flying boat, the Sunderland, but in such small numbers as to be entirely inadequate for the task. Aside from this, the Coastal Command entered the war with only obsolete light bombers cast off from the Bomber Command and in no way designed for or suitable to the assigned tasks. The situation was so intolerable that almost immediately after the start of the war the Coastal Command turned to this country and purchased large numbers of the Lockheed Hudson, a twin-engine medium transport originally designed for commercial purposes. Even though a commercial design, this plane was so far superior in performance that it was preferable to any military design provided by the Air Ministry for overwater work, and for the first 2 years of the war was the mainstay of Coastal Command operations. I do not mean that it was entirely satisfactory, for it was not; it was limited in range and armament and was effective against the submarine only up to about 300 miles from land. By the end of 1944 the Coastal Command was largely reequipped, not with aircraft produced by the Air Ministry, but by American military and naval aircraft suitable for its purposes—Catalinas, converted Fortresses and Liberators, and Mariners. It is difficult to estimate the cost in money and lives and in lengthening of the war resulting from this inability of the Coastal Command to deal with the submarine menace, but it was enormous.

(c) In the purely naval category the situation can only be described as pathetic. The standard British carrier fighter was the Fulmar, a two-seater with a performance so low that only by courtesy could it be classified as a fighter. It was about equivalent to our own naval fighters of 10 years before. It was totally incapable of carrying offensive strikes to the enemy or even of protecting its own fleet. The Air Ministry had no improved shipboard fighters in production or even in advanced blueprint stage. The Spitfire and Hurricane fighters mentioned above could not be operated from carriers. The British Navy could only turn to the United States Navy for a suitable shipboard fighter, and by the end of 1942 replaced all the Fulmars with our own Grumman Wildcats. In the torpedo-bomber category the standard British plane was the Swordfish, an obsolete biplane very similar in design and performance to our own carrier torpedo planes of about 1932 (all of which were replaced by higher-performance modern aircraft in 1938). The Swordfish did useful work at Taranto and against the *Bismarck*, but at fantastic cost in losses. An improved design, the Barracuda was brought out in 1942, but was found to be greatly inferior to our own Avenger, and before the end of the war all British carriers were equipped with Avengers, designed and built by the United States Navy. As for dive bombers, which proved to be the most effective carrier type against both sea and land targets, the British had none, either land or carrier based. While the United States Navy was developing this weapon, from 1926 on, and the Luftwaffe was following far behind in our tracks, the Royal Air Force made the categorical decision that this type of attack was ineffective and rejected all development along these lines. The British Navy, perforce, had to accept this decision. It is interesting to note in passing that the United States Army Air Corps reached a similar conclusion; but because the Navy was independent of its control we were able to proceed with the development of the skills and equipment necessary for dive bombing and so bring it to the high stage of effectiveness which made it of such incalculably great value during the war.

(d) So far as the Army Cooperation Command, which was assigned the mission of supporting ground forces, was concerned, the situation was even worse than the Navy's. The Royal Air Force had produced not one single aircraft suitable for ground-force support, and in fact, the entire organization was largely on paper. The general plan had been that ground-force support would be drawn from the mass of Fighter and Bomber Command aircraft, but in the event it soon developed that not only were these aircraft not suitable for the purpose, but the pilots lacked any adequate training or interest to equip them for the task. As a result British ground forces throughout the early years of the war, in France, Norway, and Crete, were forced to fight with neither air cover nor air support. The disastrous results are history.

So much for the end results of 20 years centralized, dictatorial control of military aircraft design and production. If indeed this unified production resulted in any monetary saving during that time I am quite sure that such saving was wiped out many times over by the awful military losses which resulted from inadequate Navy and Army support aircraft in the early years of the war.

The same unbalance which I have described in terms of material development was apparent in the over-all status of the various branches of the air force. I believe these discrepancies were inherent in the organization and mission on which the concept of a unified air force is based. The primary task of an air force is to provide air power and on such a basis what we may term pure air power will always gravitate to a position of higher preference than air power designed for use as a part of the ground and sea arms. Certainly this is what occurred in England. As of 1941 the air forces were organized generally as follows:

(a) The Fighter Command: This represented the cream and the crowning effort of the entire RAF. Its mission was the defense of the British Isles, and over a long period of years it was given top preference for equipment, personnel, and funds. The highest goal of every ambitious Royal Air Force officer was to serve with the Fighter Command, and assignment to this force was used as a reward for merit and outstanding work. As a result, the best of the Air Force personnel gravitated to the Fighter Command, and the most rapid development of tactics and advanced thinking were concentrated there. The result was a highly effective force which paid valuable dividends in the critical Battle of Britain. But I think it important to note that this fighter force was not superior to our own fighter organizations in the Army Air Forces and the Navy; only, unlike our own fighter forces, it was developed at the expense of rather than in conjunction with the other types necessary to make up a balanced military force.

(b) The Bomber Command: This was second in preference only to the Fighter Command, both in material and personnel. The Bomber Command represented the concept of offensive air power, and following Dunkerque and the Battle of Britain, for a long period constituted practically the only offensive weapon within the British capabilities. Even so, it had suffered so many years of a second-rate position that it required nearly 4 years of strenuous effort after the outbreak of the war before the Bomber Command was able to mount a really effective attack.

(c) The Coastal Command: Its missions included overwater reconnaissance, protection of shipping, antisubmarine warfare and attacks on enemy shipping and naval forces. These missions, it will be noted, are those which in our own organization are the function of naval aircraft, both sea- and land-based. They are outside of the field of what may be termed pure air power. Holding at best a third-rate position of preference in the scheme of a separate and united air force, the Coastal Command entered the war poorly equipped, as I have previously noted, inadequate in size, and manned by personnel who had not been trained properly for operations in sea warfare. This latter defect became glaringly evident early in the war, and in 1940 in an abortive attempt to compensate for this mistake, operational control of the Coastal Command was transferred from the Royal Air Force to the Admiralty. This attempt at reform, however, occurred a great many years too late and was only a partial solution. It was not possible to overcome the inherent handicap of years of separation from the Navy, nor to make up for the lack of proper training and understanding of naval warfare on the part of Royal Air Force officers who manned the Coastal Command. Nor did the Navy, after years of being denied their own shore-based aircraft, have aviators or other personnel competent to take over these duties.

(d) The Fleet Air Arm: After 20 years under the control of the Air Force, it was handed back to the Navy in the spring of 1939, just 6 months before the outbreak of the war. This did not consist of all types of aircraft required by the Navy, but only of carrier- and ship-based aircraft, and a minimum of shore air stations for their support. I have already described the aircraft with which this Fleet Air Arm was equipped. The personnel situation was no better. Throughout the period of control the Royal Air Force, assignment to naval duty was considered as little better than punishment by most young Air Force officers. I quote here from a British naval publication which reviewed the subject:

"Service with the Fleet Air Arm was usually for 2 years. It was allowed to count as foreign service, even in home waters. Officers lost many of their shore allowances while serving in it, thus assuring its unpopularity among them. Having once served his 2 years, it was unusual for even a long-service officer ever to serve in it again, so that the time and effort spent in training him was lost to the Navy forever. Under this system it was obviously impossible for the Navy ever to train younger officers in naval aviation to fill the higher positions; later this became obvious when the Air Ministry had to nominate officers as wing commanders of carriers who were without previous sea experience. This is in no way to belittle the excellent work done by many wing commanders and squadron leaders, RAF, who served as senior air officers in aircraft carriers, but there was not sufficient continuity, there were divided loyalties, and no provision was being made for the future. Few, if any, Air Force officers would be prepared to jeopardize their careers by continuous service with the Navy, even if the Air Ministry would allow it.

"The Admiralty, continually prodded by the successive commanders in chief of the principal fleets, made several attempts to have the whole question reviewed, but without success. The Prime Minister eventually ordered that the subject was not again to be broached. Naturally, the situation was not hidden from the ambitious young naval officer who, having selected the Navy as his career, became doubtful of the wisdom of specializing in a branch whose future appeared shaky."

When after 20 years of muzzling and neglect the Navy was given back control of its own Air Arm its condition can best be described as being at least 15 years behind our own in development. And 6 months later the war burst upon it.

One of the most serious byproducts of this system was the lack of knowledge of the capabilities and limitations of aviation on the part of the senior British naval officers. This was the inevitable result of their being deprived as young officers of the opportunity either to participate in the employment of aviation or to serve as actual aviators and so to acquire an intimate knowledge and understanding of aviation. Consequently, as senior commanders, even when the Fleet Air Arm was returned to the Navy and the Coastal Command placed under their operational control, they lacked the background to enable them to use their air forces effectively. Many of the disasters which overtook the British Navy during the war may be traced to this lack of background.

(e) The Army Cooperation Command: The portion of the Royal Air Force assigned the task of furnishing support to the ground forces was, as I have already mentioned, even worse off than the Fleet Air Arm. It was essentially a paper organization, and what personnel were assigned to it were the leftovers from all of the previously listed commands. It was totally ineffective throughout the first 4 years of the war.

(f) The final element of the RAF organization was the Training Command. This command was well organized and reasonably well equipped to produce pilots, air crewmen, and mechanics for the Royal Air Force. However, the scheme of unification provided that all personnel for service with the Navy and Army elements should also be trained by this command. This system, from the standpoint of the Navy and Army, had the fatal defect that not only the technical training given but also the military training, tactical viewpoints and esprit de corps imparted to the students during this impressionable stage was strongly slanted to Royal Air Force concepts. Inevitably the young students came to look on the Air Force as the only desirable assignment upon graduation and, in fact, it became the general practice that only the lower standing students were assigned to flying duties with the Navy and Army. A number of thoughtful British naval officers stated to me their opinion that the denial to the Navy of the right to train students to the Navy standards and particularized requirements was, in the long run, an even more serious handicap than the Navy's inability to secure properly designed aircraft and equipment. I am strongly inclined to agree with this view. If aviation training included only the training of a student to fly an airplane it would undoubtedly be quite feasible and satisfactory to combine the aviation training of all services. In actual fact, however, the task of a training organization must include not only the teaching of flying ability but training in the tactics, the particular military requirements and the esprit de corps of the organization in which he is to serve. So long as these differ for the different arms it is essential that each service control its own training, particularly in the early stages.

In retrospect, the situation which I have outlined was the logical and inevitable result of the unified control of the military air resources of Great Britain being assigned to the RAF in 1919. By the very nature of segregation of aviation under an air commander, the needs of the Army and Navy were neglected in favor of the so-called pure air power. The proof of the pudding is appallingly evident in the history of the first 3 years of the war. In the Norwegian campaign the lack of carrier-based air power, either offensive or defensive, made it impossible for the British Navy either to intercept the German invasion or to support the ground forces landed there to oppose it. Without this air-naval support, which could not be substituted for by the Air Force, the humiliating defeat which occurred was a foregone conclusion. In France, in 1940, the RAF completely failed to furnish the air support which might have enabled the ground forces to check the German drive. Again, defeat was the logical result. In Crete, the following spring, the Navy had no effective carrier force to bring air power to the area, which was beyond reach of the RAF fighters. Lacking this air power, the naval forces were ineffective to oppose an invasion, and another humiliating and expensive defeat was inevitable. At Singapore the naval power represented by the *Prince of Wales* and the *Repulse*, which with proper air support might have smashed the entire Malaya invasion, instead was destroyed by unopposed Japanese aircraft. Thereafter, the fall of Singapore with its appalling consequences on the course of the war was only a matter of time. In the Battle of the Atlantic the British Navy's lack of suitable aircraft and properly trained air personnel to combat the submarine resulted in fantastic losses of ships and lives and incalculable lengthening of the war, and very nearly resulted in a fatal loss of control of the Atlantic sea lanes. This situation was not finally saved until the American Navy with its naval airpower was able to assert itself.

As I have said before, it is probable that in 1923 the question considered by the Balfour committee seemed largely academic to the general public and possibly to a considerable number of the members of Parliament. I have no doubt that Air Marshal Trenchard and the other enthusiasts who so vigorously urged unification of all air under a separate air force at that time were sincere in their beliefs as to the wisdom of their course, and the benefits to be derived by unified control and yet those decisions led inexorably to the disasters of Norway, France, Crete, and Singapore, and the near disaster of the Atlantic. In contrast, we can be thankful for the wisdom of the Morrow Board and the Members of the Congress who supported our recommendations for the balanced air, air-land, and air-sea power. Application of those principles enabled us to defeat the submarine in the Atlantic, transport and support our ground forces overseas, and, finally, by our magnificently equipped and trained carrier- and land-based naval air forces, to carry the war 5,000 miles across the Pacific to the Japanese homeland.

PART II

I come now to the second part of my statement, which is concerned with problems of training involved in the proposal to transfer the functions of antisubmarine warfare, fleet reconnaissance, and protection of shipping by land-based naval aircraft to the now Army Air Force. I emphasize the training aspect because I am presently serving as Director of Aviation Training in the Office of the Chief of Naval Operations, and in the event that such transfer were effected this problem would be my immediate concern. Because of this, I am naturally giving the matter considerable thought and study.

It is a little difficult to be entirely specific because the proposal itself is so broad and nebulous as to leave many questions unanswered. As a basis for consideration and discussion, I have been forced to make certain assumptions, which I set forth below:

(a) Aircraft units assigned the functions of overwater reconnaissance, submarine warfare, escort of shipping, and fleet support will be under the operational control of the Navy: This is so basic that it appears to me to require no discussion. May I remind the committee that one of the first steps taken by the British after the outbreak of the war was to place the coastal command of the Royal Air Force under the operational control of the Admiralty.

(b) Aircraft units assigned the above functions will be specifically and permanently assigned: This is a matter of vital importance. Any concept that these missions can be performed by aircraft and personnel drawn at random from the mass of land-based aircraft, such as the various bomber commands, is fallacious and potentially disastrous. The functions described above are highly specialized and can only be performed by personnel especially trained and aircraft especially designed and equipped for the purpose.

(c) Personnel assigned to such aircraft units will have sufficient permanency in this assignment to insure adequate training and experience in all grades: We have seen the difficulty experienced by the British Navy because of the failure of the Royal Air Force to observe this principle in personnel assignment. Unless this principle is carefully followed, I am convinced that no satisfactory state of training among these personnel can be achieved. I have in mind not only the initial training of junior personnel during one tour of duty with these units but also the requirement that more senior echelons be manned by officers with previous experience in this type of work. This, in effect, requires that a certain proportion of the officers initially assigned to this part of the present Army Air Force continue in such duties throughout their active careers.

(d) Personnel assigned must be satisfactory to the Navy: This is a corollary of the requirement stated above. I have described the practice which grew up in the Royal Air Force of assigning to the Fleet Air Arm and the Army Cooperation Command only the less desirable officers, and I am convinced that this pernicious tendency is so natural and inevitable under similar conditions of organization that it must be specifically provided against by legislation.

It will be immediately recognized that the above provisions will be distasteful to the Army Air Force and difficult of administration. Nevertheless, I am convinced that they are minimum requirements for the protection of the Nation's vital interests, if the Navy is to be deprived of its own land-based aircraft. Certainly if we can draw any conclusions from the British (and German) experience, this is true.

On the basis of the above assumptions I have made a study of the training requirements to inaugurate and continue the transfer of the functions now performed by land-based naval aircraft to what is now the Army Air Force. Starting with standard Army-trained personnel, I have outlined in detail a training program for pilots and flight crews for four-engine and twin-engine aircraft in numbers now operated by the Navy as currently provided by congressional appropriations. It provides specialized training for these personnel over and above the training which they have received to fit them for duty in the bomber commands, in order to give them the minimum proficiency required for the naval tasks. This training must include advanced overwater navigation, specialized gunnery training against surface craft and submarines, including use of depth charges, rockets, torpedoes, and special weapons, recognition of ships and submarines, naval tactics, submarine-detection devices, and familiarization with shipboard procedures necessary for a proper understanding on which air-surface cooperation is based, and similar matters not required for normal Air Force functions. I estimate that to train only the initial group of air-crew personnel would require about 10½ months, at a cost of $17,122,000, exclusive of station-maintenance costs, and pay subsistence and transportation of personnel. Thereafter a training program necessary to supply replacement personnel for normal attrition and rotation would have to be continued at an estimated cost of about $12,000,000 per year. This does not include ground maintenance and administrative personnel, who, it is assumed, would be provided by the present Army Air Force to meet the requirements for this service.

I wish to make it clear that the costs mentioned above do not represent merely a transfer of funds from naval to Air Force appropriations, with no net increase of cost to the Government. The $17,122,000 cited as initial cost would be over and above any expense of both services as now constituted. Of the $12,000,000 per year required for replacement training, I estimate that at least half and possibly two-thirds would represent a net increase over present costs of both services, since it would be necessary for the Navy to continue its training program for the seaplane squadrons remaining under its control. Thus, we would have two parallel training programs for the same function, and the unnecessary duplication would result in unnecessary expense.

In addition to Air Force personnel, I consider it a matter of vital importance that a certain number of naval officers likewise be trained in these duties and serve as active aviators with the Air Force units involved. If this is not done it is only a question of time before there are no naval officers with sufficient intimate background and experience in this particular type of operations to guide naval policies and requirements. Once this occurs we will find ourselves in precisely the position reached by the British Navy, that is, without officers in the command and flag ranks with personal knowledge and background for this important function of aviation. When this occurs, absolute divorce of the Navy and the shore-based aircraft on which it depends is a fact, and can only be changed by long years of rebuilding.

I do not by any means wish to give the impression that the costs I have mentioned above represent more than a part, perhaps a minor part, of the total cost involved. The aircraft used to perform the functions we are discussing must be designed and developed specifically for the purpose, as are the naval land-based aircraft at present. If we are to avoid the disastrous course followed by the British, the Navy must continue this design and development, even though the aircraft and equipment are eventually procured by the Air Force. The cost of such a program as this is outside of my immediate knowledge and my present duties, but I am sure that it will not be negligible. As examples, I cite the results of preliminary studies made by the Bureau of Ordnance and the Bureau of Aeronautics as to costs to the Navy in case of the proposed transfer:

(a) Additional cost of furnishing special ordnance shop equipment, required for maintenance of antisubmarine and other specialized naval weapons required for Army Air Force units assigned naval duties, $4,000,848.

(b) Design of new aircraft, technical liaison, operational development and research (additional cost), $1,158,660 per year.

Again I emphasize that these are but examples, and by no means a complete compilation of the additional costs involved.

I have been speaking here in terms of money costs involved in the proposed transfer of functions now performed by naval land-based aviation to the Army Air Force. Important and tangible though these costs may be, the sums mentioned, even multiplied a hundredfold, will be insignificant if it develops that by following in the footsteps of the British we incur the same penalties for faulty organization. The financial costs of such defeats as the British suffered in Norway, Crete, and Singapore are indeed tremendous; but the true costs cannot be estimated in terms of money alone, and may well lead to ultimate national disaster.

Grass Roots Hail Hoover Reforms

EXTENSION OF REMARKS
OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. GOODWIN. Mr. Speaker, coming at this particular time when the President has declared for increased Federal spending rather than reducing the costs of government, I direct the attention of the Members to the story of public reaction to the principle of economy in the Hoover reforms as so lucidly set forth in the article I append hereto by Max K. Gilstrap, chief of the central news bureau of the Christian Science Monitor:

GRASS ROOTS HAIL HOOVER REFORMS

(By Max K. Gilstrap)

CHICAGO.—It has caught fire at the grass roots. Enthusiasm for the Hoover reforms, fanned by enlightenment, is sweeping through the States.

Dr. Robert L. Johnson, president of the National Citizens Committee, told members of the Illinois Citizens Committee that growing interest in the Hoover report has brought forth 2,000 favorable editorials a week in the Nation's press. Less than one-half dozen papers have opposed the plan to reorganize the executive branch of the Government.

The Hoover report is leading in importance in mail received by Congressmen. Governors meeting at Colorado Springs, Colo., unanimously endorsed the general objectives of the commission. Labor support has been assured by Philip Murray, CIO chieftain, through James Carey, secretary-treasurer of CIO, and by William Green, head of AFL. More than 600 college presidents have offered to serve on commission committees.

State citizens' committees have been set up in 23 States to arouse interest in the reforms. A nucleus for committees has been formed in 20 other States.

Patriotic citizens realize that helping the Hoover Commission put over its objectives means helping save the country an estimated $50,000,000,000 in the next 10 or 20 years. More important, it means striking a tremendous blow for efficiency, economy, and good government, which constitutes a form of insurance for national prosperity and security.

Illinois and Massachusetts are out in front in efforts to arouse interest in the Hoover report. When the National Citizens' Committee tossed the ball to the States, 30 Illinoisans who had served on the Hoover Commission went into a huddle. Quickly they diagramed some sure-fire plays.

With Frank Bane, executive director of the Council of State Governments, as chairman to call the signals, they began to move toward their goal; a committee in every sizable town and county by the year's end. They first sat down with educators and prepared study material on the fundamentals of good government. Soon telephones began to trill over the State in offices of labor, civic, agricultural, religious, veteran, and women's organizations. "How about appointing a member of your organization to our State committee?" they asked. "Fine" came the replies.

When someone raised an objection to some part of the Hoover report, the committee explained that they were not asking everyone to be in favor of all the recommendations;

they were asking people to participate in work for the over-all objectives.

Groups were shown how to form Hoover committees of their own. They were requested to present at least one program a year explaining the Commission's work. Informational material was patterned to appeal to particular groups.

Mr. Bane said: "We make it our business to talk specifics; to convince people that Government isn't someone else's business; that Government is an organized agency established for service to the stockholders in the United States."

Some committee speakers are gladly giving 2 months of their time to explaining the Hoover Report. Financial support for the State committee is being sought through correspondence with thousands of community leaders.

Aside from helping the Hoover Commission, State committees are encouraging hundreds of thousands of people to become constructively and intelligently interested in government. They could well set a pattern for joint participation of citizens in other constructive public efforts.

Dr. Johnson believes that with the support given by the State committees, 50 percent of the Commission's recommendations will be put into effect within 1½ years. He expects that 85 to 90 percent of the proposals may be adopted in 2 or 3 years. Less than 6 months ago the Hoover Report was given almost no chance of enactment by many of the political analysts.

"Failure to put through the recommended reforms," Dr. Johnson said, "will result in serious inflation, deficit financing, a heavy relief load, and a business depression. And that is what the Russian Politburo hopes will happen."

State and city committees have a key part to play in the success of the national program. They are the sinews of national strength. They are directed from the national committee headquarters, 1421 Chestnut Street, Philadelphia.

Americans traditionally have been willing to pay the price of alert vigilance and work for their heritage of freedom. It is encouraging evidence of common sense that they now are willing to pay the same price for equally important good government.

In rallying to pursue a more vital democracy, the words of Abraham Lincoln can be remembered:

"With public sentiment nothing can fail; without it nothing can succeed."

California Conference Endorses Townsend Bill

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. HAVENNER. Mr. Speaker, I am in receipt of a letter from Mrs. J. A. Ford, director of the Townsend Legislative Bureau of Washington, D. C., in which she quotes a letter from Dr. Norman W. Pendleton, who is in charge of the Townsend southern California headquarters in Los Angeles. Dr. Pendleton's letter read as follows:

It is my pleasure to inform you that the California legislative (nonpartisan) conference gathered in State-wide conclave at Fresno (State College Auditorium), Calif., unanimously endorsed H. R. 2135.

Delegates representing the list of organizations enclosed, all voted in the affirmative.

The organizations represented at the Fresno conference included a large number of labor unions, both A. F. of L. and CIO, and numerous lodges of the railroad brotherhoods, together with farm organizations, child-care groups, veterans' groups, minority nationality groups, and representatives of various political, professional, fraternal, and community organizations.

Loyalty of the American Negro

EXTENSION OF REMARKS

OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. MOULDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Thomas W. Young, president and general manager of the Guide Publishing Co.:

STATEMENT OF THOMAS W. YOUNG

My name is Thomas W. Young. I am president and general manager of the Guide Publishing Company, Inc., publishers of the Journal and Guide, a weekly newspaper with a circulation of 65,000, principally in Virginia and North Carolina.

I am happy to accept the invitation extended me to appear before this committee because I feel very strongly the need for bringing into proper perspective some of the opinions that have been expressed publicly concerning the loyalty of the American Negro.

It would serve no useful purpose for me to dwell upon the more obvious manifestations of the Negro's loyalty. These have already been mentioned here by others. Instead I should like to address myself to what seems to me to be the flimsy foundation upon which the apprehension about the loyalty of this group rests.

Please bear this in mind that there is no evidence on record of the disloyalty to their country on the part of Negroes generally. It has not been charged even that there have been overt acts by Negroes on which suspicion of disloyalty could be predicated. On the other hand the entire record of the American Negro's service to his country from the Revolutionary War in which Crispus Attucks, a Boston Negro, was among the first to shed their blood for this Nation's independence, down to the recent World War II in which members of this group played important and heroic roles on every front, is a satisfactory refutation of such charges.

That record and the contributions of the Negro to this country's great peacetime achievements should render unthinkable any presumptions of inconsistent conduct at any time in the future. But there has been expressed a dissent by one who has at least won the attention of those for whom, and to whom he now purports to speak. And it is that dissent which occupies our thinking today. I think it will be helpful to recognize that simple fact, and deal with it directly and specifically.

What basis, if any, is there, for believing Paul Robeson when he says that in the event of a war with Russia the Negro would not fight for his country against the Soviets?

No matter how strongly we may believe it is false, that statement coming from Mr. Robeson is not easily disposed of. His own life story is an inspiration to the humble people for whom Mr. Robeson now presumes to speak. Whatever else we might think of his personal loyalties, it would seem highly improbable that Mr. Robeson could be unfaithful to his own people. So it must be conceded that his intemperate outbursts at Paris carried appreciable weight, however much we may dislike the notion.

Two things can be pointed out to discredit that statement. In the first place, Mr. Robeson is now so far out of touch with the Negro's thinking and his everyday emotions that he can no longer speak authoritatively about or for the race. His distant travels and his latter-day preoccupations with the affairs of the Soviets have broken the bond he once held with the Negro mind. He has so completely removed himself from the intimate affairs of the Negro group in America that he no longer has the opportunity to know nor the authority to speak about the aims and aspirations and resolutions of this group.

The plain truth about the matter is that in his Paris declaration Mr. Robeson has done a great disservice to his race—far greater than that done to his country. And if Mr. Robeson does not recognize the injury he has done to the cause of the Negro in this country, then that underscores his disqualification as a representative of the race. And if he does not recognize the injury he has done, he must also be cognizant of the extent of his betrayal of his race in the interest of the new cause to which he now devotes himself.

But the second point, while less obvious, is more helpful in arriving at a proper perspective. It is this: The Negro in this country is as basically American as any other element of the population. He has been on the soil as long; he has fought to protect and preserve its liberties, and he has toiled to help build the Nation during all the years of our history. The things he yearns for and strives for are entirely compatible with the aims and the shibboleths of Patrick Henry and Benjamin Franklin and George Washington and all the others who helped found this Nation.

We have to acknowledge that in some respects our democratic processes have slowed down or failed temporarily. But any overemphasis of these circumstances obscures the more important fact that despite these occasional reverses, the machinery which we in this country have embraced for the realization of our declared way of life is nevertheless accomplishing, however slowly, the most cherished aspirations of the Negro group. The evidences of this accomplishment are everywhere, although they are frequently corrupted by the miscarriages of the machinery.

I think it is very clear that what the Negro in this country wants is simply to have our democratic machinery functioning properly. We do not want to throw out the framework of our present plan of operation in favor of another that has never been exposed to the problems which frequently bog down our machinery.

The dissatisfaction so often shown for the manner in which our democratic processes are functioning is too frequently misunderstood. And a few opportunists with questionable motives have exploited this to the extent that it now becomes advisable to adopt effective countermeasures.

We have this disadvantage: The Communists have thrown what amounts to a picket line around our democratic establishment. And we are observing that picket line with the same blind reverence that is shown to all other picket lines in this country. Everyone accepts the righteousness of the cause of the pickets, no matter how unreasonable or how wrong it may be.

I experience some of that reluctance today, for I know that there are some who will ask: "Who is he to question the wisdom of Paul Robeson?" But until someone dares to cross the picket line thrown out about our establishment by these Communists, the true cause of the Negro will be lost by the default of those who discern its outlines and recognize the dangers it faces.

Mr. Robeson does not speak for the young men who served their country so well during the recent war. He does not speak for the common people who read and believe in the Negro newspapers. He does not speak for the masses of the Negro people whom he has so shamelessly deserted.

I have heard Paul Robeson declare his own personal disloyalty to the United States. He has no moral right to place in jeopardy the welfare of the American Negro simply to advance a foreign cause in which we have no real interest.

It is my firm conviction that in the eyes of the Negro people this false prophet is regarded as unfaithful to their country, and they repudiate him.

Threatened Steel Strike

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. BUCHANAN. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include therein three editorials: First, The President's Plan, from the McKeesport Daily News, July 13, 1949; second, A Political Strike, from the Pittsburgh Post-Gazette, July 14, 1949; third, Impasse in Steel, from the New York Times, July 14, 1949.

President Truman's successful effort to avert a steel strike demonstrates that it is not necessary for the Government to crack down with an injunction just about the time somebody starts the cry "national emergency."

President Truman obtained a 60-day postponement of the steel strike of the CIO United Steelworkers by setting up a fact-finding panel to make recommendations for settlement of the dispute. While the board's findings are not binding on either party, labor, or management, nevertheless, they will have an effect on the settlement of the controversy.

The editorials follow:

[From the McKeesport (Pa.) Daily News of July 13, 1949]

THE PRESIDENT'S PLAN

Unless something sensible happens, the Nation's steel industry is scheduled for a strike-compelled shut-down Saturday.

Yesterday, President Truman tried to make a sensible thing happen. He suggested an extension of present labor contracts for 60 days while a fact-finding board looked into the dispute.

The board, composed of three men named by him, would study the wages-pensions controversy, and file its findings. Negotiations, then could resume on the basis of this study.

Philip Murray, head of the United Steelworkers with the authority to call the strike at his own discretion, has accepted the President's plan.

A scattering of the smaller steel companies has sent word to the White House that these companies will string along. But United States Steel Corp. and Republic have turned thumbs down. Similar rejections are expected from others.

Thus, a new stalemate is being fashioned, while a basic industry, in a period of economic readjustment, rests in danger of a prolonged stoppage which could have a disastrous impact on the Nation.

The trouble now is quibbling. President Truman, in his proposal, skirted the Taft-Hartley Act which, if employed, would permit the proclamation of a national emergency, the union-hated injunctions and a fact-finding board to operate under an enforced extension of the contracts.

He apparently had a mixture of politics and union preference in mind. By using Taft-Hartley, he would be in a position of personal embarrassment, in view of his futile fight against the measure and of opposition to the wishes of the union leaders whom he considers his chief supporters.

So his plan can be considered a preliminary to what might become an emergency, necessitating his use of the Taft-Hartley provisions. In the national interest it should be accepted as such. The President unquestionably is in a tight spot.

By refusing to go along the big steel producers appear to have forgotten that, in this impending crisis, it behooves all factions to seek a compromise if possible. Instead of agreeing to a compromise, they have struck back at the President in a manner which undoubtedly hurts.

They have advised him that Taft-Hartley still is the law of the land and applicable to the present situation. They are right, of course. But there is a question, 3 days before the strike date, whether being right is more proper than being sensible.

The President's requested 60-days' delay has a chance of succeeding if for no other reason than that time itself holds the potentialities of agreement. It should be tried. Certainly it should not be quibbled away when it stands as the only real hope of averting the hardships of a steel shut-down in a delicate era in which common sense, cooperation, and harmony are vitally essential.

[From the Pittsburgh (Pa.) Post-Gazette of July 14, 1949]

A POLITICAL STRIKE

Until yesterday we had supposed that the dispute between the United Steelworkers and the steel industry was economic. Now, however, it appears to be largely a political struggle over the Taft-Hartley labor law.

The union, we believe, would have been wise simply to have accepted Mr. Truman's proposal that the strike be postponed for 60 days while a fact-finding board went into the situation. That would have left the onus upon Big Steel and other producers who failed to accept the proposal and would have given the union a little more time in which to figure out another move.

But by deciding to strike a major segment of the industry Saturday morning, the union puts Mr. Truman squarely up against the question as to whether or not the strike constitutes a national emergency.

That will play into the industry's hands. Because if the strike materializes, the President will have no choice but to declare a national emergency and invoke the injunctive provision of the Taft-Hartley law, as Big Steel and other industry leaders want him to do. Thus the usefulness of the law which the union is now fighting to have repealed will be demonstrated again.

As for the public, the overriding consideration is the prevention of economic hardship that is bound to result from a strike in a basic industry. The President tried to intervene in a manner that would not antagonize labor. In doing so, he antagonized the industry. Now he must assume the role of an impartial referee under the law.

[From the New York Times of July 14, 1949]

IMPASSE IN STEEL

The present impasse in the steel industry, with a Nation-wide strike at the end of the week looming as at least a definite possibility, is a sobering illustration of what can happen when the Government plays politics with basic legislation.

Having demanded the repeal of the Taft-Hartley Act, Mr. Truman finds himself in the embarrassing position of badly needing the services of that instrument. Section 206 of the law, dealing with national emergencies—such as that now looming in steel—provides that "whenever, in the opinion of the President, * * * a threatened or actual strike * * * will, if permitted to occur or continue, imperil the national health or safety, he may appoint a board of inquiry to inquire into the issues involved in the dispute and make a written report to him within such time as he may prescribe. Such report shall include a statement of the facts * * * but shall not contain any recommendations."

Disregarding the machinery provided by the law, Mr. Truman has elected to employ a formula of his own. He has asked for a postponement of the strike for 60 days; in the meantime a board of inquiry, to be named by him, would study the facts in the dispute and propose a basis of settlement. The executive board of the CIO steelworkers has voted to accept the proposal, but at least three of the big steel companies have rejected it. The union therefore announced yesterday its intention to walk out, in the case of these companies, at midnight tomorrow night.

The steel companies would be justified if they were merely insisting that the President adhere to the procedure specifically laid down by Congress for dealing with such a situation as this. But they are not simply being legalistic and technical about the matter. As they see it, they are, in effect, being asked to submit to arbitration demands which, rightly or wrongly, they believe were not submitted in good faith but in the hope that some part of them could be obtained under threat of a Nation-wide strike.

If the steel industry is chary about leaving this issue to a fact-finding board, moreover, that reluctance is certainly not without historic justification. In the fall of 1945, capitulating to labor's demands for a general wage increase, the administration named just such a committee and the latter brought in a finding that the steel industry could afford to raise wages 18½ cents an hour. Even the Government abandoned the pretense shortly afterward that price ceilings could be maintained in the light of that rise in costs, and this basic wage award proved the initial impulse for a wage-price spiral that was to endure for 3 years.

That may have been good political strategy, but it was an economic blunder of major magnitude. It was a blunder whose repetition, even on a much smaller scale, the country could not afford at the present juncture.

Liberty Enshrined in Law

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my re-

marks in the RECORD, I include the following address delivered by me before the Overseas Women's League at Boston, on July 13, 1949:

Madam Chairman, members of the Women's Overseas League, friends and guests, with a deep sense of honor and pride I am greatly pleased you invited me to respond to the toast, "Liberty Enshrined in Law." Joining with you this evening in this national convention here in Boston brings back to me many memories of our association—memories arising from our service to the country which we so greatly cherish. I am happy to meet with you again, for as the years have seemingly melted away, your friendship has remained warm and strong. From year to year it has inspired me with fortitude and resolution to carry on.

Throughout the Nation today it is well known that I have the honor to represent in Congress the very historic Fifth Congressional District of Massachusetts. As in the early days of our country, it is the home now of fine, loyal, patriotic citizens. In this district is Middlesex County, and, among others, the towns of Lexington, Concord, and Bedford. It was through old Middlesex that Paul Revere rode through the night spreading the alarm. It was from these towns and villages and farms that the strong, brave men assembled together to fight for liberty. What they did then is admired and revered by those who cherish freedom throughout the world today. They were resolute and stood their ground, and a new Nation dedicated to liberty and freedom had its beginning. To gain this liberty and freedom our forefathers of those great eventful days of long ago paid an enormous price. You women of the Overseas League have paid a great price. Since those days up until this very moment we have been paying a tremendous price to maintain our freedom. Loyal Americans never have considered this price too high.

During the years since the war and particularly during recent months a great amount of criticism has been directed at the cost of maintaining our military services. You and I have seen the hue and cry of, "Let's cut down the huge military budget." "Too much money is being expended for our military forces." "Too much money is being wasted by our military forces." "The Nation can't stand the strain of paying these huge sums amounting to billions of dollars to maintain a great Army, a great Navy, and a great Air Force." "Whom are they going to fight?" "Why is it necessary to keep this huge military organization at this tremendous cost?" These and many more remarks like them are samples of the statements we have seen from time to time in the press. Yes, I am sorry to say, they are representative of statements that have been made on the floor of the Congress. My reply to these statements is just this: As long as we maintain a strong Army, Navy, and Air Force no nation or combination of nations can take away from us this precious thing we call liberty. Our military forces constitute the only protection we possess after all else has failed, to any challenge of our freedom, arising from the outside. It is vital they are adequately maintained.

In the process of keeping our military services completely modern in every respect, it is necessary to make drastic changes. These changes from time to time are very costly but in the process of timely development they are necessary. If a great airplane such as the B–36 becomes obsolete, it must be scrapped in favor of a weapon better able to do the job at the required time. This is costly but much has been learned in the process. If a great ship becomes obsolete it is far less costly to scrap it in favor of more effective means of accomplishing the necessary task at the required time. If a type of gun or tank or method of ground warfare, in the process of development, becomes ineffective then new advanced effective weapons and methods must be found regardless of the cost. A military organization is constantly developing, constantly improving, constantly striving for the best possible means of doing the job and upon the success of that job, ladies and gentlemen, depends the protection of our liberty and freedom.

During the many years I have had the honor of being a Member of Congress there has been no Government department more careful or more scrupulous, more exacting or more prudent in the expenditure of the people's money than has been the military departments. Many have written or have said in public addresses, "Cut down the waste in the military departments." What waste—I say, what waste? War is waste. War is waste of people. It is a waste of energy. It is a waste of living and progress. It is a waste of life and property. It might well end civilization as we now know it to be. The total casualties of killed and wounded occurring in all our wars amount to approximately 1,500,000 men and women—I repeat—1,500,000 lives have been sacrificed. This is tragic waste. Think of what all of those lives would have meant in accomplishment, in energy, and in relation to others. But they made a greater contribution, for without their sacrifices our country would not be free and all of us would not have the priceless privilege of liberty. If to save our liberty and freedom we must fight, then we will fight to the glorious end. This we have demonstrated to all humanity. Those who know freedom cannot live in chains. In the heart of every patriotic American there is deeply engraved a standard of life. Patrick Henry gave it to us years ago when he proclaimed, "Give me liberty or give me death!" If our liberty is worth our lives, it is worth our resources, it is worth our total energy, our every effort and our unselfish cooperation and loyalty to the country. This is our land and its free soil and air is a part of our body and soul.

What is this precious right we call liberty? Liberty is not a form of government. Liberty is not a means of making money or the accumulation of property. Liberty is not a religion. Liberty is not a philosophy. Liberty is a privilege. It is ours to enjoy while we are here. It is ours to protect for those who follow us. Liberty is a way of life. The desire for liberty and freedom is born in the heart of every man and every woman. Inwardly, liberty is truth, for if in our hearts we are truthful we experience freedom of conscience. If we live by truth we experience freedom of mind and soul. Outwardly, liberty means something more factual and tangible. In our associations with others liberty means the right of the individual to conduct his own affairs as he pleases with only such legal restraint as the public good may require. Freedom means the power of the individual to make a voluntary choice and that power is restrained by law only in its relation with the rest of society. This is the meaning of liberty and freedom and just as it is the meaning for us as individuals it constitutes the meaning for individuals formed together as a nation. This concept of liberty is as old as mankind. Inwardly, Christ was free because Christ was truthful. Outwardly, Christ experienced the cross because His spirit of liberty was not enshrined in law. It was not until seventeen hundred and eighty-seven years after Christ that a group of determined men decided to enshrine their hard-won liberty in law.

When our forefathers drafted the Constitution of the United States they molded the greatest document of law ever conceived in the mind of man for the protection of this way of life known as liberty. In the year of 1789, they wrote: "We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America." This is the most glorious declaration of purpose ever written. To carry out this purpose our forefathers defined and established the blessings of liberty in the Bill of Rights. In this notable document they wisely stated there shall be no law respecting the establishment of religion or prohibit the free exercise thereof. There shall be no law abridging the freedom of speech. There shall be no law abridging the freedom of the press. There shall be no law abridging the right of the people to assemble peacefully and there shall be no law prohibiting anyone from the right of petition to his government for a redress of grievances. Then, there is established the right of the people to be secure in their person and in their homes against unreasonable search and seizure. Also, they provided and established the right of every citizen who is accused of wrong to a trial by jury. These are the guaranties which give to us the right to live as we desire, to make our own decisions and to make our own choices, restrained only in the relation of these decisions and choices to the whole of society. This is liberty enshrined in law.

The United States is the only nation on earth today founded and based on these concepts of liberty and the only country in which the individual's freedom is guaranteed by law. Possessing this liberty and given the privilege of living in freedom carries with it a great responsibility. The preamble of the Constitution speaks of liberty for ourselves and our posterity. Our fathers and forefathers preceding us never forgot for one moment the responsibility of protecting liberty for the present generation and their posterity. We have that same responsibility. It is our duty to protect the freedom which we have the priceless joy to experience, in order that the generations to come may likewise experience this free way of life. If we maintain our military forces with the highest quality of personnel and the highest degree of efficiency, we need have no fear of the destruction of our liberty from any combination of forces outside of the country.

All of us, however, must be alive to the fact it is possible for our liberty to be destroyed by forces now existing within our country. In all sincerity and with all the energy I can muster, I say to you that it is the duty of every loyal American to demand and fight for the annihilation of these forces. Any organization, any group, or any individual having the objective or intention to destroy our Government and the laws which enshrine our liberty should be exposed and declared by law as enemies of the country, denied the right of citizenship and summarily dismissed from this land of liberty and freedom. For many years in public addresses throughout this Nation and on the floor of the Congress, I have fought and exposed the power of communism in this country. I have experienced the retaliation of communism. So have my friends. I have experienced the sinister, underhanded viciousness of communism's effort to destroy. I have experienced its malicious method of character assassination. I have received their threats to destroy me. I have received their notes of death. I know what I am speaking about. I say to you that either communism must be destroyed in the United States or the liberty which we now so greatly cherish will no longer be enshrined in law. Freedom will be gone. Freedom will have disappeared from its last home on this earth and the decency and dignity of life which we prize so highly will be lost forever. Many of you saw the concentration camps of Europe. These concentration camps are factual symbols of what happens when people do not have the right of liberty. We must see to it that there are no concentration camps in America. Communism must go. If every loyal man and women in this

country would demand the abolition of communism in America it will be done. This is a Nation in which we operate by law and by the process of law we can protect this Nation from the devastating force of communism. In all of our legislation we must be very careful of the direction that legislation takes and the total effect it has on the country. Remember this—that just as it was possible to enshrine our liberty in law it is possible by law to take it from us.

For many years now I have taken an oath that I will support and defend the Constitution of the United States against all enemies, foreign and domestic. I know many of you have also taken a similar oath. We must, at all times, be true to ourselves. We must never forget that our solemn duty is to measure every act we do from the viewpoint as to whether or not it protects our country and our free way of life. This is our responsibility to posterity—to the generations to come who will depend on the acts we do during this—our time—when we are privileged to be here. We must do all in our power to protect our country, to constantly improve it, to continually make it a better place in which to live. We must strive to live together in friendship, for in friendship there is truth and understanding. With truth and understanding lighting the way it might be possible for this Nation to nourish and give to the world its constant hope of "liberty enshrined in law."

Medical Care

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. ANDERSON of California. Mr. Speaker, in all this clamoring for socialized medicine it is encouraging to note that some local communities have pretty well solved their health problems.

The Santa Clara County Medical Society in California has embarked upon a very interesting program which might well serve as a model for many other countries in the United States. For the information of the House membership I am including herewith a communication from the Santa Clara County Medical Society and excerpts from one of their various newspaper ads.

SANTA CLARA COUNTY MEDICAL SOCIETY,
San Jose, Calif., June 30, 1949.

Hon. JACK Z. ANDERSON,
House of Representatives,
Washington, D. C.

DEAR JACK: I thought you would like to know that the council of the Santa Clara County Medical Society was extremely pleased with your letter of May 30 which was read to the council at its last meeting. We plan to print the next of your letter in the next issue of our membership bulletin.

Last December you were kind enough to allow me the time to outline to you the work that the Santa Clara County Medical Society was doing to guarantee the availability of medical care to everyone, irrespective of income, in this county. At the time I also outlined to you the other public-service projects which the local medical profession were assuming as part of their community responsibility. Now that medical societies throughout the country are passing resolutions condemning compulsory health insurance I thought that it might be of assistance to you to know that the doctors in your own area are doing a great deal more than just passing resolutions in connection with this great problem of distributing medical care and medical-care costs. In Santa Clara a definite stand has been taken on certain fundamental obligations of the medical profession to its public and we are pleased to forward you now the attached copies of our first two newspaper advertisements which may serve as tangible evidence of the steps being taken by this county medical society. We solicit your particular attention to the two paragraphs in the second column of each advertisement, which paragraphs are headed "Service for all" and "Protection for all." The first advertisement ran in all the daily and weekly newspapers in this county. The second advertisement appeared in San Jose and Palo Alto dailies. More will follow on a continuous schedule.

It is the intention of the medical society to use these advertisements as a means of informing the public about the local medical profession guaranty that no resident of Santa Clara County will go without necessary physicians' services simply because they might not have the ability to pay for those services. While the public advertisement of such a policy is new, the principle of course is not, as doctors have been rendering such services for centuries in accordance with their oath.

The Santa Clara County medical society began to spread the word about the fact that this medical society had officially adopted this policy on an organizational basis just about 2 years ago, or at approximately the same time that Alameda County began published notices about their similar guaranty. Locally, all public health nurses, welfare workers and church and charitable organizations were advised of the society's interest in trying to locate any person who may be deprived in any way of needed care. From the period August 1, 1947, to April 14, 1949, a total of only 22 cases were called to our attention. Fourteen of these cases were referred to physicians who performed the necessary services without charge to the patient and without causing the patient embarrassment in any way for having received the services on that basis. The remaining eight cases were all found to require types of services which could be easily secured simply by referring the patient to an organization or service which was already available to persons coming in their classification. By this, we mean they were found to be eligible for county hospital admittance; were entitled to services under the California Crippled Children's Act, or could receive funds for their care from the Cancer Society or the national polio funds.

It was not with some fear of a possible avalanche of such requests coming in if we ran a newspaper advertisement proclaiming this guaranty, but on April 18, 1949, nevertheless, the first advertisement appeared. Nothing like Governor Warren's estimated tens of thousands medically uncared for persons appeared on the scene. We have since run a second advertisement and to date we have received a total of only 14 requests for consideration. Seven of these have been taken care of in the following manner: Four were referred direct to physicians and have received care. One was referred to the county hospital and received care; one was entitled to care under county hospital provisions in San Joaquin County (where the man was a resident) and the seventh case was given care under the provisions of the Crippled Children's Act. The other seven inquiries which we received did not require physicians' services under the terms of the guaranty, but were persons making inquiry as to whether or not they could secure physicians' services on an open credit account with a doctor. One of the cases was a lady asking if we could have a doctor call on a neighbor of hers who did not want to receive the services of any physician, but the neighbor believed those services were required.

We have noted that of all the cases considered, 40 percent of the inquiries were regarding prenatal and maternity care for medically indigent, nonresident persons. Since this was an indication that there does exist, in a minor way, one unfilled medical need within our community, the medical society's public-health committee made a thorough investigation and have made a recommendation to the county board of supervisors that may help correct this situation. The recommendation is to the effect that since any pregnant female in labor presenting herself either at a private hospital or a county hospital is required under California law to be admitted immediately as an emergency case, that the board of supervisors declare that the "emergency" officially be recognized at any time prior to labor commencing so that proper prenatal attention can be given all such cases. It is the sincere belief of this county medical society's officers that the ferretting out of unfilled medical needs is something that should be done on a local community basis, and that the correcting of any situation should be carried out through local planning and administration to meet the needs and desires of the people of the area.

In order to avoid the possibility that charges may be made that our advertisements were not read (despite the fact that they covered nearly a quarter page of each newspaper) we included and offered to send any inquirer a packet of information about various health-insurance plans that were available in this area. Our first advertisement brought in 51 requests for these pamphlets and our second advertisement brought in 18 requests.

As a further footnote, we should like to point out that prior to the first advertisement appearing an exact printed copy was mailed to each member of this medical society together with a postcard ballot and request for favorable or unfavorable comments. Sixty percent of the actively practicing members voted 125 to 4 in favor of the advertising program. One hundred and six to twenty-three voted to have the society issue this guaranty of medical care for those who needed it. One hundred and eleven voted "yes" (against nine votes of "no" to publicize the society's desire to be informed of anyone having been charged a fee that they believed was excessive. We mention these tabulations to indicate that this program in this county is not a propaganda device concocted by a small committee and activated by the officers of the society, but is, on the other hand, a sincere and continuing program which has the wholehearted support of practically all of our members.

We are pleased to submit the above information to you and hope that by having it in your files it may serve as a reference someday if you are ever called upon to indicate just how far beyond the passing-resolutions stage the doctors in your own area have progressed.

Most cordially yours,

JOS. F. DONOVAN,
Executive Secretary.

SERVICE FOR ALL

If you know of anyone going without a physician's care simply because of financial reasons—please call our medical society office, at once. The medical profession of this county, in keeping with its individual member's oath always to place the patient's welfare above every other consideration, guarantees that anyone needing the service of a doctor can get that service irrespective of the patient's ability to pay.

PROTECTION FOR ALL

Any professional act believed to be contrary to public interest or the charging of a

fee believed by the patient to be excessive, should be reported in writing to the society. The services of the medical society's ethical conduct committee are available to all.

Timely Observations

EXTENSION OF REMARKS
OF
HON. PHIL J. WELCH
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. WELCH of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial taken from the St. Joseph News-Press of July 13, 1949, written by Harold M. Slater, city editor, St. Joseph News-Press, St. Joseph, Mo.:

TIMELY OBSERVATIONS

There are some scenes in most people's lives that do not die in memory. One that will not be forgotten by thousands came just a year ago this Friday morning at 2 a. m. It was the hot, sticky, stuffy, crowded Philadelphia convention hall as Harry S. Truman formally accepted the Democratic nomination for President and started on the most amazing underdog trail to victory in the history of the Nation.

Truman truly fitted into the legendary knight-in-shining-white category as he came before that dead-tired convention session. The man from Independence, dressed in sparkling white raiment, wasn't conceded as much as a prayer of a chance by most of those present when he came out on the platform. Only a few hours before, the weary delegates, who had been in session since 11 a. m. the day before, had seen the Mississippi and Alabama delegations stride out of the hall in indignation over the adoption of the civil-rights plank. The Wallaceites were planning to open their convention in less than a week. The Democrats were split wide open.

Everything seemed stacked against Harry. And he seemed to be the only one who didn't know it. While the convention had done its formal wrangling over the selection of a vice-presidential nominee, Truman sat on a veranda just outside the big hall, mopped sweat from his television make-up and chatted with friends. Then minutes later he and Alben Barkley appeared for their acceptance speeches. Someone had said the Democratic convention had a for-whom-the-bells-toll atmosphere. Truman vanished that with a fighting speech in which he declared the Democrats would win and the Republicans lose "because we're right and they're wrong."

It had been this kind of convention: Some of the delegates were so disheartened that when the time came to select a vice-presidential nominee they had whispered around an old story as appropriate for the occasion. It was about the man who went into a store and ordered a pair of trousers. "Brown or blue?" inquired the clerk. "It doesn't matter," said the customer, "they're for a corpse." And Jim Farley, great Democrat and great optimist, couldn't be talked into making a prediction on the outcome of the election. "I've got to protect my reputation," Jim smiled to newsmen.

Just 2 weeks before in that same hall the GOP had nominated Thomas E. Dewey in a gay, jubilant, and scrappy convention. The contrast in Republican Philadelphia then and at the Democratic convention was great. Some were saying you wouldn't know it was the same town unless you looked at the sign on the depot. As Dewey was nominated the night of June 24, a Republican publicity writer sitting next to this reporter proudly displayed the lead on his story. It was "Thomas E. Dewey received his Christmas present early this year. Just 6 months to a night before Christmas Eve he was handed the Presidency on a platter." Oh, brother.

The Republicans were so confident they had spent much of their convention time scrapping over the distribution of Federal patronage after Dewey was in. Some of the Democrats at their's were worrying as to how long civil service and merit systems would keep them in their political jobs. Then Harry Truman came along with his acceptance speech and changed things. If ever there was a convention that needed a tonic it was that queer and pathetic conclave, and Harry Truman provided it. He was the little man who didn't know he was licked and his courage from there caught the imagination and captured the votes of enough Americans to give him victory in November.

It hadn't been so many years before that Truman as a young farmer had been an usher at a Democratic national convention. That night last July he acted in his old capacity by showing the Democratic audience how the victory seats could be reached despite barricades.

Extension of 52–20 Unemployment Compensation for Our Veterans

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. O'HARA of Illinois. Mr. Speaker, I have received many communications from the people of Illinois urging, as did the President of the United States in his memorable message to us last week outlining plans for keeping America prosperous, the extension of the unemployment-compensation provisions of the Servicemen's Readjustment Act, beyond its expiration date of July 25. We are only a week away from this date and the Congress must act at once if we do not wish the hazard of our war veterans again being forced onto the streets as sellers of apples.

We are being asked to do a very simple thing. At a time when there is unemployment and when the veteran who fought to save the very life of this country may be at a disadvantage because his years of war service kept him from the labor market, and in certain instances, caused his loss of seniority position, may be the first to be out of work, we are being asked to protect him in these moments which will be anxious ones for him and his family. We are being asked as well to continue a program which will protect the whole country by keeping some purchasing power in the hands of consumers—employed or not, that their temporary hardship may not cause further lay-offs and further unemployment—the way a depression starts.

I wish to enter into the record at this time a letter from Mr. Lyle D. Gumm, chairman of the Illinois State Council of the American Veterans Committee, which I am sure will carry great weight with my colleagues because of the well-known policy of the AVC in its approach to problems of viewing the veteran as a citizen first. The stand which this fine organization takes in urging extension of 52–20 must be accepted, therefore, as one motivated by concern for the welfare of the entire Nation as much as by the desire to obtain for veterans that protection against unemployment which AVC has found is absolutely necessary. Mr. Gumm's letter follows:

JULY 9, 1949.

Hon. BARRATT O'HARA,
Washington, D. C.

SIR: The Illinois State Council of the American Veterans Committee is in the process of conducting a campaign to extend the unemployment compensation provisions of the Servicemen's Readjustment Act (52–20). You know, of course, that these benefits are scheduled to expire on July 25 unless extended by act of Congress.

Some time ago, the national planning committee of our organization passed the following resolution unanimously:

"Whereas unemployment is increasing and has become critical in certain industries; and

"Whereas veterans of World War II are disadvantaged in that many have been unable to accumulate sufficient benefits under the Unemployment Compensation Act, or have returned to civilian employment so recently that they stand in immediate danger of being the first laid off, and

"Whereas World War II veterans recently discharged have not yet been fully rehabilitated in respect to obtaining employment: Be it

"*Resolved*, That the national planning committee of AVC urges the Congress to amend the unemployment-compensation-benefits provisions of the GI bill of rights by extending for 5 years the entitlement period inasmuch as the unemployment-compensation provisions of the Servicemen's Readjustment Act (GI bill of rights) expire July 25, 1949, except for a relatively small group of veterans who were not discharged from the service prior to July 25, 1947."

You are undoubtedly aware of the position AVC has taken with respect to bonus and veterans' pensions. We look upon the extension of 52–20 in a different manner; as must legislation for unemployed veterans at the present time. Here are some of the reasons:

One million two hundred and fifty thousand veterans have already used up their benefits under the Servicemen's Readjustment Act.

More than 750,000 veterans are now drawing unemployment compensation under the Servicemen's Readjustment Act. They will lose such benefits on July 25, unless 52–20 is extended by Congress.

In Illinois, 35,147 veterans applied for 52–20 on the week ending June 11, 1949, as compared to 18,659 who applied for similar benefits on the week ending June 11, 1948.

Thousands of veterans who have been in school since the end of the war will be unable to draw State unemployment compensation, not having accumulated credits under the State unemployment insurance law.

Because of the rapid rise in unemployment of veterans and because in some instances veterans have the least seniority and are the first to be laid off, it is our contention that unemployment compensation provisions of the Servicemen's Readjustment Act should be extended.

We respectfully urge you to use your influence to force this legislation out of the House Veterans' Affairs Committee in order to secure an early vote. We also urge you to sign the discharge petition which Representative HUBER is circulating, in order to force his bill, H. R. 1374, out on the House floor.

We would appreciate hearing from you regarding your attitude toward this legislation and specifically what you may be able to accomplish toward insuring its passage.

Sincerely,

LYLE D. GUMM,
Chairman, Illinois State Council.

I would emphasize the fact that in the demand for the extension of 52–20 AVC, which approached the bonus and pension propositions from a different viewpoint, is lined up with the other veteran organizations. There is no division of opinion among the spokesmen for the veterans. All are in agreement that 52–20, in view of present conditions of employment, cannot be permitted to lapse.

Common decency to our veterans, and a proper concern for the welfare of our Nation, demand that we act at once in conformity with President Truman's recommendation and vote extension to 52–20.

Washington County Production and Marketing Administration Report

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. TRIMBLE. Mr. Speaker, one of the most active organizations in northwest Arkansas in the soil-conservation program is the production and marketing administration in Washington County, headed by Eusel M. Coleman, county administrative officer, and ably assisted by his conservation committee composed of Shannon Pharr, of Lincoln, Ark.; L. E. Maupin, of Prairie Grove, Ark.; and Roe D. Stokenbury, of Elkins, Ark. These men and their communities are doing a wonderful job.

Under leave to extend my remarks, I wish to insert their 1949 report, as follows:

ANNUAL REPORT, 1948, UNITED STATES DEPARTMENT OF AGRICULTURE, PRODUCTION AND MARKETING ADMINISTRATION, AGRICULTURE CONSERVATION PROGRAM IN WASHINGTON COUNTY

(Presented by Washington County committee)

INTRODUCTION

We prepare this report in an effort to give you a better understanding of the objectives and accomplishments of the Washington County Production and Marketing Administration, known as triple A agricultural conservation program.

Production and Marketing Administration embraces several programs of the United States Department of Agriculture, price supports, marketing quotas, crop insurance, and the agricultural conservation program. Since agricultural conservation is the major program in Washington County, more space has been devoted to conserving soil and water.

This is a choice land. It came to us with its beautiful mountains, rich valleys, flowing rivers, but above all with an abundance of life-producing topsoil.

We have wasted our soil and ruined it faster than any other people in any other time have wasted theirs. The majority of our soil waste has been through the lack of knowledge and foresight on the part of farmers and the Nation as to assisting the farmers in a conservation program before a great portion of our soil was wasted by erosion. Through the lack of the use of conservation practices, growing an excess of soil-depleting crops in feeding the nations, these depleting crops were grown by the farmers during the two world wars at the request of our National Government for the purpose of aiding in the wars, and feeding our Allies and these countries since the war.

With population increasing more than 13,000,000 in 8 years, we can't afford to continue wasting our soil.

The real wealth of the Nation is the nitrogen, phosphate, calcium, and potash in the soil which makes possible the growing of vegetation from which comes our food.

The agricultural-conservation program encourages farmers to make widespread use of conservation practices that stop unnecessary soil and mineral losses and to maintain and rebuild the soil.

In behalf of Washington County farmers, whom we represent on this committee, we wish to express our appreciation to those who have helped in the AAA program's success. We invite your cooperation in the present and future programs.

W. SHANNON PHARR,
Chairman,
LINCOLN E. MAUPIN,
Vice Chairman,
ROE D. STOKENBURY,
Member.
Washington County Production and Marketing Administration Agricultural Conservation Association Committee.

GENERAL INFORMATION

The agricultural conservation program in Washington County is operated through the Washington County Agricultural Conservation Association. The conservation program is open to all farmers in the county, and each one is invited to participate regardless of the size, type, or location of farm.

This program is Government-farmer cooperation in the field of soil and water conservation. Congress makes appropriations to assist farmers in carrying out needed soil and water conservation practices. Money appropriated is allocated to States on the basis of conservation needs. The assistance represents a public investment in the maintenance and restoration of our soil. The farmer has to invest dollar for dollar plus his time and labor in putting the practice into effect.

The agricultural conservation program provides for a national program of soil and water conserving under the direction of farmer-elected farmer committees. With farmer-elected farmer committees directing the program the public is assured of getting the most conservation for the money spent. Farmers acquainted with local needs and conditions see to it that money appropriated for payments is spent on practices adapted to the county.

The Production and Marketing Administration soil and water conservation program is not only concerned with the needs of individual farmers but with the needs of the Nation. When the fertility of our farms is restored and maintained the public can be assured of a plentiful supply of better-quality products. We all depend on the soil for the necessities of life and have a vital interest in maintaining its productivity.

Farmers who participate in the 1949 triple-A program will be continuing to build on what has been done in 12 years of triple-A programs. This program, as before, will be open to every farmer and on every farm and all are eligible to share in the assistance offered for recommended practices. The program is entirely voluntary and the assistance is available to farmers to help them carry out conservation practices on a share-the-cost basis which amounts to about half of the out-of-pocket cost to the farmer for the practice and he furnishes labor in addition. The triple-A program is planned, developed, and administered by farmer-committeemen who are elected annually by their farmer-neighbors. Each year, in November and December, county and community committeemen are elected to serve during the following calendar year. The county committee, composed of three regular and two alternate members, is charged with the responsibility of administering the triple-A and other related agricultural programs dealing directly with farmers in the county. Community committeemen are elected to represent about 50 farms each and assist county committees in administering the program in their communities. These nonpartisan farmer-elected committeeman setups the the heart of the entire farm program and have proven effective in developing and administering the triple-A program. In addition, this organization is being used to administer the price-support programs of the Commodity Credit Corporation, marketing quotas, and production adjustments. The triple-A program is farmer-developed and planned with the assistance of technically trained personnel from the triple A and other agricultural agencies and organizations. Recommendations for programs are developed by farmers in county and community meetings each year.

In addition to farmers, representatives of the agricultural agencies are invited to attend these planning meetings. These recommendations are made in such a way that they help, not only the individual farm and farmer, but the community and State and add a lot to the over-all program so that conservation needs may be met. Leadership in developing county suggestions is furnished by the farmer-elected committeemen and through them are channeled the knowledge and experience of producers as to the needs for conservation practices in the individual county and community. County recommendations for practices are submitted to the State triple-A committee which in turn studies the recommendations in relation to national needs and advice from a State technical advisory committee composed of representatives of the College of Agriculture, experiment stations, and technicians of other agricultural agencies. The practices adopted by the State committee are forwarded to Washington United States Department of Agriculture officials and when approved become the practices for which assistance will be furnished by the triple A the next year. After practices for the State as a whole are approved, each county committee selects the practices which it believes are best adapted to the county and which will result in the most conservation and they become the program in the county for which assistance will be offered through the triple A. Individual plans are developed for each farm whereby the most effective use can be made of the assistance offered. These plans, made at the start of each program year, enable each farmer to take into consideration the availability of labor, equipment for engineering practices, supplies of materials, and the farmer's ability to contribute his share of the cost of needed and recommended practices. Assistance in executing individual farm plans is furnished by triple-A committeemen. This planned assistance to farmers makes triple-A funds more effective and makes assistance of other agencies more effective. In Washington County in 1948 farmers on 2,225 farms comprising 240,833 acres of farm land, 133,846 acres of cropland, 39,021 acres of pasture or range land, and 9,028 acres commercial orchard participated in the triple-A program. This is 59 percent of the farm land in the county.

OFFICE PERSONNEL

Eusel M. Coleman, county administrative officer, Fayetteville.

Parl C. Young, clerk, Fayetteville.

Marjorie S. Tannehill, clerk, Fayetteville.

Martha J. Gulley, part-time clerk, Fayetteville.

PARTICIPATION

A total of 2,252 farmers participated in the 1948 Triple-A conservation program. One or more approved conservation practices were put into practice on each of these farms and that 59 percent of the cropland in Washington County was included in the conservation program in 1948.

Fifty-eight thousand and fifty-five dollars were available as assistance to farmers for carrying out conservation practices in 1948. However, the value of all practices carried out and reported was $109,474.38.

In 1948 there were 248 acres of Bermuda sodded in developing of pastures; 1,823 acres of row crops were planted on the contour in 1948; 7,982,500 square feet of vegetative waterway were constructed in 1948; 8,565,000 linear feet of terraces were constructed in 1948; 52,544 pounds of rye grass were seeded to pasture and cover crop to 26,272 acres in 1948.

1948 administrative expense

County and community committeeman	$857.14
Office personnel	6,765.59
Travel	178.56
Bank charges, telephone, supplies, etc.	313.83
Total operating expense	8,115.12

County data for 1945, 1946, 1947, and 1948

Year	Farms in county	Farms reported	Percent of farms reported	Cropland on all farms	Cropland on reported farms	Percent cropland on reported farms	County assistance	Practice earnings	Amount farmers contributed
1945	4,954	2,132	43	202,328	117,350	58	$118,528	$122,075	$244,196
1946	5,046	2,053	41	207,070	121,641	59	117,115	139,187	278,361
1947	5,168	2,297	44	212,848	136,741	64	119,728	187,843	375,182
1948	5,230	2,252	43	225,093	133,846	59	58,055	109,474	218,315

PRICE-SUPPORT PROGRAM

The price-support program is a branch of the Production and Marketing Administration and is administered by the same personnel responsible for the agricultural conservation program.

Price support provides that the prices of farm products be supported at rates fair to both farmers and consumers because of the importance of good farm prices in maintaining national prosperity.

Support levels for various commodities are represented as a percentage of parity. Parity means that the prices farmers receive for their products are comparable to the prices they have to pay for the things they buy. This allows support prices to vary up or down, depending on the price of nonfarm commodities.

Following is a brief of present price-support legislation:

First. The basic commodities—corn, wheat, rice, tobacco, cotton, and peanuts—will be supported at 90 percent of parity through June 30, 1950.

Second. The major nonbasic commodities will be supported at 60 to 90 percent of parity through December 31, 1949, except that milk and its products, hogs, chickens, and eggs are to be supported at 90 percent of parity for that period.

Third. Beginning January 1, 1950, the provisions of the long-range price-support program will go into effect. It provides that the basic commodities will be supported at 60 to 90 percent of parity, depending on the level of supply. All other agricultural commodities (this includes eggs, chickens, and hogs) may be supported at 0 to 90 percent of parity, depending upon the importance of each commodity to the national economy, its degree of perishability, the level of supply, and other factors.

ELECTION OF COMMITTEEMEN

A county convention, at which representative farmers from all communities of the county met in December 1947 and elected the following men to serve as the county committee during 1948: W. Shannon Pharr, Lincoln, chairman; Lincoln E. Maupin, Prairie Grove, vice chairman; Roe D. Stokenbury, Elkins, regular member; David L. Burnett, Greenland, first alternate; Jack Taldo, Springdale, second alternate.

The county committee holds regular meetings each month and in addition special meetings are called as the need arises.

The following is a part of the duties performed by the committee:

1. Recommended program practices, methods of establishing farm allowances and rates of payment for practices.
2. Designate needed practices for the county and recommended materials and services to be furnished on purchase orders and fair price for the materials.
3. Reviewed and passed on farmers' performance reports and approved applications for payment.
4. Approved association budget and certified monthly expense accounts.
5. Cooperated with all agricultural agencies in holding meetings in an effort to keep farmers informed concerning the objectives, provisions, and progress of the program.
6. Arranged for the annual election of community and county committeemen and encouraged farmers to participate in the elections.
7. Obtained conservation materials such as lime, phosphate, and seeds.
8. Informed the State committee on the progress of the work and farm problems.

CONSERVATION PRACTICES

Practices for which assistance was offered in Washington County in 1948 were recommended by the county committee and approved by the State committee on the basis of:

1. Practices that would fill a definite need in conserving soil and water.
2. Practices needed by a majority of the farmers.
3. Practices that would obtain the most conservation for the money spent.
4. Practices that could be administered in a practical manner.

APPLICATION OF MINERALS

The application of limestone, potash, and superphosphate is an important soil-conserving practice. These promote a rapid and heavier growth of grasses and legumes. The application of these minerals serves as a major conservation practice. In 1948 Washington County farmers applied 3,500 tons of ground limestone, 123,900 pounds of potash, and 4,516,719 pounds of 20-percent equivalent superphosphate to pastures, meadows, green manure, and cover crops.

ESTABLISHING AND IMPROVING PASTURES

Farmers established or improved 13,200 acres of pasture by seeding 257,063 pounds of adapted pasture grasses and legumes and controlled noxious weeds by mowing 29,389 acres under the 1948 program.

Sixty percent of the phosphate, limestone, and potash was used on permanent pasture and 40 percent used on winter and summer legumes.

COVER CROPS

In addition to conserving soil and water the use of legumes adds nitrogen to the soil.

In 1948 farmers seeded 36,018 pounds of winter legumes on 2,400 acres and 182,194 pounds of summer legumes were seeded on 9,100 acres.

PONDS FOR STOCK WATER

The construction of ponds for livestock water has been a big factor in developing our livestock program. Land that was of little use has become valuable as permanent pasture after constructing a pond to provide water.

Sixty-two thousand and forty-seven cubic yards of dirt was moved in constructing 79 ponds in 1948, and during the last 4 years there have been 547 ponds constructed in the county with the assistance of the AAA program.

The New New Deal

EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Enquirer of Wednesday, July 13, 1949:

THE NEW NEW DEAL

While the deflationary process remains a gentle and comparatively painless one, there is no prospect of any rash grant of power to the Chief Executive to plunge into national economic planning. But the blueprints are drawn for such a headlong entry into a planned economy. And it is a safe guess that any speed-up of the deflation process would produce considerable support in Congress for such a policy.

According to United States News and World Report, the Truman administration is ready with a program that would pour at least $15,000,000,000 of public funds into new investments in the year ahead—if mounting unemployment should make it politically possible.

The proposal envisions Government action in several distinct channels—direct assistance to private business enterprises, subsidized expansion of plant capacity in selected lines, large-scale public works projects, systematic development of regions comparable to the Tennessee Valley Authority, deliberate channeling of Government contracts into areas of unemployment and increased control over price and wage policies.

That is a blueprint for a planned and controlled economy. It is not socialism, for it entails very little actual public ownership of economic enterprise. But it would write the doom of competitive free enterprise as we have known it. The threat does not sound as frightening as it would have sounded 15 years ago, because we all have become habituated to far-reaching public controls over business and large-scale Government intervention in the economic process.

Nevertheless, it is a fateful decision which lies in wait, probably to be made soon after the first impact of any serious economic depression that may be in store. For once the Government embarks on a conscious policy of creating economic opportunity for the whole population, of "guaranteeing full employment and prosperity," there will be no turning back. Any failure of such a plan

will lead only in on direction—to still greater public expenditure and still greater intervention in the national economy.

Fortunately, we have a Congress which is unmistakably hostile to any such abandonment of competitive free enterprise. But it is very important that the full meaning of this "guaranteed prosperity" program should be understood—its dangers as well as its allurements. For it would not take very much of a further slump in prices, production and employment to tip the scales in Congress and lead us into an adventure from which there could be no turning back.

Quota Restrictions on Oil Imports

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. VURSELL. Mr. Speaker, recently on the floor of the House I discussed the danger of importing 700,000 barrels of oil a day to the oil interests of our Nation.

I pointed out that unless the administration would agree to quota restrictions to reduce the amount of foreign oil which is flooding this country that it would further curtail our exploration, production, and refining of oil products.

I also stated that thousands of workers engaged in production, refining, and distribution of oil were losing their jobs at a cost of millions of dollars to our Government, in paying them unemployment compensation. I urged that the administration reverse its policy, and that a percentage quota amount of imports be approved in a bill now pending before the Senate.

This is a matter that should be of interest to all Members of the House and Senate whether or not oil is produced in their State.

Mr. Speaker, as further confirmation of the position I took, I am inserting in the RECORD a clipping from the Cisco Daily Press, of Cisco, Tex., wherein that paper on July 3, 1949, published an open letter written to Senator TOM CONNALLY, of Texas, by Mr. Rudolph Kamon, of the Kamon Petroleum Exploration, Cisco, Tex., which I hope all Members will read carefully, because it contains further pertinent facts on this subject:

GEOLOGIST CHARGES OIL IMPORTS ARE THREATENING INDUSTRY WITH CHAOS

Rudolph Kamon, local geologist, charged Saturday that the importation of foreign oil into the United States is threatening Texans and United States oil men with chaotic conditions in a letter to Senator TOM CONNALLY.

Kamon spoke on the subject at a meeting of the West Central Texas Oil and Gas Association here last week. He sent a copy of his address to Senator CONNALLY.

Addressed to Senator CONNALLY, the letter follows:

"The economy-destroying, waste-creating problems caused by the imports of foreign oil into the United States by big importers and operators of foreign concessions, were taken up at the West Central Texas Oil and Gas Association meeting held here in Cisco on June 29, and corrective measures were explored in the discussion for stopping this waste.

"The economy-destroying and waste-creating practices of importing hot oil into the United States which has been produced from foreign oil concessions by a few operators integrated with ownership of oil wells in the United States, principally in Texas, must be stopped now.

"This interconnected ownership of foreign oil now being imported into the United States subjects this oil to Texas State regulations for being produced in violation of Texas proration rules to stop waste, those of the Interstate Oil Compact Commission, whose rules are violated by transporting illegally produced or hot oil in interstate markets or commerce, and their owners, are liable in the United States and Texas for such violations.

"Furthermore, these foreign concession oil fields have not been reported to the nations regulatory bodies by their owners, like they have reported their United States properties for regulation and production of oil to eliminate waste and are gutting their unrestricted foreign oil fields by unrestricted and unregulated production of oil wells.

"This practice of producing legal or regulated oil in the United States and Texas, and also unregulated unreported oil in violation of rules laid down for their United States, principally Texas, oil wells, gives these few operators the advantage running up to 5,000 percent in favor of the foreign imported hot oil over the producer in the United States, who is not violating the rules laid down by importing hot oil.

"Such oil producers, especially in Texas, are forced to drill up to 500 more wells for each 50,000 barrels of daily allowable oil, while the owners of foreign concessions can drain their field with two unregulated wells to make 50,000 barrels of oil to be imported into the United States markets. All this has been covered by my paper which I am enclosing.

"By shipping approximately 700,000 barrels of hot oil daily into the United States, it stops the outlets for that much refinery residium and fuel, backs this up into storage and indirectly makes tremendous waste in oil fields cut down to not enough time before oil congeals in the formations and is irrecoverably lost.

"This 700,000 barrels of imported hot oil stops the need for the drilling of approximately 7,000 oil wells, cancels the need for 40,000,000 feet of casing and 40,000,000 feet of heavy tubing which in turn makes up to 100,000 men jobless.

"This is only the beginning. The 100,000 men losing their jobs directly as the result of oil imports of hot oil will cause another 100,000 men and women to lose their jobs in allied industries supplying the needs of producing oil in the United States.

"Now we see 200,000 workers out of work as a result of the imports of unrestricted foreign oil into the United States. These 200,000 families with their earnings lost due to imports of the hot oil, cannot meet their payments on housing, ice boxes, nor can they buy clothes. The unemployed figure will go to approximately 700,000 men who have lost their jobs due to the importing of hot oil by the few owners operating also under our laws and subject to these laws which they are violating. These men are directly responsible for the beginning of a depression.

"Since we have now a great number of unemployed who worry and fret, who have no money to buy groceries, gasoline or oil, the market for oil products is shrinking, so that these same operators and importers of foreign hot oil can justify their insistence of further curtailment of the oil wells in Texas, so that more men are thrown out of work and the vicious conditions created by them are aggravated. The loss of tax money is tremendous, and is ignored. If there is no income, no taxes can be collected.

"It is my belief, and the belief of every Texan, that you can be instrumental in stopping the importation of this foreign hot oil into the United States. By stopping this unrestricted and unregulated hot oil from being imported into the United States and by prosecuting the violators responsible, you can restore the prosperity of the Nation and earn the gratitude of at least a million people who will again be able to make a living by getting their jobs back.

"This is an emergency.

"I have the honor to remain,

"Yours very truly,

"RUDOLPH KAMON."

Luxury Tax on Furs

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. DAVENPORT. Mr. Speaker, in my capacity as publisher of a neighborhood newspaper in Pittsburgh, I am in close contact with many retail fur stores whose advertising I both write and publish. I was amazed in entering one of the stores a few weeks ago to find that this furrier, Jerome Litt, of East Liberty, Pittsburgh, Pa., had not one fur coat in stock. Instead his stock consisted of cloth coats and suits. When I asked Mr. Litt where his furs were his answer was: "Harry, I have had to go out of the fur business entirely because of the 20-percent luxury tax."

I talked to another furrier, Herman Rosenbloom, also of East Liberty, Pittsburgh, Pa., who told me that he has been in the fur business for more than 25 years and that the luxury tax has hit the furriers so hard that more than 300 furriers—wholesale and retail—have gone into bankruptcy in the past year. "Something must be done," said Mr. Rosenbloom, "or the retail furrier will be forced to the wall."

In my conversation with Max Azen and Jerome Wolk, two large Pittsburgh retail furriers, I was given the same story. Something must be done and done soon to save more retail and wholesale fur institutions from going into bankruptcy. With respect to consumers a great injustice is also being done because fur coats are certainly not a luxury—they are a necessity—in the cold climates of the northern States.

Under leave to extend and revise my remarks in the RECORD, I wish to include the following article which was reprinted in the Pittburgh Sun-Telegraph:

POCKETBOOK PLAGUE—LUXURY TAX COSTS FURRIERS JOBS, MANY FORCED INTO BANKRUPTCY

(By Mina Wetzig)

The so-called luxury tax on furs not only is unfair to the buying public, it has boomeranged itself right back into the teeth of the Federal Government.

The Government is losing money instead of making it—unemployment rolls have swelled because of the fur tax, resulting in a loss of income tax. Besides that, unemployment compensation is being paid to once financially independent citizens.

The fur industry isn't the only one blighted by the pocketbook plague—the 20 percent excise tax—but it is hardest hit. Since 1944, when the tax was boosted from 10 to 20 percent, there have been 4 bankruptcies in the luggage business, 9 in toilet goods, 108 in jewelry, and 334 in furs. All the bankruptcies listed more than $32,000,000 in liabilities.

And while in all these industries it's a case of the Government killing the goose that lays the golden eggs, the fur industry is the outstanding example.

There's been a decrease of $125,000,000 in retail fur sales during the past 2 years. Some 13,000 members of the industry are currently unemployed. Workers in fur manufacturing plants alone lost wages of about $25,000,000—and this is apart from earnings lost by department store employees, fur trappers, farm hands on fur ranches, and others connected with the industry.

MATERIAL COSTS GO DOWN

All this in an industry where the cost of materials has gone down an average of 30 percent since the war.

The fact that in 1946 the Government collected $98,994,000 from the fur tax and only $73,140,994 in 1948 is evidence that people are not buying as much—and do not want to buy until the tax is lifted.

Pittsburgh furriers know it—they lose sales because customers cannot see the point of paying 20 percent more for a fur coat when a cloth coat at the same price—or even more expensive—is tax free.

There's so much twisted thinking behind the fur tax that it almost boils down to whether you wear your coat inside or out. You can buy a mink-lined cloth coat without paying a tax. If the mink is on the outside, it's 20 percent more, please.

And manufacturers have even gone so far as to put expensive, hand-painted linings in $100 fur coats to make them tax free. This was under an Internal Revenue Bureau ruling that said the coat was tax-free if the value of the fur was less than three times the value of the material in the next most valuable component material.

WHAT'S A LUXURY, ANYWAY?

Hand-painted linings have recently been ruled out, however, but confusion on the definition of a luxury still abounds. For instance, where's the logic in paying a 20 percent tax on a $125 mouton dyed lamb coat—which will still be wearable five years later—while a $245 cloth coat with a Persian lamb collar is sold tax-free?

Fur coats are really investments instead of luxuries. Women don't throw fur coats away. After wearing them 5 or 6 years, they either pass them down to their daughters or re-do them into jackets or neckpieces, collars and cuffs for a cloth coat, or even hats.

One local fur dealer had a 50-year-old squirrel stole brought in for re-doing just yesterday. What's luxurious about an article that's durable for 50 years?

A Little Bit of Socialism

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. GOODWIN. Mr. Speaker, the transition from moderate Government controls to a completely regimented economy with the people ultimately deprived of their liberty may very easily come about without our fully realizing the danger. The peril, however, is a very real one as is clearly set forth in the editorial which I include herewith from the Everett (Mass.) News Gazette:

A LITTLE BIT OF SOCIALISM

There is a saying to the effect that a little bit of socialism is a good thing for a country—that it puts free enterprise on its toes and keeps it humping.

However, having a little bit of socialism is much like having a little touch of leprosy. It always grows and feeds upon itself. And in time it consumes everything that stands in its way.

As an example, on June 8, the New York World-Telegram carried a revealing news story. It said that "Britain's Labor Government served notice that if it wins next year's parliamentary elections it will transform the United Kingdom into a collectivist state as soon as possible." It will demand and undoubtedly enact a law giving the Government permanent authority to impose rationing and other such controls. It has marked at least six more major industries for socialization, including sugar refining, meat wholesaling, cement making, and various forms of insurance. A high labor spokesman warned that people must be ready to change their jobs and managements to change their lines of production if the need arises. He said further that private industry must watch its step.

The meaning and intent of all this is certainly clear. If the Labor Party wins, a little bit of socialism will be made all inclusive, and a total, regimented economy established by the Government. All the principal instruments of production and employment will become possessions of the state. Labor will be a tool of the state, to be used in whatever way the bosses think best.

It is only a step from this to the police state that exists behind the iron curtain. When you have a dictated economy, you eventually have a dictator and lost liberty. Powerful political forces in the United States want us to go the way of Britain, and are using every subterfuge to sell us on a similar program, before the people are aware of the danger.

Fur-Labeling Bill

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. O'HARA of Minnesota. Mr. Speaker, I have just received this morning an interesting letter from New Orleans, La., with reference to H. R. 5187—the truth-in-fur bill—which I am sure is an example of the feeling of the public generally with reference to this legislation. The letter follows:

NEW ORLEANS, LA., *July 15, 1949.*
Congressman O'HARA OF MINNESOTA.

DEAR SIR: Enclosed is a page of the Louisiana Retailers Bulletin which you'll be interested in reading. It represents the opinion of one man.

Thousands of retailers are in favor of your bill to require proper labeling of furs. Customers—as you probably know—have been getting gypped for years by the crooks in the fur business. In the trade they say "It's a skin game in more ways than one." The hundreds of prosecutions in the files of the Federal Trade Commission will show how necessary your bill is. Those records are available for publication.

Do you know there are more than 150 trade names for rabbit skin alone?—including Baltic lion.

Women absolutely do not know what these trade names mean. They do not know that Chinese wolf, for example, is plain old dog. Not one woman in a thousand knows that a Marmink is a ground hog dyed to look like a mink. Northern seal I know has frequently been sold as genuine seal—although it's clipped rabbit dyed black.

The very best of luck to you—and God bless you for introducing that bill. The public will be grateful.

A SUPPORTER FROM LOUISIANA.

The North Atlantic Pact and What it Means

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. BURDICK. Mr. Speaker, the Senate approval or disapproval of this pact will come before the Senate for a vote this week. The people throughout the country have had too short a time to reflect on the import of this agreement and my fear is that it will pass without giving the people an opportunity to register their views.

We can only judge the future by the past. In looking over the beginnings of this Government, we find in the third section of the Articles of Confederation this language as used by the Colonies:

ARTICLES OF CONFEDERATION

ART. III. The said States hereby severally enter into a firm League of Friendship with each other, for their common Defence and Security of their Liberties, and their mutual and general Welfare, binding themselves to assist each other, against all force offered to, or Attacks made upon them or any of them on Account of Religion, Sovereignty, Trade, or any other Pretence whatever.

The Articles of Confederation was the foundation of our present unamended Constitution. In fact the Constitutional Convention at Philadelphia was not convened for the purpose of writing a new Constitution but the purpose was to amend the Articles of Confederation. During the first days of the convention much thought was given to these amendments, but making no progress, the convention scrapped the old Articles of Confederation and wrote a new pact, to be later known as our Constitution. The ideas of the old Confederation were not omitted but a plan in better language and definite meaning was brought forward.

Compare the purpose of this North Atlantic Pact with section 3 of the Articles of Confederation, and you will at once see that we are headed for a United States of the North Atlantic, and like the interpretation of the Monroe Doctrine, will include more states than those of the North Atlantic area. If this pact is agreed to, you can be sure that the agreement is not the end. It will be found necessary to strengthen this

document as times goes on and in the end we will find the United States of America a member of the United States of the North Atlantic. Since these other countries cannot finance any force to resist attacks on the members, the United States will be called upon to foot the bill and be embroiled in every fuss in the world.

In the debates in the Senate, Senator CONNALLY, leader of the approval of the pact, announced that senators can vote for the pact without giving up the right to vote against appropriations to husband the pact. This is entirely illogical, for when we put our name to a document promising to defend any member nation with force and without delay, it would be entirely dishonorable to refuse aid when an attack was made on any member. The new Senator from New York [Mr. DULLES] is more honest about it and he says that if we agree to the pact, we ought to support our promises to other member nations.

There are those in the Senate who say that this pact in no wise interferes with the United Nations organization. That is also absurd. We are to carry out what we agree to regardless of the United Nations. This pact, I wish you to remember, is the beginning of a United States of the North Atlantic and instead of remaining an independent Nation, we shall be no more independent than can be exercised by abiding by the Pact.

Wars have been fomented in Europe for centuries and wars will be fomented again and will continue just as long as the states of Europe are directors of colonies. Jealousies of trade, power and commerce will break out again no matter how much machinery is built to prevent war. We are able now to furnish money, men and natural resources to assist the world, but the day will come if we do not stop this policy, when we shall not have money and resources enough to defend ourselves.

We are at a critical period in our history. We should not agree to the pact unless we mean to keep our word, and to keep our word under this fact means the surrender of our sovereignty and also means the collapse of this Government in due time. The pact should not be approved at all.

The people back home want this Congress to balance the budget and be more careful about expenditures, but I ask you how this can be done unless we change our foreign policy. The people do not generally know it, but the fact is we have spent $92,000,000,000 in assisting other countries since the war ended; our income taxes collections are becoming less; we will be spending on borrowed money for at least another year, and the budget is out of balance now. The obligations assumed by the approval of this pact will commit us to greater spending—if we mean to be honorable and keep our word. Just how this can be done and save this country from utter ruin, I have heard no one explain.

It does little good to cut down essential spending here at home while we squander billions abroad. We could of course compel the aged, the crippled, and the blind to live on less than $32 per month; we could stop natural progress here at home; but these items are not a drop in the bucket when it comes to handing over not millions but billions and billions to other countries. Those who say we should cut our own appropriations in order to balance the budget, ought to hunt for larger game and assist in stopping this flow of billions to foreign countries. One way to stop it would be to refuse to confirm this North Atlantic Pact.

Fortify Alaska Now

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. BARTLETT. Mr. Speaker, dramatic testimony of the need for fortifying Alaska immediately and in an integrated manner was given last week before the Senate Appropriations Committee by Fergus Hoffman, member of the Seattle Post-Intelligencer staff. Mr. Hoffman, a veteran newspaperman who has served on several Alaska papers, has been delegated by William Randolph Hearst to spend his time exclusively on the Alaska defense situation and in my judgment is as well qualified to speak out on that subject as any layman. Mr. Hoffman has made many trips throughout the Territory in the postwar period. He has had opportunity given to few to inspect our defenses—or lack of them—in the far north.

Mr. Hoffman told the Senate committee there is grave danger that bases built during the war against Japan and now left unguarded might be seized and used against us by another aggressor. He recommended that it would be far, far better to demolish those bases than to leave them unprotected.

Even the present bases, according to Mr. Hoffman, are relatively unguarded and could be seized without any considerable difficulty by a determined enemy. That would make possible the turning against us, as it were, of magnificent air installations from which long-range bombers could devastate the States.

More than any other one thing there is need in Alaska now for housing—permanent housing—so that combat troops can be stationed in sufficient numbers at Alaska bases to protect them, Mr. Hoffman told the Senate committee. Building there is expensive because of high transportation costs and because of lack of local building industry. But, Mr. Hoffman pointed out, the cost of doing the job and doing it promptly would be only fractional to the cost to the Nation in every way if Alaska were to be taken by an enemy. Elsewhere in the RECORD last Thursday, Mr. Hoffman's testimony was inserted, and I urge every Member of the House to read it and read it carefully.

The job of fortifying Alaska, less than 60 miles distant from Soviet Asia at the closest point, ought to be No. 1 on our list of priorities. We are maintaining a great military establishment now because we are living in a troubled world. We should not allow that establishment to be lamentably weak at the point where the danger could be gravest.

Fake Hoover Plans Being Foisted Off on Congress

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I am inserting in the CONGRESSIONAL RECORD a copy of an editorial entitled: "Economy—How Not To Get It," from the July 16, 1949, issue of Business Week. This editorial reveals the unfair tactics of the "Fair Dealers" in trying to foist a fake Hoover plan off on Congress, knowing that Congress and the people almost universally favor the real Hoover plan and not the administration substitute. As always, the administration has attempted to capitalize on the favorable publicity regarding the famous proposals of Herbert Hoover by putting forward a tricky proposal that seems to resemble, but actually negates, the real thing. In other words, the administration uses the Hoover plan to make another assault on the American system of private enterprise and in favor of collectivism.

The editorial follows:

ECONOMY—HOW NOT TO GET IT

American business has been sold down the river again—this time in the name of Government economy.

How did that happen? We can tell you, even though we probably are putting the information on the record too late for much to be done about it. We hope, however, that time has not run out against us.

President Truman a few weeks ago signed the reorganization bill and promptly sent to Congress seven plans for revamping the Government's executive branch. He did some very careful picking and choosing. He selected from the recommendations made by the Hoover Commission—the Commission on Organization of the Executive Branch of the Government—those plans which obviously had political appeal. He junked anything in the Hoover Commission report that he apparently believed would not suit his political purposes.

One of the plans which President Truman wants to get in operation speedily relates to the Department of Labor. President Truman said: "Reorganization Plan No. 2 of 1949 strengthens the Department of Labor by transferring to it the employment-service and unemployment-compensation activities. This conforms to the recommendations of the Commission on Organization of the Executive Branch and reverses undesirable developments of recent years which have scattered various labor programs throughout the executive branch."

The transfer proposal wholly lacks any characteristic of economy. In fact, the transfer is almost 100 percent certain to cost more money. That is, more dollars will have to be raised through taxes to make the new operation work.

HOW THE SYSTEM IS RUN

The Federal Security Agency is now administering the employment-service program. It is doing this through its regional office system, which has about a dozen other programs under its supervision.

When Federal administration of unemployment compensation was originally established, it was lodged in the Social Security Board. Federal supervision of State employment-service activities was started in the Department of Labor. But State agencies had so much trouble handling two Federal programs and dealing with two Federal agencies that President Roosevelt finally transferred the Employment Service in 1939 from the Department of Labor to the new Federal Security Agency. There it was combined with Unemployment Compensation Administration.

The States' employment services were taken over by the Federal Government during the war, and the Department of Labor got the job of running the program. But Congress last year forced the Labor Department to give the operation of the employment service back to the States. Washington's over-all supervision was returned to the Federal Security Agency; there it was integrated again with Unemployment Compensation Administration.

What was the result? Money was saved. All that was necessary was to shoehorn field administration of the Employment Service into the work already done by FSA regional offices. At the same time, the elaborate network of regional and area offices set up by the Labor Department was knocked out of commission. The result was fewer Government workers to do the same job.

TOO COSTLY A COMPROMISE

It is quite true that Truman's proposal to transfer the unemployment-compensation and employment-service functions from FSA to the Labor Department is in accord with the Hoover Commission recommendation. However, the task force used by the Hoover Commission to study those functions did not recommend the transfer. Nor did it oppose the switch; it merely took a neutral position.

Rightly or wrongly, the Commission itself recommended the transfer. We suspect that the Hoover group may have taken this action in the belief that it was not particularly harmful and would help sell the whole reorganization program.

If that was the reasoning of the Hoover Commission, there might be good sense in going along—provided this transfer was used to get the whole economy package through. But Truman hasn't delivered the whole package to Congress. So we believe the price of this compromise is too great.

It is our considered opinion that Congress ought to toss back Reorganization Plan No. 2 on the ground that it will not contribute to the basic purpose of streamlining the Government.

WHY BUSINESS LOSES

American business, of course, is going to lose on this deal as a taxpayer if the proposed transfer of employment activities takes place. But American business stands to lose even more. Remember that the Department of Labor is set up "to foster and promote the interest of wage earners." It is not set up to give equal protection and consideration to the interests of wage payers.

If the Department of Labor gets the State unemployment-compensation and employment-service systems under its wing, American employers will be hurt. Organized labor will be helped, for organized labor knows that it can get Washington to bring pressure to bear on the State set-ups to suit the needs and fill the demands of labor unions. The unions will do everything in their power to get unemployment compensation freely dispensed to men on strike. The unions will do everything that they can to get eligibility requirements for unemployment compensation changed. They will see to it that unemployment-compensation and employment-service programs work to their advantage. And, thus, American business will be sold down the river again—in the name of Government economy.

Commies Train Sights on World Shipping

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. COLMER. Mr. Speaker, a few weeks ago when the independent offices appropriation bill was up for consideration on the floor of the House, Congressman BOGGS of Louisiana, Chairman PETERSON of the Public Lands Committee of Florida, and I, together with others, sponsored an amendment to that bill which would restore some $3,000,000 plus for the orderly operation of the merchant marine cadet-training schools located in New York, Florida, and Mississippi. At that time I pointed out to my colleagues here that this appropriation was opposed by certain left-wing Maritime Union officials; that, in fact, the Maritime Union, particularly that branch of it headed by the Communist leader, Harry Bridges, was opposed to having bright, stalwart, young American high-school boys train in these schools for officers in our merchant marine; that their scheme was to have these officers recruited from the ranks, where there are many Communists. After a spirited fight here on the floor, we succeeded in restoring these funds.

When the bill got over to the other body, certain misguided Senators took the responsibility for deleting our amendment from the bill.

In view of what is happening around the world in shipping circles today, with England, Canada and Hawaii having their commerce on the high seas brought to a virtual standstill as a result of these misguided efforts, I am very much in hope that these Members of the Senate, who have been given some misinformation, will realize what is going on and will withdraw their opposition to this amendment, and that these funds may be restored.

I am sure they will do so when they realize what is behind this movement for I know they are just as good Americans as I or any other Member of Congress.

Mr. Speaker, in this connection I submit for the benefit of those concerned the following article which appeared in the Washington Daily News on Tuesday, July 12, last:

COMMIES TRAIN SIGHTS ON WORLD SHIPPING

(By Charles T. Lucey)

World shipping has become a main target of the Communists. The Commies' proud boast today is of a seamen's strike which began in Canada and has bounced from one port to another around the world.

In London, with 8,000 stevedores and dockers out on sympathetic strike and with scores of ships unloaded, King George yesterday proclaimed a state of emergency giving the government wide powers to act.

In many other countries—by the Communist Daily Worker's count, they include such far-flung spots as Norway, Italy, Australia, New Zealand, British Guiana—Canadian ships have been tied up in sympathy.

Officials of Britain's Labor government repeatedly have blamed the Communists for the dock workers' strike. Many of the ships unloaded are filled with foodstuffs, and the strife has embarrassed the Government seriously at a moment when it is facing a climax in Britain's postwar economic troubles.

The dockers have ignored Government leaders' warning that they are playing into the hands of Communists whose interest is to injure the British economy by disrupting the island's vital shipping trade.

STRIKE IN HAWAII

Across the world in Hawaii another strike—again against an island community—is in progress. The immediate and legitimate trade-union issue is wages. But the union concerned is Harry Bridges' International Longshoremen's Union, and there have been charges that prolonging the strike and further disrupting shipping happens to suit the party line.

Senator HUGH BUTLER, Republican of Nebraska, recently prepared a report for a subcommittee studying Hawaiian statehood, in which he claimed Communist supporters, operating chiefly through the Bridges' union, had "persistently sabotaged the economic life of the Territory."

The strike the Communists have cheered began on the Canadian east coast and involved two unions. The shipowners' contract had been with the Canadian Seamen's Union, but when a prolonged battle occurred the owners signed up with the Seafarers International Union, affiliated with the AFL. Canadian Seamen's Union men who had taken ships overseas went on strike. In many cases they got seamen of other countries to go out with them.

Within the last few days two British Cabinet members and the Labor Party chairman have attacked Communist activity in the strike.

Sam Watson, the Labor Party official, said the London dock strike was the work of foreign agencies whose job was to throw a hammer in the works of British recovery. He declared the trouble was political and would be solved if anti-British agitators were tossed out.

Sir Hartley Shawcross, the attorney general, said the strikes either had been started or fomented by Communist agitation from abroad, aimed at damaging the British economy and wrecking the Marshall plan. Aneurin Bevan, Minister of Health, said there was evidence that "evilly disposed persons" were trying to end recent industrial harmony.

DAILY WORKER CHEERS

But here at home the Daily Worker cheers its cause. On June 21 it cited sit-down strikes on British ships and said:

"Support is growing day by day in foreign ports. Countries like Japan and the Philippines, both under the heel of American imperialism, are firmly behind the strike and will not touch any Canadian ship that reaches their shores."

On July 7 the Daily Worker reported 90 Canadian ships "tied up by class-conscious longshoremen in four continents of the world. And 800 dock workers in London are tying up 88 non-Canadian ships in solidarity with the strikers." The paper claimed the British workers were not officially striking but were locked out when they refused to work struck Canadian ships.

S. 1008, the O'Mahoney Bill, Unnecessary and Should Be Defeated—If Passed It Should Certainly Contain Kefauver-Carroll Amendments—Bill Would Help National Chain Stores Destroy Local Merchants, Especially Helpful to Atlantic & Pacific Grocery Co.

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. PATMAN. Mr. Speaker, representatives of small-business groups, aggregating millions of small-business people in all lines of business and industry were denied an opportunity to present their views in opposition to S. 1008. Typical of the wires to Representative EMANUEL CELLER, chairman of the Committee on the Judiciary of the House, pleading for an opportunity to be heard, is the following wire which was sent June 10, 1949:

Representative EMANUEL CELLER,
House Office Building,
Washington, D. C.:

Thirty-four thousand small independent retail druggists in our Nation represented by the National Association of Retail Druggists vigorously oppose any tampering with the Robinson-Patman Act. This legislation has been a lifesaver to small business. Monopoly cannot live with the Robinson-Patman Act, hence the desire to emasculate it. If you permit public hearings on S. 1008 we wish to be heard. A reply will be appreciated.

GEORGE H. FRATES,
Washington Representative,
National Association of Retail Druggists.

Not only did the druggists, but the representatives in many different lines of small businesses make similar requests. This bill was not considered by a Senate committee. It was offered on the floor as an amendment to a moratorium bill. It was not thought at the time that the bill was intended for any other purpose except to clarify rulings of the Supreme Court. To my mind there was no confusion in the decision of the Supreme Court, and there was no need for clarification, but this seemed to be the main purpose of the bill. It was later discovered that the bill, if enacted, would take the heart out of the Robinson-Patman act, in addition to accomplishing its avowed purpose of clarifying the law on the basing point.

When the bill reached the House, it was referred to the Committee on the Judiciary. Chairman CELLER was an opponent of the Robinson-Patman act when it passed in 1936. In fact, he was the leading and most vigorous opponent of the act. Notwithstanding his opposition the bill passed in the House by a vote of 290 to 16. Now, as chairman of the committee, Representative CELLER denied small-business groups an opportunity to be heard in opposition to the bill that would destroy the act that he opposed in 1936. I think this should be taken into consideration by the Members when considering whether or not the bill should get defeated.

SENATE ACTION NEXT

The bill is now in the Senate and can be called up at any time by the chairman of the Committee on the Judiciary of the Senate. When called up the question will be whether or not the House amendments by Representative CARROLL, of Colorado, should be agreed to, or whether or not the bill should be sent to conference. It occurs to me that there are very few differences between the Kefauver amendments adopted in the Senate, and the Carroll amendments adopted in the House. My personal hope is that the Senate will refer this bill to a Senate committee for hearings and give small-business men an opportunity to be heard before taking any action on it. If this cannot be done, I hope the House amendments are adopted as they kill about 75 percent of the damage to the Robinson-Patman Act. If the bill is sent to conference, all Members who are in sympathy with small business and against monopolies and trusts should be on the alert to prevent the scuttling of the Kefauver-Carroll amendments in the conference.

Dr. Vernon A. Munn, professor of economics, University of Washington, Seattle, Wash., presented a statement to our Committee on Small Business concerning the O'Mahoney bill. It is as follows:

THE O'MAHONEY BILL

The O'Mahoney bill (S. 1008), as I interpret it, is designed to set aside the law of count II in the Conduit case, so that there will be no way in which to challenge the use of a basing-point system except by proving the existence of conspiracy even where substantial lessening of competition occurs. In the absence of the Kefauver amendment, moreover, the bill appears to set aside the rule of law established in the Standard Oil of Indiana case. The bill thus appears to provide for the legalization of the most potent device of monopoly—discriminatory pricing—and for the reestablishment of the law of the jungle. The rules of fair competition are to be set aside for the principle that a practice which is profitable to politically important groups is good for the Nation. S. 1008 is a serious threat to the preservation of price competition which is fair and aboveboard. It should no tbe enacted if due regard is to be given to the national interest.

The efforts of Senator ESTES KEFAUVER to qualify the legalization of discriminatory pricing in the O'Mahoney bill, in my opinion, were noteworthy and laudable. Discriminatory pricing should continue to be made illegal whenever the effect is substantially to lessen competition. This principle is indispensable in a program of maintaining competition.

Insofar as large corporations, having plants in various places, are granted the right to discriminate to match or undercut the prices of distant rivals, they will be given a most powerful tool for discouraging new rivals and for frustrating and preventing the survival of small business upon the basis of productive efficiency. Small business does not need subsidies or special favors. It does, however, need an equal chance (1) to obtain the materials of production and (2) to continue in business without being crippled by the discriminatory pricing of large corporations to match or undercut the local prices of small business, while securing noncompetitive prices elsewhere.

The Federal Trade Commission and the Department of Justice all during the year 1948 insisted that no clarifying legislation was needed on account of the basing-point decisions. However, in 1949, evidently after great pressure, it was agreed by these agencies that if Congress was determined to pass some kind of legislation they recommended language along the lines of the O'Mahoney bill. I think their original decision in the matter was correct, that no clarifying language was needed. Any clarifying language will permit the same people who have been fixing prices for 25 years against public interest, to continue to fix prices by going into the courts and asking that the new words and phrases be defined. This will take from 10 to 25 years.

The Washington Post, in a recent editorial commenting on the O'Mahoney bill, had the following to say concerning the Kefauver-Carroll amendments:

In our opinion, this qualification was essential to avoid weakening the Robinson-Patman Act. That certainly was not the purpose of the House in approving a clarifying measure. In trying to clear up the confusion about the legality of delivered pricing systems and freight absorption, neither the House nor the Senate has any intention of removing safeguards against monopolistic or discriminatory practices banned by existing laws.

The passage of this bill without the amendments would definitely help national corporate chain stores in their present campaign to destroy local merchants. It would be worth millions a year to the Atlantic & Pacific Tea Co. alone.

Public-Works Program

EXTENSION OF REMARKS
OF
HON. GEORGE D. O'BRIEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks, I include the following article from the New York Times of July 16, 1949:

WASHINGTON, July 16.—A decade of war and postwar transition has built up throughout the country a tremendous backlog of needed public improvements that could be called upon to help absorb the shock of a serious business depression. However, the job of planning and blueprinting such projects is equally large, and it was this task that President Truman this week sought to get started.

In his economic report to Congress, Mr. Truman asked for funds to be used as loans to States and localities to get construction projects ready for the contractor. The idea is to build up the shelf of plans that would be ready to go, when, and if a public-works program should be desired to bolster the national economy. The shelf that exists today, while sizable, is held to be far from adequate to meet any serious emergency.

Government and independent surveys indicate that more than $100,000,000 could be

spent on public construction desired, or needed, at the present time by the States and localities. Other direct Federal projects could add as much as $30,000,000,000, it is estimated, to the total.

There is said to be a need for $10,500,000,000 worth of schools. States have noted that they could use $60,000,000,000 worth of new roads. Sewers and waterworks could take up another $9,500,000,000; hospitals, $8,500,000,000; public buildings, $4,500,000,000; airports, $3,500,000,000; docks and warehouse facilities, $2,500,000,000; and recreation facilities, $2,000,000,000.

LONG-RANGE PROGRAM

There is no thought that so much building could, or should, be started at once. It is regarded as enough work for a 10-, 15-, or even 20-year program.

But these estimates do show that a public-works program on a grand scale is available—one that is large enough to take up considerable slack in employment and industrial activity should the country's important building industry fall into a sharp decline. Such a decline, of course, is not seen in the immediate future.

The need for public construction derives from the comparative inactivity in the field since 1939. During the war years, both labor and materials were channeled into war output. The only roads built led to war plants or military posts, which accounted for almost all the building construction. Since the war, the emphasis has been on housing and reconversion of industry. According to the Federal Works Agency, there has been virtually no construction of Federal buildings, not even a postoffice, in 10 years. Meanwhile, the Federal establishment has grown much larger, and many communities need new post offices, among other things.

FOR FEDERAL BUILDINGS

This is not to say that public works as of today are at a standstill, but they are held to be considerably below prewar normal. Therefore, there is, in the view of the technicians, more than normal room for stepping up public construction if necessary in the interests of keeping the whole construction industry at a high level.

To show the importance of this industry to prosperity, it is pointed out that in the 20 years between the two World Wars, almost 11 percent of the national income was from new construction, public and private. In 1949 the percentage has fallen to between 8 and 9 percent.

In 1949 private construction is estimated at $13,000,000,000, while all public construction (State and local, including that federally aided) is running at $5,250,000,000. This means $18,250,000,000 for the whole industry, a total which some economists feel should not be allowed to drop too far. As private building falls off public building should be increased.

Such an adjustment, however, is held to be next to impossible without advance planning, without a well-stocked shelf of blueprints.

President Truman had this in mind last week when he urged Congress to pass a bill permitting the Government to help States and localities "intensify their advance planning and to acquire sites for useful projects."

He noted that the economic situation did not now call for an "immediate and sweeping expansion of public works," but he held it would be "dangerous" to "neglect the precautionary preparation" of measures that might be needed in the event of a serious business downturn.

The President was asking for such a bill as has been introduced in the Senate by Senator DENNIS CHAVEZ, of New Mexico, and a number of his colleagues on the Public Works Committee. This would authorize $100,000,000 to be used over a period of 2 years for loans to States and communities to prepare plans and specifications for projects.

PREPARED PLANS

This bill is similar to a provision in the War Mobilization and Reconversion Act of 1946 by which the Federal Works Agency received $56,000,000 to lend State and local governments for blueprint purposes. That fund was exhausted in 1947, and most of the shelf of plans it made possible is gone. As of today, it contains prepared plans for State and public works estimated to cost $2,500,000,000.

In addition, the Federal Government itself has plans for public works, chiefly dams, power plants and flood control projects, totaling about $2,000,000,000.

Thus, there are on the shelf at present a total of $4,500,000,000 worth of public works projects ready to go should an economic distress signal be raised. This is somewhat less than the total going into public construction this year, and, as an FWA official noted, the shelf is being exhausted day by day as States draw upon it for current projects.

Most of the advance planning to date has been done under the sponsorship of the Federal Works Agency (lately transformed into the General Services Administration). The constituent groups here directly involved in various phases of public works are the Bureau of Public Roads, Public Buildings Administration, Bureau of Community Facilities—which has coordinated the advance planning program of the States and cities—and the Bureau of Federal Supply, the Government's over-all purchasing agency.

In addition, such agencies as the Reclamation Service, Public Health Service, and Corps of Engineers are concerned with public works and construction programs in their respective fields.

Substitutes for Hoover Commission Proposals Are Offered

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. SHAFER. Mr. Speaker, inspired by numerous newspaper campaigns, Members of Congress are being deluged by letters, telegrams and petitions to enact the recommendations of the Hoover Commission. All such communications have been written by tax-burdened citizens who rightfully believe that Government costs should be reduced. However, the communications seem to be based on the premise that to object to any parts of the Hoover recommendations would be to endanger acceptance of the entire program.

The claim that you must accept all or nothing can have little validity unless there is good faith acceptance of the entire program by President Truman and others who are advancing that argument.

Actually, the reorganization plans so far submitted by President Truman ignore numerous Hoover Commission recommendations. For example, one relating to the Post Office Department ignores the recommendation that the Postmaster General should not be an official of any political party. Also ignored in other plans are the recommendations that all shipping operations of the Maritime Commission should be transferred to the Department of Commerce and that the Commission should function only as a regulatory body. In the plans sent to the Congress by President Truman to reorganize civil service, money-saving recommendations of the Hoover Commission are not included. In the President's plan to reorganize the Department of Defense, far more powers are recommended for the Secretary of Defense than were proposed by the Commission and the budgetary proposals were not included until provided in a Senate amendment.

Mr. Hoover himself has pointed out to the Senate Committee on Executive Expenditures that the President's Plan No. 2, transferring the Bureau of Employment Security from the Federal Security Agency to the Department of Labor, fails to include the Commission's recommendations that the Bureau of Employees' Compensation, the Employees' Compensation Board, and the Selective Service System also be transferred to the Department of Labor.

Many Members of Congress believe there is a real issue at stake in the Presidential reorganization plan No. 2. They feel that the commission's proposal to transfer the Bureau of Employment Security from the Federal Security Agency to the Department of Labor is ill advised; that it will make possible the long-sought desire by labor union officials to win their campaign to gain complete control of Federal administration of unemployment compensation and the employment services. Such a transfer will take place automatically unless, by August 19 of this year, either the House of Representatives or the United States Senate votes, by constitutional majority, to reject the plan.

Lodging in the Department of Labor all Federal authority over both unemployment compensation and the employment services, means control by labor union officials because, First, by law the Department of Labor officially is the promoter of labor interests and viewpoints, and is not even intended to be an unbiased, neutral department of Government; second, as a practical matter the Labor Department always is dominated by national officials of organized labor, with much of its executive personnel selected from organized labor ranks; third, efficiency in administration would not be promoted by tearing an important part of the social security program away from the rest of the social security program; on the contrary, coordination of policy and administration between unemployment compensation and old age and survivors' insurance, for example, would be destroyed; fourth, the Commission's argument that many of the Labor Department's former functions have been taken away from it and therefore the Department should be rebuilt, fails to recognize that these functions were taken away because the Labor Department proved by its actions that it was unfit to administer them on an unbiased basis; fifth, the argument that operation of the employment services offices is a proper

Labor Department function ignores realities; it fails to recognize that successful functioning of the employment service depends upon their voluntary utilization by employers—probably nothing can more thoroughly discourage such voluntary use than the transfer plan now proposed; sixth, the Commission gave no consideration in its report to the fact that the social security program is intended to be in the broad public interest, properly to be entrusted to an independent agency obligated to no single economic group—whereas to transfer unemployment compensation to the Labor Department is to label it solely as a "labor rights" program, to be administered exclusively from the labor standpoint.

Yes, there is much about the propaganda regarding the Hoover Commission recommendations that should be studied. Let us not be deluded into believing that all proposals before Congress are Hoover Commission proposals.

Federal Aid for Education

EXTENSION OF REMARKS
OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast conducted by Ed Hart:

This is Ed Hart speaking from Washington. Every week this Nation spends $300,000,000 for national defense. An effort in Congress to obtain $300,000,000, not per week but per year, to improve our declining education system is meeting significant opposition. On May 5, the Senate did pass the Thomas Federal school-aid bill. But a companion measure in the House, the Barden bill, has suddenly aroused intense debate not only in Congress but throughout the country.

Support the Barden bill—it preserves the basic American principle of separation of church and state. Kill the Barden bill—it discriminates against Catholics and Negroes. So goes the debate, punctuated at times with ugly name calling.

But our guest today, despite provocation, has not resorted to name-calling. He is Representative GRAHAM A. BARDEN, author of the Barden Federal school-aid bill, a Member of Congress for the past 15 years, specializing in matters pertaining to education and labor. He was coauthor of the Barden-La Follette Act dealing with vocational education and the George-Barden Act concerning rehabilitation of the physically handicapped.

Before coming to Congress, while serving as a member of the North Carolina Legislature, Mr. BARDEN was one of the leaders in the fight for better public schools including both Negro and white, and he fought as an advocate of equal pay for Negro and white teachers. Congressman BARDEN, recently there has been a lot of heat but not too much light focused on your bill for Federal school aid. I have a notion it would be to everyone's advantage if you would explain precisely its content, intent, and purpose.

Mr. BARDEN. This is a very short bill, Mr. Hart, consisting of only about 125 lines of large type, yet it does the following things:

1. It authorizes the appropriation of $300,000,000 for the public schools of the United States and $14,500,000 for the public schools in Puerto Rico, Alaska, Hawaii, and the Virgin Islands.

2. It provides for a formula which would allot money to the States in direct ratio to the number of children between the ages of 6 and 17 and in inverse ratio to the financial capacity of the various States. This formula is virtually the same one used by the Senate in the Thomas bill. When applied it produces the same results in amounts to the various States. Both formulas provide for a $5 minimum per child to those States which under the formula would not participate, such as some of the richer States as New York and Massachusetts.

3. It provides that the Secretary of the Treasury, through the fiscal service of the Treasury Department, shall pay to each State the amount apportioned by the formula.

4. The bill provides for judicial review which does away completely with the necessity of an administrator in Washington directing, controlling, or interfering with the schools of the various States.

5. My bill provides for annual reports to be filed by the States with the Commissioner of Education, whose sole duty or power in connection with same is to convey it to the United States Congress.

6. It further provides a safeguard to prevent the States from reducing their appropriations, thereby shifting the burden to the Federal Government, by penalizing any State twice the amount of the reduction.

7. And finally, it defines current expenditures by excluding building construction, debt service, bonded indebtedness, transportation, and health program. All of these are excluded in the Senate bill with the exception of transportation. Therefore, my bill provides funds essentially for teachers' salaries, which is the greatest need in the American public school system today. Books, laboratory equipment, and similar necessary expenses may also be included.

Mr. HART. Congressman BARDEN, you have been most precise in stating what your bill is and what it seeks to do, but I wonder if we can't get a few thoughts clarified. Now, you want in effect to establish a minimum floor under the American education system. What sort of a minimum standard would you have established?

Mr. BARDEN. Mr. HART, in effect what I am after and what the bill provides for is that every child in America attending the public schools would receive an education that would cost no less than $60 per pupil per year. Being a little more specific, it would mean that every substandard school, whether white or Negro, would be brought up to that standard before the Federal funds could be applied in the more fortunate districts.

Mr. HART. What States then benefit mostly under the formula?

Mr. BARDEN. Most of our school-aid money would go where the need is greatest, and I think it is it is generally conceded that the Southern States are in the greatest need at this time. States like Mississippi, Alabama, and North Carolina would get more than some of the richer States who enjoy higher standards of schools. Bear in mind, Mr. HART, that the so-called poor States by and large have been making a greater effort and have been spending a higher percentage of their income for education than some of the wealthier States, even though the wealthier States have the best school systems.

Mr. HART. By the way, Mr. BARDEN, does your bill interfere with or restrict in any way whatsoever the use of a particular State's funds?

Mr. BARDEN. Absolutely not, Mr. HART, and on this point there has been a tremendous amount of misinformation. There is not one word in this bill that in any way hinders, restricts, regulates, controls, or even refers to the use of a State's own funds by that State. Furthermore, there is nothing that would prohibit a State from transferring funds from its teachers' salary funds to transportation or any other activity carried on by that State as a school expense and replacing those moneys from the funds received through Federal aid.

Mr. HART. You are most positive, Congressman BARDEN, regarding the States controlling its own funds and the Federal Government having a minimum amount of authority.

Mr. BARDEN. Yes. The Federal Government is not taking over the schools. This bill only seeks to aid them financially, not to control or interfere with them or the States.

Mr. HART. Without some form of Federal control, aren't you inviting discrimination, particularly in matters pertaining to education of Negroes?

Mr. BARDEN. The bill specifically protects against discrimination by providing that before any part of the Federal funds can be spent in the better or more fortunate schools of a State, all of the public schools, both Negro and white, must be brought up to the minimum standard of $60 per pupil This is the most forward step ever taken for the benefit of the substandard schools.

Mr. HART. Well, you have answered the charge that your bill does not discriminate against Negroes, but there have been voices raised claiming that the Barden bill discriminates against a great church.

Mr. BARDEN. That charge, Mr. Hart, is equally false and without foundation. First, you must get this clear in your mind, the funds provided for are for public elementary and secondary schools, which means—as defined by the bill—tax-supported grade schools and high schools which are under public supervision and control. It does not discriminate against the Baptist schools, the Methodist schools, the Episcopal schools, or the parochial schools. It simply says that no school except the public schools shall participate in these funds. This was well expressed in a statement issued by Congressman JACOBS, of Indianapolis, "As long as we have the same right to send our children to public schools as anyone else, we are not discriminated against." Further quoting, "Our parochial schools are an adjunct of our religion. The issue is clear—either you keep parochial schools and maintain them or accept public funds and convert the schools into public schools." Further quoting, "As Catholics, we do not have the right to a separate publicly supported school system nor does any other group of people have such right." Frankly, I am astounded at this question being raised in the year 1949 when I thought it was so clearly and well settled as far back as the days of Roger Williams, Lord Baltimore, Thomas Jefferson, and the Members of the First Congress of the United States who were not only great leaders in, but exponents of religious freedom and separation of church and state, regardless of the denomination.

Mr. HART. Congressman BARDEN, you resent the fact that the religious issue has been injected into the debate of your bill?

Mr. BARDEN. I certainly do. The people want the public schools improved. I propose that they should be improved through Federal aid. It is dangerous for the future tranquillity of this Nation that the question of whether our public school system should receive Federal aid has had injected into it by certain church officials the entirely irrelvant factor of religion. I do not think the American people as a whole want private or parochial schools, regardless of the denomination, subsidized by the Federal Government. Let those who think otherwise be honest and have a bill prepared which would, if passed, grant such aid, then we would know who among us would sanction the violation of the first amendment to our Constitution.

Mr. HART. Unfortunately, Congressman BARDEN, your bill has given rise to a national politico-religious debate.

Mr. BARDEN. I regret that it apparently has, but since this is the case may I remind some church dignitaries who start political controversy that they need not expect immunity from political blows. If they enter the political arena they are inviting such blows. They may lose some of their effectiveness as spiritual leaders in such combat, and if they resort to falsehood and name-calling as weapons, they run the risk of losing even their honor. As you know, Mr. Hart, there has been a personal campaign of vilification against me. What the effects of this are upon me is of little consequence, but those individuals behind this personal campaign apparently have a far greater design than merely attacking me.

Mr. HART. In the course of the debate statements have been made that your bill would direct that no private- or parochial-school pupils receive even the health benefits and transportation services provided for their companions attending public schools.

Mr. BARDEN. Actually, Mr. Hart, the Barden bill prohibits the use of Federal funds for such purposes as transportation and health services for either public- or non-public-school pupils—so how can there be discrimination on this score. But let me repeat, the bill does not in any way interfere with any program that the States are now carrying on or may desire to carry on with State funds.

Mr. HART. But, nevertheless, the charges I mentioned before still persists Congressman BARDEN.

Mr. BARDEN. I know that the misstatements you mention have been repeated many times. Such falsification concerning my bill is not accidental. It comes from those sources who are demanding as their right—their right, mind you—to receive Federal money for the support of church schools. It comes from those sources who charge bigotry to any who disagree with their political views. It comes from those sources who would whip their flock into a fanaticism which could destroy a first principle of American democracy—the separation of church and state. I say to these people, with Thomas Jefferson, "To compel a man to furnish contribution of money for propagation of opinion which he disbelieves is sinful and tyrannical." And there, Mr. Hart, I rest the case for the Barden bill.

Mr. HART. Congressman BARDEN, there are two juries—the Congress of the United States and the people of the United States.

Supreme Court Justices as Character Witnesses

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. KEATING. Mr. Speaker, there have been varying reactions regarding the conduct of the trial judge in the Alger Hiss case. Many have been frankly and vehemently critical. Others, equally stanchly, have defended his impartiality and judicial demeanor. Lawyers and laymen alike are to be found on both sides of this controversy.

One incident of the trial, however, regarding which I have encountered complete unanimity in condemnation was the appearance on the witness stand of two Justices of our highest court to act as character witnesses for the accused. The legal admissibility of this evidence is not open to challenge. It is the impropriety of their appearance which has disturbed the American people, who look with awe and reverence upon our Supreme Court.

I intend no harsh criticism of Justices Frankfurter and Reed, both of whom are outstanding and able men. The former was one of my professors in the Harvard Law School. Yet I deem it my duty to state emphatically that they should have declined to give character evidence in a case which, by its very nature, might later reach the Court where they sit.

To avoid a repetition of such a regrettable occurrence, which has shocked the Nation, especially members of the bar, I am introducing today a bill to prohibit Justices of the Supreme Court from giving character or reputation evidence or testifying regarding matters of opinion in Federal courts. They should not, of course, be barred from giving evidence as to facts in any controversy of which they may have knowledge. In other words, if they have seen some actions done or heard words spoken which are material in pending litigation, there is no reason why they should not testify about them in the same manner as anyone else. Existing law would disqualify them from sitting in judgment on an appeal to their court, so that no litigant would be injured through permitting such testimony.

On the other hand, character evidence or opinion evidence seems to me to be in an entirely different category. No case comes to mind where this type of testimony from such a source would be essential to promoting the ends of justice. A Supreme Court Justice could conceivably have been the only witness to an automobile accident or the only person who overheard a crucial conversation. To deprive him of the right to testify in such a case might defeat the ends of justice. It would always be possible, however, to secure other expert or character witnesses without reliance on the Supreme Court as an exclusive source of supply.

Although it is reported that this question has never arisen before since no other Supreme Court Justice in all our history has sought to testify as a character witness in a criminal trial, it is important that a precedent for such action in the future be not established. Nine Justices sit on our highest court. If Alger Hiss had been convicted and a review of that judgment had taken place in the Supreme Court, Justices Frankfurter and Reed would, of course, have been disqualified, leaving seven to make the decision. If a larger number of the Justices, conceivably all nine, had elected to disqualify themselves, paralysis of our judicial system would have been the result.

Had a judgment of conviction been presented for review to the Supreme Court, extreme embarrassment would have been caused their brother jurists in sustaining the conviction of one to whose high character two associates had attested. In this zeal not to give undue weight to such testimony, it is conceivable that they might bend over backwards to the prejudice of the accused. It is simply a situation which should never arise.

In addition, the very presence in one of our Federal courts of a justice of the appellate tribunal, as a witness for either the prosecution or defense, results in an influence on the presiding judge and jury out of all proportion to the importance of his testimony, when he is there only to support someone's character. As we all know, those of previously spotless reputation often commit serious crimes. General character evidence is not of too great value at best. Its introduction should, therefore, be surrounded with the necessary safeguards to insure that its value and effect be not exaggerated.

I realize the serious implications surrounding the suggestion that anyone of high or low estate be deprived of the privilege of testifying in our courts. The extension of such prohibitions should be cautiously approached. Yet it is well established that physicians, lawyers, and clergymen are barred from disclosing confidential communications. The preservation of the sanctity of their relationship is considered of paramount importance. I can think of nothing more vital to the welfare and security of our Nation than the perpetuation of the position of eminence and respect which our highest tribunal has enjoyed throughout its history among our people. To permit the Justices of the Supreme Court to vouch for the character of defendants on trial in our Federal criminal courts represents a source of imperilment of the standing of that revered tribunal.

Demonstrably, reliance on the proprieties has failed. Legislation on the subject is the only alternative.

To avoid the possibility of any interference with defense plans in pending litigation, I have provided that this statutory change shall not take effect until July 1, 1950.

History of the Legislation Pertaining to the Garrison Dam in North Dakota

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 19, 1949

Mr. BURDICK. Mr. Speaker, the first documentary report on the building of the Garrison Dam came into Congress on February 5, 1934, known as House Document No. 238, Seventy-third Congress, second session. This was the Army engineer's report on the development of water uses of the Missouri River and in that report the Garrison Dam was discussed. On page 799 of the report, we find the following language:

76. The Garrison site was considered of sufficient importance to justify underground explorations, in order to determine whether or not a high earth dam could be constructed with safety. These borings indicate that

the foundation materials at that point do not have sufficient crushing strength to support a high dam. The site was accordingly abandoned in favor of other sites on the main stem, above the mouth of the Yellowstone River. For a detailed discussion of foundation conditions at the Garrison Dam site, see the report by Dr. Warren J. Mead, appendix XIII. Dr. Mead is a structural geologist of international reputation, and the conditions disclosed by his report, based on actual underground explorations, indicate that further consideration of a dam at the Garrison site would be unjustified.

77. In view of the short period of usefulness (because of the probable high rate of silt deposition), and of the unfavorable topographic conditions, for the location of reservoir sites in the lower basin, also of the poor foundation conditions obtaining at the Yankton and Garrison sites, it appears that the best potential sites for flood-control purposes would be on the upper Missouri River, above the mouth of the Yellowstone. The Fort Peck, Garfield, and Iliad sites, located on the main stem between the mouth of the Yellowstone and Fort Benton, Mont., at river miles 1,877.6, 1,997.1, and 2,131.6, respectively, are favorable sites for flood-control reservoirs. The particular reservoir, or reservoirs, selected would depend upon the capacity required and the particular reservoir, or combination of reservoirs, that would furnish that capacity most economically. A detailed description of the reservoir sites is contained in appendix XII, together with a description, of the proposed structures and cost, of the reservoirs at different capacities.

The full scientific reasons for Dr. Warren J. Mead's advice against the safety of the proposed dam at the Garrison site are fully set forth in appendix XIII of the report. His advice against building the dam at Garrison was based on the fact that his examination disclosed the average depth of the mud below the bed of the river at Garrison to be, on the average, 85 feet. His conclusion that the dam would not hold was based on the fact that the extreme pressure of dirt dumped on this mud would be such that it would give way. Remember, also, that the amount of water to be impounded under this first proposal was 10,000,000 acre-feet of water. When we add 7,000,000 more acre-feet as proposed in the 1,830-foot pool, as authorized by Congress, you can see that the admonitions of Dr. Mead are even more worthy of consideration.

The quotations from this report will be significant in a further discussion of the matter of Garrison Dam.

Now, let us see what the law is:

After the first report declaring that a dam could not be built at Garrison with safety to withstand the pressure of a 10,000,000 acre-feet pool, the next report was House Report No. 475, presented to Congress March 2, 1944.

This—the Pick report—says that the dam at Garrison can be built with safety and that the amount of water to be impounded in the reservoir is 17,000,000 acre-feet. The report also says that from this pool water should be diverted to the Devils Lake area. It does not mention the diversion of waters from below Fort Peck to the Minot, Velva, and Sheyenne River areas, but only that diversion and irrigation can be had from the 17,000,000 acre-foot pool at the Garrison Dam.

This report was signed by Lewis Pick and, on page 28, the capacity of the pool is set forth at 17,000,000 acre-feet. That amount of storage was evidently sufficient, in the opinion of the present General Pick, to take care of all the multiple purposes of the dam.

The next report on the subject was Senate Report No. 191, submitted by the Bureau of Reclamation and filed May 5, 1944. This report is the document that contains the Sloan plan. It has no reference to the Pick plan and is entirely different. In this plan, irrigation, water use, flood control, and power development are provided for and the report states that sufficient electric power can be developed to supply the whole area as far as electricity can be economically transported without the use of a mainstem dam. The Garrison Dam is not discussed because they had no idea of building such a dam.

Congress, thus being confronted with two different plans for the development of water uses of the upper Missouri, decided to send both reports to four engineers; two from the Army and two from the Bureau of Reclamation, with instructions to bring in one comprehensive plan. This was done and Senate Document No. 247 was the result, signed by all four engineers, and it embodied a complete agreement.

The recommendation of the Army engineers contained in House Document No. 475 is not the law regarding the Garrison Dam; neither is the report of the Bureau of Reclamation, Senate Report No. 191, but the two controlling documents as to the law are found in this same Senate Document No. 247, the agreement reached by the Army engineers and the Bureau of Reclamation; and in Public Law No. 534. Within these two documents lies all authority which the Army engineers have at this time, and in no other law, save a limitation placed in the appropriation bills for the past 4 years respecting the Garrison Dam. You can look in vain for other authority, but there is none.

What did this Senate Document No. 247 contain?

It was an agreement reached by both agencies as to flood control, navigation, irrigation, and power development in the entire Missouri River Basin. Each side gave up certain recommendations in order to bring before Congress one unified plan, now commonly known as the Pick-Sloan plan.

This report was filed November 21, 1944, and the following language appears in the document:

OCTOBER 25, 1944.

To the SECRETARY OF WAR and the SECRETARY OF THE INTERIOR:

1. In view of the questions raised regarding the differences between the separate plans presented by the Corps of Engineers (H. Doc. 475, 78th Cong., 2d sess.) and the Bureau of Reclamation (S. Doc. 191, 78th Cong., 2d sess.) for the comprehensive development of the Missouri River Basin, a committee, composed of two representatives each from the Corps of Engineers and the Bureau of Reclamation, was appointed to review the engineering features of the two plans with a view of reconciliation between them.

2. The committee met at Omaha, Nebr., on October 16 and 17, 1944, discussed the various features of both plans, examined the supporting data for each plan, and prepared the enclosed joint engineering report. The joint engineering report points out that by making appropriate modifications, it is possible to eliminate existing differences between the two plans.

3. It was possible to bring into agreement the plans of the Corps of Engineers and the Bureau of Reclamation by recognizing the following basic principles:

(a) The Corps of Engineers should have the responsibility for determining main stem reservoir capacities and capacities of tributary reservoirs for flood control and navigation.

(b) The Bureau of Reclamation should have the responsibility for determining the reservoir capacities on the main stem and tributaries of the Missouri River for irrigation, the probable extent of future irrigation, and the amount of stream depletion due to irrigation development.

(c) Both agencies recognize the importance of the fullest development of the potential hydroelectric power in the basin consistent with the other beneficial uses of water.

4. For convenience in referring to the joint engineering report, the following comparable six subdivisions contained in the report of the Bureau of Reclamation, Senate Document 191, Seventy-eighth Congress, second session, have been used:

(a) Upper Missouri River Basin.
(b) Yellowstone River Basin.
(c) Missouri River—Fork Peck to Sioux City.
(d) Minor western tributaries.
(e) Niobrara, Platte, and Kansas Rivers.
(f) Lower Missouri Basin.

* * * * *

MISSOURI RIVER—FORT PECK TO SIOUX CITY

7. The plan presented in House Document 475, Seventy-eighth Congress, second session, contemplates the construction of five additional multiple-purpose reservoirs on the main stem of the Missouri River for flood control, navigation, irrigation, power, domestic and sanitary purposes, wildlife, and recreation, as shown in the following table:

Project, location, and approximate gross storage capacity

	Acre-feet
Garrison, near Garrison, N. Dak.	17,000,000
Oak Creek, near Mobridge, S. Dak.	6,000,000
Oahe, near Pierre, S. Dak.	6,000,000
Fort Randall, near Wheeler, S. Dak.	6,000,000
Gavins Point, near Yankton, S. Dak.	200,000

The plan also provides that as soon as substitute storage is built on the main stem of the river, the Fort Peck Reservoir will be operated as a multiple-purpose reservoir primarily in the interest of irrigation.

* * * * *

9. After full discussion of the varous features of the two plans in this subdivision the following main-stem reservoirs were recommended in the joint engineering report in order to more fully utilize the water resources of the basin and to most effectively serve the present and ultimate requirements of flood control, irrigation, navigation, hydroelectric power, and other uses.

Project, location, and approximate gross storage capacity

	Acre-feet
Garrison, near Garrison, N. Dak.	17,000,000
Oahe, near Pierre, S. Dak.	19,600,000
Fort Randall, near Wheeler, S. Dak.	5,100,000
Big Bend, near Joe Creek, S. Dak.	250,000
Gavins Point, near Yankton, S. Dak.	200,000

The final storage capacities to be selected for the above reservoirs will be jointly agreed upon after more detailed plans and cost estimates have been made.

10. The Garrison Dam, Reservoir, and power plant was included in the coordinated

plan as it provides a large volume of useful storage capacity for flood control, navigation, and irrigation, and permits the utilization of approximately 160 feet of head for the development of hydroelectric power in an area capable of absorbing the potential output and which, otherwise, has no prospective source of abundant low-cost power. A large reservoir at the Garrison site, situated immediately below the Yellowstone River with its large silt contribution, will prolong materially the life of downstream reservoirs.

It will be noted that the final authority over flood control and navigation is lodged with the Army engineers and that matters pertaining to irrigation are left with the Bureau of Reclamation, even to the extent of determining the height of the dam at Garrison. As this joint agreement is in all things approved by Public Law 534, the conclusion is inescapable that so far as irrigation is concerned the Army engineers have no authority over that in the slightest degree. The Bureau of Reclamation has already gone on record that a pool level of 1,830 feet at Garrison is sufficient for irrigation purposes. Notwithstanding that, the Army engineers have no authority over irrigation. They are constantly giving testimony before this committee and others, and are filling the newspapers with stories about the great irrigation plans they are formulating for a high dam at Garrison. They ignore the joint agreement under Document No. 247.

It will be noticed that in this joint agreement the capacity of the dam was agreed to at 17,000,000 acre-feet, and the following important language appears on page 3 of Document No. 247:

> The final storage capacity to be selected for the above reservoirs, including the Garrison Dam, will be jointly agreed upon after more detailed plans and cost estimates have been made.

That means that if the impounded waters are to be more than 17,000,000 acre-feet, the Bureau of Reclamation will have to agree to it. They have not so agreed, and from their testimony in various hearings on this matter they will not agree.

Yet even this provision does not daunt General Pick. He goes ahead arrogantly in purchasing land, unlawfully, to accommodate a water pool of 23,000,000 acre-feet.

Turning now to Public Law 534, which was an approval of this Senate Document No. 247, I quote section 9, that law, which reads as follows:

> SEC. 9. (a) The general comprehensive plans set forth in House Document No. 475, and Senate Document No. 191, Seventy-eighth Congress, second session, as revised and coordinated by Senate Document No. 247, Seventy-eighth Congress, second session, are hereby approved and the initial stages recommended are hereby authorized and shall be prosecuted by the War Department and the Department of the Interior as speedily as may be consistent with budgetary requirements.
>
> (b) The general comprehensive plan for flood control and other purposes in the Missouri River Basin approved by the act of June 28, 1938, as modified by subsequent acts, is hereby expanded to include the works referred to in paragraph (a) to be undertaken by the War Department; and said expanded plan shall be prosecuted under the direction of the Secretary of War and supervision of the Chief of Engineers.
>
> (c) Subject to the basin-wide findings and recommendations regarding the benefits, the allocations of costs and the repayments by water users, made in said House and Senate documents, the reclamation and power developments to be undertaken by the Secretary of the Interior under said plans shall be governed by the Federal reclamation laws (act of June 17, 1902, 32 Stat. 388, and acts amendatory thereof or supplementary thereto), except that irrigation of Indian trust and tribal lands, and repayment therefor, shall be in accordance with the laws relating to Indian lands.
>
> (d) In addition to previous authorizations there is hereby authorized to be appropriated the sum of $200,000,000 for the partial accomplishment of the works to be undertaken under said expanded plans by the Corps of Engineers.
>
> (e) The sum of $200,000,000 is hereby authorized to be appropriated for the partial accomplishment of the works to be undertaken under said plans by the Secretary of the Interior.

Here again the work on this common plan—Pick-Sloan plan—is divided between the authorities just as the Document No. 247 outlines.

It is obvious that the authority over irrigation, which was given up by the Army engineers when they signed Document No. 247, was approved by the law and that the Bureau of Reclamation alone has jurisdiction and authority over irrigation. General Pick has no authority whatever to be constantly issuing newspaper releases that a high dam will irrigate certain lands.

He stated before this committee that a high dam would irrigate some 750,000 acres, but says nothing about the 1,300,000 acres to be irrigated by the Bureau of Reclamation under their lawful authority.

There was written into this act an important amendment placed there by Congressman LEMKE, myself, and others which provides:

> (b) The use for navigation, in connection with the operation and maintenance of such works herein authorized for construction, of waters arising in States lying wholly or partly west of the ninety-eighth meridian shall be only such use as does not conflict with any beneficial consumptive use, present or future; in States lying wholly or partly west of the ninety-eighth meridian, of such waters for domestic, municipal, stock water, irrigation, mining, or industrial purposes.

Just what legal authority does General Pick have to do the following things?

To interfere with or destroy 40,000 acres of presently operating irrigation projects in the Williston area, consisting of the following:

The lower Yellowstone, the Buford Trenton, and the Lewis and Clark projects. Does this not conflict with this amendment?

To flood out a city of 10,000 people?

To destroy the railroad system into Williston?

To destroy the fresh-water system of this city?

To flood 90,000 additional acres in the Williston Valley and destroy the fields, ranches and homes in this area?

To disrupt our tax system and adversely affect an area containing 50,000 people?

The answer is that he has no such authority, but proposes to do it because of his own plans.

There is no authority anywhere to permit the operation of the normal pool level at the Garrison Dam above 1,830 feet, which would accommodate a storage pool of 17,000,000 acre-feet. There is no authority in law or by agreement with the Bureau of Reclamation to maintain a water reservoir capacity of 23,000,000 acre-feet.

A conservative estimate of the costs to the Government for the erection of this high dam—pool level of 1,850 feet—would be substantially as follows:

Cost of 90,000 acres of river bottom lands at and near Williston	$5,400,000
Flooding of 3 irrigation projects at or near Williston (Government cost)	5,000,000
Improvements	1,000,000
Cost of removing the Great Northern Railroad to a point 9 miles north of Williston, N. Dak.	1,000,000
Destruction of a city of 10,000 people	20,000,000
Cost of dikes around Williston, the railroad, and 3 irrigation projects	16,000,000
Total	48,400,000

Thus we have a total estimate of $48,400,000, not one item of which has been authorized by law. These figures do not take into account the annual crop production on this land of approximately 1,000,000 per year for all time to come.

This estimate does not take into consideration the future losses that may occur in life and property by the building of a dam that is unsafe. The higher the dam, the more pressure will be placed on a mound of dirt resting on a mud bottom of 85 feet, with no stone support anywhere from top to bottom. It will be risky enough with a pressure from a 17,000,000 acre-foot pool, and to increase it does not bring more safety, but more risk.

Now I wish to let this committee know that the Pick-Sloan plan as agreed to by Document No. 247 and as approved by Public Law 534 is satisfactory to the people of the Williston area, but the interpretation of the Pick-Sloan plan by General Pick is violently objected to. If the Army engineers could in some way be made to observe the law, no difficulty would arise. The constant and persistent advocacy of a high-water pool and irrigation suggested by the Army engineers, not authorized by law, has stirred up the people of northwestern North Dakota. It has divided the people of North Dakota. We find the Governor and the State water board following General Pick implicitly, while all four Members of Congress from North Dakota want the Army engineers to observe the law. The House of Representatives of the Legislature of North Dakota, by a vote of 77 to 31, approved the MVA plan of development, as in that they see a chance to break the arbitrary power of a determined Chief of the Army Engineers. Further evidence of the dissatisfaction of the people with the conduct of the Army engineers is shown by the attached

resolution—House Concurrent Resolution L—which was passed by the North Dakota Legislature with only a few dissenting votes.

The support for this plan will grow in strength just as long as the obstinate dictatorial attitude of General Pick continues. No board of directors of the MVA could possibly be as high-handed and arbitrary as is the Chief of the Engineers in his operations in North Dakota.

General Pick says he will build dikes around Williston. He will build dikes to protect the railroad when the Great Northern has already testified before Congress that, if the pool level is raised, the company will withdraw their railroad and run it on solid ground 9 miles north of the city of Williston. This means the destruction of Williston and a probable damage of $20,000,000. He says he will dike the irrigation project and that no harm will come to the people. Before Congress authorizes a higher dam they should inquire into the dike system. They should inquire into General Pick's fitness to promise and carry out this protection.

The law authorizes the Army engineers to build dikes along the Missouri River from Sioux City to the mouth of the river, but nowhere in the law is there any authority given for the building of dikes around the city of Williston and around the three presently operating irrigation systems at or near Williston.

We have illustrations on all sides that dikes along the Missouri and other rivers do not prevent seepage, which sours the land, and that these dikes from one end of the country to the other are in a constant state of repair. They do go out, as the Columbia River catastrophe of a year ago demonstrates. Is General Pick infallible?

The people of the Williston area will not live behind dikes, neither the farmers nor the city people. It is dangerous and they know it. It is dangerous enough to live below one of these earth dams, and it will be a miracle of the ages if they do not finally break and flood out thousands. The Fort Peck Dam has had two partial slides, one of which cost several lives.

The first report on this dam, contained in House Document 238, condemns the plan. This was done by Dr. Mead, whom the Army engineers themselves said was a structural geologist of international reputation. Does this mean anything to Congress? The dam at that time was to impound only 10,000,000 acre-feet, and this international authority said it was unsafe. Suppose we increase the pool to 17,000,000 acre-feet; will the pressure on the 85 feet of mud under the river bed be greater? If we increase it to 23,000,000 acre-feet, will the pressure on this mud be still greater? The answers are obvious.

This internationally famous engineer warns us against a 10,000,000 acre-foot pool. The law fixes the pool now at 17,000,000 acre-feet. Would it not be more sane to not increase the pressure and try out this experiment first—instead of wading in blindly and throwing all caution to the winds to blindly follow an engineer who is not infallible?

To stop this high-handed and arbitrary action of General Pick, the Congress is being appealed to now to limit the pool level to 1,830 feet and limit land purchases to accommodate that level.

This attitude of General Pick is not authorized by law, it is not compatible with the safety of the people in that valley, and it is not necessary. The Bureau of Reclamation says they can produce all the power we can use without a dam in the Missouri main stem. A 1,830-foot water level is enough for flood control and navigation, and at this time it is not an irrigation dam. Irrigation, and ample irrigation, has been provided for in the Sloan plan.

The conclusion is inevitable that a 1,850-foot water level is not necessary, and it may be highly dangerous to life and property.

The solution to this difficulty can be accomplished by Congress in the following manner:

Permit the dam to be constructed accommodating a water pool of 17,000,000 acre-feet and limit all land purchases to accommodate no greater pool.

Let experience demonstrate the workability of the dam and the safety of the dam. The admonition given us by Dr. Mead in 1934 should not be entirely ignored. The safety of the people in that area deserves careful consideration.

Congress should make appropriations for the Missouri-Souris or Sloan plan and develop that part of the Pick-Sloan plan as well as to build the Garrison Dam. It is apparent now from all the reports we have that the combined plan will be more apt to succeed than if we are to spend all of the tax money to build the Garrison Dam. Under the law, the Army engineers will have no control over furnishing electric power to cooperatives, municipalities, and enterprise. That authority belongs to the Bureau of Reclamation.

If the years demonstrate that a higher pool level is necessary, it can be built, and in the intervening years, as little damage as possible will be done to the flooded area.

All the people of northwestern North Dakota demand is that the Army engineers build the dam as authorized by law and give their attention to that work and not engage in a propaganda campaign for a higher pool level. The people of this area want the unified Pick-Sloan plan carried out as now authorized by law.

What the people of Williston, through their representatives in Congress, have been doing in past years, and what they are trying to do now is to limit the operating pool level of the dam to the authorized 17,000,000 acre-feet. This, up-to-date, has been done by an amendment to the appropriation bill, but this is not enough to stop the land purchases now going on to accommodate a higher pool. They never thought the Army engineers would do this or a limitation would have been offered before. This limitation should also be put in the bill and thus hold the Army engineers down to the authority in the law.

It will be at least 11 years before this water pool will come up to 17,000,000 acre-feet, hence, why destroy all this property before it is needed; and I also add, why destroy it at all before it is found by Congress to be necessary? The people of that area will comply with the will of Congress, but they do not want their lives and property put at the mercy, caprice, and arbitrary will of one man, whether he be in the Army or elsewhere. That is not the way of a democracy.

To give this committee all the evidence I can on the dispute as to the capacity of the Garrison pool of water, I want to say that in discussing a water pool of 17,000,000 acre-feet and a normal pool level of 1,830 feet above sea level that these statements are one and the same thing. An impounded pool of 23,000,000 acre-feet means a normal pool level of 1,850 feet. When we use the words 1,830 normal pool level, it means a 17,000,000-acre-foot pool, and when we use the words 1,850 normal pool level, we mean a water pool of 23,000,000 acre-feet.

Considerable light is thrown on this subject in Senate hearings on S. 1915 September 26 to October 2, 1944.

On page 34 of this report, from the testimony of W. G. Sloan, Assistant Regional Director, Bureau of Reclamation:

As a result, with the irrigation that is included in the plan and the reservoirs we have planned, we find that we can provide a uniform flow for navigation purposes in the lower river of approximately 17,000 second-feet during the navigation season, which is approximately 20 percent less than the amount the Army engineers have considered necessary. We have adopted this 17,000 second-feet as a compromise as we think that by uniform flows navigation can better be served than by erratic and irregular flows, such as have occurred in the past and such as would occur without this complete regulation of the stream. Power development has always been considered as incidental to irrigation and flood control, and in the lower part of the river, especially in the States of North Dakota and South Dakota, we have found that by regulating the stream to obtain a uniform power output, otherwise firm power, we would fulfill this obligation for navigation and for irrigation at the same time. So that the capacity of these reservoirs has been controlled more by the desire or the requirement of obtaining firm power than by any other feature, but it is tested by the requirements for navigation and flood control.

On page 36 of the report from Mr. Sloan's testimony:

We do not use all of the capacity of Fort Peck for this development. Of the total of 18,000,000 acre-feet capacity, 10,000,000 acre-feet will remain to supplement the navigation requirements in the lower region. The balance would be used for the development of power and diversion to the large Missouri-Souris project. The canal takes out below Fort Peck and diverts to a reservoir in Montana out of which we pump to lift the water over the divide into the Dakota lands. The return flow from all of these lands is gathered in the Souris River and diverted to the Sheyenne and James Rivers in North Dakota for several purposes, one of them to restore the level of Devils Lake, which is a large recreational lake and fishing lake which has been in existence in North Dakota prior to the last 20 years and has been gradually depleted, decreasing in size until it has virtually disappeared.

It was originally a lake of 60,000 acres and is now about 1,200 or 1,500 acres. It had many boats plying on the stream itself. It has long been the desire of those people to restore the level of that lake. That will be

one of the incidental benefits of the Missouri-Souris project. Likewise, we will furnish municipal water supplies in the Red River Valley and some 19 towns below Devils Lake and along James River and Sheyenne River.

From page 46:

Senator BUTLER. I don't think it would be out of line to ask you this question: Does the 17,000 feet which your plan provides amply cover the requirements as they can be estimated for navigation?

Mr. SLOAN. Well, I don't pretend to be an expert in that line, but I concluded in my own mind that the 17,000 would probably be adequate, and I base that on several considerations; that the conditions in the lower Missouri River would be so much improved by a lower uniform flow that they could probably easier maintain a 9-foot channel with those low discharges and low velocities. The velocities would be lower and, therefore, the cost of moving a boat upstream would be less, and the cutting and breaking down of the banks would be decreased by this uniform flow. It might require greater initial dredging to begin with to get the 9-foot channel, but once they had it it would be much easier to maintain it. Certainly that amount of water is adequate for any 9-foot channel that is required if properly maintained.

And from page 47, again from Mr. Sloan's testimony:

Now, perhaps I haven't satisfied all of the States; perhaps I have not satisfied North Dakota for instance, where there is actually an irrigable area of probably three or four million acres. The same is true in South Dakota. An additional three or four million acres could be irrigated. But in so doing, if I provided for all of that in North Dakota, there wouldn't be any water left for South Dakota, and if I provided for both of them, there wouldn't be any water left for navigation down below. And so I have adopted this (I call it a compromise plan) where I have distributed those benefits to the different States in proportion to their possibilities.

From page 49:

Senator GURNEY. Mr. Sloan, I think Senator BUTLER has brought up already the difference in the end result as far as it affects the navigation interests. In other words, there is a difference between your plan and the Army plan of 5,000 second-feet for navigation at Sioux City, Iowa. Those are not definite figures, but are as I remember them. Seventeen thousand second-feet for your plan is available at Sioux City, as contrasted with the Army plan of 22,000. And so I start to compare the two plans in my mind; as I understand your testimony this morning you said there was no large dam contemplated—in other words, you left out the Garrison Dam; is that right?

Mr. SLOAN. Yes, sir.

Senator GURNEY. As I remember it, the Army said that Garrison Dam was necessary to replace storage now obtained at Fort Peck which would naturally go for irrigation under your plan, and they originally had quite a large storage contemplated and they would overflow present lands, I think, in the Buford irrigation project; is that right?

Mr. SLOAN. Yes, sir.

Senator GURNEY. But later it was thought that the dam could be planned so as not to cover up the Buford project, and instead of having some 20,000,000 acre-feet, I believe, or 22,000,000, they would cut it down to 17,000,000; is that right?

Mr. SLOAN. Well, I haven't had any knowledge, I have never seen anything officially that has been proposed.

Senator GURNEY. Well, that is my understanding of it from listening to testimony for many days before Senator Overton's committee.

House Concurrent Resolution L

Concurrent resolution memorializing the Congress of the United States to investigate the procedure, amount of compensation paid, and policies of the United States Army engineers in acquiring and leasing lands for the Garrison Dam Reservoir

Be it resolved by the House of Representatives of the State of North Dakota (the senate concurring therein):

Whereas numerous and continued complaints have been made by land owners and organizations of land owners affected by the taking and renting of lands for the Garrison Dam Reservoir of certain procedures and policies of the United States Army Corps of Engineers in connection therewith, and particularly to the following:

1. That representatives of the Government have persuaded some farmers to sell their land at less than fair and reasonable prices, when they were not fully aware of their rights, and in some cases where they thought it would be useless to resist the Government, not knowing or realizing that land of equal or less value would be purchased for higher prices where the owner was better able to represent his own interests.

2. That the result of litigation has now proved that some land was purchased too cheaply, with the result that those who sold voluntarily and without causing the Government any expense have been discriminated against.

3. That the Government did not sufficiently take into account the hardship visited upon families required to relocate, where they had struggled for two or more generations to build a home which could not in any case be duplicated, and which consisted in many cases of buildings and improvements invaluable to the owner but of no value to the Government.

4. That the difficulty and expense of relocation was not in all cases given fair consideration.

5. That persons were forced to sell their property and in many cases thus exposed to income-tax liability which they should not under the circumstances be required to suffer.

6. That an unreasonable policy with respect to renting land to former owners during a delayed period before the land is flooded has worked an unnecessary hardship: Now, therefore, be it

Resolved by the House of Representatives of the State of North Dakota (the senate concurring therein), That the Congress of the United States be urged to investigate the procedure and policies of the United States Army engineers by means of a suitable committee or otherwise, as it may deem best, to determine whether such criticisms are just, and if so, to take the necessary steps to compensate persons equitably entitled even though there may no longer be legal liability so to do; to pay additional sums to those who voluntarily accepted less than fair prices; to reconsider the equities of those injured through force of circumstances in the difficulties of relocation; and to establish fair and equitable rules for dealing with tenants; be it further

Resolved, That copies of this resolution be sent to the President of the Senate and the Speaker of the House of Representatives of the Congress of the United States, and to each of the United States Senators and Representatives in Congress of the State of North Dakota.

PALMER LEVIN,
Speaker of the House.
GEORGE OLSON,
Chief Clerk of the House.
C. P. DAHL,
President of the Senate.
W. J. TROUT,
Secretary of the Senate.

THOMAS HALL,
Secretary of State.

Resolutions, Alabama Department, the American Legion

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1949

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks, I include the following letter from Maj. Joseph M. Dickerson, adjutant, Alabama Department, the American Legion, together with resolutions passed by the Alabama Department in its recent convention in Mobile:

THE AMERICAN LEGION,
DEPARTMENT OF ALABAMA,
Montgomery, Ala., July 11, 1949.

Hon. CARL ELLIOTT,
House Office Building,
Washington, D. C.

DEAR CARL: Enclosed herewith are copies of six resolutions adopted by our department convention. Subjects of the resolutions are indicated below:

Appreciation to our Senators and Representatives in Congress for their efforts to forestall bills in furtherance of civil-rights program.

Endorses and commends Committee on Un-American Activities and requests committee to continue.

Requests Eighty-first Congress to extend rights of veterans of World War II under title 5 of Servicemen's Readjustment Act of 1944.

Condemns acts of violence committed by mobs and hoodlums. Recommends Federal Government not interfere in handling of such matters by local authorities.

Recommends that lending machinery be provided so that all veterans may benefit by the GI bill of rights.

Recommends that war-housing units be transferred to local housing authorities for use as low-rent housing projects.

We earnestly urge that you give your full support to the resolutions where requested.

It was a good convention, and I am sorry you could not be with us. With kindest regards, I am,

Yours very truly,
JOSEPH M. DICKERSON,
Department Adjutant.

Whereas, the Department of Alabama, the American Legion, in convention assembled in Mobile, Ala., July 5, 1949, wishes to express appreciation to the members of Alabama's delegation in Congress for their efforts to prevent the passage of legislation in furtherance of the civil-rights program; and

Whereas the State of Alabama has satisfactory laws for dealing with the problem of lynchings; and

Whereas our present system of making the payment of a nominal poll tax a prerequisite to voting in the State is a State matter and of no concern to the Central Government; and

Whereas many of the provisions of the proposed bill to establish a National Fair Employment Practices Commission, will, if enacted into law, disrupt certain industries in our State, and are irreconcilable with our system of free enterprise and our present segregation laws; and

Whereas other provisions of the civil-rights program recommended by President Truman would be detrimental to the State of Alabama: Therefore be it

Resolved by the Alabama Department of the American Legion, That this convention applauds and expresses its appreciation to

Alabama's Senators and Representatives in Congress for their efforts to forestall the passage of all bills that have been introduced in the United States Congress in furtherance of the civil-rights program, particularly their fight against antilynching laws, anti-poll-tax laws, and the establishment of a National Fair Employment Practices Commission.

A true copy:

JOSEPH M. DICKERSON,
Department Adjutant.

Whereas the Committee on Un-American Activities of the United States House of Representatives has rendered outstanding service in exposing the efforts of Communist and other subversive groups to undermine our Government and spread among our people ideologies antagonistic to our American way of life; and

Whereas this committee is carrying on a work which is in line with our Americanism program: Therefore be it

Resolved by the annual convention of the American Legion, Department of Alabama, assembled at Mobile, Ala., July 3, 4, and 5, 1949, That we endorse and commend this committee and ask the Representatives from Alabama to vote to continue this committee; be it further

Resolved, That copies of this resolution be sent to the Honorable JOHN S. WOOD, chairman of this committee, and each of the nine Representatives and the two Senators from Alabama and that copies be given to the press for publication.

A true copy:

JOSEPH M. DICKERSON,
Department Adjutant.

Whereas the right of most veterans of World War II to receive readjustment allowances under title V of the Federal Servicemen's Readjustment Act of 1944 (known as the GI bill of rights) expires July 25, 1949; and

Whereas only about one-half of the unemployed Alabama veterans of World War II have rights to benefits under the Alabama unemployment compensation; and

Whereas unemployment amongst Alabama veterans is increasing; and

Whereas economic conditions in the near future may be such as to cause great hardship and financial distress to such veterans and their families: Now, therefore, be it

Resolved, That the American Legion, Department of Alabama, in annual convention assembled in Mobile on July 5, 1949, does herewith memorialize and petition the Eighty-first Congress of the United States of America now in session in the city of Washington, D. C., to extend the rights and privileges of veterans of World War II under title V of the Servicemen's Readjustment Act of 1944; be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, the Vice President, the Speaker of the House of Representatives and to each Congressman and Senator from the State of Alabama, and the members of the Veterans' Affairs Committee of the House.

A true copy:

JOSEPH M. DICKERSON,
Adjutant, Department of Alabama.

Whereas the American Legion was organized for the purpose of upholding and defending the Constitution of the United States of America, maintaining law and order, and fostering and perpetuating a 100 percent Americanism, to inculcate a sense of individual obligation to the community, State, and Nation, to promote peace and good will on earth, and to transmit to posterity the principles of justice, freedom and democracy upon which our Government is founded; and

Whereas there is widespread violation of the principles of trial by jury, of the security of the home, and of the freedom and liberty of the individual citizen by gangs and mobs, who seek to substitute force and violence for law and order; and

Whereas hundreds of thousands of the flower of American manhood have died upon the battlefields of the world to protect and preserve the princples upon which our country and the American Legion is founded and those of us who by good fortune were spared to meet here today, are determined to keep faith with the dead, and make certain that their sacrifice be not in vain: Now, therefore, be it

Resolved, That the American Legion, Department of Alabama, in convention assembled in the city of Mobile, July 3, 4, 5, 1949, hereby condemns each and every act of mob violence committed by mobs and hoodlums and thugs within the State of Alabama; and we hereby call upon each and every enforcement agency and official in Alabama to ferret out, arrest and bring to the bar of justice each and every member of each of said mobs, to the end that justice and democracy be preserved; and be it further

Resolved, That all law-abiding citizens of Alabama be and they are hereby each called upon to rally to the support of their respective local law enforcement officials and aid them to detect and place in arrest, each and every person guilty of acts of mob violence; and be it further

Resolved, That the American Legion, Department of Alabama, commend General Gorgas Post No. 1 for its prompt courageous and effective stand against mob violence and that this Department hereby express its stanch future support of each and every post in the State of Alabama required to act on the part of law and order for the good of the respective communities wherein they are located; and be it further

Resolved, That the Congress of the United States be advised that local self-government is the cornerstone of democracy, that government must be kept close to the individual citizen, that the integrity of State and local government must be preserved, and that the matter of the suppression of mob violence is for the State and local government and that said matters are now being appropriately handled by the people of Alabama without Federal interference.

A true copy:

JOSEPH M. DICKERSON,
Department Adjutant.

Whereas it has come to the attention of the American Legion, Department of the State of Alabama, in convention assembled in Mobile on July 3, 4, 5, 1949, that there are warhousing units in the Mobile and Gadsden areas and possibly other areas in the State of Alabama, which have been determined by the respective housing authorities in those areas to be needed as low rent housing units; and

Whereas under the present requirements of the acts of Congress, it is required that these housing units be demolished or disposed of by January 1, 1950; and

Whereas it is the opinion of this convention assembled that remedial legislation should be passed by Congress authorizing the transfer of such projects to the respective local housing authorities for use as low rent housing projects: Now, therefore, be it

Resolved—

1. That it is the sense of this convention that the Congress of the United States should immediately pass remedial legislation providing for the transfer of war housing units to local housing authorities for use as low rent housing projects, war housing projects which have been determined by the respective local housing authorities to be needed in the respective communities for use as low rent housing projects.

2. That such remedial legislation is urgently required in order to provide housing facilities for veterans in the respective areas involved.

3. That this convention assembled requests that the Senators and Representatives of the Congress of the United States from Alabama assist in the passage of such legislation providing for the transfer of war housing units to local housing authorities for use as low rent housing units.

4. That copies of this resolution be sent to each Senator and Congressman from the State of Alabama.

A true copy:

JOSEPH M. DICKERSON,
Department Adjutant.

Whereas the Congress of the United States in passing the GI bill of rights intended that GI loans be made available to veterans for certain worth-while purposes; and

Whereas the intention of this bill is being defeated by the fact that facilities of private lending institutions either are not available, especially in the rural areas, or lending institutions are not interested in making these loans in many instances, resulting in veterans being deprived of securing these GI loans: Now, therefore, be it

Resolved by the American Legior, Department of Alabama, in annual convention assembled in Mobile this 5th day of July 1949, That the Congress of the United States be called upon to provide the lending machinery and facilities to veterans wherever they might reside so that all veterans may benefit by the GI bill of rights in accordance with the legislative intent; be it further

Resolved, That a copy of this resolution be forwarded to each Representative and to each Senator of Alabama, and that they be requested to initiate legislation to this effect.

A true copy:

JOSEPH M. DICKERSON,
Department Adjutant.

Pressure in Shanghai

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of July 18, 1949:

PRESSURE IN SHANGHAI

The Chinese Communists, after a somewhat faltering start, are beginning to put on the pressure in Shanghai. The censorship is now being tightened and foreigners are feeling the need to get out. Thus another illusion is being shattered. Obviously there will not be business as usual. Business in China has always been more or less on our terms. From now on we will be obliged to comply with the Communist terms, or else. That has been made plain.

It can be agreed that our terms of dealing with China were not always generous and that the occasionally stiff-necked attitude of the old China hand has invited retaliation. But our over-all relationship with the Chinese has been friendly and fruitful. Our enunciation of an open door policy was made on our own behalf, but it did prevent the partition of China. That policy, in turn, paved the way for the Nine-Power Pacific Treaty, in which the sovereign integrity of China was fully recognized.

What is happening now reverses the trend of half a century. The sovereign integrity of China has already been compromised. It was compromised physically when we agreed

to the return of Soviet economic control in Manchuria. It has been compromised spiritually by the installation of a regime in the Yellow and Yangtze Valleys that freely proclaims its moral subservience to a foreign state. It is not merely the economic open door that is being closed in Shanghai; it is the open door frame of mind. The Chinese Communists are not defending China's integrity by the present wave of antiforeignism; they are deliberately giving it away.

Similarly, what we are losing by our own calculated detachment at this point is not so much an economic or political advantage as it is a moral one. The amount of business as usual that we could do with China would be relatively insignificant in any case. But we have stood for certain concepts of government and behavior in the Far East. We have tried, honestly and earnestly, to align ourselves with progress toward larger freedoms and higher achievements. We have tried from time to time really to help China in the best sense of the word. At the moment we are standing aside and seeing some of our joint accomplishment lost. What the Communists in Shanghai have taken away from us is our moral initiative, and we have not made it plain how we propose to regain it.

Farm Legislation

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 19, 1949

Mr. HARVEY. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an editorial from the Hoosier Farmer of July:

NEVER, NEVER, NEVER

Something dangerous and unexpected is happening to the farmers of America and it is not of their doing. It would appear that a few persons in high governmental positions are attempting to make a political football of current farm legislation and legislative proposals affecting agriculture.

In all of the history of farm legislation stretching back 50 years, farm legislation on the national level has been the product of both major political parties. On many occasions, able leaders among the Democrats and Republicans have joined hands to write and introduce farm bills. The best proof of the common sense of farmers in protecting their political self-respect during the trying years of the 1920's and the desperate early 1930's is reflected in the farm bloc that was formed of Congressmen and Senators of both political parties.

Any politician who would throw the serious economic problems of agriculture strictly into the political arena certainly doesn't have the welfare of the farmer uppermost in his mind. To decide the present and future farm problems on a partisan basis will divide farmers against themselves and will result in selling them down the river. There are Democrat farmers and there are Republican farmers; and, the only chance all farmers have to get desirable legislation, as well illustrated during the past 30 years, is to work together through their own organization in a united bipartisan program of direct action. Farm problems are not political problems.

The Agricultural Act of 1948, which will go into effect in 1950, was developed by farmers themselves, from grass-roots thinking throughout agricultural America. The American Farm Bureau Federation worked with the leaders of both major political parties in getting the law upon the statute books. A Democratic administration, including the present Secretary of Agriculture and President Truman, who signed it into law, cooperated in supporting the provisions of the 1948 act. A Republican-controlled Congress, after much consideration and lots of urging by farm organizations, passed the bill that became known as the Agricultural Act of 1948. Every step was on a bipartisan basis.

The Brannan proposal, which would do away with economic opportunity and substitute a scheme of cheap food for labor and industry and hopeful subsidies to farmers who would be tied down with governmental red tape and controls, is a dead duck as far as Indiana farmers are concerned. Hoosier farmers are thinking through on a nonpartisan basis this stabilized peasantry plan for agriculture and studying its dangerous philosophy more than any national legislative proposal ever made to them. Politicians who misinterpret that farmers favor the Brannan scheme of economic farm control are in for a rude awakening. Farmers want to try the Agricultural Act of 1948, which is in the tradition of farm legislation of the past 20 years.

Indiana farmers want no little Brannan program either. Some politicans and Government agents have suggested we try on a test basis the Brannan plan with hogs this fall. That would be harmful to farmers raising and feeding cattle, sheep, dairy cows, and poultry. President Schenck says it would mean consumers would stop buying all meats but pork, which would be subsidized to consumers at extremely low prices. This trial plan would cost farmers billions of dollars in loss of markets for all meats and dairy products, except pork, and it would add many hundred millions—maybe billions—of dollars to the national debt. There is no stopping place, once the Brannan scheme gets under way, until all farms become completely controlled by the Government.

There is but very little difference between Government-controlled farms and Government-owned farms.

GLENN W. SAMPLE, *Editor.*

Trade Treaty With Czechoslovakia

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 19, 1949

Mr. PATTERSON. Mr. Speaker, on June 22 I placed in the RECORD a resolution adopted by Frank A. Johnson Post, No. 758, of the American Legion in Johnson City, N. Y., concerning the reciprocal trade treaty negotiated by the United States with Czechoslovakia. It was pointed out, at that time, that a disservice was done to the American people by the administration and the State Department in concluding negotiations with Communist-dominated Czechoslovakia.

I submit now additional evidence that people from all sections of America are disturbed by the implications of this trade agreement. The national executive committee of the American Legion has adopted a resolution asking that the escape clause in the treaty be invoked so that there will be no further inroads in the American rubber and shoe industries because of importations of slave-labor products from Czechoslovakia.

In addition, I submit a resolution forwarded to me by the Young Men's Business Club of New Orleans, La., concerning the Czechoslovakian exhibit at the International Trade Mart in that city. It is evident that the illegally-installed Government of Czechoslovakia is determined to take advantage of the trade agreement signed by this country by increasing its exports to us as much as possible.

These two actions by geographically separated groups give an indication of the indignation which will soon be felt by many more of our citizens when decreased production and increased unemployment are prevalent because of the influx of the products of cheap labor from a Russian satellite country.

Whereas labor and industry, particularly those engaged in the manufacture and sale of rubber footwear are presently suffering by reason of a reciprocal-trade agreement negotiated by the Department of State concerning the shoe industries, such agreement having been last promulgated by Presidential proclamation dated April 22, 1948, effectuating general agreement of trade with respect to Czechoslovakia; and

Whereas this situation extends to about 125 well-developed lines of American industries including the manufacture and marketing of shoes, gloves, carpets, felt hats, glassware, and many other lines of consumers and capital goods; and

Whereas the terms of the reciprocal treaty have made possible the importation of goods from Czechoslovakia, manufactured through low labor standards and other methods abhorred by both capital and labor in this country, and importations have created unfair competition to American industries and are seriously threatening its continued existence and if permitted to continue will result in extensive unemployment and injury to the affected industries; and

Whereas the above-mentioned reciprocal-trade agreement contains a saving clause worded substantially as follows: "If, however, as a result of unforeseen circumstances, any of these concessions should result in such increased imports from Czechoslovakia as to cause or threaten serious injury to domestic producers in this country, the United States is free to withdraw or modify the concessions to the extent necessary to prevent or remedy the injury"; and

Whereas present conditions particularly in the rubber and shoe industries warrant that effective steps be taken to halt the increase of importations from Czechoslovakia; and

Whereas the American Legion is gravely concerned about the many veterans who are engaged both in employment and industry, as well as the welfare of the entire people of the United States, who will suffer unless the aforesaid action be taken: Therefore be it

Resolved, That the President and all appropriate officials of the United States be and are hereby urgently requested to take all necessary and appropriate action in the premises which will result in a termination of this extremely unfavorable situation; and be it further

Resolved, That copies of this resolution be forwarded to the President of the United States, the Secretary of State, and such other officials of our Government as may be deemed necessary.

Submitted by:

LEO V. LANNING,
National Executive Committeeman,
New York State.

Whereas on April 28, 1949, a Czechoslovakian exhibit was opened in the International Trade Mart in New Orleans for the

promotion of trade with the Communist regime of the Russian satellite state, Czechoslovakia; and

Whereas the International Trade Mart, a civic enterprise, is "dedicated to world peace, trade, and understanding (and to encourage) the development of trade with friendly foreign nations"; and

Whereas the Communist regime of Czechoslovakia has been condemned by the United States State Department; and

Whereas sufficient facts have been presented to us that this trade would not help the people of Czechoslovakia but rather their despised Communist overlords, by following this trade practice we would be feeding "ammunition to aggressive international communism," and to promote this trade is definitely "contrary to our national interests": Therefore be it

Resolved, That the Young Men's Business Club of New Orleans does hereby go on record as being in favor of the removal of Czechoslovakian exhibit from the International Trade Mart at the earliest possible date, and that this club asks the citizens of New Orleans, because of the dangers to national security and international good will, not to deal with governments professedly enemies of genuine democratic process; and be it further

Resolved, That the Young Men's Business Club of New Orleans request the International Trade Mart not to make available its facilities to such governments; and be it further

Resolved, That nothing herein shall be deemed to reflect in any manner on the integrity, progressiveness, business ability, patriotism, or good citizenship of the officials of International Trade Mart.

Blueprint for the Welfare State

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 19, 1949

Mr. MILLER of Nebraska. Mr. Speaker, now we have it—the blueprint for the welfare state. Abandonment of private enterprise and adoption of Government planning and controls to cope with problems arising from the leveling off of the inflation spiral. While the President does not go the whole way with them in his midyear economic report his left-wing advisers led by Senator MURRAY and 17 other Senators have introduced a bill in the Senate as an amendment to S. 281 to do this very thing. Business analysts almost unanimously agree that this leveling-off process is healthy for our economy but the Fair Deal planners are beginning to worry about its effect on their continuance in office. The only thing they can think of is Government controls and regimentation.

Until recently the President has been urging Congress to give him powers to control production, fix prices, and increase taxes to stop inflation. Now that production under free enterprise begins to catch up with demand certain of his advisers get jittery and cook up an all-inclusive and costly plan of Government action. It proposes a completely planned and managed economy with a National Economic Cooperation Board to which the President shall appoint representatives of industry, labor, agriculture, consumers, and as far as feasible of State and local governments and regional development organizations. The functions of this Board shall be to "make recommendations with respect to the development of national economic policies to promote maximum employment, production, and purchasing power under the Employment Act of 1946, including the investment, price-wage-profit, and other policies set forth in this act." Nothing is to be left to the judgment of private enterprise which has brought to our people the highest standard of living the world has ever experienced. The plan proposes the extension of Government credit to private business "to encourage the satisfying of investment and production needs for designated essential expansion areas." To promote better Nation-wide understanding and better voluntary application of general price, wage, and profit policies which will help to further the objectives of this act the Board must study such things as minimum family budgets consistent with health and decency and the needs of investors. Here is the opening wedge to complete thought control. The people would be called upon to report every detail of their lives to this supersnooper agency. Cannot you just imagine what a huge bureaucracy this would set up, into which all the planners could be gathered. Think of all the interviewers you would have to entertain and the reports you would have to make out. One member of your family would have to spend their whole time giving interviews and making reports. If you were in business you would have to set up an information section to prepare for them.

Under the plan the Federal Government would grant money to political subdivisions for preparing public-works plans so that at all times there would be a shelf of plans for approximately 30 billions worth of works. Another proposal would give the President authority to designate serious unemployment areas in which he could place defense and other Government contracts, initiate or expand Federal works programs. The President is now putting this into effect. What a heyday that will provide for politicians to pull and haul for such works. Aid could be given to each worker in communities where unemployment is most serious to pay the cost of moving to a locality where work is more abundant.

As I stated above this plan would completely abandon individual enterprise upon which this country was built and substitute for it a completely planned economy. Since the proposal has reached the stage of a bill we will at least have the advantage of knowing the ultimate goal for which the planners are striving. They have already carried us a long way in that direction. This bill would take us much further on that route.

When I look at these proposals I cannot help but remember the days during the 1930's when the New Deal took us into debt to the amount of $60,000,000,000 trying out a lot of these plans but was unable to cure our economic ills.

Let us look at the record from 1933 to 1939. In spite of deficit spending and pump priming, this country had an average of about 9,000,000 unemployed. It took a war to cure the disease. The administration now proposes more deficit spending and calls those who would balance the budget and cut unnecessary expenditures selfish interests. It must come as a shock to folks who try to keep their own family budgets in line with their income. Saving for a rainy day is some sort of a sin.

In my humble judgment, Mr. Speaker, the Government should be no different than the individual. When incomes fall the average family stops buying those things they might want but cannot afford. President Truman and his left-wing advisers recommend the opposite course. It is an unusual philosophy that can only lead to bankruptcy and the welfare state.

Rome's Ban on Communists

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 19, 1949

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein two editorials, one which appeared in the Newark Sunday News, July 17, 1949, and the other in the Progresso Italo-Americano on Sunday, July 17, 1949. Both deal with the question of Rome's ban on Communism.

There is little doubt in my mind, Mr. Speaker, that the Vatican decree banning adherence to or interest in Communism by Roman Catholics everywhere is an event which is as momentous as it will be far-reaching.

The imperative summons to countless individuals to stand up and be counted on the side of God or on the side of a godless faith leaves little room for equivocation.

True it is a drastic and unprecedented step. But there was little choice left against the aggressive policy of international Communism—the enemy of all religions.

The editorials follow:

[From the Newark Sunday News of July 17, 1949]

ONE STRUGGLE

Religious feeling is a part of the human consciousness. What are, or used to be, called the eternal verities are present both in the consciousness and in the hearts of men, who do not believe that all of life is to be explained in terms of science and reason alone, to the exclusion of the spirit.

Communism rejects this point of view. Its materialism rests on the thesis that the most powerful of all forces in human motivation is the force of economic selfishness. Whatever is opposed to this narrow dogma is denounced as superstition and reaction.

All religion falls into this classification, in the view of the Soviet Union. Religious organizations are the target of special scorn and restrictive action. The Soviet Union would like it to appear that this conflict

is one between church and state, whereas the fact is, and all Marxist writing proves it, that other worldliness in men's minds is regarded as destructive of the Communist ideal.

As concerns the Christian religion, two great pronouncements have just been made resisting communism's attack on religion. The first came from the Vatican, the second from the central committee of the World Council of Churches, meeting in England.

The decree of excommunication issued at Rome applies to Communists throughout the world, but it was designed, in large part, for the information and instruction of western European Catholics. It is, in effect, a warning to all Catholics not to waiver in their faith.

That is the purpose, likewise, of the appeal of the World Council of Churches issued at the close of its conference in England. Speaking in one voice 150 Protestant and Orthodox denominational bodies of 44 countries denounced totalitarianism as false and evil doctrine and proclaimed that there could be no social justice that did not recognize the rights of man and his duties to God.

These warnings are a solemn reminder of the great conflict in the realm of the spirit that separates the world. The struggle against communism is not a series of struggles, but one struggle, in which all that part of civilization which regards the individual as its base must participate, if the individual person and the individual soul are to remain intact.

[From Il Progresso Italo-Americano of July 17, 1949]

THE ENEMY OF ALL RELIGIONS

It would be extremely difficult to overestimate the importance of the decision of the Vatican that all Catholics who attach themselves to communism will incur the automatic excommunication of the Roman Catholic Church. Here is a declaration which will vitally affect the moral and even the material welfare of many millions throughout the world.

One of the costliest injuries inflicted on civilization by the totalitarian systems is the distortion and destruction of the meaning of words. Thus do these despots talk about their tyrannies as peoples' democracies. With shameless demagogy do these apostles of violence and bloodshed rave about their being lovers of peace. In fact, so successful have these overworked hypocrites been in their fraud and deceit that some people even call totalitarian communism a religion. We are sorry to say that too many in our own country and abroad have fallen for this poisonous piffle.

Here we have a most pernicious falsehood gaining currency among people who should know much better. It is true that Communists are fanatical in their devotion to their dictatorship and brutal bureaucrats. But fanaticism in the cause of evil and tyranny is certainly not the same as believing in religion. It is true that the Communists are often prepared to make reckless sacrifices of others (and sometimes even of themselves) in order to advance their totalitarian despotism. But not everyone who makes sacrifices is religious or devoted to ethical principles. Idolatry and crudest paganism are also rich in sacrifices, as certain periods of history will disclose. That does not turn idol worshipers into adherents of a faith which elevates their souls, raises their moral standards, and takes them beyond the crassest materialism in morality and callous contempt for all human decency.

DEVILISH DECEPTION

Nor does the fact that Communists believe in the infallibility of Stalin make communism a religion. Stalin is a hard, cruel, ruthless, and extremely vengeful man. He has become an expert at liquidating not only his political opponents but also his acquaintances, and even his best friends. Surely that does not make him infallible—except in cold-blooded murder. Certainly there is nothing godly about Stalin's purges, tortures, concentration camps, wrecking of churches, drugging of high Catholic and Protestant church dignataries, arresting of Zionists, and systematic revival of anti-Semitism.

All great religions have certain common moral virtues. They do not differ in essential moral values. Regard for human life, respect for the dignity of the individual, sacredness of the family, sanctity of the fruit of one's labor, equality before God—these great ethical standards are inherent in and inseparable from all great religions.

Totalitarian communism has only blind and bitter hatred of these moral values. The Communists have only utter disdain for the rights of others. They do not know or have the slightest comprehension of the Golden Rule. In short, communism is not a religion, but the very antithesis and mortal foe of all true religion.

Indeed, communism a la Russe has become the world's most dangerous racket. It pretends to be a movement of progress, when it actually is a force for and vehicle to total retrogression. It pretends to be highly social in its outlook, while it really is antisocial and utterly subversive of all progressive and constructive social relations. It pretends to be for basic reforms. In reality, Communists—as it has been so well said—are only assassins and gangsters masquerading as social reformers. Communists are highly antisocial creatures camouflaging themselves and parading as devoted social uplifters.

COMPLETE DEGENERATION

As we think of Communists making this claim because of some idealism in the first stages of the Russian revolution, we recall that other movements also began as social reform movements, but soon degenerated into venal expressions of international gangsterism. Fanaticism, dogmatism, slavish idolatry before the monolithic party boss, blind obedience, and recklessness of purpose and policy which characterize communism are the very opposite of true religion.

All lovers of liberty and honest progressives will, therefore, welcome the historic pronouncement of the Vatican in regard to the inherent antimorality of totalitarian communism as a dogma and its ruinous role as a destructive world force.

The Voice of Loyalty

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by Gen. Carlos P. Romulo, Philippine Ambassador to the United Nations, and chief delegate of the Philippines to the Far Eastern Commission that sits here in Washington. This statement was made by him in reply to a press release of our State Department of June 10, 1949, on the subject of Japanese reparations.

If the statement would have been made by anyone except by General Romulo, I would not call your attention to it. But, Mr. Speaker, we all know General, now Ambassador Romulo. He was once our esteemed colleague in this House. His loyalty to the United States is not a matter of lip service. It was tested in the crucible of battle. He fought for American ideals in Bataan, Corregidor, Leyte, Manila. In the words of that great American soldier, General MacArthur, "Romulo fought for the American flag with unsurpassed courage and devotion." He was awarded the highest American decorations. His four books, all best sellers, are among the best exponents of American idealism.

In the United Nations where in Paris he was elected the chairman of the important Ad Hoc Political and Security Committee of the General Assembly, he distinguished himself as an outstanding champion of American democracy and freedom. His words, therefore, carry weight not only because in war he fought courageously for democratic principles but also because in peace, in the councils of the world forum, his is a voice that is respected because it is a powerful one for those fundamental freedoms and human rights sacred to every true American.

On the subject of Japanese reparations, he speaks for a people close to us because for 48 years they were under the American flag and when that flag was threatened by Japan they rose to its defense. Let us give heed to what they address us in the following statement:

THIRD STATEMENT BY AMBASSADOR CARLOS P. ROMULO, CHIEF DELEGATE OF THE PHILIPPINES ON THE FAR EASTERN COMMISSION, ON THE PROBLEM OF JAPANESE REPARATIONS, WASHINGTON, D. C., JULY 13, 1949

The United States Department of State, in a statement of June 10, 1949, replying to the Philippine and Chinese representatives on the Far Eastern Commission who had expressed disagreement with the United States position on the problem of Japanese reparations, made the following observation: "These statements appear to this Government to be based on a number of serious misconceptions both as to United States policies toward Japan and the fundamental nature of the Japanese problem."

I believe it only fair to state that if there had been any misconceptions as to United States policies toward Japan, they arose not out of prejudice in our minds but rather as a reaction to the uncertainty that has hindered the efforts of the Commission during the past 2 years. If the discussion that has taken place in the Commission has served no other useful purpose, it has at least brought into focus a number of agreed facts and principles.

Accordingly, the Philippine Government is pleased to take note of the following declarations contained in the statement of the United States State Department of June 10, 1949:

1. That "Japan has been completely disarmed and the United States is determined that its war-making capacity shall not be permitted to re-emerge";

2. That it is not true "that the United States feels greater concern for the welfare of its late enemy than for the just reparations claims of its allies";

3. That "there are * * * elements in Japan which seek to take advantage of their country's plight for their own benefit";

4. That, by inference, the United States would welcome any "measures to enable the Japanese better to help themselves," short of compelling the Allies to abstain from further reparations;

5. That the Philippines, like any of the Allied countries, continues to have "the authority * * * to claim reparations" and

"the right and responsibility to submit its own reparations claims"; and

6. That the United States has "absolutely no intention of forming or allowing the formation of any national defense force for Japan."

To the extent that it has made these affirmations, the United States statement has contributed a certain measure of clarification which is most welcome. However, with all due respect, the Philippine Government is constrained to state that it cannot accept certain interpretations of established policy set forth in that statement.

In particular, the Philippine Government takes exception to the United States interpretation of paragraph 11 of the Potsdam declaration to the effect that it gives first priority to a self-sustaining Japanese economy, and second to reparations. We consider this interpretation to be an afterthought. The Potsdam declaration was punitive in spirit and intent, and understandably so, since it was promulgated in the heat of the conflict. It was a call issued by the principal Allied Powers, then at the threshold of imminent and certain victory, upon the Japanese Government to surrender unconditionally and avoid further useless destruction of life and property. It was, to be sure, a demand for the enemy's surrender radically different in character from similar proclamations issued by less gallant victors. Despite the magnanimous spirit of that declaration, it was nonetheless a statement of the victors' terms. The concern for Japanese economic revival was a generous and humane consideration, but it was not and could not have been the primary one. The primary consideration at that time was properly the determination to make Japan pay for her criminal act of aggression, and this was to be done by depriving her of her overseas territories, by destroying her war-making capacity, and by exacting from her just reparations in kind.

It would be a patent distortion of the stern purpose of the Allies to suggest at this late day that paragraph 11 of the Potsdam declaration gives Japanese industrial recovery priority over reparations. Since reparations were destined to be a primary source of assistance in the economic reconstruction of the countries devastated by Japan, that would have been like saying, in a document laying down the terms for the unconditional surrender of the enemy, that Japanese industrial recovery would take precedence over the economic rehabilitation of the Allies. That would be a logical absurdity.

Let us examine the language of paragraph 11. The word "permit" occurs twice in that paragraph, but in two quite different senses. Japan's right to maintain certain industries is carefully qualified by the first use of the word in the first part of the sentence: "Japan shall be permitted"—meaning the Allies would grant Japan the privilege of maintaining such industries. No such permissive meaning attaches to the use of the same word in the clause: "and permit the exaction of just reparations in kind." Here it means simply in order to enable Japan to pay reparations in kind. The grant of the privilege of maintaining certain industries was an act of generosity, and hence permissive with respect to Japan. The right of reparations, on the other hand, was subject to no such permissive qualification. It was a right that inhered in the victorious powers under the iron laws of war.

Under this interpretation, if the United States wishes to relinquish her reparations claims against Japan, nobody can stop her. But her decision to do so would be an individual act of self-denial which it would be unfair to ask the devastated allies like the Philippines to emulate. The United States can be as magnanimous toward Japan as she pleases; she has reasons of her own for choosing such a course, and she can afford it. But the Philippines is not so fortunate. With the best will in the world we must confess that we have not the means to match America's unprecedented gesture of renunciation.

The United States has pointed out that the Allies must bear their proportionate measure of sacrifice for the sake of a peaceful, democratic, and self-supporting Japan. Although we continue to share in the stated objective, we must emphatically declare that we cannot share in the means proposed. The call for further sacrifice cannot possibly apply to the Philippines, although it may apply to countries that suffered little or no direct damage or to those which, having suffered such damage, have in substantial part recovered their losses through the seizure of considerable war booty or valuable territories. It cannot possibly be suggested that the Philippines, which suffered such utter devastation in the struggle against Japan, must now again bear its proportionate measure of sacrifice for the sake of Japan. Our share of that sacrifice is minus zero.

It is a truism to say that economic want is the enemy of peace and democracy. That would be true not only in Japan but everywhere else including the Philippines. The United States considers herself committed to a peaceful, democratic, and self-supporting Japan. Because of the special ties between the United States and the Philippines and the special character of their alliance in the war against Japan, one may wonder whether the concern for the survival of a peaceful, democratic, and self-supporting Philippine Republic is not at least equally deserving of consideration.

Many of the Allies are not themselves self-supporting and the consequence menace to their internal order and democratic institutions is fully as grave as that which is said to confront Japan. Is it demanded that the victims of Japanese aggression, if confronted by the choice of their own self-sufficiency and the self-sufficiency of Japan, should nobly renounce their interests for the sake of Japan?

A more reasonable proposal would be to declare that Japanese economic recovery can only be achieved within the total framework of a reviving far-eastern economy. It is true, as the State Department has asserted, that "the programs of democratization and reform prescribed by the Far Eastern Commission for Japan could succeed only in a tolerable economic environment." But it is evident that such an environment cannot be created for Japan under hothouse conditions, but only in the context and milieu of the far-eastern economy as a whole. Any attempt to develop Japanese economy independently of the countries of southeast Asia would be short-sighted and unwise, and the Philippines, for one, is determined not to revert to its prewar position, with all the attendant risks, as mere supplier of raw materials to Japan and dumping ground for its cheap manufactured products. If this aspiration is unreasonable, we would like to know why.

The United States has disavowed any intention of showing greater concern for the welfare of its late enemy than for its allies. However, its latest statement contains no hint whatever of its intention to prove the contrary. It was completely silent on the representations of the Philippine Government to the effect that the expected reparations from Japan form an essential part of the Philippine economic rehabilitation program, and that we need reparations or their equivalent to enable us to develop a modest industrial base before Japanese industrial power has a chance to fully reestablish itself and menace us once more.

The United States statement was also silent on the argument that Japan is being treated, in the matter of reparations, altogether too leniently as compared to Germany, to the disadvantage of those countries that have claims against her and none against the latter. Yet, we have reason to believe that Japan's economic condition is not as critical as that of Germany. We have the authority of General MacArthur for the statement that Japan has achieved a greater postwar economic recovery, largely by her own efforts, than many European nations, and that Japanese production has doubled in 2 years while Japanese exports for the same period are about to be quadrupled.

In the face of these facts, we are asked to abstain from Japanese reparations even while the occupying powers in Germany other than the United States continue to exact reparations and are still transferring industrial plants from their respective zones of occupations, including the Ruhr.

Nor did the United States statement make any reference to the argument that the Philippines has a preferential claim to reparations as one of the worst devastated countries in the war against Japan. There is an established obligation that must be satisfied, and the concern over the economic difficulties of Japan, whether real or fancied, cannot cancel that obligation. We maintain that Philippine entitlement to reparations is indefeasible, and that such entitlement would stand as a matter of simple justice even if the concept of a punitive peace were discarded. Japan must pay in some acceptable form for the damage she has wrought in the Philippines. If it is now suggested that Japan be relieved of this obligation, then we have a right to know by whom the outstanding obligation shall be assumed and by what means it is to be satisfied.

The United States State Department in its reply denies that the United States implicitly agreed in the Philippine Rehabilitation Act that it would undertake to act as agent for the Philippines to collect reparations from Japan at least to the extent of the balance of the war damage claims not paid for by the United States. The term "agent" was used in our previous statement in a special technical sense. The relationship suggested arose from the special ties between the United States and the Philippines in the unusual circumstances obtaining at the time of the passage of the Rehabilitation Act, before the Philippines became independent, and the reference was not to the ordinary kind of agency involving profit but rather to an agency involving moral trust.

It was implicit in the Rehabilitation Act that the United States would not allow the discontinuance of Japanese reparations to the Philippines until the Philippine war damage claims are paid in full; on the contrary, that the United States would cooperate to the fullest extent with the Philippines in securing reparations from Japan to rehabilitate its economy.

The discussions of the bill in the congressional committee hearings, and particularly a letter of the State Department itself in connection with the reparations aspects of the bill, give additional support to this contention. The State Department letter referred to was submitted to the House Committee on Insular Affairs and set forth its views in connection with section 106 of the act (see p. 143 of the hearings of said committee). That letter stated in connection with section 106:

"It may be assumed that the Philippine Government, with the support of the United States, will be able to secure a fair share of reparations, including probably all the industrial equipment of the type available for reparations which the Philippine economy can absorb."

Another excerpt from the discussions of section 106 of the House committee which makes clear this implicit intention of Congress appears in a statement of Mr. McNutt, the then United States High Commissioner to the Philippines. In connection with an amendment of section 106 proposed by him (which was adopted by the committee and by Congress and is now the present section 106 (b) of the act), he stated (p. 76):

"Now the reason for the suggested amendment is this: The amounts so authorized to be appropriated, or surplus materials to be utilized, under this act are recognized as insufficient to fully rehabilitate the Philippines from losses and damages incurred in the war. It appears that this section 106 was to provide for full rehabilitation, provided sufficient reparations and indemnity could be obtained from the Japanese Government and the Japanese people."

Congress accepted this proposed amendment, and it is therefore clear that it agreed with Commissioner McNutt that the purpose of Section 106 was to provide for full rehabilitation of the Philippines by means of reparations and indemnity, both physical assets and money and bullion, sufficient to cover the balance of the war damage claims not paid for out of the United States Treasury. In such an intention, there is necessarily implied an undertaking by the United States to assist the Philippines in obtaining sufficient reparations to cover the unpaid balance of its war damage claims.

The Philippine Government has acted in its own behalf within the Far Eastern Commission in respect of its own reparations claims precisely because the Rehabilitation Act did not purport to settle completely the question of war damage to Philippine property. The enactment resulted from the peculiar relationship between the United States and the Philippines, and it sought to provide a means whereby the young Republic, which had been created by American magnanimity, would be able to secure the equivalent of immediate partial reparations instead of awaiting protracted settlement by an international commission.

As early as May 21, 1947, the New York Times reported that the United States had claimed the greatest share of reparations from Japan with the stipulation that it would keep none of the proceeds, but would distribute them among the Philippines and other ravaged countries, and in consequence of which the percentage share of reparations allotted to the Philippines would be decreased proportionately. On November 6, 1947, General McCoy declared in a statement to the Commission on behalf of the United States Government: "The United States Government proposes that if the Commission will accept the schedule now submitted by the United States, the United States Government will relinquish 18 of the 28 percent which it claims, and will allot this 18 percent as a fund to be distributed by the other states among themselves in any proportion which they deem advisable."

It, therefore, appears that the principle of agency as a moral trust arising from the American solicitude for the Philippines and other war-devastated countries, which was implicit in the reference to reparations in the Rehabilitation Act of 1946, was subsequently reaffirmed in an official United States statement before the Commission in 1947.

In conclusion the Philippine Government desires to request the United States Government to define in clearer terms the exact extent of its decision to discontinue reparations. It is important to the interests of the Philippine Government that it be made a matter of record at the present time whether or not this discontinuance is intended merely as a temporary supension of reparations until a later date, either before or after the Japanese peace treaty is concluded, since it is an established rule of international law that a sovereign state has an inherent right to reparations of which it cannot be deprived by another state. Finally the Philippine Government desires to be informed whether the United States Government contemplates a compensatory formula either as an interim measure before the peace treaty is signed or as final settlement in lieu of reparations in kind.

Treason's Strange Fruit—A Premium Upon Disloyalty

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. PATTERSON. Mr. Speaker, in February of this year it was announced by the Library of Congress that the Bollingen award for "the highest achievement of American poetry in 1948" was granted to Ezra Pound, indicted for treason, for his Pisan Cantos.

I do not profess to be a poetry critic, and will make no contention regarding style or meter of this alleged work of art, but will confine my remarks to the content of this work and the background of the poet as well as the part played by the Library of Congress in the award.

Ezra Pound, a confidante of Mussolini's and an apologist and propagandist for this Fascist dictator, as indicated in Boston for his treasonous activities during World War II. A finding of insanity precluded his being tried for treason, and he is now comfortably confined at St. Elizabeths Hospital here in Washington.

It is certain that many persons in the literary field will protest that there should be no condemnation of literary efforts because of political convictions. Reasoning such as this in Pound's case is extremely fallacious and without basis. Pound is a moral degenerate completely devoid of sensibilities or logic. It is impossible and wholly indefensible to attempt a separation of Pound's poetic efforts from his treasonous convictions and activities. Should we encourage the activities in literature of moral lepers? Should we, through the Library of Congress, say to aspiring poets that Pound's work is laudable and worthy of imitation?

Let us examine the implications of the award-winning poem, portions of which are quoted in Robert Hillyer's article in the June 11 issue of the Saturday Review of Literature on the Bollingen award. The Pisan Cantos contain obscenities to an excessive degree, and make many derogatory references to Jews and Negroes. As Pound's anti-Semitism and hatred of minority groups is well known, this is not surprising. Pound states that Jews stimulate wars to make money, while the stupid Christians go out to fight and are slaughtered. How can we tolerate these expressions, when we all realize the great contributions made in World War II by many thousands of Negroes and Jews who laid down their lives for an ideal. We bear a burden of shame by giving public recognition to this type of literary slander.

Although the Library of Congress did not directly participate in the award for this travesty, it must bear partial responsibility because of the linking of its name in the grant, and because of its participation in the appointment of the jury which selected Pound's work for the award.

As the Library is an instrument of the Congress, and directly responsible to it, it would seem desirable for an appropriate committee of this body to investigate the circumstances surrounding this award. This would not be thought control, but rather a rational and pertinent investigation of a shameful act.

I include articles by Robert Hillyer written for the Saturday Review of Literature, and a reply from Luther Evans, Librarian of the Library of Congress, which deal more fully with the Bollingen award:

[From the Saturday Review of Literature of June 11, 1949]

TREASON'S STRANGE FRUIT—THE CASE OF EZRA POUND AND THE BOLLINGEN AWARD

(By Robert Hillyer)

Last February 20 the press announced that Ezra Pound, who was then under suspended indictment for high treason, had been awarded a new prize, the Bollingen-Library of Congress award of $1,000. The award was made by a jury of Fellows of the Library of Congress in American Letters, which had adjudged Pound's Pisan Cantos to be the highest achievement of American poetry in 1948. Except for those facts, the general public, even that part of it which is interested in literary matters, knows little.

It is my purpose in these two articles to provide information concerning the background of this award from two points of view, the political and cultural, which are in this case closely related.

Ezra Pound is quite simply under indictment for treason because during the last war he served the enemy in direct poetical and propaganda activities against the United States. The defense has been that he was insane, which may be an interesting commentary on his prize-winning poetry. His poems are the vehicle of contempt for America, Fascism, anti-Semitism, and, in the prize-winning Pisan Cantos themselves, ruthless mockery of our Christian war dead. That fact may place the award, and the committee on the Bollingen prize, in an observable relationship to our dead and to the Nation they died for. Lastly, the award was sponsored by the Library of Congress and its Librarian. The Library is the property of the American people; the Librarian is their paid custodian. Should this matter come up for investigation by Congress, neither the Librarian nor the Bollingen group will have the right to argue that it is an attempt on the part of Government to control literaure; on the contrary, this group has apparently invoked the sanction of Government for its own ends.

At my request, Luther H. Evans, the Librarian of Congress, furnished me with data about the background of the award. In 1936, through private generosity, a chair of poetry was founded in the Library of Congress, to which appointments are made on an annual basis. In 1942 Allen Tate, the incumbent, with the approval of Archibald MacLeish, then Librarian of Congress, established a group known as the Fellows of the Library of Congress in American Letters. I have been unable to discover from the Library how or by whom this impressively titled group of fellows is appointed. They first met on May 26, 1942. At the time of the 1948 Bollingen award, the fellows included Allen Tate, Katherine Garrison Chapin (Mrs. Francis Biddle), Katherine Anne Porter, Willard Thorp, Paul Green, Louise Bogan, T. S. Eliot (a native of the United States who has become a British citizen), Theodore Spencer (who died January 18, 1949, after the award had been decided upon), Conrad Aiken, Wystan Hugh Auden (a native of Great Britain who is now an American citizen), Karl Shapiro, Robert Penn Warren,

Robert Lowell, and Léonie Adams. The first five have been members of the group since it was begun. To quote Mr. Evans:

"Through the activities of this group, the Bolligen Foundation offered to the Library of Congress a gift of funds to enable it, over a period of 10 years, to make an annual award of $1,000 to the author of that book of verse published during the previous calendar year which, in the judgment of the Fellows in American Letters, represented the highest achievement of American poetry during that year. The fellows may, however, decline to make an award for any year if in their judgment no poetry worthy of the prize was published during the year."

In view of Pound's hatred for the democracy of his native country, it is ironic that among the conditions of the award is the stipulation that the recipient must be an American citizen. By some tenuous legality Pound may be a citizen, but he knows nothing and cares less about civil obligations. Louis Untermeyer describes him as the most belligerent expatriate of his generation. He has seldom set foot in America since he was 23. His country's elections, wars, aspirations, and exploits have left him untouched if not hostile. After a lifetime of writing characterized by William Butler Yeats as nervous obsession, nightmare, stammering confusion, this alienated citizen produced the Pisan Cantos, certainly the worst of the lot. Yet the Bollingen jury stretched a point to consider Pound a citizen and defied all critical standards by finding in the Pisan Cantos the best American poetry of 1948.

Even in this brief summary of facts, several questions arise and some of them can be answered. Where did the Bollingen money come from? Ten annual $1,000 prizes are not easily obtained in these days. The money was given by the Mellon Foundation and set up as the Bollingen Foundation at the behest of Paul Mellon, the son of Andrew Mellon, former Secretary of the Treasury.

Why was the prize named the Bollingen Award? Where does the name come from? At this point, I must cite an incident which illustrates the ignorance of the jury itself concerning the background of the prize. One of the members, Prof. Willard Thorp, of Princeton, when asked by a reporter where the name of Bollingen came from, responded that he did not know, but he thought "it must be a family name." If so learned a member of the committee was in the dark, how should his less gifted colleagues be better informed? If gold rust, what shall iron do? But the original sponsors of the awards must have known what the name meant.

Bollingen is the Swiss lakeside retreat of the psychoanalyst Dr. Carl G. Jung. It is near Zurich. There, in an idyllic cottage, dwell Dr. Jung and his wife, receiving the visits, adulation, and gifts of many, including such millionaires as Paul Mellon. It is said that his first wife was one of Dr. Jung's patients. There is no implication in what follows that Mr. Mellon had any knowledge of Dr. Jung's former connection with nazism.

The issue of Dr. Jung's pronazism has been hotly argued, though certain facts are a matter of record. For a time Dr. Jung's admiration for Adolf Hitler was warm, and his services to the Nazi cause, including propaganda activities during his trips to this country, were considerable. Among his sympathies were included such Nazi flourishes as racism in general, the superman, anti-Semitism, and a weird metaphysics embracing occultism, alchemy, and the worship of Wotan. Convincing proof of all this is to be found in special research by A. D. Parelhoff and in Edward Glover's article Freud or Jung in Horizon for March 1949. Here are a few quotations from Jung: "The American presents to us a strange picture: A European with Negro mannerisms and an Indian soul" (1930). "The Jew, as a relative nomad, never has had and never will have his own culture * * * The Aryan unconscious is a higher unconscious than the Jewish" (1934). "Hitler's first idea is to make his people powerful because the spirit of the Aryan German deserves to be supported by might, muscle, and steel" (1936). "The paean of the Italian nation is addressed to the personality of the Duce, and the dirges of other nations lament the absence of great leaders" (1939). "German policy is not made; it is revealed through Hitler. He is the mouthpiece of the gods of old" (1939).

I had personal contact with Dr. Jung's nazism. At luncheon during the Harvard Tercentenary of 1936, Dr. Jung, who was seated beside me, deftly introduced the subject of Hitler, developed it with alert warmth, and concluded with the statement that from the high vantage point of Alpine Switzerland Hitler's new order in Germany seemed to offer the one hope of Europe.

Through the generosity of Paul Mellon, the Bollingen Foundation supports the Pantheon Press, a publishing house which issues many outpourings of the new estheticism, the literary cult to whom T. S. Eliot and Ezra Pound are gods. More significant, it is apparently still congenial to Jung and his school, who have now dropped their Nazi allegiance but not necessarily the symptoms of nazism. Let me quote from a review which appeared in the New England Journal of Medicine of M. Esther Harding's Psychic Energy: Its Source and Goal, published by Pantheon Press, with a foreword by C. G. Jung:

"In this book the author, via a Jungian delving into the unconscious, attempts to answer the query whether or not the primitive and unconscious side of man's nature can be tamed effectively or even altered. She believes that contemporary culture and civilization afford but a poor facade covering unconscious roots that are essentially base, vile, and self-annihilating. * * * Men must regress to primitive levels of the unconscious, as seen in the totalitarian rationalization and the world conflicts of today. The author holds out little hope of changing the collective unconscious of a people but individuals may be saved. * * * The book is as pessimistic and ethereal as anything Jung himself might have written."

Among the acknowledgments in the foreword to Psychic Energy, Miss Harding pays this moving tribute: "Many thanks are due as well to Mr. Paul Mellon for much helpful criticism and for the time and interest he has devoted to this book." It would seem that the reservoir at Bollingen has many outlets, but I cannot recommend the water as potable. It is not my conception of a Pierian spring or a fountain of Bandusia.

It is appropriate that an award named after Dr. Jung's headquarters should be given to Ezra Pound. But it is extraordinary that it should be awarded by a committee of Americans and sponsored by the Library of Congress.

Pound's career in the service of Mussolini as propagandist and agent against the United States is too well known to need summary here. He was arrested in Italy on a charge of treason, was pronounced sane, and seemed ripe for hanging. As soon as he stepped on American soil, however, he officially lost his mind, and is now lodged in a comfortable room any of our wounded veterans would envy, in St. Elizabeths Hospital in Washington. Members of the jury and other apologists have argued that the writings of Pound and the actions of Pound are two different things and must be considered independently. Art is art and life is life and never the twain shall meet. Let us, then, devote our attention to the Pisan Cantos. Would they have won an award had they been submitted by an anonymous author? Have they any intrinsic merit as poetry?

It may be stated flatly that the Pisan Cantos are so disordered as to make the award seem like a hoax. If they are poetry at all, then everything we have previously known as poetry must have been something else. In no sense are they a work "of an extremely high order," as Karl Shapiro maintained even when dissenting from a committee's decision. In general, they are merely the landslide from the kitchen-midden of a heart long dead: broken memories, jagged bits of spite, splinters of a distorting glass wherein the world is seen at it is not, a hodgepodge of private symbols, weary epigrams, anecdotes, resentments, chuckles, and the polyglot malapropisms that pass for erudition among the elite. Some individual passages are clear enough, decked out with oddments of reading such as sophomores delight to identify. I have enough information to know that when Pound speaks of "broom plants" he is thinking of the Plantagenet kings, and I have enough languages to understand many of his not very recondite tags. Occasionally he deviates into sense, and on page 94 there is a fair lyric beginning. "Tudor indeed is gone and every rose." Most of the rest is rubbish.

There are scornful references to "niggers" and obscenities indicated by initials. In the opening lines, where even the most careless member of the jury could not have missed it, there is a tearful elegy, in the Pound lingo, on Mussolini and his mistress:

"The enormous tragedy of the dream
in the peasant's bent shoulders,
Manes! Manes was tanned and stuffed,
Thus Ben and la Clara a Milano.
That maggots shd/ eat the dead bullock,
Digenes, but he twice crucified
where in history will you find it?
You say this to the Possum: a bang, not a
whimper, with a bang not a whimper."

The concluding line of this touching dirge seems to be addressed to T. S. Eliot under the soubriquet of "Possum," a name used by Eliot in his mirth-provoking book on cats. The regret for the passing of the "twice crucified" Italian gangster is clear enough.

Clear, also, are the following four lines on page 17:

"From their seats the blond bastards, and
cast 'em.
The yidd is a stimulant, and the goyim are
cattle
In gt/ proportion and go to salable slaughter
With the maximum of docility."

The first line is an ironic travesty on American sentiments toward the Nazis. The last three lines tell us that the Jews stimulate wars in order to make money, while the stupid Christians (under the contemptuous term of "goyim") go out to fight and are slaughtered. As will be noted, the first line is merely another example of Pound's prevailing and brutal anti-Semitism. In the last three lines the Christian soldiers who were killed in the war are described as cattle who "go to salable slaughter with the maximum of docility." I doubt that living Americans will tolerate that sneer at their dead.

However, the lines were not only tolerated but applauded by a group of Americans and one expatriate on the Bollingen jury. Such an esthetic contempt for mankind, especially those best of mankind who in courage and loyalty laid down their lives, can scarcely be imagined. Cynicism and heartlessness have never gone further. Think of it: in the name of the Library of Congress, these esthetes crowned as their laureate the man who wrote those words.

The alien, or expatriate, T. S. Eliot, was not in the original group of Fellows in American Letters: he is a disciple of Dr. Jung; and he has been for years an intimate of Pound. Both Pound and Eliot, and Eliot especially, have a stranglehold on American poetry through the so-called new criticism. Their tastes are dissimilar in some ways, Pound's being of Bohemia and Eliot's of the

British country families. Likewise, the quality of their intolerance shows a difference. Pound has been outspoken straight through the Pisan Cantos. Eliot had his British respectability to think of and a wetter finger in the wind. His frankest anti-Semitism dates back to 1932, when in a speech at the University of Virginia he remarked that "reasons of race and religion combine to make any number of free-thinking Jews undesirable." A spirit of excessive tolerance is to be deprecated. It is probable that he would like to expunge this speech from the memories of men. Failing that, he has discovered quite recently that the Jew had a contribution and now mentions with approbation the "legacy of Greece, Rome, and Israel." This statement does not wholly cover his tracks, but, in any case, the man who made conversions fashionable surely has a right to avail himself of them. Harry Roskolenko, in the Cant in Pound's Cantos, appearing in the Congress Weekly for April 11, 1949, puts the matter succinctly:

"One may well ask if the Fascist is always an anti-Semite, or if the anti-Semite is the consistent political exponent of fascism. In the case of Eliot we do not see this consistency. Eliot is much too sophisticated a man, too weary with his turnings and squirmings, to bring his work into the Fascist focus. He has his small doses of anti-Semitism, noticed largely because he is a so important man of letters. * * * Eliot is chiefly a man of occasional, if subtle, ventures. But both Pound and Eliot stem from the same literary environment. * * * The Bohemian Pound and the sacred Eliot merged and then parted, each preparing his own elegy of the American."

Eliot's whole life has been a flight from his native St. Louis, Mo. He has gone far, and, doubtless, if he survives Masefield, he will be the next English Laureate. In America he is so enhedged with nebulous divinity that people are shocked, as by blasphemy, at anything said against him. This is occasioned not so much by his writings as by the awe for a man who managed to get contemporary America out of his system, an aspiration of many new poets and critics. Yet it is not only the folk who carry furled umbrellas on a sunny day and pronounce dictionary with one less syllable than their parents gave it, who are attracted to this queer figure. He has succeeded—where Oscar Wilde failed—in promulgating the doctrine of art for art's sake throughout all ranks, and even among left-wing critics and intellectuals he finds some of his most sedulous interpreters.

Yet the long, spectacular climb that has made him as it were the Diamond Jim Brady of poets, has left him winded and wincing. "It is possible," writes Lewis Gannett, "that a part of Mr. Eliot's disillusion with the contemporary world is the product of his own deracination. He repudiates at once the aspiration and hopefulness of his grandfather, who transformed the St. Louis public-school system, and of contemporary Labor England. He has made himself a man without a country, is uncomfortable about it, and rationalizes his own rootlessness."

This flaw has cracked the entire fabric. Eliot has long tinkered with humpty-dumpty in public, but, as was noted long ago, not all the king's horses and all the king's men can put humpty-dumpty together again. We observe a man homesick for an aristocratic society which is his neither by birth nor heritage; which, in fact (regrettably perhaps), has ceased to exist. He is a proponent of classicism swayed by the most whimsical and idiosyncratic vagaries of taste and performance. He is the advocate of a kind of humanism in which no trace of humanity can be found.

Eliot should never have been on the committee in the first place. An Englishman to the manor born would have declined to participate. Unless our ancestors made a grave mistake, and I have no doubt there are members of the committee who think they did, Eliot is a foreigner. He gave up this country in favor of one he liked better. That is a question of taste. But it does not seem quite cricket to move away from the house that had the plum tree in the back yard and then return for the plums. Many of his willing helpers, however, would agree with him that his present home is much more elegant and that he should be deferred to.

Eliot undoubtedly wielded great influence in an award which, under the auspices of the Library of Congress, degraded American poetry and insulted her dead. Unless he resigns, he might well have the next nine Bollingen awards in his grasp. And who, incidentally, appoints the Fellows in American Letters that so many come from the exponents and idols of the new criticism? Most important of all, is it proper or legal for such a group to exist, appointed privately, even secretly, yet speaking openly under the authority of the American Congress?

What is to be done? The 1949 Bollingen award is a permanent disgrace and cannot be expunged. But preventative measures against a similar choice can be taken. The first step would seem to be for the expatriate T. S. Eliot to be dropped from the jury.

[From the Saturday Review of Literature of June 18, 1949]

POETRY'S NEW PRIESTHOOD

(By Robert Hillyer)

In my first article I gave some data about the background of the Bollingen-Library of Congress award to Ezra Pound, under indictment for treason. I presented my reasons for believing that a key figure in the selection of Pound for the award was T. S. Eliot, an expatriate. In this second article I should like to consider what elements in modern American poetry and criticism are sufficiently stagnant to serve as a breeding place for influences so unwholesome. The statement of the Bollingen jury itself implies (which is the most definite word one can use in regard to such indefinite language) that a work of art should be judged entirely apart from its author, and, what is more important, from the content of the work itself. In other words, nothing matters but the mode of expression. On these grounds the Bollingen jury gave the award to Pound.

So far I have failed to meet the Bollingen jury on their own grounds, because those grounds seem to me to be indefensible. They would limit all discussion to esthetic values merely. For the next few paragraphs I shall seek to oblige them, although the apologia for their action runs counter to the whole record of literary experience and is patently disingenuous. Here it is as contained in the public announcement of the award:

"The fellows are aware that objections may be made to awarding a prize to a man situated as is Mr. Pound. In their view, however, the possibility of such objection did not alter the responsibility assumed by the jury of selection. This was to make a choice for the award among the eligible books, provided anyone merited such recognition, according to the stated terms of the Bollingen prize. To permit other considerations than that of poetic achievement would destroy the significance of the award and would in principle deny the validity of that objective perception of value on which any civilized society must rest."

It is difficult to deal with such meretricious verbiage, nor have I the space to copy for the curious reader any passage from the Pisan Cantos. I say with full confidence that no one, outside neoesthetic circles, who examines that opus will fail to agree that if it be poetic achievement then everything we have known of poetry in the English language from Chaucer to Frost is not poetic achievement.

The party line of Eliot and the new esthetes (including the self-styled new critics) is merely the old doctrine of art for art's sake titivated with plumes of voodoo jargon to overawe the young. Their power in academic circles is beyond appraisal because it is pervasive rather than defined. They have pooled their separate timidities and frustrations, gaining strength from each other's weakness, and have succeeded in an age unprepared by education against pretentious cheek. It reminds one of the scene in Molière's Malade Imaginaire, where the doctor discovering that his patient knows no latin, proceeds to amaze him with high-sounding gibberish. In their subsidized quarterlies they bandy polite disagreements back and forth to maintain an illusion of independent thought, but in all important matters they are at one. Their current preoccupation is a new vocabulary that has no purpose but its own creation. This may be examined in the pages of Poetry: A Magazine of Verse, November 1948–January 1949, in A Glossary of the New Criticism. I recommend it. They assume a superiority which cannot be attacked because it has no substance. To a world eager for the clearest vision of poets they offer only the analysis of disillusioned irony, word by word. Going further, they subtly undermine reputations of our great poets such as Robinson and Frost, lest contrast destroy the bases of their propaganda. They have shut the doors of poetry in the face of the public. Pound and Eliot are their unquestioned and almost their single point of reference. Otherwise, their pedantry is the easy kind that can be invented verbally as one goes along; they are neither scholarly nor deeply read. A few tags from Aristotle and Coleridge are threadbare from being handed about among those who never read them in their original context.

Yet their power is enormous, especially in the colleges and even the preparatory schools. A large proportion of funds for cultural purposes from the great charitable foundations is earmarked for their use. Poetry: A magazine of verse seems to be falling into the hands of the new esthetes. In their April number the editors comment on what a hard time poor Ezra Pound must have had from lack of appreciation and add that nothing is more understandable than that he should have adopted a rather cross attitude toward America. Some day someone is going to adopt a rather cross attitude toward the editors of Poetry. Maybe America. I will ask the reader to consider the childish frivolousness of such comment on the Bollingen award at a time when the clouds of the new fascism and the new estheticism have perceptibly met in that award.

Karl Shapiro, a dissenting member of the jury, provides an interesting example of how an honest mind may be confused by the miasmas of estheticism. In a letter to the Baltimore Sun, February 25, 1949, he said that he found the Pisan Cantos a work of an extremely high order. Yet, Mr. Shapiro continues, "Pound has been a confessed Fascist and a violent anti-Semite for many years. * * * The values I perceive in the Cantos are the subjective values * * * of an embittered expatriate who turns world destroyer." Values? Are we to believe that a work based on admittedly evil personal values can be of an extremely high order? Elsewhere in the same letter he speaks wholly at variance with the group whose doctrine he had previously embraced:

I disagree vehemently with the principle embodied in the library press release that to judge a work of art on other than esthetic grounds is to deny the objective perception of value on which any civilized society must rest. This is not a statement of principle but an apology; in no case is it a fact that can stand historical or logical inquiry.

* * * I think it can be pointed out that such an interpretation of literature stems directly from a coterie of writers called the new critics. This group makes the claim, in effect, that a poem is of such abstract and ethereal a fabric that its relation to the world of men is practically nonexistent. To break the hypnotic spell of detachment which the new critics have cast over poetry is one of the more serious literary issues of our time."

What is the origin of this "hypnotic spell"? In the first place, Pound and Eliot years ago began the practice of stuffing their text with oddments chosen from other writers without quotation marks or explanation. In the case of The Wasteland this method caused so much anguish that when the poem was printed in book form a glossary was added. A mind seeking the advantage of superiority over others gets a quick satisfaction from being able to recognize bits not known to his grosser fellows, and thus the author's own feeling of superiority in planting them there. I say without jesting that this common snobbery creates a warm bond between the new poet and the new critic. Then the critic becomes uneasy. Perhaps someone more learned than he is recognizing more excerpts. Then begins a polite rivalry in source hunting and interpretation, weaving back and forth as one new critic corrects or amplifies the pseudoscholarship of another in the beautifully printed pages of their subsidized magazines. To make sure that the public is excluded from this pathetic substitute for aristocracy, they then proceed to fabricate a language bearing little relation to the magnificent one they were born with but failed to master.

With the incorporation of passages from older writers in their works, Eliot and Pound very early set up the worship of irony. This quality, originally from the Greek eironeia, meaning a falsehood based on understatement, has come to be the vehicle of bitterness and sense of defeat without which no modern poet can be acknowledged modern or a poet. An example of what we may call the ironic travesty is found in one of Pound's early effusions. The original is the beautiful little cuckoo song from the thirteenth century, which begins—

"Summer is icumen in
Lhude sing cuccu."

In Pound's hands this becomes—

"Summer is icumen in
Lhude sing goddamn."

Eliot's Wasteland and his later works abound in such felicities. For example, there is Webster's haunted dirge from The White Devil, which Charles Lamb once compared with the dirge in Shakespeare's Tempest: the one of the earth, earthy; the other of the water, watery. It ends:

"But keep the wolf far thence, that's foe to men,
For with his nails he'll dig them up again."

Eliot improves the couplet thus:

"Oh keep the dog far thence, that's friend to men,
Or with his nails he'll dig it up again."

This version serves doubly to corrupt both music and meaning.

From such comparatively simple beginnings stem the indescribable ramifications of the new poetry and the new criticism, which, having exhausted referable quotations and symbols, proceed into semantics and private unintelligibility. They go further than the pioneer warlocks who first cut this trail for the lesser wizards and their followers unto the third and fourth generations. They have, as Ben Ray Redman remarks, "perfected a jargon that is a fright to read."

In this same article, T. S. Eliot in Sight of Posterity, Mr. Redman summarizes:

"To begin with, there is the overshadowing possibility—which I consider a probability—that our descendants will not like this generation's most characteristic poetry at all. They may well think that we have set too high a value on verbal mysteries, prosodic eccentricities, ambiguities, and ambivalent symbolism; that the satisfaction experienced by our critics in the presence of many contemporary poems has too often come, not from the poetry itself, but from the critical puzzler's sense of triumph at a riddle solved. Even if this does not occur, there is a chance that Mr. Eliot's extensive dependence on other men's words will prove a heavy burden for his poems to bear for very long—after all sources have been discovered by delighted discoverers—and that he will stand condemned by the rule of his own statement: 'The good poet welds his theft into a whole of feeling which is unique and utterly different from that from which it was torn; the bad poet throws it into something that has no cohesion.' * * * His [Eliot's] most serious and mature poems may, indeed, largely disintegrate into quotations."

The errors produced by this mosaic style among aspiring new critics are frequent and supply amusement for the well-read. Elizabetn Drew, in her T. S. Eliot, the Design of His Poetry, doggedly analyzes a passage about a bird, a kingfisher, quite ignorant of the fact that the kingfisher is the halcyon, and is so used in Eliot's symbol—with a wink at the knowing—to avoid the phrase "halcyon calm." Mistakes like that give the whole show away. Three years ago in an article in the Saturday Review of Literature (Meaning in Modern Poetry, March 23, 1946), Lloyd Frankenberg insisted at length that Eliot, in a reference to jug-jug, was thinking of a chamber pot, whereas in fact the master was directly quoting (with ironic intent) from an Elizabethan song about the nightingale. And so it goes. It is all quite clearly a case of the blind misleading the blind.

Lastly, I note a decline in critical honesty. Compare two comments, one of them written 17 years ago, the other, just recently. Both apply to one of Eliot's better-known anti-Semitic passages:

"My house is a decayed house,
And the Jew squats on the window sill, the owner,
Spawned in some estaminet of Antwerp."

In 1932 Ruth Bailey, in her Dialog on Modern Poetry, paraphrased these lines from Gerontion frankly and correctly: "The Jew is international, the scum of Europe and its landlord, and the house which he owns, the house of European civilization, is international, too; it belongs everywhere and nowhere." Now note carefully the sly euphemism with which Elizabeth Drew glosses over the obvious bigotry of the same passage in 1949: "As a result of not fighting for the values of a living tradition, the modern world is now owned and enslaved by the only proliferating element in it, the international money power." Where is Eliot's Jew?

What I have been leading up to in this sketch of the new estheticism is that its sterile pedantry, based on a sense of personal inadequacy, and its failure to command our common English, result in a blurring of judgment both esthetic and moral. I have said that in the Bollingen Award to Pound the clouds of an intellectual neo-fascism and the new estheticism have perceptibly met and on a horizon too near for comfort. I do not, however, accuse the jury as a whole or any member in particular of totalitarian or antidemocratic convictions. Some of them simply yielded to conformity. One member of the committee expressed regret, in a conversation with me, that another engagement had not provided an excuse for absence from the committee's deliberations, such as they were. Others had not thoroughly read the Pisan Cantos, and no one could understand them except in spots. One or two probably withdrew into quietism, not aware of the fact that there are times when quietists must be heard loudest of all. Half the committee were disciples of Pound and Eliot and sympathetic to a group which has a genuine power complex. The performance of the Bollingen committee is disagreeably reminiscent of what happens when a dictatorial will moves through a group wherein right and wrong are no longer clearly distinguishable from each other. History shows us that a civilization is always destroyed on the cultural level before the politicians and military take over.

Meanwhile Pound is settled in a comfortable room enjoying the books supplied him by his kind friends. He is quite sane enough to study Chinese. These surroundings, comparable to an expensive room in a private hospital, may with just indignation be contrasted to the crowded wards in which are herded the soldiers who lost their minds defending America, which Pound hated and betrayed.

Nothing can be salvaged from the disgrace of the Bollingen award of 1949. Nothing can be atoned for. It would be well for the Library of Congress to withdraw the prize, for no decent poet in the country would accept it. The future may profit if the award has rung down the curtain on the inglorious Age of Eliot with all its coteries and pressure groups.

An uncompromising assault on this new estheticism is long overdue. The award to Pound made it inevitable. In a spiritual morass where language, ethics, literature, and personal courage melt into something obscure and formless, a guided impulse has stirred the amorphous haze into something approaching form, something shaped out of stagnant art by grouping fascism. When I began the research for these articles I was quite unaware how deviously the trails would lead me toward one concept; totalitarianism. It is not genteel authoritarianism or the desire for order in a disordered world, as polite critics have called it. It is the mystical and cultural preparation for a new authoritarianism.

[From the Saturday Review of Literature of July 2, 1949]

A LETTER FROM THE LIBRARIAN OF CONGRESS

(EDITOR'S NOTE.—Realizing that no discussion of the 1948 Library of Congress-Bollingen Award to Ezra Pound for the Pisan Cantos would be complete without a statement of the position of the Library of Congress in the matter, Saturday Review of Literature is grateful to Luther H. Evans, Librarian of Congress, for the following letter in reply to Robert Hillyer's articles Treason's Strange Fruit and Poetry's New Priesthood (Saturday Review of Literature June 11, 18) and Saturday Review of Literature's editorial Ezra Pound and the Bollingen Award (June 11). In order to give the point of view of the Library equal prominence with Saturday Review of Literature's attacks on the award, this week we devote our editorial pages to Mr. Evans' answer, together with a rejoinder from the editors of Saturday Review of Literature.)

SIR: I am writing you in regard to the article by Mr. Robert Hillyer and the editorial by yourself and Mr. Smith in the June 11 number of the Saturday Review of Literature.

Mr. Hillyer said early in his article that he was unable to discover who appoints the Fellows in American Letters. Mr. Verner W. Clapp of the Library of Congress wrote Mr. Hillyer on April 22: "The fellows are appointed by the Librarian of Congress."

The Fellows in American Letters were first appointed in 1944 by my predecessor, Archibald MacLeish, to perform assignments of importance to the Library of Congress, and in his opinion and in the opinion of the distinguished workers in the field of American letters who could devote the necessary time to such onerous tasks, useful to scholarship and the advancement of literature. They accepted the tasks of advising the Library concerning the strengthening of its collections and the promotion of bibliographical and publication projects in American literary material. They also advised the Librarian on the choice of the annual incumbent of the Chair of Poetry in English. After almost 4 years of successful endeavor the fellows, in addition to their other work, which now included assisting in carrying forward a project to issue albums of contemporary poetry read by the poets themselves, hit upon the idea (in January 1948) of an award for the outstanding publication each year in American poetry. After I approved the proposal an approach was made to secure the funds, with the success which has been noted.

The implications in Mr. Hillyer's article that the Bollingen Foundation had a part in the award to Ezra Pound, or in some way influenced it, are particularly annoying to the Library of Congress, and if in your editorial column you intended to vouch for the validity of such implications, I am sure you were not acquainted with the facts.

So far as my own knowledge and belief go, neither the Bollingen Foundation nor any of its trustees, officers, or representatives had the slightest connection with the choice of the Pisan Cantos for the award. When, at the request of myself and the Library's fellows, the foundation agreed to make a grant to the Library, its purpose was to enable that agency of the Federal Government to grant a prize in recognition of outstanding achievement in American poetry. My idea in requesting the grant, and the sole purpose of the foundation's trustees in approving it, was to encourage serious endeavors in this field of American letters.

It was the foundation's definite understanding from the beginning that the award would be solely that of the Library of Congress, made on the basis of the choice of a panel made up of the Library's Fellows in American Letters. It should also be emphasized that the foundation had no connection with the selection of these fellows nor any of their activities. They were appointed by the Librarian of Congress, and their selection is the responsibility of that officer of the Federal Government. So far as concerns T. S. Eliot, he had not served as a member of the panel at any meeting when the gift to the Library from the foundation was made. He was appointed by me on my own responsibility, without any consultation with, or the knowledge of, the foundation. In short, from the beginning every step was taken to insure that the prize, when awarded, would in fact be that of the Library of Congress, made on its responsibility, uninfluenced in any way by the foundation. While the prize bears the name of the foundation, this was a courtesy which the Library of Congress wished to extend in appreciation of the donor's generosity.

It is extremely unfortunate from the viewpoint of future aid to the cultural activities of the Library of Congress that a public benefactor, such as Bollingen Foundation, seeking only to promote the welfare of the Library by a generous gift, should be subjected, because of the Library's application of that gift, to the unfavorable reflections appearing in Mr. Hillyer's article, which are apparently vouched for in your publication's editorial accompanying the article. Furthermore, you will understand that this is highly embarrassing to me and to the Library.

That Mr. Paul Mellon has through some diabolical and perverted motivation tried to influence the decision of the fellows, is an insinuation which I believe has no foundation whatever. I doubt seriously that Mr. Mellon knows personally a single member of the group of fellows. All the public can see how generously he has given to worthy causes, without going beyond the press headlines of the past week. Why cannot the traducing of persons of high personal character and integrity be reserved for officers of Government, who must by virtue of the nature of the democratic process put up with it anyhow?

The attack on the legality and the propriety of appointing persons to the staff of the Library of Congress for the purposes served by the Fellows in American Letters ignores the clear statutory authorizations under which the Library of Congress operates (U. S. Code, title II), and constitutes a challenge to a broad program of the Library for promoting the arts in America. Under the auspices of the Coolidge Foundation the Library has for decades commissioned the writing of music, has awarded medals for outstanding accomplishments in musicianship, and has provided concerts of high quality.

Surely, it is no service to American culture to make an ill-founded attack upon the effort made by this great institution to enrich the life of the people by such means. With the specific approval of Congress also, the Library prepares a publication known as the United States Quarterly Book List. This book list has as its purpose the review under the editorship of a regular Government employee of selected books which make a contribution to knowledge. The operation involves the editing by Government employees of evaluations of books made by the individual scholarly reviewers who contribute their services for this purpose. The editor has authority to rewrite reviews and to change the evaluations made of the books reviewed. The signatures of the reviewers do not appear.

The Congress has also during the past decade or more authorized a large appropriation to the Library of Congress, currently in the amount of approximately $1,000,000, for the provision of books for the adult blind readers of the United States. The selection of books to be put in this program is entrusted entirely to the Librarian of Congress and his staff. The operation involves the choice of a few books from the multitude from which the choice is made for the instructional and recreational reading of blind persons. The responsibility is a heavy one and it amounts, in effect, to calling some books bad and other books good.

I should like to observe that the question of propriety in a project of the type I have been discussing is intimately related to the Governmental arrangements for making the scholarly or artistic decisions involved. It would obviously be improper and an abuse of authority for decisions to be made as to what is truthful or what is beautiful or what is good as the arbitrary acts of an individual not especially qualified to make them. By this I mean, for instance, that I as the head of the Library of Congress would be acting arbitrarily were I to pass judgment on what is good music, assuming that I am not an expert in the field, or selecting books for the Quarterly Book List in fields where I do not have expert capacity or in picking a book of poetry for an award when I am not a qualified critic of poetry. The only way to insure that choices of this kind are legitimate and acceptable when made by a Government institution is to conduct affairs in such a way that persons who make the esthetic or the scholarly judgments are persons chosen for their competence in such work and divorced from general responsibilities for the management of the institution itself. This principle I have striven to observe, and I have, I believe, observed it in the present case.

The Fellows in American Letters are in all cases, I believe, persons of attainment and a high sense of responsibility for promoting and strengthening what is good in American culture. No such serious charge as yours, as far as I know, has hitherto been made against them of being politically motivated members of a clique or a school or a particular esthetic group, or of being under the domination of any individual. Now that your charge has been made I shall, of course, inquire into the situation with a view to the possibility if it should prove desirable of strengthening the representative character of the group. The insinuation which has been made is very damaging to the fellows and to the Library of Congress, since it amounts to a charge that the fellows have not acted, as they were charged to act, as public servants, but rather that they have abused the authority entrusted to them for evil ends. I think evidence should be produced, rather than pure supposition, to sustain such an insinuation. You and Mr. Hillyer are under a public duty to produce the evidence.

I personally regard the choice of the Pisan Cantos for the Bollingen prize as an unfortunate choice. I do not feel called upon to go into all of my reasons for feeling this. I think it is sufficient to say that from my poetically ignorant point of view, Mr. Pound's book is hardly poetry at all. I believe now, as I believed at the time of announcing the award, that I would be engaging in an improper interference with free scholarship if I were to substitute my own decision in this matter for the decision of the fellows. I think that for me to interfere with the work of scholars would be far worse than to award the prize for a book which did not deserve it. After all, a cure is available in scholarly terms for scholarly errors, but I know of no cure for the bureaucratic error of overriding scholarly judgment in cases of this kind. I feel that I would have been striking a blow against the cause of liberty by overriding scholarly judgment, and I do not feel that the blow for unrighteousness which the award may represent is nearly as grave.

You and Mr. Hillyer have treated Mr. Pound as though he had been proved guilty of treason. To me this is not the case. To me also it is irrelevant to the making of the award, since we did not say in the conditions of the award that a person had to be one who had not been convicted by courts or found guilty by the public of some crime or other. I should also like to observe that Mr. Pound is a citizen, no matter whether it may be desirable in the judgment of the Saturday Review of Literature that he should continue to be such. The matter of citizenship is one of law and not one of politics or poetry.

The Fellows in American Letters do not have to be citizens. Therefore, the criticism of Mr. Eliot's membership of the group on this ground is irrelevant. Persons are chosen for outstanding accomplishment in the field of American letters, either as creative writers or as scholars in the field. Mr. Eliot meets this test, and I have no intention of asking him to resign. Indeed, I should be very sorry if such a distinguished writer were to cease to be a member of the group.

As to whether a person who is insane can write distinguished poetry, that is something I would prefer to leave to the literati to wrangle over, rather than try to make a decision myself.

I am deeply disturbed by one point of view which you and Mr. Hillyer seem to share, and that is that poetic quality must somehow pass a political test. In my many years of study and teaching in the field of political science I came to regard a political test for art and poetry as a sign of dictatorial, illiberal, undemocratic approach to matters of the

mind. The alternative attitude is not necessarily the separation of art from life, or of form from substance. I think you really ought to admit that the principal charge you wish to bring against Mr. Pound's peotry is not that it is form divorced from substance or art divorced from life, but that it is a kind of substance and preaches a view of life which you do not like. I do not like them either. But the question of whether Pound's peotry is art, whether it is good poetry, is a different question. As to that question, my answer is also negative, but as I have said already, I do not feel that it would be proper for me to override the judgment of persons in whose competence I have confidence, and who were charged with responsibility to make the judgment.

LUTHER H. EVANS,
Librarian of Congress.

WASHINGTON, D. C.

A REPLY TO MR. EVANS

We were well aware that we were heading into a storm when we published Robert Hillyer's two articles and our supporting editorial on the United States Library of Congress-Bollingen award to Ezra Pound for the Pisan Cantos as the highest achievement of American poetry in 1948. Our objections were centered on the form and content of the poetry itself, as well as on the fact that Ezra Pound had been under indictment for treason and had been declared insane. More specifically, we objected to the name of the American Government, through the Library of Congress, being attached to an award which was as much an insult to good taste as it was to the basic values of a democratic people.

There are major and minor issues involved in Mr. Evans' reply for the Library of Congress. Perhaps the most important issue of all involves the familiar argument that art must be kept separate from politics. It is made to appear that SRL has ignored this most sacred of all critical canons in opposing the award to Pound. Indeed, Pound's defenders hold their ground on the art-for-art's sake principle. Such being the case, SRL is anxious to meet this particular issue head-on. Certainly, we do not believe that candidates for poetry awards must somehow pass a political test, to use Mr. Evans' phrase. But while one must divorce politics from art, it is quite another matter to use the word "politics" as a substitute for values. We do not believe, in short, that art has nothing to do with values. We do not believe that what a poet says is necessarily of lesser importance than the way he says it. We do not believe that a poet can shatter ethics and values and still be a good poet. We do not believe that poetry can convert words into maggots that eat at human dignity and still be good poetry. We do not believe that the highest function of art is to deny and corrupt the values which make art possible.

It is impossible to conceive of the Pisan Cantos as the winner of this congressional award without being concerned with the writer and his beliefs. Great art owns principles that are ordered and founded on some form of mental integrity based on truths that have been a part of the human consciousness since man began to record his thoughts and state his beliefs in the relationship between man and nature. We cannot accept Pound's totalitarian ravings as evidence of his genius. The occasional flashes of inspiration in the Pisan Cantos from Mr. Pound's past, the few stanzas that were intelligible did not give to this volume the right to be called the finest contribution to American poetry of last year. If pressed for our own nominations there are at least three poets whose books in 1948 seem to us worthy of the Bollingen prize: Mark Van Doren, Peter Viereck, and Archibald MacLeish.

To be sure, insanity and inhuman ideas are not unknown in poetry; but we do not agree that they are inherently a part of it. That Mr. Pound is insane and that he has been a traitor to the United States does not add luster to his verse. Nor is incomprehensibility, on which poetry's new priesthood depends for its claims to omniscience, a virtue in itself. We believe that the average established critic of poetry, the vast majority of our poets, and the readers who once found relief and joy in poetry will agree with Robert Hillyer's pronouncement that the Pisan Cantos are so disordered as to make the award seem like a hoax. We also believe that the award seems to make fools out of the American people who love poetry, and out of the Library of Congress, which appeared to be placed by its Fellows in American Letters in the position of having to disagree with an award made in its name.

Mr. Evans says that he personally regards the choice of the Pisan Cantos as unfortunate, and offers his own view that it was hardly poetry at all. He believes, however, that it was hardly his function as Librarian of Congress to impose his own views on the fellows of the Library of Congress who made the selection. We agree. We did not suggest that Mr. Evans should have substituted his own judgment for that of the fellows. Once the fellows made their selection, the fat was in the fire. We insist, however, that once the name of the Library of Congress was attached to the award it could not avoid responsibility. If the award was to have been an independent one, having nothing to do with a Government agency, then care should have been taken to dissociate the agency both from the committee making the award and from the award itself. But the United States Library of Congress cannot sponsor such an award as an integral part of its activities and then abruptly disclaim responsibility at the first sign of a fight.

Mr. Evans is a gifted and valuable administrator of what is perhaps the greatest library in the world. He is universally liked by his associates. It is no disparagement of Mr. Evans to suggest that he may not have been aware at the time that the fellows were landing the Library on top of a powder keg. Complicated problems of modern art and its attendant criticism were involved, apart from Pound's treasonable activities, his insanity, the character of the jury, or the award itself, or any of the other issues that have been brought up in retaliation. They concern, as Mr. Evans has said, art and politics, and beyond that the control of poetry and the other arts by small groups of the elite who now have the power to pronounce judgment, to confound our intelligence, and to give the Nation's highest cultural awards.

One of the sentences in Mr. Evans' letter reads: "It is of no service to American culture to make an ill-founded attack upon the effort made by this great institution [the Library of Congress] to enrich the life of the people." Our answer is that when a committee of the Library not only does not enrich the life of the people, but actually damages cultural values, we have the right of protest.

Farm Program

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1949

Mr. HAYS of Ohio. Mr. Speaker, the appended letter is, I think, deserving of the attention of every farmer in the United States. I cannot see how any sensible person would disagree with the obvious fact that farm income must be maintained if the economic condition of this country is to remain on a sound basis. If this Congress fails to write a farm program which will protect the farmer's income, I believe that the American farmer should have a chance to take a backward look and see who was at fault. With that thought in mind, I am placing this matter in the RECORD so that it will be permanently kept for future reference. The following letter is self-explanatory:

DEAR COLLEAGUE: There are 171 Republican Members of the House, and if ever there was a time when these Members should all be present and voting, it is next week when the House begins consideration of H. R. 5345, the Pace-Brannan farm bill.

Upon the completion of the 6 hours of general debate, a substitute bill will be offered and voted upon within a short time. Accordingly, it is of paramount importance that every member be constantly on the floor Tuesday and Wednesday, July 19 and 20.

Every Republican Member who is on his feet and breathing, or shows any signs of life and is free from doctor's orders must be accounted for on the above-mentioned dates, and be ready to vote on this important and far-reaching legislative proposal.

We must defeat the Brannan farm bill. It can be done if all Republicans are on the job.

Your vote is needed.

Sincerely yours,

LES C. ARENDS,
Republican Whip.

Washington State Fraternal Congress Approves Adoption of Resolution on World Federation

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1949

Mr. JACKSON of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

WASHINGTON STATE
FRATERNAL CONGRESS,
Seattle, Wash., July 15, 1949.

Hon. HENRY M. JACKSON,
House Office Building,
Washington, D. C.

DEAR SIR: The following resolution was unanimously passed by the Washington Fraternal Congress in convention assembled at Tacoma, June 25, 1949:

"Whereas on June 7, 1949, 92 Members of the House of Representatives of the United States Congress, including Members from both parties, introduced a resolution entitled 'A resolution to seek development of the United Nations into a world federation' the text of which resolution reads as follows: 'It is the sense of the Congress that it should be a fundamental objective of the foreign policy of the United States to support and strengthen the United Nations and to seek its development into a world federation open to all nations with defined and limited

powers, adequate to preserve peace and prevent aggression, through the enactment, interpretation, and enforcement of world law"; and

"Whereas the members of the Washington State Fraternal Congress, together with all other people living in the United States or indeed anywhere in the world, are vitally interested in the prevention of war and the burdens of taxation and enslavement that war will bring about: Now, therefore, be it

"Resolved, That the Washington State Fraternal Congress, representing some 100,000 fraternalists in the State, in convention assembled at Tacoma, Wash., this 25th day of June 1949, commend the Congressmen who have introduced the foregoing resolution and endorse its purposes and aims; and be it further

"Resolved, That the secretary of the Washington State Fraternal Congress be directed to transmit a copy of this resolution to all Congressmen and Senators representing the State of Washington in the Congress of the United States.

"THE COMMITTEE ON RESOLUTIONS,
"CARROLL O. KARSCHNEY, *Chairman,*
"JENNIE N. BURNS,
"NORA E. DANFORD."

I certify that this resolution was passed by the congress June 25, 1949.

C. D. ROBINSON,
Secretary Emeritus.

National Service Life Insurance Appropriation

EXTENSION OF REMARKS
OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

COMPTROLLER GENERAL OF
THE UNITED STATES,
Washington, July 18, 1949.

Hon. EDITH NOURSE ROGERS,
House of Representatives.

MY DEAR MRS. ROGERS: I believe you may find of interest the attached copy of a special report to the Congress by the Comptroller General, dated July 15, 1949, on the subject of certain matter underlying an appropriation recently proposed in connection with the national service life insurance appropriation.

Sincerely yours,
FRANK L. YATES,
Acting Comptroller General of the United States.

COMPTROLLER GENERAL OF
THE UNITED STATES,
Washington, July 15, 1949.

The CONGRESS:

There recently has been submitted to the Congress a communication transmitting revised estimates of appropriation for the fiscal year 1950 involving a net increase of $239,399,000 for the Veterans' Administration in the form of amendments to the budget. (S. Doc. No. 78, May 20, 1949.) One segment of this revised estimate consists of an appropriation increase of $412,590,000 for the national service life insurance appropriation which was explained in a letter of the Director of the Bureau of the Budget, dated May 18, 1949, as follows:

"The Veterans' Administration has now completed studies relative to the excess mortality cost traceable to the extra hazard of military or naval service where life contingencies are involved, as authorized by the National Service Life Insurance Act, as amended. The additional amount required to be transferred from the national service life insurance appropriation to the national service life insurance trust fund in this connection is $202,170,000, and there must also be provided an amount of $210,420,000 to cover interest which would have been earned by the fund if it had been possible to make all reimbursements at time."

The Congress approved a similar request, involving $300,000,000 (not involving payment of interest, however) in the First Deficiency Appropriation Act of 1947, 61 Stat. 62. Accordingly, a total of $712,590,000 is involved in the matter being brought to your attention by this report. This sum is analyzed as follows:

A. The amounts estimated by the Veterans' Administration as being needed to reimburse the NSLI fund for extra (that is ,war) hazard death claims where settlement options selected result in a need for a principal sum that on the average, actually exceeds the face of the insurance policies involved:	
Approved in the First Deficiency Appropriation Act of of 1947 (61 Stat. 62)	$300,000,000
Request now pending before the Congress (S. Doc. No. 78)	202,170,000
	502,170,000
B. The amount of interest as estimated by the Veterans' Administration which would have been earned by NSLI fund from date of death in individual extra hazard cases to date of transfer of the money from NSLI appropriation to the NSLI fund (S. Doc. No. 78)	210,420,000
Total	712,590,000

As to part A: In brief summary, a perhaps unintended defect in the law relating to cases where the beneficiaries select a life income settlement results in the payment of about 15 percent more than the fact amounts of their policies. This is because the law calls for the use of an outmoded mortality table which does not reflect actual current experience. While the amount of each monthly payment is figured from the table, the comparative longevity of the beneficiaries results in many more payments, in the average case, than the table was based upon. In practice, therefore, the Veterans' Administration must set aside and put out at interest in each case about $1,153 for each $1,000 of insurance bought, paid for, and matured. The actual effect is to discriminate in favor of cases where the beneficiary selects a life income instead of a lump sum payment, to reduce the dividend otherwise due other policy holders and (in the cases of deaths due to war hazard) to charge the appropriation excessively.

The situation which has resulted in the current request for $202,170,000 and the earlier request for $300,000,000 for the NSLI appropriation was created by a defect in section 602 (e) of the NSLI Act, which provided for use of the same mortality table for calculating premiums and annuities, and did not prescribe a modern and more accurate annuitants' table for calculating annuities for male and female lives.[1] Section 602 (e) requires use of the American Experience Table of Mortality (with interest at 3 percent) in all insurance calculations under the act. The act provided for settlement options involving life contingencies (that is, payments at a fixed rate for the lifetime of the beneficiary) thereby creating an immediate need for appropriate annuity tables for male and female lives, based on current mortality experience with annuitants. Since the act provided for only one table in all calculations, namely, the American Experience Table of Mortality, and that without distinction between male and female lives, such obsolete table of mortality has been used in calculating settlement options involving life contingencies. The effect of such use of the American Experience Table is to select a monthly income rate for life based on a table that reflects a higher mortality rate than the current experience, thus resulting in paying out to beneficiaries over the years a sum (exclusive of interest) greater than the face[2] of the policies being settled. The amount of such excess above the face of the matured policies is determined by relating the monthly income rate, determined on the basis of the American Experience Table of Mortality and 3 percent per annum, to the lower mortality rate shown in the approved National Service Life Insurance Beneficiary Mortality Table which assumes a much lower mortality rate than is assumed in the 1937 Standard Annuitants Table. A brief comparison is given as follows:

Rate of mortality per thousand

Age	American Experience Table, male and female	NSLI Beneficiary Mortality Table		1937 Standard Annuitants Table	
		Male	Female	Male	Female
30	8.43	1.73	1.42	2.07	1.56
35	8.95	2.43	2.38	2.98	2.07
40	9.79	3.75	3.57	4.36	2.98
45	11.16	5.33	4.42	6.36	4.36
50	13.78	7.71	5.42	9.29	6.36

By using the NSLI beneficiary mortality table to calculate the Government's liability, the cost to the Government is even greater than it would have been if the 1937 standard annuitants table had been used. Also, it is estimated that policies settled under the NSLI beneficiary mortality table receive an additional amount equal to an average of 15.3 percent above the face amount of the policies. In other words, on a policy of $1,000 the Veterans' Administration pays out of the fund a principal sum of $1,153, plus interest, on that sum.

Since the Government bears the cost of extra-hazard deaths (sec. 607 (b) of the act) by transfers from the NSLI appropriation to the NSLI fund, it now appears that this extra 15.3 percent above the face amount of such policies is likewise to be borne by the Government because of the obsolete

[1] In the case of annuities it is necessary to distinguish between male and female lives because the mortality rates among females are much lower than among males and because a much more substantial proportion of annuities issued are on female lives than is true in the case of life insurance. It has been found, however, that the difference between the mortality of male and female annuitants can be represented with sufficient accuracy by taking for females the male mortality rate for an age 4 or 5 years younger.

[2] Hereinafter, when reference is made to the face of the policy, it is to be interpreted as meaning the face of the policy, less the reserve. The reserve on these policies is nominal in amount as most of them are 5-year-term policies.

mortality table authorized for use under section 602 (e) of the act for settlements with beneficiaries. This situation develops when recognition is given to a need for transferring more money into the NSLI fund than the face of the policies involved, to avoid having the fund bear a portion of the extra-hazard costs as it assumes the liability for the monthly income to the beneficiaries. The monthly income rate to the beneficiary is based on one mortality assumption (American experience table without adjustment for current experience and without adjustment for male and female lives), but such monthly income rate actually will continue for a much longer period of life than is assumed in the American experience table of mortality.

In summary, one table (American experience table of mortality) sets the monthly rate to be paid to the beneficiary but another table (the NSLI beneficiary mortality table) estimates the number of years the beneficiary will be paid such rate, thereby determining on extra-hazard cases the liability of the appropriation to the fund. Such liability, in all instances, exceeds the face amount of the policy.

The amount transferred from the NSLI appropriation to the NSLI fund from October 1, 1940, to October 1, 1948, to cover the face amount of matured policies, on death claims determined by Veterans' Administration to be due to the extra hazard of military and naval service is $3,278,575,601. It is estimated by the Veterans' Administration that the additional amount required to reimburse the fund for the excess payments referred to (when the above claims are valued on the mortality table approved by the Administrator pursuant to sec. 607 (b) of the act) is $402,170,000 (approximately 15.316 percent of $3,278,575,601).

The Veterans' Administration has estimated the average at 15.316 percent, but to be more specific there are given below certain examples prepared by the Veterans' Administration:

Female beneficiary age	Amount of monthly income provided by each $1,000 of insurance under option 3 (American Experience Table, sec. 602 (e))	Value of income on prescribed Mortality Table sec. 607 (b)
30	$3.97	$1,169.67
50	5.39	1,227.94
70	8.51	1,211.89
80	9.55	1,086.62

The use of the American Experience Table of Mortality for calculating settlements involving life contingencies on non-extra-hazard cases results in the NSLI fund bearing the excess average cost of 15.316 percent on such non-extra-hazard cases also. Accordingly, the beneficiary in either extra hazard or non-extra-hazard cases who receives a settlement under option 1 (lump-sum settlement) receives the face amount of the policy, while other beneficiaries selecting life income options receive more than the face amount of the policy. This arrangement appears to create an inequity between beneficiaries selecting lump-sum settlements and those selecting settlements involving life contingencies.

A revision of section 602 (e) of the act as it applies to future settlements on a life contingency basis appears to be the area for possible remedy. There should be provision for using the same annuity table, a modern annuitants' table reflecting current mortality among male and female annuitants, under the authority of both sections 602 (e) and 607 (b). Such consistency in the initial act would have made unnecessary the prior appropriation of $300,000,000 and the current appropriation request of $202,170,000. Accordingly, the following statutory language is recommended as a remedy for the mortality table problem as it relates to the future:

"Section 602 (e) of the National Service Life Insurance Act of 1940 (54 Stat. 1009) is hereby amended by adding at the end thereof the following: *Provided*, That with respect to insurance reinstated or purchased on or after the date of this amendment, any calculations involving life income settlements or annuities on such policies that mature, shall be made on the basis of an annuitant's mortality table approved by the Administrator of Veterans' Affairs, with interest at the rate of 3 percent per annum, which shall reflect current annuitants' mortality experience on male and female lives, and *provided further*, That with respect to these policies, later maturing by reason of the extra hazard of military or naval service, there shall be transferred from the national service life insurance appropriation to the national service life insurance fund, pursuant to section 607 (b) hereof (54 Stat. 1012) the face amount of the policy less the related reserve."

As to part B: There also appears to be need for review and consideration of the question as to whether or not there now exists a legal liability on the part of the Government under the NSLI Act of 1940, to appropriate the requested amount of $210,420,000 (S. Doc. No. 78), particularly since the Government has borne the cost of administration in connection with the insurance program, and the NSLI fund has been invested in 3 percent interest-bearing obligations of the Government, whereas the average interest rate for interest-bearing obligations of the United States is only about 2.2 percent.[1] The $210,420,000 represents estimated loss of interest earnings due to varying delays in making transfers from the NSLI appropriation to the NSLI fund of the face amount ($3,278,575,601) of the insurance on deaths traceable to the extra hazard of military or naval service and the additional delay in transferring the excess value ($502,170,000) of the benefits over the face amounts on all extra-hazard cases. Unless specifically provided by law, it has been the policy of the Government not to pay interest to creditors or sums not promptly paid to such creditors. (See for example the letter of June 4, 1813, by the then Comptroller of the Treasury and the committee report thereon, 26 Annals of Congress 794, and see also *United States* v. *North American Co.*, 253 U. S. 330.) In view of such policy, the failure of the act to require the payment of such amounts and the fact that the fund apparently has a surplus of approximately $2,800,000,000, serious doubt would appear to exist as to the propriety of the appropriation of such sum or the need therefor. Furthermore, it is understood that the Veterans' Administration proposes to calculate the estimated loss of interest earnings from date of death, making no allowance whatsoever for a reasonable average time in which transfer of moneys should or could have been made from the appropriation to the fund. I have serious doubt that this class of obligation against the NSLI appropriation was ever contemplated in the original framing of the act or in the subsequent amendments thereto. If, however, it be the purpose of the Congress to adopt a policy of bearing even this ultimate and rather refined element of the cost of the extra-hazard cases (possibly in line with the language of section 607 (a)), it would be necessary to amend section 607 (b) and change the measure or formula for the transfer of funds by adding (after the first sentence) the words: "plus interest, at the rate applicable to moneys in the fund, from the date of maturity to the date of transfer." Whether, as a matter of policy, that change should be made is not a subject upon which I feel called upon to make a recommendation, but I am convinced that without such change the present law does not call for this item to be borne by the NSLI appropriation.

In view of the extra costs developed on the basis of an obsolete mortality table for annuitants; the high interest rate paid on the invested fund; the administrative expenses being borne by Federal appropriations; the forthcoming special dividend payments of possibly $2,800,000,000; and the substantial implication of such factors on the Federal budget, the matters involved are deemed of sufficient importance to be brought to the attention of the Congress.

Respectfully submitted.

LINDSAY C. WARREN,
Comptroller General of the United States.

[1] An interest difference to date of over $148,000,000.

Farm Prices Must Be Kept in Balance With the Prices the Farmer Must Pay

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. WHITE of Idaho. Mr. Speaker, so much is being said about parity prices and legislation to provide support prices for farm products that I have taken the occasion to review some past financial history and express my views concerning the necessity for the price support for agricultural products in a letter to the master of the National Grange. Mr. Goss' letter and my reply thereto are inserted herewith for the consideration of my colleagues:

NATIONAL GRANGE,
Washington, D. C., July 18, 1949.

DEAR CONGRESSMAN: I apologize for mimeographed letter but time does not permit an individually addressed letter.

The National Grange believes it would be a serious mistake to adopt H. R. 5345. The House Committee on Agriculture has held extended and constructive hearings on a long-range farm program and has adequate material to formulate a sound carefully thought-out program if given time to do so. Such a program should be, and can be, largely self-supporting. The measure before you abandons self-supporting policies and adopts as its main principle a direct cash subsidy program which our members have rejected repeatedly after full consideration.

We see great danger in such a drastic change in policy. There are far better ways. At this late hour it is not practical to bring in a sound and comprehensive long-range farm bill. We recommend that under the pressure of pending adjournment, no such drastic reversal of policy be adopted by substituting cash subsidies for fair prices at the market place.

We strongly favor temporary legislation to meet emergency requirements until long-range legislation can be carefully formulated on a sound self-supporting basis.

Sincerely yours,

A. S. GOSS,
Master, the National Grange.

JULY 19, 1949.

Mr. A. S. Goss,
Master, the National Grange,
Washington, D. C.

DEAR MASTER GOSS: It was extremely interesting to receive your letter discussing the vitally important issue now before Congress, the farm price-support program.

In considering our present commodity price level and ways and means to maintain the stability of our national economy by keeping the price structure in balance, I am sure you appreciate the necessity of maintaining the equilibrium between the price of the products of the manufacturer which the farmer must buy, and the price of the products of agriculture which the farmer must sell. In other words, maintaining the balance of parity in the price level that will provide purchasing power in the hands of the farmer; purchasing power that is indispensable to the support of the market for the products of the manufacturing industry, together with the services of distribution and the transportation system, industries that are the big employers of labor.

If high prices are to prevail on one side of our price structure, it is vitally important, if we are to have a stable economy, that prices are in balance on the other side. If farm prices are permitted to drop out of line with the prices of manufactured products, to a level where those engaged in agriculture lose their purchasing power and their ability to support the manufacturers' and distributors' price structure, then our national economy will be upset, just as it was after the First World War, when credit was contracted and currency retired—a condition which is within your and my personal recollection.

It may be of interest to review some of the causes of the farm depression of that time.

In the first place, with a war on, business organizations and manufacturing companies found a long-sought opportunity to raise prices of their particular products. War conditions precluded any new competitors from entering the field which the big manufacturers found they had practically all to themselves in the war period, when you and I saw everything that the farmers must buy double in price. Barbed wire, theretofore selling at $1.50 per spool of 80 rods, went to $6; nails from 5 cents per pound to 8 and 9 cents per pound; a 5-foot McCormick binder from $175 to $350; baling wire from $2.50 to $6.50 a bundle, and so on through the entire list of every manufactured thing the farmer must have. And then what did we see? We saw the profits and cash reserves of these manufacturers and distributors piled up in huge cash surpluses, and we saw an inflated stock market get out of bounds, and we saw the manufacturers and distributors with their swollen profits, drained from those engaged in farming and the other basic industries keep these cash reserves, these winnings, from their stockholders, and avoiding income taxes by issuing stock dividends, and everybody was prosperous in an inflated market except the farmer and those engaged in the other basic industries. Then we saw the banks attempt to arrest this dangerous financial trend by curtailing loans and shutting off money to the speculators, only to have the industrial concerns, attracted by high interest rates, step in and support the inflated securities market, by lending their cash surpluses to the speculators—money that had been drained away from the farming and basic industries until the farmer, having lost his purchasing power, could no longer support his part of the national economy. The result was that the whole price structure tumbled into a depression that has cost the American taxpayers billions of dollars in an effort to restore a balanced economy. So we have come to hear much about price parity, and are devoting much time and money to devising schemes to support farm prices.

In considering our economic problems today, in order to demonstrate the necessity for support prices, for farm products, we need to take just one manufactured commodity for an example, barbed wire. Back in the days when the law of supply and demand and unfettered competition gave us price parity, the farmer bought an 80-rod spool of galvanized, barbed wire for $1.50 to $2 per roll. Now he must pay from $8.50 to $10 per roll, and so on through the list of farm necessities.

Now if the prices of farm products are permitted to drop, and the manufacturers and distributors are successful in holding up the prices of the things the farmer must buy as they did back in the twenties, our national economy will be upset, our price structure will be wrecked, and our financial pump will lose its prime—i. e., bank loans will be contracted and currency (money) retired. When value is gone, the bankers have no basis on which to extend credit, and without credit there is no basis on which to create and issue currency (money), making it necessary to adopt many expedients and take heroic measures to stabilize prices and again prime the financial pump.

When the farmer has lost his purchasing power and is unable to support his part of the national economy, the manufacturing, distributing, and transportation industries will suffer irreparable losses, along with the farmer, the miner, the lumberman and fisherman, representing our four great basic industries.

Let us preserve and protect the prosperity we now enjoy by maintaining a balanced price structure, with purchasing power in the hands of industry's best customer—the farmer. If we are to have permanent prosperity, we must maintain a stable national economy by establishing price parity, which can best be achieved by a constructive farm price support program.

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

The Political Parade

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. REED of New York. Mr. Speaker, I am taking this opportunity to bring to the attention of the House an article by George Rothwell Brown, which appeared on the editorial page of the New York Journal-American of July 12, 1949. The prophecy made by Mr. Brown with reference to the temptation of foreign nations to take not only our markets but to drain off our gold supply should be heeded.

Under unanimous consent heretofore granted, I am hereby inserting in the RECORD the editorial to which I made mention:

THE POLITICAL PARADE

(By George Rothwell Brown)

WASHINGTON, July 12.—The late Justice Brandeis once wrote a fascinating book on an intriguing subject, entitled "Other People's Money."

Perhaps there are no more people on earth more interested in other people's money than the French, nor are any people more gifted with fantastic ideas of what to do about it.

But even the French have excelled themselves this time, in their proposal at Paris that the United States raise the price of gold from $35 to $55 an ounce, as a means of easing the world shortage of dollars.

What the French are thinking about—and so are a good many other Europeans—is that $24,000,000,000 gold hoard at Fort Knox.

There isn't a statesman on the other side of the Atlantic who would not like to help us decide what to do with it.

As a matter of fact it was reported in the London newspapers in June that a new plan was under consideration by the Truman administration, for the granting of substantial gold credits to western Europe

"The underlying idea," said one British press report, "would be to put new blood into the Marshall plan by integrating it with President Truman's fourth point for the raising of the standard of living in the undeveloped areas."

Thus the British economic crisis revives an idea which was first advanced in England in the late summer of 1947, by Foreign Secretary Bevin, with what amounted to a demand that the Socialist-Labor government be cut in on Uncle Sam's gold stocks, as a part of the Marshall plan.

In essence the proposal was, and is, a plan to extend the old Roosevelt "share-the-wealth" scheme to the international field.

What basis there may now be for current London reports of plans by our Treasury Department to help Britain in her hour of crisis with an earmarking of some hundreds of millions of gold, this writer does not know.

They sound New Dealish enough to be true.

Not even the present Democratic Congress, with its sane Conservative coalition standing as a bulwark against its "lunatic fringe," as T. R. would say, would be guilty of such folly.

Moreover the number of those in both Senate and House who favor a return to the gold standard, as proposed by the bill of Representative DAN REED, of New York, now slumbering in the Ways and Means Committee, is slowly increasing.

This proposal is clearly the sounded proposition yet placed before Congress to correct the present economic dislocation in the United States, and thwart the designs of Communist Russia in western Europe.

The directors of the New York Board of Trade took note of such a possibility last March, when they went on record as declaring that any increase allowed in the price of gold would cause heavy losses by the United States, would disturb our economy, and "impair or destroy, for generations to come, the confidence of the people in the willingness and ability of Congress to maintain a fixed monetary standard for the people of our country."

The Fort Knox gold will become increasingly a temptation to the "have-nots" of all countries—including our own!

Congress will do well to keep an eagle eye on it.

S. 1008, the O'Mahoney Bill, Should Be Defeated To Protect Small Business and Discourage Monopolies and Trusts

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. PATMAN. Mr. Speaker, S. 1008 was first introduced for the alleged purpose of clarifying a decision of the

Supreme Court. Then it was discovered that the bill, as adopted by the Senate in the form of the O'Mahoney amendment June 1, 1949, would take the heart out of the Robinson-Patman Act, which has been so effective in protecting hometown merchants and all independent businessmen:

HEARINGS AVAILABLE SOON

The bill has never had a hearing before a committee, either in the House or the Senate. When the Judiciary Committee of the House refused to hear small-business representatives, the Committee on Small Business of the House, at the insistence of small-business men, granted hearings to the opponents of this measure. These hearings, in printed form, will be available some time this week. I do not believe many Members of the House or Senate will be willing to vote for this measure after these hearings have been read and considered. These hearings, reporting the testimony of competent witnesses, disclose that a great disservice will be done to small business in this country if S. 1008 is allowed to become a law. For instance, this bill, even in its present form with the Kefauver-Carroll amendments, strikes a devastating blow at the Robinson-Patman Act. The Great Atlantic & Pacific Tea Co. would benefit by millions of dollars a year if the Robinson-Patman Act is weakened. This concern has just been convicted of trying to unfairly and illegally destroy independent merchants. Under the Equity Opportunity Act of 1936—the Robinson-Patman law—a big manufacturer cannot give A & P special discounts without giving the independent merchants across the street who are competitors of A & P the same discounts under similar and like circumstances. This is the part that A & P wants repealed, and which would be repealed under S. 1008 as it passed the Senate.

It is my sincere hope that the bill, S. 1008, will yet be referred to a committee in the Senate for full hearings and report before acted upon. If this cannot be done, certainly the Kefauver-Carroll amendments should be agreed to. If the bill is sent to conference, one way of killing it would be for either the House or Senate to refuse to adopt the conference report.

In the interest of private enterprise, the free competitive system, and in opposition to monopolies and trusts, this bill should be defeated.

Sol Bloom

MEMORIAL ADDRESS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1949

On the life, character, and public service of Hon. SOL. BLOOM, late a Represantative from the State of New York

Mr. KLEIN. Mr. Speaker, there is an intrinsic grandeur of tragedy in the passing of any man who has been prominent in his devotion to public service; but there is some special feeling of emptiness when a man departs whose identification with service to the public good has become so long identified with our thinking that he seems immortal.

Such is the feeling that we must all have as we contemplate the empty place of the late great SOL BLOOM, a Representative in Congress from New York since 1923, and a man to whom service to his country was a temperamental and not an economic compulsion.

There is little need for me to review SOL BLOOM'S life and times in this place.

We all know how he was born in a small Illinois city, how he made a fortune in the amusement and music publishing worlds, and of how he was compelled by his desire to repay his debt to the Nation for his success by entering politics.

In Congress he served the Nation and the people of his congressional district faithfully and well. He championed world peace and international cooperation; he upheld the dignity of man and the divinity of humanity. Where there was a good cause demanding championship, there also was SOL BLOOM.

The intimate friend of the world's great figures, SOL BLOOM always had a moment to speak to the lowliest messenger or page boy.

The death of this servant of his country and of his God will leave an empty place in the hearts of all who knew him, and an empty place in the political arena which no successor, however beloved, can exactly fill.

Harry's Fireside Chat Not Fooling Everyone

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, that Harry's fireside chat is not fooling everyone out in the "sticks" where local residents do not presume to "know it all," is evidenced from the following editorial which comes from a recent issue of the Allegan Gazette, for 75 years a Republican paper published in Allegan, Mich., my home town:

HE'S STILL SELLING SHIRTS AT A LOSS

Faced with a walk-out of 500,000 in the steel industry, a threatened strike in the Ford Co., a declining national economy, and increasing welfare costs, President Truman at long last gave in and, in a message to Congress, abandoned his demand for an additional $4,000,000,000 in taxes and said, "No major increases in taxes should be undertaken at this time."

This statement represents a victory for Congress which has steadfastly resisted all of Truman's efforts to increase taxation. No credit can be given Truman as his statement comes a little late in the year and now is merely an admission on his part that he has been wrong for the past 6 months.

Nor can Congress afford to gloat over this victory because Truman has and still refuses to reduce Government spending. In his message he sharply criticized legislators insisting upon reduced Federal spending and evidently intends to operate in the red.

This is what he says: "If we tried to avoid a budget deficit by cutting essential expenditures, we would contribute to lower national output and lower employment, Federal receipts would fall further, and the burden upon Federal expenditures would increase. There are economic and social deficits that would be far more serious than a temporary deficit in the Federal budget."

Since March the Federal pay roll has increased more than $100,000 a day and Truman still insists that we cannot achieve economy by reducing Federal spending. It is quite clear that he intends to keep on spending more money than the Government receives and thus force new and burdensome taxes upon the people at a later day. In other words, it is his intention to increase the national debt.

Briefly, Truman is still contradicting himself. He says that the people cannot afford new taxes and at the same time adds to their burden by planning to spend the country into a deficit for this year.

He is operating this Government on the same principles he operated his clothing store back in Missouri, selling shirts at a loss.

Big Step Forward in Indian Policy

EXTENSION OF REMARKS

OF

HON. ANTONIO M. FERNANDEZ

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1949

Mr. FERNANDEZ. Mr. Speaker, in the Navajo rehabilitation bill passed by the House last Friday, one big forward step was taken in that the Navajo and Hopi Indians will, under this bill, be made subject to the laws of the State wherein they reside. This provision, if adopted into law, will make history.

Because of the press of time when the bill was up for debate, and because of the apparent unanimity in the committee and in the House with respect to this phase of the bill, this provision was not discussed.

The Committee on Public Lands should have been complimented in helping by these means to give the policies of the Indian Office a new and beneficial turn—one which will get the Navajos nearer the goal of full and responsible citizenship.

The manner in which the amendments so providing were adopted by the committee, in itself has made history. When it was before the committee for consideration, fears were expressed that the Navajo Indians might resent any effort to make them subject to the laws of the State. The Office of Indian Affairs clearly was of the opinion that they would resist, and it sought an opportunity to present the matter to the Indians themselves, with the full expectation, I am sure, that the Indians would condemn the amendments offered for that purpose.

At a regular annual session of the Indian Council, the amendment was submitted to them and its provisions and implications explained to them by their own attorney. It was discussed by the Indian Council at length and put to a vote. The council, by a vote of 37 to 20 approved the amendment with an addi-

tional requirement that in the administration of the schools, the State curricula should be adopted so far as possible.

Here we have the largest group of Indians in the United States, almost 100-percent full-blooded, choosing of their own accord, probably for the first time in history, to give full citizenship a trial. Here we find this group of Indians thinking ahead of the Office of Indian Affairs, and of many of us in Congress who have hesitated to take this step, required if the practice of segregating Indians from other citizens is ever to be ended.

The Navajo Indians realize that the enforcement of law and order in their huge reservation is fast breaking down, if in fact they have ever had an effective enforcement of law and order. With the rehabilitation provided by this bill, with full educational opportunities, and with full citizenship rights and obligations, I predict that the intelligent Navajo people will lead the way to the full integration of all Indians in our body politic.

In this determination the Navajo Indians have earned the plaudits of their fellow citizens of non-Indian blood, particularly in New Mexico. They too realize that so long as the Navajos continued completely segregated and beyond the laws of the State, the problem would become more difficult as the years go by. The Navajos are rapidly spilling over their own borders on the New Mexico side through the sheer pressure of numbers. The latest survey recently completed by the Pacific Southwest Inter-Agency Technical Committee, shows that though the Navajo Reservation consists of a total of 15,444,952 acres, only 3,437,115 acres are in New Mexico, and yet of the total 55,458 Navajos found to exist by that survey, 26,268 are in New Mexico—nearly half in one-fifth of the reservation on the New Mexico side.

As a sample of the reaction of the press in the State on this important amendment contained as section 9 of the bill, I include herewith under leave heretofore obtained two editorials. The first appeared in the Albuquerque Journal, a daily at Albuquerque, and the second in the Gallup Independent, a daily at Gallup, which has for years fought for a better deal for the Navajo people just across the reservation line from Gallup.

These editorials read as follows:

[From the Albuquerque (N. Mex.) Journal of May 18, 1949]

Congressman FERNANDEZ may not be successful in putting across his amendment to the bill proposing a 10-year, ninety-million program to make the Navajo and Hopi Indians self-supporting, but it is sound.

The amendment would have the Indians placed under authority of State laws as a necessary part of their rehabilitation program. He would continue the exemption of Indian lands and retain the Government responsibility for education and of the Indian children, but he would make them full citizens in fact of the States.

Inasmuch as the Indians have only recently won their full voting rights in New Mexico and Arizona, it is logical that they should be under authority of the laws of the State as any other citizen.

Some lawyers in the State subsequent to the decision granting the Indian the ballot right have noted the inconsistency of still classifying the Indians as wards of the Government and not subject to the laws of the State. Mr. FERNANDEZ' amendment would straighten this out.

[From the Gallup (N. Mex.) Independent of June 23, 1949]

NAVAJO COUNCIL, REPRESENTATIVE FERNANDEZ GET ORCHIDS IN SCHOOL FIGHT

The Navajo Tribal Council and Representative A. M. FERNANDEZ are to be congratulated.

The Tribal Council gets the first orchid for staying with 'ts demand for accredited schools on the reservation, and writing into the Fernandez amendment to the Navajo-Hopi rehabilitation bill the requirement that State curricula be instituted and followed in the Government schools on the reservation. The purpose of the amendment proposed by Representative FERNANDEZ was to give State police and courts jurisdiction over the Indians on tribal and allotted lands for the protection of ballot boxes and welfare assistance checks which are now being paid out of State public assistance funds under the social-security law.

Representative FERNANDEZ gets the second orchid for accepting the suggestion of the Navajo Tribal Council and writing into the amendment the provision that State curricula be followed in the reservation schools—thereby proving again his sincere and continued interest in the welfare of the Navajos.

The amendment containing the school clause was approved by the full House Public Lands Committee, and made a part of the Navajo-Hopi rehabilitation bill before the House. The Senate Committee on Public Lands also has approved a duplicate Navajo-Hopi rehabilitation bill with an amendment providing for a congressional watchdog committee to control the expenditures which in 10 years will run into $90,000,000. The House and Senate will work out a compromise measure to adjust the amendments, and it is expected each will accept the other's amendment.

Once the rehabilitation bill wins approval of Congress and gets the President's signature, the school policies of the Indian Office, which the tribal council declared ineffective and undesirable, will be out, and for the next 10 years during the life of the rehabilitation bill, reservation schools must be run according to State accredited scholastic standards. By the end of the 10 years the schools which have been required by the law of the land to teach accepted subjects to the Navajos should be well along toward accredited status, and the Indian children well grounded in American common-school courses.

The Navajos, through the persistence of their tribal council and the help of Representative FERNANDEZ, will have effected a major accomplishment in their struggle for education and recognition as full citizens. Congratulations to both.

Isthmian Canals and National Defense

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 14, 1949

Mr. MARTIN of Iowa. Mr. Speaker, for many months I have been studying the various proposals for Isthmian Canals, and for the so-called modernization of the Panama Canal—especially from the standpoints of national security and defense. In three previous extensions of mine in the CONGRESSIONAL RECORD during the present session, I commented, at some length, on the vulnerability of the proposed types of canal to the atomic bomb, and quoted the following named articles which appear in the Appendix of the RECORD dealing with the subject: The first by Lt. Gen. Leslie R. Groves, at page A169; the second by Maj. Gen. C. F. Robinson, at page A755; and the third by Lt. Col. A. W. Betts, at page A1713.

In the July 1949 issue of the Atlantic Monthly there was published another and extremely able paper on the much broader subject of the national defense of the United States, by Hanson W. Baldwin, the distinguished military editor of the New York Times, under the title "What Kind of War?"

Mr. Baldwin discusses the military policy of the United States in thoroughly objective fashion, and presents his concept of the probable form of a future war, with special reference to the atomic bomb. He does not even mention any project for a new Isthmian canal, either at Panama, or elsewhere. He does, however, warn against the danger of military programs contemplating the erection of impregnable Maginot lines in futile efforts to attain absolute security; and stresses the fact that in modern warfare the only actual, ultimate security must depend on our over-all strength and resources.

This able thesis—and the others just mentioned—are particularly pertinent to the recent canal proposals placed before the Congress in the name of national defense. The general theme of these authoritative pronouncements is that any type of construction would be vulnerable to atomic attack. Mr. Baldwin's main appeal is for a balanced defense program and the avoidance of squandering the Nation's wealth on futile undertakings.

His sturdy, well-considered views should aid in decreasing the hysteria induced by a magnification of the atomic bomb problem—though its gravity must ever be borne in mind—and should also serve to restrain those who, under the pleas of national defense, would heedlessly add to the existing burdens of the American taxpayer with Isthmian canal projects of doubtful value and astronomical costs.

A careful study of this most instructive and valuable contribution is respectfully commended.

WHAT KIND OF WAR?

(By Hanson W. Baldwin [1])

I

The prophets of doom—of a new Armageddon of atomic bombs and hurtling bombers—are loud in the land these days. The

[1] Hanson W. Baldwin graduated from the United States Naval Academy in 1924, and after serving aboard battleships and destroyers in the east coast, Caribbean, and European squadrons, he resigned from the Navy in 1927 to devote full time to his writing. He joined the staff of the New York Times in 1929, was its military and naval correspondent (1937-42), and has been its military editor since 1942, the year in which he was awarded the Pulitzer prize. He is the author of six books, the most recent being Strategy for Victory and the Price of Power.

issue seems to be settled; most Americans take it for granted that a war with Russia is likely and that the atomic bomb will certainly be used; the only unknown is the date. Even the President, who believes that his policies will restore stability to the world, and who cherishes the hope that history may know him as the peacemaker, brandished an atomic bomb a few weeks ago. If war comes, we would not hesitate—he said—to use it.

There is, I think, a basic fallacy in this thinking—a fallacy so major that unless corrected it might well undermine our hopes for a quick victory if war should come, and our aspirations for a more stable peace after victory. The Nation's dangerous war psychosis, which has a good bit of the chip-on-the-shoulder attitude of the belligerent but frightened small boy, is delivering us into the hands of the political demagogues and bomb-rattling Douhets; we think war; we talk war and the bomb, but we never pause to figure out what the objective of a war with Russia should be.

Yet it is very clear that in a war with Russia, in any war, the kind of war we should fight should depend upon the objectives of the war—the kind of peace we want. We are putting the cart before the horse; we are following the same policies that we did in World War II—the goal victory, unconditional surrender, blitzkrieg—with no eye to the long grim road that lies ahead after the bombs are dropped and the radioactive ruins have shrouded the dead. If we fight a war with victory as the only objective; if we fight a war without first spelling out the political aims of the conflict, we can lose the peace again—as we have done twice in the last 30 years. The kind of peace we want dictates the manner of war we fight.

This is so self-evident that it should require no great emphasis, yet Americans always have been wishful thinkers and politically credulous people who have fought wars without knowing what they were fighting for. Wistful aspirations have too often been substituted for hard-headed political aims; we have seldom seen beyond victory. If we are to avoid the mistakes of the past, therefore, we must formulate first the things we want to fight for; only then can we determine the way we want to fight. In other words, sound military strategy stems from national policy, not vice versa.

If a war with Russia should come, what should be the objective of victory; what are our national aims? Do we want a Carthaginian peace? We might judge so from the delenda est Carthago threats of our Douhets and the incendiary words of some of our Congressmen. Is our objective to make Russia a desert, to tumble down the walls of the Kremlin, of Moscow, of Leningrad, of Rostov, of a score of cities, into the shards and dust of destruction, to plow the ruins and salt the fields? Is the aim of war against Russia annihilation of as much of the enemy population as possible and unbridled devastation and destruction?

These questions surely answer themselves. No war of attempted annihilation in history, save, perhaps, the destruction of Carthage by Rome, has resulted in a more stable peace, and Carthage was a compact city-state; Russia is a vast heartland of 200,000,000 people. We professed in the Wilsonian days, and in the recent trials, that our enemies were not peoples but the tyrants who ruled over them and the totalitarian ideologies they espoused; it would be hard by any amount of rationalization and on any basis of expediency to justify a war whose objective was primarily destruction, devastation, and slaughter.

There is no moral or ethical aim to a war of annihilation, nor could such a conflict be said to have aught but a negative political objective; certainly no such war could lead to a just peace or to a stable peace.

A war of annihilation, with the crushing consequences such a conflict would have upon the economy of the world and the world's political structure, could not help creating problems equal to, or worse than, those we now face. The wanton slaughter of millions—even if in the name of righteousness—would scarcely contribute to stability, much less to the triumph of ethics or justice; nor could we expect that political moderation—that antipathy for extremes which is the strength of the Anglo-Saxon democracies—would be fostered by such an aim. A war of annihilation is politically a senseless war, morally a reprehensible one.

What of the alternative aim of Balkanization? If Russia is not to be devastated as the Mongols once devastated Europe, should we not aim to split her into pieces, to amputate her provinces, to truncate her territory? But we do not want territory, and Balkanization always has led in past history to irredentism, to chauvinism and friction and future trouble. The greater part of the Soviet states proper have been Russian for centuries; it would be unjust ethnically and historically and politically to carve the Russian state into small bits. It would be, moreover, a most difficult and most impractical undertaking which would require the occupation of Russia—the largest land mass in the world—for years, and the constant policing of troubled artificial borders. Balkanization could provide the tinder for a fourth great war; it certainly would not lead to a more stable peace.

What, then, should be our peace aims? Are we out to loot Russia's treasures, to put an ikon in every fourth living room in America? Do we want the oil of the Caucasus, the minerals of the Donbas, the wealth of the Urals? The somewhat impatient answer is obvious: we do not covet any of these.

Our national aim in a war with Russia is—or should be—clear. The fangs of Russia should be drawn; that is, the power of the Soviet states to expand at the expense of their neighbors should be hobbled, and the aggressive expansionist philosophy of the Soviet Union eliminated. In practical political terms this means, I think, at least, two things—

1. The monopoly of the Communist Party upon the governmental structure of Russia and her satellites must be broken, and the false appeal of Communist dogma refuted.

2. All territories and all nations that Russia has enslaved or occupied must be freed and Russia must return to her traditional frontiers.

The practical definition of these aims in terms of frontiers and peoples would not be easy; peace aims are never easy. The Baltic states and the Polish frontier would be but two of the problems, and the Ukranian separatist movement, always strong throughout the centuries, might present another major issue. There might well be added, moreover, a third requirement—the disarmament of Russia. This, however, should surely be a condition of military victory, not per se a peace aim, or we have forgotten the lessons of the past; for no victorious cabal, remaining armed itself, can ever force permanent disarmament upon the vanquished and hope for a more stable peace.

The essence of our peace objectives if a war with Russia occurs should be to eliminate the threat of aggression which, by virtue of the marriage of Communist ideology with Russian power, now casts a long shadow across the world. We can, I think, carry the argument one step further; these should not only be the national objectives if a hot war—a shooting war—starts, but they should be the national objectives of the existing cold war.

II

These objectives are not easily attained, but we can make the ultimate goal harder and more difficult to achieve, or easier to reach, by the methods we use.

Two principles can guide us in the determination of these methods: (1) You do not defeat ideas with a sword. (2) Unbridled devastation leads to economic misery and political extremism.

These principles suggest that in cold or hot war we should emphasize political and psychological and economic methods. The old principle of war—concentration upon the objective—demands the focusing of our efforts upon totalitarian communism and upon Russian military power—the threat of Russia to the world—not the dispersion of our effort by an attack upon the Russian people.

There are, obviously, many weaknesses in the seemingly monolithic facade of communism; the fissures of Titoism are widening in many of the iron curtain countries, and even in the Kremlin itself the death of Stalin, almost certain to occur within the next 5 to 10 years, will exacerbate the differences that already exist in the Politburo and may produce, in the subsequent palace struggle for power, another Trotsky-like split and perhaps numerous defections. The peoples of the Soviet Union are not without their own differences; there are racial, religious, and nationalist minorities in Russia and dissidents such as the Ukranians and the Don Cossacks who object to the rule of the Russians as much as to the rule of communism. There are, after all, only about 6,000,000 members of the Communist Party in Russia, a nation of perhaps 200,000,000 and only about 120,000,000 Russians; the rest are a medley of races with their own cultures, traditions, and histories, their own nationalist aspirations.

The above facts, which are not subject to successful challenge, suggest that in cold or hot war we should try to drive a political, moral, and psychological wedge between the government and the peoples; that we should particularly encourage the oppositionism—underground but definite—in the iron curtain countries, and the separatism and nationalism of the Ukrainians and other minorities within Russia.

Lest such measures seem to be a weak reed for us to lean upon—and it is not suggested, of course, that these should be the only measures we should take—it might be well to remember that failure to exploit these Soviet weaknesses probably cost Germany the war, and that Ukrainian guerrillas, bearing arms against the Soviet government, still are fighting—though in small numbers—in the forests of this vast region.

Records produced at Nuremberg demonstrate that in the fall of 1941 the Nazi Party, disregarding objections by the German Army, transformed the invasion of Russia into brutal war against the whole Soviet people The party, instead of the Army, took over the military government of conquered areas, ruled with a rigid hand, and tried to crush the slightest spark of opposition with more and more repression. Hundreds of thousands of Soviet soldiers surrendered with little fighting, and scores of thousands—including the Soviet general Vlasov—deserted to the German side in the first months of war; but instead of encouraging this spontaneous revulsion against Communist totalitarianism, instead of actively fostering by all possible means a Ukrainian separatism, instead of acting as liberators, not conquerors, the Nazi Party, by its war of annihilation and its cruelty to Soviet prisoners and to the conquered areas of Russia, consolidated the opposition of all Soviet peoples and kindled the flame of hate, which later devoured the Reich.

The foregoing indicates, at the very least, the great importance of the political, the psychological, and the moral in any conflict with Russia. Yet it is precisely these factors which our present concentration upon the atomic bomb—first as the primary means of

deterring Russia from aggression; second, as a weapon of victory in war—tends to subordinate. The bomb has become the cure-all, the white hope of American foreign and military policy.

Perhaps it justifies this reputation. It is a terrific weapon; certainly it is more than just another bomb, though it is not the absolute weapon. Given enough atomic bombs and assuming they could be delivered to their targets—both major assumptions—there is no doubt they could create a desert of rubble out of a modern city civilization, even in a large country.

But it might well be that wholesale atomic assault upon the Russian people, rather than upon the Kremlin and the Politburo, would tend to consolidate the Soviet peoples instead of splitting them. Certainly we could not much hope to profit from the fissures in the Russian political structure if on the one hand we proclaimed we came to liberate, and on the other we slaughtered promiscuously millions of Soviet citizens—men, women, and children—regardless of their political beliefs or ethnic backgrounds or aspirations for freedom. In other words, the military weapon—if that weapon were unlimited atomic attack—might not complement our political and psychological warfare; as a matter of fact, even now in the cold war, there are strong evidences that the threat of the atomic bomb has been used by the Kremlin to unify the Soviet masses.

It is quite clear that atomic warfare—unless most sparingly used and unless the targets were most carefully selected—would fit into that category of senseless slaughter which so many authorities have rightfully condemned. If the aim of war be a more stable and just peace, promiscuous atomic bombardment cannot possibly contribute to that end. Even today, only 4 years after the war, the seeds of a new neo-fascism are sprouting in the bomb-ruined cities of Germany, and economically impoverished Japan is turning slowly toward extremism of left and right.

III

The primary question of atomic strategy is always the same: Will the atomic bomb stop the Red Army? If it will not, if—despite our devastation and destruction of scores of Russian cities—the Red Army marches into western Europe, then certainly we are undone. Gone are the hopes of a quick and easy victory, of a "three weeks war"; gone, too, are the objectives of victory, the very objectives we are working for today—the preservation of western Europe's free political traditions, large economic resources, and cultural and historical and spiritual institutions from the clutching hand of extremism.

There is pretty general military agreement that the Red Army can move into western Europe despite our possession of the atomic bomb. The bomb is not a good weapon against dispersed land armies; land armies can best be immobilized and their forward movement stopped by opposing land forces with great firepower and high mobility, supported by tactical air power—fighters, fighter-bombers, and light bombers, blasting with conventional bombs at bridges, railroad choke points, roads, and the enemy's supply lines and advancing spearheads. The sort of interdiction used in Normandy is a classic example of the use of tactical air power to slow down and immobilize a ground army, yet even with the overwhelming air superiority we enjoyed there, the stoutness and duration of the German defense and the successful retreat of the Germans to the West-wall attest the difficulty of interdicting an army by air power.

The advocates of the atomic bombardment of Russia do not contemplate the tactical use of atomic bombs against advancing Soviet forces: The atomic bomb is too precious and there are too few of them to warrant their attempted use against the well-nigh innumerable tactical targets. A bomb dropped in the Rhine at a key point might spread radioctivity over a fairly wide adjacent area and might contaminate the lower portions of that river for some time, but anyone who has seen the Russians clear mine fields—with their men as the human detonators—knows that this would not stop the Red Army; they would take their losses and keep moving.

The use of atomic bombs against the Russian home front, against Soviet cities, supply centers, oil supplies, factories, and nodal communication points in Russia, such as Moscow, would, however—some observers hold—hamstring the Red Army. The destruction of the factories in the rear would turn off the sluice valve of supplies; oil supplies would dry up; the destruction of railroad centers would cripple transportation. So the theory goes. Yet even the most hopeful theorists do not believe that this will halt the Red Army; while Soviet cities are being destroyed the Soviet Armies will be taking over western Europe's cities.

But once in possession of western Europe, it is held, these armies would be helpless; they would become more of a loosely organized rabble than an army; they would wither on the vine as did the beleaguered Japanese garrisons on the by-passed islands of the Central Pacific.

There are several fallacies in this assumption. In the first place, the effects of strategic bombing are those of attrition; the strength of an opponent is gradually worn down; the bombardment of rear-area installations is not immediately felt in the field. In other words, there would be a time-lag between the destruction of Russian factories and the drying-up of Russian front-line supplies—perhaps a long time-lag.

Destruction of home-front supply bases would have less effect on the Soviet Army than on a western army. For the Soviet army, unlike conventional western armies, lives to a large extent off the country; it utilizes captured supplies and does not depend solely or primarily on conventional systems of transportation. The advance of the Soviet Army is like the advance of a horde of locusts; its men move on foot, by horseback, clinging to tanks or busses, flatcars, trucks, in carriages, on mules, and in farm carts driving herds of cattle before them. The Soviet Army is much less motorized, and except for its heaviest equipment depends less upon railroads, than the western armies; its mobility is built upon human and animal muscle-power.

These facts are not comforting, therefore, to those who believe that atomic bombing would bring about a quick Russian collapse and would isolate the Red armies in western Europe and force them to wither on the vine quickly. But even if the atomic bombardment of Russia should produce fairly rapid deterioration in the fighting power of the Red Army, that would be of small comfort to Paris and Brussels and The Hague, overrun by the Mongol and the Tartar and the loosely disciplined fierce men from the plains of central Asia. Would such soldiers, knowing that the cities of their homelands were being destroyed behind them, be prone to offer mercy to the inhabitants of the west, or would there be sack and pillage and rapine unparalleled for centuries? Moreover, once taken, are not Paris and western Europe hostages for Moscow and Leningrad? Would we bomb Paris with atomic bombs?

I think not, and I think that the Russian occupation of western Europe would mean, inevitably, not a short quick war, but a long and arduous one. The outcome would be certain; the United States and its allies with their greatly superior industry would eventually win, but at what cost. The reconquest of western Europe by invasion, by land armies, would probably be necessary, and the red tide of war would tend inevitably to lap over three continents. It is precisely this—invasion—which western Europe fears, and it would be precisely this—invasion—that would bring down into dust and ashes all we have been working to prevent since World War II, and all our aspirations for a better and more stable peace.

IV

If the atomic bomb cannot stop the Red army, what can?

The answer is not simple, but compound. The bomb cannot halt the Red army short of western Europe once that army has started to move, but as Winston Churchill says, it has been of persuasive value in influencing the men of the Kremlin not to order the Red army's advance. Yet it is immediately clear that the deterrent value of the atomic bomb will progressively have less and less importance as Russia stock piles bombs. She has none today, and the chances are that the United States will retain its atomic energy lead—quantitatively and qualitatively—for years to come. And even if Russia should produce her first bomb by 1952—the deadline usually mentioned—one bomb of hers against several hundred bombs of ours would have little strategic meaning.

As both sides stock pile bombs, the strategic advantage of the larger stock pile steadily diminishes. It would be small comfort to us to have 1,000 atomic bombs if Russia had 100. The deterrent value of the bomb, under such circumstances, would be considerably less than it is now, for we would be certain to face retaliation in kind if we used it to halt Russian aggression; whereas Russia would probably not employ it against us—thus provoking our retaliation—so long as our numerical superiority was pronounced.

It is because in time we shall lose our atomic advantage, and because the atomic bomb will not halt the Red army today, that the measures we have undertaken to restore some balance of power in Europe are of such pressing importance. That balance of power must be restored before Russia acquires a sizable stock pile of atomic bombs.

Any policy we follow must be a policy of calculated risk. The great danger is that we might try to follow the will-o'-the-wisp of absolute security—to disaster. The bones of nations that have tried to be too strong litter the graveyards of history. For a time in 1948, there was some danger that we might make this mistake; the military programs then outlined—and for a time supported by Congress—almost led to military expenditures of 20 to 30 billion dollars a year. This danger—the danger of trying to erect impregnable Maginot lines whether of dollars, planes, or tanks—still exists but not in the acute form of a year ago.

The measures that will stop the Red Army, that will contain—and perhaps in time destroy—communism, that will contribute to our national objectives, that will lead to a more stable peace, are not only, and not primarily, military in nature, but political, economic, psychological, and moral. We are trying to fill in the great political vacuums left by the war, to rehabilitate war-torn and war-ravaged nations, to give them some national self-respect by helping them to be self-supporting and self-protecting. Until these things are done, there will be no peace.

The first pillar in this program was the ECA, with emphasis on the ERP of it—not a program to be recommended to widows and orphans, but one without which Western Europe would have had no chance of resisting the onslaughts of communism. The second pillar was the Atlantic Pact, political backing for western Europe. The third and fourth pillars are military: lend-lease arms aid to Europe, and United States rearmament. The fifth pillar is moral and psychological: a reaffirmation of faith in the American ideal and assurance of United States support for all free institutions.

Obviously there must be balance in the development of this structure or it cannot

develop into an edifice of peace. If the military phases are overweighted, they may promote what we are trying to avoid—war. If the economic is underweighted there could be disaster. Without psychological and political backing there is no meaning to the whole program.

The Atlantic Pact, the lend-lease arms program, and a strong United States are essential elements of this structure. Europe cries for security. No economic measures can succeed unless European capital has faith in Europe's future; the continual fear of sudden invasion would force the continued flight of capital from the continent. The Atlanic Pact gives some measure of political security to Europe; it means, in effect, that the United States will enter any war brought about by Russian aggression. The arms-aid program and our own rearmament gives military backing to this political guaranty.

Neither, of course, provides absolute security for the United States or for western Europe; there is no such thing. But the Atlantic Pact, our own rearmament, and the arms-aid program—if properly implemented—can provide some relief from the insecurity which has pervaded Europe these past 2 years.

v

Since 1945 the real deterrent to the Red Army has been the presence of American troops in Germany, Austria, and Trieste, and the certainty that Soviet aggression in Europe would implicate the U. S. S. R. in a war against the most powerful industrial nation on earth, the United States.

Today Russia could probably start an invasion of the west (without any additional mobilization) with some 50 divisions and considerable tactical air superiority. Western Europe might be able to oppose this aggression with 10 to 15 divisions (including the equivalent of 2 United States divisions in Germany) and tactical air power grossly inadequate to the task of interdicting any army. It is these weaknesses in ground and close-support air power that our own rearmament plus European rearmament should remedy. Twenty-five to 40 highly trained, mobile, excellently equipped divisions, plus considerable tactical air superiority, could stop the initial rush of the Red Army at the line of the Rhine—stop it at least long enough to permit mobilization and the dispatch of United States reinforcements. Forty divisions are impossible now—will not be possible for some time to come—but this is not an impossible eventual goal and we must provide a steady increment of military strength for western Europe. As the years pass. ground and air power, armed with the new weapons, organized for the new tactics of tomorrow, must be prepared to substitute for the atomic bomb—in western Europe—as a major military deterrent to war.

This does not mean, of course, that the Navy is unimportant. Control of the seas must be the basis of all our strategy; without it we cannot defend America. The United States and its western Allies have tremendous sea superiority today—an advantage we must be careful to maintain—but we have no such advantage on land or in close-range tactical air power. Yet until an adequate ground and air force is built up in Europe, a balance of power cannot really be restored.

We have taken the first slow, painful steps toward the development of such a force today, but there are many who feel that the emphasis is insufficient, the plans too limited. The arms-aid program, it is true, stresses land power and tactical air power. But the scope of the latter development in particular is set in too modest a frame—all the more so since the United States tactical air strength is largely a shell, and present plans do not indicate the likelihood of quick improvement.

The overriding emphasis upon the atomic bomb and upon strategic air power is tending to subordinate tactical air power, close-support air power—the kind of air power that prohibits surface movement and stops ground armies. Our tactical air power today is the neglected stepchild of the Air Force; only the Navy, for its specialized purposes, has an efficient but small surface support arm.

The plain truth is that the United States today, on the eve of a crucial 5 years which may determine peace or war, has not formulated adequately our national objectives, nor have we even seriously considered any strategy that is not atomic strategy. The assumption that we will use the bomb to defeat Russia is the basic assumption underlying the dominant strategic concept that, with the advent of Louis Johnson as Defense Secretary, has now gained ascendancy, and it is the basic assumption underlying much of our political thinking.

It is in my opinion a dangerously oversimplified assumption; certainly neither our military nor our political planning ought to be based purely on one assumption. We must have alternative strategies. It may be, unhappily, that we shall be forced to use the bomb, but perhaps it can be avoided; as time passes and Russia acquires an atomic stock pile, we shall almost certainly find it to our advantage to avoid it. But even if we do use it, how we use it and against what targets deserve far more careful consideration than they have yet received. Our strategical thinking and our political thinking must not be imprisoned within an atomic concept.

It is clear that the military effectiveness of any atomic strategy depends first upon the number of bombs available, and second upon the number of bombs the enemy has—and also upon a great many other space, distance, and defense factors. Today our political planners—and even many of our key military planners—not only have to guess at Russia's atomic potential, but they do not know how many bombs the United States possesses. A powerful argument can be made, as Senator McMAHON has suggested, for stating that the secret has been too well kept; it is difficult to formulate sound military or political strategy without knowing the numbers of bombs available. This is the second lesson; we must not only plan alternative strategies, but at least our top political and military planners—and perhaps sooner or later the world—ought to know the numbers of bombs on hand.

The inevitable conclusion of such thinking and such planning and of a proper consideration of numbers of bombs as well as of the power of a bomb may well lead us to policies which may tend to limit war, if not to prevent it.

But above all, if we do put the horse where it belongs—before the cart—if we formulate national objectives and peace policies before we determine war strategy, we shall surely emphasize those factors now too often neglected which, if emphasized, could avert war. Political, economic, and psychological weapons, properly used, are more potent persuasion than the threat of an atom bomb.

For the past 3 years we have been engaged in a cold war with Russia. The threat of the atom bomb and the long shadow of military force always have loomed in the background, but the principal factors in this cold war have been political, economic, and psychological, and it is precisely where we have used these weapons wisely (western Europe) that we have succeeded in containing the menace of communism, and it is precisely where we have neglected them and have overemphasized military force that we have met checkmate or defeat (Greece and China). Russia and her satellites have great political weaknesses, and we possess enormous economic strength. Let us lead from strength to weakness. If we do so, if we win the political, economic, and psychological war already joined, there need be no shooting war.

Andrew Lawrence Somers

MEMORIAL ADDRESS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1949

On the life, character, and public service of Hon. ANDREW LAWRENCE SOMERS, late a Representative from the State of New York

Mr. KLEIN. Mr. Speaker, this is a time when I could wish that I had the eloquence of a Shakespeare, that I might speak of ANDY SOMERS in the lofty language of Marc Antony's funeral oration for the fallen Caesar.

Without exaggeration, in the frail body and great soul of ANDY SOMERS there was contained a touch of that imperial greatness extolled by Marc Antony; his will and his ability were greater than his physical capacity to bear the huge burdens forced upon it by his compulsion to master his environment and his chosen specialty of the intricate field of finance.

Whatever he did, he did with his whole being. He never spared himself, never leaned upon the uncertain crutch of assistants. His knowledge was his own, acquired by hard study and devotion to his task.

Nor was his mastery limited to any narrow band of human knowledge. Here was a versatile man, learned in many fields, swiftly adaptable to each new problem, and dedicated to its instant mastery. ANDREW SOMERS was, in many respects, a true statesman, and recognition of his fine qualities was implicit in his repeated election to the Congress by the people of the Tenth Congressional District of New York. His presence in our State delegation lent a distinction of which we were all aware and proud.

He possessed a rare intellectual and personal integrity which, in a crass and materialistic world intent upon worldly gain, stood out in vivid distinction.

Here, surely, was a man destined by nature for great accomplishments, only partially achieved when his career was cut short by untimely death.

Cost of Cement in Road-Repair Program for Next 10 Years Will Be Doubled if Basing-Point Pricing System Is Followed by Cement Industry

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. PATMAN. Mr. Speaker, in an estimate made public on Monday, June 20, by the American Public Works Association, it was predicted that $47,000,000,000 would be needed over a 10-year period to put all roads, streets and highways in condition to carry traffic with

reasonable efficiency and safety. It is estimated by the Public Roads Administration that approximately 92,000,000 barrels of cement a year would be used in a 10-year program of this magnitude.

If the basing-point pricing system is allowed to operate again as it was before the Supreme Court decision in the Cement Trust case, the cost of the cement used in repairing and constructing highways will be doubled over a 10-year period. That means that the taxpayers will be out an unnecessary cost of $243,000,000 a year if the big cement producers are allowed to maintain absolute control over the price of cement.

Cement is a commodity which can be made in practically every locality of our country. There are ample raw materials all over our country; yet as long as the Cement Trust controlled prices, there were 14 States which had no cement plants, and many other States where plants in competition with the "big boys" had to fight for their very survival.

Since April 1948 when the Supreme Court rendered its decision outlawing the basing-point pricing system, two new cement plants have been built in Virginia, one in South Carolina, and others are under construction. This in itself is an illustration of the fact that competition thrives when basing-point pricing is suppressed.

Cement can and should be produced in practically every State in our Union. Closer distances between the cement plant and the highways will mean substantial savings to our taxpayers.

The Doctor and Our Health

EXTENSION OF REMARKS
OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject The Doctor and Our Health, which I delivered at the centennial celebration of the Medical Society of Philadelphia County, Philadelphia, Pa., on May 11, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE DOCTOR AND OUR HEALTH

More than half a century ago, a young Southerner walked into the offices of Dr. Samuel D. Gross, professor of surgery at Jefferson Medical College, and asked to be examined for enrollment. He displayed a medical degree from the University of the City of New York.

"You already hold a degree from a good medical school, young man. Why do you want to enter Jefferson College?" asked Dr. Gross.

"Because I wish to come to the fountainhead of American medicine and surgery, sir, and hear your lectures," the young Southerner answered.

Dr. Gross was only human and there were no examination questions after that. Instead the time was spent in conversation—about Alabama and a trip Dr. Gross had made there. As they walked to the door Dr. Gross put his arm around the young student and said, "God bless you, my son."

That young Southerner was my father, the late Dr. L. L. Hill, of Montgomery, Ala., a practicing physician and surgeon for some 50 years. After completing his work at Jefferson Medical College he studied in England under Joseph Lister, whose name I bear, and at other schools and hospitals in Europe. But throughout his life my father bore always a deep respect, admiration, and affection for Philadelphia, for Dr. Gross, and for the great teachers and the fellow students he knew there and with whom he maintained friendship throughout his lifetime.

So when I join with you in observing the centennial of the Medical Society of Philadelphia County, I come as one who has roots in the medical history of Philadelphia that I am honored and happy to nourish once again.

Philadelphia was the cradle of American medicine, as she was the cradle of America's political and financial and cultural life. Here the founding fathers proclaimed the Declaration of Independence and upon the anvil of debate forged the Constitution of the United States. Here Robert Morris and his associates began the building of American finance. And here the sturdy old philosopher, journalist, scientist, and public servant—Benjamin Franklin—blended so well the courage and common sense, the curiosity and intellectual power that symbolized our young and growing Nation.

Largely through Franklin's efforts, Philadelphia raised the first hospital in the United States—the renowned Pennsylvania Hospital which 3 years from now will celebrate 200 years of humanitarian service. The colonial legislature of Pennsylvania appropriated 2,000 pounds for the establishment of the hospital with the stipulation that the sum be matched by popular subscription. This pioneer example of government and private philanthropy acting together for the common welfare was an inspiration to us who fathered the Hospital and Health Center Construction Act 200 years later.

The Pennsylvania Hospital laid the enduring foundation stone of Philadelphia's medical history. In 1765 the medical school of the College of Philadelphia was founded—the first in America. This famed institution continues today as the University of Pennsylvania Medical College. In 1820 the Philadelphia anatomical rooms were established. The next year the first American school of pharmacy was founded here. In 1825 the Jefferson Medical College was founded and in 1840 the Pennsylvania Medical College was established. Soon after, Philadelphia took another pioneering step in the field of medicine with the founding of the Female Medical College of Philadelphia.

By the middle of the century, Philadelphia had become the medical center of the new world.

In her institutions, Philadelphia's medical history was made by men who were as truly pioneers as the frontiersman with ax and rifle. Into the unknown wilderness of human sickness, disease, and suffering they ventured with the frontiersman's courage and determination, for in the early days of medicine the doctor risked infection and death almost in the same degree as his patient.

Philadelphia built her medical heritage upon the faith and courage of men like Dr. William Shippen, Jr., who braved superstition and ignorance, even the threat of violence, to dissect the human body and learn its mysteries; men like Dr. John Morgan, founder of American medicine, who saw that medicine and surgery were separate fields in the art of healing, and men like Dr. Benjamin Rush, signer of the Declaration of Independence and early fighter against the dread yellow jack.

Here Dr. Philip Syng Physick did the work that made him the father of American surgery. Here Dr. Caspar Wistar wrote the first medical textbook and William P. C. Barton compiled the first American Materia Medica.

Following the path hewn by these pioneers have come later generations of great doctors, Joseph Pancoast, Richard Levis, Silas Weir Mitchell, and D. Hayes Agnew, Jacob M. DaCosta, J. Chalmers DaCosta, George Edmund de Schweinitz, John B. Deaver, and William W. Keen, and many others whose names are bright in medical history.

Here were the great teachers of American medicine, William B. Van Lennep, a founder of the American College of Surgeons, Solomon Solis-Cohen, Rufus B. Weaver, Chevalier Jackson, and many others. Some of you here tonight knew them, and studied and worked under them in the medical schools of Temple University, Jefferson College, Hahnemann College, and the University of Pennsylvania.

From this priceless heritage, it is not surprising that Philadelphia should give leadership in meeting the health and medical problems of today. I am indebted to your colleague, the president of the Medical Society of the State of Pennsylvania—Dr. Gilson Colby Engel, of Philadelphia—in the preparation of the voluntary health insurance bill which I introduced in the Senate of the United States only a few weeks ago. I conferred at length with Dr. Engel on his proposals for a 10-point program and important parts of his program constitute the basis of the bill.

The voluntary health insurance bill sets forth a program to bring hospital and medical care within the reach of every American.

It proposes to do this, not by setting up a strange and untried system of compulsion, but by making use of the practices of American medicine, tried and tested through the years, the fruitful products of our free American way of life.

We must preserve the freedom of the individual doctor. For only as the doctor remains free and uncontrolled and unregimented, only as he finds the inspiration and enjoys the right of individual action that freedom gives—to explore, to inquire, to discover, to serve in his own way—only then can we continue the marvelous progress of American medicine.

We must preserve the incentives of our free medical system—the incentives for individual effort, initiative and resourcefulness—the incentives to give the best we have. These incentives are not merely material rewards. They are the satisfactions that come from a job well done, that flow from the personal relationship of the doctor and his patient.

We must not destroy the American doctor's unique place of trust and confidence. The present system of medical care has been too valuable, too effective, and too useful to be abandoned. The course of wisdom is first to examine our existing health and hospital and medical resources. Then to strengthen and build upon them. This the bill will do.

The first and immediate objective of the voluntary health insurance bill is to provide hospital and medical care for persons who cannot pay, by giving them Government-supported membership in nonprofit, prepayment health insurance plans. These persons would receive the same type and quality of medical care provided regular subscribers to health insurance plans and they would not be identified as recipients of Government assistance. There would not be the delay or embarrassment of a "means test" at the time hospital care is needed.

Persons of limited income are encouraged to pay part of the cost of their hospital and

medical care. Medical protection would be assured, however, through the State health-insurance agency while the individual contributed to his protection within his own financial limits. It is important that we maintain this sense of individual responsibility. The independence of our people has been America's strength, and this is one way to maintain and encourage that independence.

Another basic purpose of the bill is to stimulate and encourage every self-supporting citizen to protect himself and his family against the cost of hospital and medical care by voluntary enrollment in the prepayment plans that now serve millions of Americans.

The most costly illness the average individual is likely to encounter is that requiring hospital care. The cost of hospital or medical care under the prepayment plans runs about $5 a month for the worker and his family. The hidden costs of a Government program would in the end be a greater burden upon the average individual. We can only imagine the infinite and vexing details of control that would have to be established for operation of a vast compulsory system affecting the lives and health of all the American people.

With universal participation the voluntary health plans can provide more comprehensive protection than they do now. The bill gives assistance to the States to survey the extent of enrollment and to develop methods of broadening protection and increasing the number of persons enrolled. The bill provides for pay-roll deduction of subscription charges for Federal employees who request it, and encourages similar voluntary deduction for State and local government employees. When persons enrolled in prepayment plans become unemployed, subscription charges will be paid during the period of unemployment compensation.

About a third of the American people now have some form of health protection through voluntary health-insurance plans. A recent survey shows that an estimated 52,500,000 people are protected by voluntary hospital coverage; more than 26,000,000 have voluntary surgical-expense coverage, and nearly 9,000,000 have medical-expense coverage. More than 31,000,000 of the Nation's 58,000,000 employed civilians are insured under some form of voluntary protection against loss of income due to sickness or accident.

If we believe there is a place in our American way of life for the voluntary system, here is a voluntary movement that cannot be ignored.

We have deliberately limited the bill to medical care provided in a hospital or diagnostic clinic. I do not believe we have sufficient medical resources—doctors, nurses, hospitals, and other facilities—to provide the care that would be called for if we immediately included office calls, home care, and minor illnesses. As present programs go forward and increase the number of doctors and nurses and provide additional hospitals and clinics, we can then provide in an orderly manner for the expansion of the services made available under the bill.

In its broadest effect the bill will stimulate the coordination and full use of the Nation's health resources. The bill does this by assisting the States to survey their needs and take steps to develop the highest possible efficiency and cooperation in the use of their medical, hospital, and health facilities.

In this the voluntary health insurance bill follows the tested pattern of the Hospital and Health Center Construction Act. Before ground was broken or foundations laid for a single hospital, the first year under that act was spent taking inventory of hospital and health-center needs in each State. Once the facts were in hand, the States were able to move promptly with a construction program suited to their particular needs. Under the act the Nation is now engaged in the biggest hospital construction program in our history. Some 768 hospitals, health centers, and other health facilities are being built or have been approved for construction.

The proposed surveys under the voluntary health insurance bill will, I am sure, reveal different needs for different areas. Some areas may find that the network of hospitals, health centers, diagnostic clinics, and the supply of doctors and nurses and skilled technicians can provide a well-rounded medical service. Other areas may need additional services or facilities in order to provide proper care. Cooperative use of certain facilities may be desirable for some areas. All of these matters can best be determined by the people right on the scene.

Thus the bill provides that the Federal Government pay half of the cost of the following types of surveys by the States and the local communities:

Surveys of existing diagnostic facilities: Proper diagnosis is a necessary element of medical care and the growth and development of diagnostic clinics will be encouraged, especially in rural areas, so that such services will be available to everyone.

Surveys of existing facilities and services and financing for mental illness, tuberculosis and chronic diseases: The surveys will provide the basis for programs to increase and improve these facilities, at present considered primarily a State responsibility.

Surveys of areas which at present do not have adequate medical care because of economic inability to support a medical practice: We know that many areas, especially rural sections, have not been able to attract the doctors they need and this is a matter of deep concern to all of us.

When the States have determined their needs, the States and the Federal Government then can and must take definite, intelligent action. From our experience with the Hospital and Health Center Construction Act we know that the surveys have led to specific programs to meet the deficiencies revealed.

Through the voluntary health insurance bill, the Federal Government will give financial aid, encouragement and wise guidance out of its vast resources, its broad experience, and its facilities for technical study and research.

But full control and administration of the program rests entirely in the hands of the States and local communities. The details of the program will flow from the needs, the customs, and the determinations of the people. The people will plan for themselves. The people will do for themselves. Here is the very antidote to centralization and regimentation.

Finally, and most important under the bill, our steps to extend adequate hospital and medical care to all the people will preserve the fundamental freedoms, the incentives, and the individual, personal relationships which have done so much to give America the highest quality of medical care in the world.

This is indeed the path of progress in a free democratic society.

The Hospital and Health Center Construction Act and the Voluntary Health Insurance Plan are only two of the many fields in which the local communities and the States must act jointly with the Federal Government to meet the health problems of modern living.

The foundation of a nation's health lies in the soil and the foods we obtain from the soil. I am sure you will agree that a successful health program calls for steps to restore and maintain the health-giving minerals and nutrients of the soil. With this objective I have joined in sponsoring the national soil fertility bill.

Preventive medicine through public health services is vital to the Nation's well-being. Last year the local communities spent more than $54,000,000, the States spent more than $40,000,000, and the Federal Government spent some $33,500,000 for public health services. The Public Health Service bill, of which I am author, will enable the local and county health units to strengthen and enlarge their services, and to intensify their never-ending fight against vermin, against food and water contamination, against tuberculosis, syphilis, malaria, typhoid and undulant fever, infantile paralysis, and epidemic diseases.

Medical research is health protection for tomorrow. The medical colleges, privately endowed foundations, and many private industries are carrying on great research work. The Federal Government is lending its support to research through the National Institutes of Health, the National Heart Institute, the National Institute of Dental Research, the National Mental Health Act, and the Atomic Energy Commission. We need the National Science Foundation provided for in a bill now before Congress, which will correlate and give coordinated direction to the research of the Nation.

The finest hospitals and health centers, the ultimate in medical knowledge have no value unless there are skilled doctors, nurses, and technicians. The State universities and the privately endowed institutions are expanding their medical schools and giving new emphasis to scholarships for medical students. Some States are offering special inducements to assure doctors for rural areas. The Federal Government is giving some help to train doctors and nurses and health workers through fellowships, grants to the States, and grants to universities and medical schools for teachers. The shortage of doctors, nurses, and health workers is so acute in so many places that this help of the Federal Government must be greatly increased.

Over all the Nation a vast effort for health is being put forth by individuals and private institutions, by the States and their communities, and by the Federal Government. But we must do infinitely more.

The very progress of our civilization brings new hazards to health—our freely moving population, modern transportation and industry, the mass production and handling of foods, the concentrated life of our cities. We must recognize that housing and economic security, crime and juvenile delinquency are factors in public health.

We are only hours away by plane from the yellow fever of the tropic jungle, less than 2 days away from the sleeping sickness of Equatorial Africa, less than 3 days from cholera and bubonic plague. The ramparts that you, the doctors, must watch are as essential to our strength and security as the military ramparts we guard.

Diseases of the heart and arteries cause one out of every three deaths in the United States and disable 8,000,000 Americans each year. The terrible death toll of cancer is rising steadily year after year. Mental sickness affects more people than any other illness.

All that we know about the human body, all that we know about nutrition and preventive medicine, all the wondrous drugs and chemicals and medical and surgical equipment we have—these are only the sinews and the tools of medicine. The doctor is the mind, the spirit, the genius of medicine.

Our hopes rest finally upon you. Yours is the challenge. And I have faith that you shall meet that challenge.

Since the days of Jan Petersen, the Swedish barber-surgeon who ministered to the needs of the earliest Pennsylvania settlers, the doctors of America have not waited for change to overtake them. They have sought change and they have created change.

They have recognized change as the essence of all life and all growth. The marvelous progress of American medicine tells their story.

The genius of those probing, questing minds which ventured fearlessly into the wilderness of early medicine, that same genius is with us today—in Philadelphia and Baltimore and Boston, in New Orleans and Chicago and Denver, in Minnesota and New York and California.

It is with us in the doctor who carrries his knowledge into the hills of Kentucky or Alabama, the mining towns of Pennsylvania, the bayous of Louisiana, or the mountains and plains of the West. It is with us in the operating room as the surgeon works deftly and swiftly and rescues human life. It is with us in the laboratory, where the scientist seeks always for new and more efficacious drugs, where he traces with atomic isotopes the attack of disease upon living cells, and delves ever deeper into the mystery and the miracle of human life.

The doctor of generations past has gone—he who was general practitioner, specialist, surgeon, psychiatrist, friend, and counselor all in one. But his generosity, his faith, his humanitarian spirit live on. I can find no better words to describe him than the words of J. Chalmers da Costa in his address on the occasion of the fiftieth anniversary of the Medical Society of Philadelphia County.

In words that live today Dr. da Costa said: "Our fathers did wonders with the resources they could command. The lesson of their lives is largely one of dignity, self-sacrifice, devotion to science, and regard for the bonds of professional conduct and duty, and carelessness as to wealth or fame."

Let us go forward today with this heritage into the ever-widening frontiers of medical discovery and medical progress, to serve as our fathers served—healing the sick and making whole the maimed, safeguarding the mother in childbirth and watching over the infant so new to this world, bringing life and health and happiness to our fellow man—following with humility and faith in the footsteps of Him who nearly 2,000 years ago was called the Great Physician.

Are Good Democrats Scarce?

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, it seems only fitting that political jobs not under civil service should go to capable party members who not only would perform well their official duties but be a credit to the party.

In the more than 10 years during which I have been in Washington, I have been puzzled as to why it is that so many top jobs in the Government and in the offices of those who are high in Government service are given to individuals who are later disclosed as having a rather bad reputation or who subsequently land in jail.

Attached is an editorial from the Chicago Tribune of July 19, which calls attention to two individuals who filled top jobs but whose records were subsequently disclosed to be not of the best:

ANOTHER OF FRANKFURTER'S HAPPY HOT DOGS

The proteges of Justice Felix Frankfurter of the Supreme Court are not doing very well these days. Edward F. Prichard, another graduate of Harvard law, who served his apprenticeship in Frankfurter's office and then became the "boy wonder" of the New Deal, has just been convicted of election fraud in Kentucky and sentenced to 2 years in the Federal penitentiary. He doctored 254 ballots in the general election last November, forging all but 1 for the straight New Deal ticket.

Mr. Prichard, a fat boy of 34 years, rose under Frankfurter's sponsorship to become an assistant to then Attorney General Robert Jackson, a Supreme Court Justice himself these days; chief counsel for the Office of Economic Stabilization under former Justice James F. Byrnes, Assistant Secretary of the Treasury under Fred M. Vinson, now Chief Justice of the Supreme Court; a long-range planner for the War Production Board, and counsel for the Democratic National Committee.

These posts of eminence under such New Deal luminaries do not appear to have given Mr. Prichard an elevated moral outlook, but perhaps the tone was set by his sponsors and political associates.

The conviction of Felix's bright boy follows hard upon the trial of another of his proteges, Alger Hiss, who was charged with perjury in denying that he purloined State Department documents and turned them over to Soviet espionage agents. Eight of the twelve members of the jury voted their belief that Hiss was guilty. Justice Frankfurter, who also steered Hiss into a post as secretary to a Supreme Court Justice and later planted him in the New Deal, turned up at the trial as a character witness for Hiss. The jury vote indicated a belief that he stood in need of someone to vouch for himself.

Justice Frankfurter did not check in with a similar affirmation that Prichard is an upstanding youth, but he is strategically situated should an appeal be carried to the Supreme Court.

Felix certainly can pick them.

Tops in Nation—Connecticut State Police

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Weanesday, July 20, 1949

Mr. PATTERSON. Mr. Speaker, I call to the attention of the House the award bestowed upon the Connecticut State police by the National Safety Council.

Our Connecticut organization, of which we are all justifiably proud, was chosen as the most effective State law enforcement agency in the Nation. No praise is too great for every member of this sterling group from Commissioner Edward J. Hickey down to the industrious and able patrolman. Their combined efforts make Connecticut a grand State in which to live.

Not content with this honor, the Connecticut State police were instrumental in our obtaining high ratings in many other classifications as outlined in the following article from the July 18 issue of the Waterbury (Conn.) American:

STATE POLICE TOPS IN NATION

HARTFORD, July 18.—The Connecticut State Police Department last year was the most effective law enforcement agency in the Nation.

The top rating was bestowed on Commissioner Edward J. Hickey and his boys by the National Safety Council. Notice of the honor was received by the highway safety commission.

The council also awarded top 1948 national honors to the State's safety organization program. On other counts Connecticut was rated as follows: Traffic engineering, school safety and effective public safety education, second place; driver licensing, seventh; efficient use of traffic records, twelfth, and effective traffic laws, seventeenth.

The council did not like Connecticut's motor vehicle inspection program because it is voluntary and not required by law.

Brannan Farm Plan

EXTENSION OF REMARKS

OF

HON. CECIL M. HARDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mrs. HARDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call the Members' attention to an editorial which appeared in the July issue of the Hoosier Farmer, official publication of the Indiana Farm Bureau. I feel that the editorial not only expresses my personal view of the Brannan farm plan but that it likewise expresses the viewpoint of a majority of the farmers of my district and my State.

The editorial follows:

NEVER—NEVER—NEVER

Something dangerous and unexpected is happening to the farmers of America and it is not of their doing. It would appear that a few persons in high governmental positions are attempting to make a political football of current farm legislation and legislative proposals affecting agriculture.

In all of the history of farm legislation stretching back 50 years, farm legislation on the national level has been the product of both major political parties. On many occasions, able leaders among the Democrats and the Republicans have joined hands to write and introduce farm bills. The best proof of the common sense of farmers in protecting their political self-respect during the trying years of the 1920's and the desperate early 1930's is reflected in the farm bloc that was formed of Congressmen and Senators of both political parties.

Any politician who would throw the serious economic problems of agriculture strictly into the political arena certainly doesn't have the welfare of the farmer uppermost in his mind. To decide the present and future farm problems on a partisan basis will divide farmers against themselves and will result in selling them down the river. There are Democrat farmers and there are Republican farmers; and, the only chance all farmers have to get desirable legislation, as well illustrated during the past 30 years, is to work together through their own organization in a united, bipartisan program of direct action. Farm problems are not political problems.

The Agricultural Act of 1948, which will go into effect in 1950, was developed by farmers themselves, from grass-roots thinking throughout agricultural America. The American Farm Bureau Federation worked with the leaders of both major political parties in getting the law upon the statute books. A Democratic administration, including the present Secretary of Agriculture and President Truman, who signed it into law, cooperated in supporting the provisions of the 1948 act. A Republican-controlled Congress, after much consideration and lots of urging by farm organizations, passed the bill that became known as the Agricultural Act of 1948. Every step was on a bipartisan basis.

The Brannan proposal, which would do away with economic opportunity and substitute a scheme of cheap food for labor and

industry and hopeful subsidies to farmers who would be tied down with governmental red tape and controls, is a dead duck as far as Indiana farmers are concerned. Hoosier farmers are thinking through on a nonpartisan basis this stabilized peasantry plan for agriculture and studying its dangerous philosophy more than any national legislative proposal ever made to them. Politicians who misinterpret that farmers favor the Brannan scheme of economic farm control are in for a rude awakening. Farmers want to try the Agricultural Act of 1948, which is in the tradition of farm legislation of the past 20 years.

Indiana farmers want no little Brannan program either. Some politicians and Government agents have suggested we try on a test basis the Brannan plan with hogs this fall. That would be harmful to farmers raising and feeding cattle, sheep, dairy cows, and poultry. President Schenck says it would mean consumers would stop buying all meats but pork, which would be subsidized to consumers at extremely low prices. This trial plan would cost farmers billions of dollars in loss of markets for all meats and dairy products, except pork, and it would add many hundred million—maybe billions—of dollars to the national debt. There is no stopping place, once the Brannan scheme gets under way, until all farms become completely controlled by the Government.

There is but very little difference between Government-controlled farms and Government-owned farms.

GLENN W. SAMPLE,
Editor, the Hoosier Farmer.

Civil Rights

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues an editorial which appeared in the Brooklyn Eagle of July 14. It is extremely apropos at the moment in view of the petition filed by our colleague, Congressman DOLLINGER, of New York, which seeks to bring before the House for its consideration his bill to prohibit the use of Federal funds for slum-clearance and public-housing projects in any State which permits segregation on account of race, color, or place of origin.

I voted against amendments seeking to accomplish the same purpose when they were offered as riders to proposed legislation, such as extension of rent controls and the public-housing bill, both of which are now law, but neither of which could have become law with such provisions incorporated in the bills. In taking that position I frankly stated that I was not receding from support of the President's civil-rights program. At the same time I stated that the question of civil rights should be met and decided by this House on its own merits. The Dollinger bill, H. R. 1641, presents at least a part of that program foursquare for action. There can be no hemming and hawing about it. The Members can be recorded in favor or against that precise principle with no side issues to mar their judgment or behind which they can hide. The editorial follows:

POWER OF DECISION ON CIVIL-RIGHTS ISSUE IN HANDS OF REPUBLICANS

Insofar as the current session of Congress is concerned, President Truman's civil-rights program may be considered as a dead letter. Any effort toward its revival would be the signal for the southern Democrat-Republican coalition to spring into action. The issue of equal rights is as much alive today, however, as it was before a bitter Senate filibuster stifled it by the threat of a complete disruption of the whole program of congressional action. Eventually, the principles which it embodies must be enacted more effectively into law.

President Truman, although recognizing the helplessness of his position on civil rights as matters now stand with Congress, has done wisely in reminding the country through his message to the National Association for the Advancement of Colored People that this fight must continue. It is a fight certain to be marked by reverses and disappointments and even by the fear of failure. Actually, as the President points out, there has been progress.

In the military organizations of individual States and in the National Military Establishment gains have been made in the elimination of segregation. In both public and private employment some of the racial barriers have been lowered. But the main objective—enactment of antipoll tax, antilynching, and antijob discrimination—has not been attained.

At a later date, when the way has been cleared somewhat by better understanding and a less tense feeling in the strongholds of the opposition, the effort will be renewed. It will be helped toward success by an enlightened, reasonable public support, since, as President Truman has reminded the movement's friends, "officialdom moves only as rapidly as an intelligent and persistent citizenry demands."

An alteration in the attitude of southern Members of Congress will be difficult to bring about. It has its origin in deep-rooted prejudices. But these votes are not necessary in order that the principles of civil rights may be given the status of law. Everyone knows where these southern Representatives stand on this issue. They are foursquare opposed.

And everyone knows where the northern Democrats stand. They are for civil rights. The power of decision, accordingly, rests in the hands of the Republicans who profess friendship for the principle but fail to meet the test of sincerity when the show-down comes. What this issue requires, if it is to be dealt with honestly and effectively, is sincerity among the Republicans in the Senate and the House. They should refer to the civil-rights plank in their party's platform last year for a reminder that they are on record as being opposed to lynching, to the poll tax, and to discrimination in employment. Then, when the issue comes before them again, as it will in the course of time, they should vote accordingly.

Federal Aid to Education

EXTENSION OF REMARKS
OF

HON. HARLEY O. STAGGERS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. STAGGERS. Mr. Speaker, May 5 the Senate passed a measure providing Federal aid to education by a vote of 58 to 15, an overwhelming bipartisan vote, and if the House of Representatives fails to take action on this most important bill we will be remiss in our duties as legislators and certainly as members of the Republican and Democratic Parties. Both parties carried this objective in their platforms, and we have a clear mandate from the voters of our country to complete the enactment of Federal aid to education before the adjournment of this session.

The present controversy which has arisen is no excuse for the leadership not bringing it to the floor for a vote and let the elected Representatives stand up and be counted. The action, or lack of action, on this bill will affect the future of our Nation more than any other single piece of legislation now before the Congress.

If we are to go forward as a united and strong Nation, we must provide adequate educational facilities for the youth of our country. America is only as strong as its weakest link. Whatever breaks down our standard of citizenship in one part of our country will lower it as a whole. We must have an enlightened citizenry if we are to hold our lead in the program for world unity.

It is the responsibility of the Congress to eliminate hardship, poverty, and inequality to the best of its ability. Federal aid to education is one way of doing this. To say we cannot afford the cost is to overlook the opportunity to enact a great piece of social legislation. The money spent on this program is an investment in America's human resources, making more able citizens who will carry on our democracy in the years to come.

Ignorance and the low standard of living that it produces are the most fertile soil for demagogy, communism, and dictatorship we can find. Instead of being an extravagance it is the soundest sort of economy and the best measure of national security.

The opponents cannot use the excuse, for their opposition to Federal aid, that they do not want governmental control of schools, as this has been clearly eliminated in the present bill.

Adult illiteracy in our country is shocking. This was brought to our attention very sharply during the last war, when we found that one in every seven adults in the United States, 25 years of age and over, cannot read nor write. If our country cannot afford to properly educate our children, then we cannot afford to set ourselves us as leaders of peace.

Equal educational opportunity of the children who are to be citizens of both the States and the Nation is the main responsibility of our constitutional Republic. The inequalities of educational opportunity that characterize the educational system today challenge American statesmanship.

Education can be made a force to equalize the condition of men. For most of the children the opportunity for anything more than a meager formal education is largely conditioned by place of birth. Since the most authentic research has shown that it is beyond the economic capacity of many of the States of the Nation to provide adequate educational facilities for their people without Federal assistance, it is clear that both the

local and national welfare demand greatly increased Federal participation in the support of our schools.

With democracy in retreat in most of the earth, America may give a lift to the democratic hopes of the forgotten millions in all parts of the world by a new declaration for equitable and democratic Federal aid to public education which will more equalize opportunity for all our children.

No one questions the fact that the shortage of teachers in our country is critical, yet we are not willing to provide a decent salary to the molders of our children's lives. How can we raise our boys and girls to be competent, loyal, and enthusiastic American citizens unless we have competent, loyal, and enthusiastic teachers.

The cost is greater to keep our youths in reform schools than it is to keep them in grade and high schools. With the increase in childbirth and the decrease in qualified teachers how are we going to teach our future citizens the advantages of a democracy and expose the false philosophies of communism. We cannot expect our young people to interest themselves in a career that offers small pay and little gratitude. Why should they spend years preparing for a job that pays less, after 4 years of college, than a job they could obtain upon completion of grade school.

It is the solemn responsibility of our teachers to inculcate the youth of our Nation with the principles of right living and clear thinking that make democracy work. Half of the child's formative years are spent in the schoolroom. It is there he develops the characteristics that will be his through adult life. Can we afford to longer neglect the crying need of our teachers?

This discreditable school situation is not a transitory one but one that will grow steadily worse from year to year, as school enrollments will increase a million a year, starting next fall. We have 7 years in which to meet an increase of more than 41 percent in elementary school enrollment. What are we going to do about it?

I advocate passage of the Senate bill S. 246 which avoids the controversial issue as to whether public funds should be appropriated to sectarian schools. In this bill this issue is left up to the individual State. As I stated earlier in my remarks, bill S. 246 passed the Senate 58 to 15, an overwhelming bipartisan vote.

Essay Contest in West Virginia

EXTENSION OF REMARKS

OF

HON. ROBERT L. RAMSAY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. RAMSAY. Mr. Speaker, this week I have had the privilege of spending some time with as fine a group of young folk as you will find in any section of this great land of ours. They are three young girls and two young men, the five winners of an essay contest conducted in three counties of the First Congressional District of West Virginia, which I have the honor of representing.

The Peoples Federal Savings and Loan Association of Wheeling conducted an essay contest open to high school students from Brooke, Marshall, and Ohio Counties. Eighteen hundred students participated. The subject of the contest was Freedom. The five winners are being given a tour of shrines closely identified with freedom. Saturday they left Wheeling and journeyed to Charleston, the capital of West Virginia, where they were received by the Honorable Okey L. Pattison, our Governor. Sunday they came to Washington and spent the next two days touring the high spots of this great citadel of freedom. While here they were greeted by Vice President Barkley; Secretary of Defense, the Honorable Louis Johnson; our two West Virginia Senators, Hon. Harley M. Kilgore and Hon. Matthew M. Neely; and myself. They were keenly disappointed, as was I, at not being able to see this great body in session and in not being able to see the Senate.

Today they are visiting shrines of freedom in Philadelphia, and will, on their return trip, visit Valley Forge and Gettysburg.

Mr. Alex Salvatori, president, Peoples Federal Savings and Loan Association; the institution's other officers, Mr. E. K. Meriner, contest director; and the three judges are to be commended for conducting this contest and providing such a memorable tour for these fine young folk.

Finally, Mr. Speaker, the winners of the contest are to be congratulated. They are representative of the splendid youth in our section of West Virginia. The five winners are Miss Sue Stranchina, Wheeling High School; Miss Carolyn Keucher, Wellsburg High School; Howard Conner, Sherrard High School; Robert Dragisich, Follansbee High School; and Miss Mary Agnes Lovinski, St. Joseph's Academy, Wheeling.

A Little Child Shall Lead Them!

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. MULTER. Mr. Speaker, a little child shall lead them! The bigots may rant and rave, the Fascists may hide under sheets as they attempt to destroy our liberty, the Communists may continue to undermine all that is good in America. All their concerted action will be to no avail.

The following prize-winning essay was written by a young American girl, Jennine Edwards, a member of the graduating class of Tupelo Senior High School of Tupelo, Miss. I am sure my colleagues will rejoice with me in reading this very fine exemplification of the true spirit of American youth. Too many of their elders must relearn the lesson this girl states so well.

WHAT AMERICANISM MEANS TO ME

(By Jennine Edwards)

I ask myself, What is Americanism? What are the things that give to each of us in America that sense of belonging? What are the things that make America mine?

Americanism is first the physical land. It is the rolling wheat fields of the West, the snowcapped mountains, the rocky coast of New England, the cotton fields and tobacco plantations, and the towering forests. It is the bustling cities with the roar of factories and the tall, still skyscrapers; it is quiet, comfortable villages with rows of white clapboard houses.

It is the people—every color and creed—who are impatient, generous, and slightly egotistical. It is people with the desire to weed out racial discrimination and prejudices and to cultivate unity and concord in living together.

Americanism is the institutions. It is the churches and the freedom of choosing any faith one desires—Protestant, Catholic, or Jewish. It is the schools and libraries where the youth of America may satisfy his thirst for education and infinite knowledge. It is the football, basketball, and baseball games in the vacant lots and huge stadiums. It is the drug stores and soda fountains, county fairs and hot dogs. It is the books, newspapers, radios and moving pictures which enables one to mold his unbiased opinions.

It is our Government, which decades ago granted to the future generations the noblest gift of mankind—liberty. It is openly voicing our honest opinions, giving our criticisms, exercising the privilege of voting and being given equality before the law and just trial by jury for crime.

Americanism is the opportunities so freely given to every man, regardless of his birth, to live, to work, to become whatever his manhood can make him. It is the fact that no man is excepted from his chosen field but is given an equal chance to succeed if he has the willingness to work hard and the backbone to stick it out.

Americanism is not only the present, but also the past. It is songs: Dixie, Sewanee River, Yankee Doodle, and Over There. It is the brave men who built the foundation for this democracy: George Washington, Thomas Jefferson, Abraham Lincoln, and Franklin D. Roosevelt. It is all the history recorded on the pages of time.

The failures and conquests of yesterday, the problems of today, and the destinies of tomorrow—these to me mean Americanism.

Maybe George Washington Was Wrong But I Still Think He Was Right

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. WHITE of Idaho. Mr. Speaker, as school children we learned of the Father of our Country and the heroic struggle he made in the Revolutionary War to win the freedom of our country and we learned of his wisdom and forbearance in establishing the United States as a new Nation. He left for us as guide in

carrying out the principles of government embodied in our national Constitution the advice and admonition bequeathed to us in his Farewell Address which we read anew in Congress each year on the solemn occasion of Washington's birthday anniversary.

I have taken the advice and admonition of our first President and the founder of our Nation to heart and I respectfully submit for the consideration of my colleagues some things Washington told us in his Farewell Address that ring as true today as they did when our Nation was new and untried 150 years ago:

To the People of the United States:

Friends and fellow citizens, in looking forward to the moment which is to terminate the career of my political life, my feelings do not permit me to suspend the deep acknowledgment of that debt of gratitude which I owe to my beloved country, for the many honors it has conferred upon me; still more for the steadfast confidence with which it has supported me. The basis of our political systems is the right of the people to make and to alter their constitutions of government. But the constitution which at any time exists, until changed by an explicit and authentic act of the whole people, is sacredly obligatory upon all. The very idea of the power, and the right of the people to establish government, presuppose the duty of every individual to obey the established government.

Towards the preservation of your Government and the permanency of your present happy state, it is requisite, not only that you steadily discountenance irregular opposition to its acknowledged authority, but also that you resist with care the spirit of innovation upon its principles.

As a very important source of strength and security, cherish public credit. One method of preserving it is to use it as sparingly as possible, avoiding occasions of expense by cultivating peace, but remembering, also, that timely disbursements, to prepare for danger, frequently prevent much greater disbursements to repel it; avoiding likewise the accumulation of debt, not only by shunning occasions of expense, but by vigorous exertions, in time of peace, to discharge the debts which unavoidable wars may have occasioned, not ungenerously throwing upon posterity the burden which we ourselves ought to bear. The execution of these maxims belongs to your representatives.

Observe good faith and justice towards all nations; cultivate peace and harmony with all. Religion and morality enjoin this conduct, and can it be that good policy does not equally enjoin it? It will be worthy of a free, enlightened, and, at no distant period, a great nation, to give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence.

In the execution of such a plan, nothing is more essential than that permanent, inveterate antipathies against particular nations and passionate attachments for others, should be excluded; and that in place of them just and amicable feelings towards all should be cultivated. The nation which indulges towards another an habitual hatred, or an habitual fondness, is in some degree a slave.

So likewise, a passionate attachment of one nation for another produces a variety of evils. Sympathy for the favorite nation, facilitating the illusion of an imaginary common interest, in cases where no real common interest exists, and infusing into one the enmities of the other, betrays the former into a participation in the quarrels and wars of the latter, without adequate inducements or justifications. It leads also to concessions, to the favorite nation, of privileges denied to others, which is apt doubly to injure the nation making the concessions.

Against the insidious wiles of foreign influence (I conjure you to believe me fellow citizens), the jealousy of a free people ought to be constantly awake; since history and experience prove, that foreign influence is one of the most baneful foes of republican government. But that jealousy, to be useful, must be impartial, else it becomes the instrument of the very influences to be avoided, instead of a defense against it. Excessive partiality for one foreign nation and excessive dislike for another, cause those whom they actuate to see danger only on one side, and serve to veil and even second the arts of influence on the other. Real patriots, who may resist the intrigues of the favorite, are liable to become suspected and odious; while its tools and dupes usurp the applause and confidence of the people, to surrender their interests.

The great rule of conduct for us, in regard to foreign nations, is, in extending our commercial relations, to have with them as little political connection as possible.

Europe has a set of primary interests, which to us have none, or a very remote relation. Hence, she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves, by artificial ties, in the ordinary vicissitudes of her politics, or the ordinary combinations and collusions of her friendships or enmities.

Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?

Harmony, and a liberal intercourse with all nations, are recommended by policy, humanity, and interest. But even our commercial policy should hold an equal and impartial hand; neither seeking nor granting exclusive favors or preferences consulting the natural course of things.

Constantly keeping in view, that it is folly in one nation to look for disinterested favors from another; that it must pay with a portion of its independence for whatever it may accept under that character; that by such acceptance, it may place itself in the condition of having given equivalents for nominal favors, and yet of being reproached with ingratitude for not giving more. There can be no greater error than to expect, or calculate upon real favors from nation to nation. It is an illusion which experience must cure, which a just pride ought to discard in relation to the still subsisting war in Europe.

After deliberate examination, with the aid of the best lights I could obtain, I was well satisfied that our country, under all the circumstances of the case, had a right to take, and was bound in duty and interest, to take a neutral position. Having taken it, I determined, as far as should depend upon me, to maintain it with moderation, perseverance and firmness.

A predominant motive has been to endeavor to gain time to our country to settle and mature its yet recent institutions, and to progress, without interruption, to that degree of strength, and consistency which is necessary to give it, humanly speaking, the command of its own fortunes.

GEO. WASHINGTON.

UNITED STATES, *17th September 1796.*

Mr. Speaker, there are more reasons why we should keep out of entangling foreign alliances today than there were in the time of George Washington.

Until the governments of the world are ready for real disarmament and the establishment of international policing power to prevent invasion and aggression to be administered under the direction of an international commission established to maintain peaceful international relations and safeguard the sovereignty of each country having an established government, I shall be opposed to any commitment to arm or fight wars for foreign governments.

Increase Consumption by Repealing Wartime Retail Excise Taxes

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of the House an editorial which appeared in the Brooklyn Eagle of July 16, 1949. No one can deny that increased production means continued prosperity, provided consumption keeps apace with production. At the present time consumption is lagging far behind production in many industries.

The wartime retail excise taxes were imposed to create consumer resistance. Those retail industries affected by those taxes now need consumer stimulation and one very good way to create that stimulus and provide more consumption is to repeal those wartime retail excise taxes. That can be accomplished by the passage of my bill H. R. 2324. I again urge those Members who have not yet signed my petition No. 6 to do so, so that we can bring this bill before the House for consideration.

The editorial follows:

TRUMAN CALLING FOR PRODUCTION, BUT MORE CONSUMPTION IMPERATIVE

President Truman's views on economic issues are in such harsh conflict with the convictions of many Members of Congress, including those of his own party, and his shafts at certain interests are so sharp that a critical reaction to his radio speech was to be expected.

In his charge that many people would like to have a depression "for political reasons" and his warning that we shall have to be sure "that the selfish interests do not drive us into the ditch, as they have done before," there is provocation to resentment.

Selfishness is an unfortunate human characteristic, and depression on a Nation-wide scale lends itself to exploitation, both political and economic. It is entirely conceivable that there are people who would welcome the opportunities for personal advantage which national adversity might hold. Their number and their power, however, could hardly influence the tide of events.

The question of whether unfavorable trends can be altered most effectively through policies of liberal spending or rigid restrictions is one which involves fundamental differences of economic philosophy. Conservative forces in Congress demand curtailment of appropriations. President Truman opposes cuts in the budget.

His theory is that of his predecessor, President Roosevelt, who used public funds in many different ways to lift the spirits of disheartened people, to give stimulus to business and industry, to create jobs and restore a sound economy. The present need is not so extreme or so urgent, but the an-

swer to the question of a declining economy still presents the same alternatives—to spend or to save.

The experience of the past supports the position of the President. Every possibility of reasonable and practicable savings should be utilized but the President properly recognizes the dangers attending cuts in Government expenditures that cause more unemployment. This is a trend, reflected dramatically in an increase from 2,000,000 to 4,000,000 jobless in a year, that must be stopped at all costs.

President Truman calls for production and more production. But he might well have completed the formula by appealing for consumption, consumption, and more consumption. It is becoming rather painfully clear of late as sales fall off and manufacturers' inventories of many mechanical appliances are piling up that consumption is the more imperative requirement.

It may seem an oversimplification of the problem to suggest that price readjustments might be a way effectively to stimulate consumption. There is little doubt, however, that a practical recognition of the reduced resources of many households would help ease the change to a strong peacetime economy.

Address by Hon. Homer E. Capehart, of Indiana, in Reply to President Truman's Speech to the Nation

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me over a number of Indiana radio stations in reply to the address to the Nation by President Truman on July 13:

I am going to devote my entire program today to an analysis of President Truman's speech to the Nation on Wednesday, July 13, with respect to our economic condition.

I have been one of Mr. Truman's most severe critics on deficit spending; therefore, I must be one of the selfish people he is talking about.

However, he completely, 100 percent, misrepresents the facts.

I have not once advocated—and neither has anyone else—eliminating housing, Federal aid to education, flood control, conservation, and many of the other projects which Mr. Truman so indicated in his speech.

I voted for housing, Federal aid to education, flood control, conservation, and all other good constructive measures.

Honest people want their Government to spend within reason. They want it to balance its budget. They know that no government can continue to spend year in and year out more money than it takes in without eventually getting into trouble.

I say to you, Mr. Truman, there will be no happiness in this country when our Government, under your guidance, runs out of money—only a selfish, misguided politician would recommend bankrupting our country—as your policies will do if you do not listen to a little common horse sense.

Mr. Truman said farm production should continue at high levels.

Yet his Brannan farm plan would, if workable at all, call for the regimentation of our farmers—for curtailing production—for a reduction in acreage planted—and for a reduction in livestock.

It would limit each farmer's income.

There you have the President of the United States advocating big production, yet at the same time advocating a farm program to curtail production.

It doesn't make sense, Mr. Truman.

This doesn't make sense either, Mr. Truman:

Six months ago you referred to the 1948 national income of $225,000,000,000 as a year of inflation.

Yet on January 7, this year, at the same time you talked inflation, you said to the Congress in your State of the Union message—and I quote the very first words of your speech:

"The people of the United States have just enjoyed another year of bountiful prosperity."

In that same speech you even left the impression that you were responsible for that great income for you said—and again I quote:

"Let us all remember that our unparalleled prosperity has not been maintained by chance, and that we can lose it if we leave the future to chance."

Now, Mr. Truman, that was an entirely different tune than that which you used in Los Angeles, Calif., on September 23, 1948, just three short months before your address to Congress.

Do you remember what you said there? I will refresh your memory by quoting your own words:

"There is no great mystery about how to stop the cost of living from going higher and higher.

"The best way to stop it is with price control.

"A program that does not include price control will not, and cannot, hold down the cost of living. We have learned that from experience."

First you called it high cost of living.

Then you called it a year of bountiful prosperity.

It just doesn't make sense, Mr. Truman.

The President, likewise, selfishly misrepresented the facts in his talk last Wednesday night when he said normal running expenses of our Government were only $10,000,000,000—as he put it, only a 50-percent increase over 10 years ago.

Now, the President of the United States knows this is not a true statement. Let's look at the record.

The President said the total expenditures for the fiscal year of 1950 would be $42,000,000,000—three-fourths of which was for wars and future wars, divided as follows: National defense, $14,000,000,000; veterans' assistance and interest on the debt, $11,000,000,000; foreign aid, $7,000,000,000; total, $32,000,000,000.

He said, further, that the balance of the Government's expenditures of $10,000,000,000 were increased only 50 percent, while all other expenditures were increased 900 percent.

Here is what the budget was in 1939—10 years ago.

Let's take a good look at it and analyze where the President misinformed the people in his fireside chat.

The total budget in 1939 was $9,000,000,000.

The President took debt interests and veterans' assistance costs out of the 1950 budget; so we'll take a billion and a half out of 1939 for that purpose.

He set aside $14,000,000,000 for military costs.

In 1939 military costs were $1,650,000,000.

He took out foreign aid, but we can't take any out of the 1939 budget for that purpose because we had no foreign aid at that time.

That leaves about six and one-half billions in the 1939 budget for the same things which the President said cost $10,000,000,000 in the 1950 budget.

But here is the catch:

When you take out relief work, agriculture payments, etc., the 1939 budget showed a pay roll of $1,800,000,000 for 1,000,000 Federal employees.

When you take out public works, welfare, subsidies, etc., from the 1950 budget, you have $6,500,000,000 for a pay roll of over 2,000,000 Federal employees.

Now, Mr. Truman, there is the real cost of Government, and that increase is more than 300 percent.

Mr. Truman is going to spend us into prosperity, so he says, but let's take a look at the past record in this respect.

Following are the annual deficits created by trying to spend us into prosperity.

Along with those figures are the number of unemployed in each year.

	Deficit	Unemployed
1933	$3,000,000,000	Nearly 13,000,000.
1934	4,000,000,000	Over 11,000,000.
1935	3,000,000,000	Over 10,000,000.
1936	5,000,000,000	Over 9,000,000.
1937	3,000,000,000	Nearly 8,000,000.
1938	1,000,000,000	Over 10,000,000.
1939	4,000,000,000	Over 9,000,000.

It won't make any difference how much money you give Mr. Truman and his New Dealers—they will spend it all.

Except for the Congress, Mr. Truman and his selfish bureaucrats would take all your money and spend it.

They think they can spend it better than you can.

They are not only selfish, but likewise conceited.

During the two most prosperous peacetime years in the history of our country—1947 and 1948, when the Republicans controlled Congress—every man, woman, and child in the United States was employed at high wages and salaries.

Farmers were the most prosperous in the history of this Nation—as was business—and yet during this most prosperous of all times, Mr. Truman and his selfish boys ran a deficit.

If they cannot run this country without running it in the red in the most prosperous period in history, how can they do any better during a declining market?

Now, the selfish Mr. Truman (selfish with respect to wanting to spend your money) has spent $177,000,000,000 since the war—$10,000,000,000 more than all Presidents spent from 1789 to 1940, which included all wars during that period.

Yet, he is talking about a depression.

We have 4,000,000 unemployed and another 8,000,000 working short hours.

Mr. Truman talks about selfish interests without naming them.

Who are they?

I will tell you who they are:

They are Mr. Truman and his more than 2,000,000 Federal pay rollers.

America, wake up.

The greedy, selfish interests are here in Washington, headed by the President, and not among the one-hundred-and-forty-odd millions of Americans who pay taxes.

How can you have confidence in a man who only 6 months ago said we should increase taxes, and now says we should not?

Who said 6 months ago we should control prices, and now says we shouldn't?

Who said 6 months ago we should return to OPA, and 6 months ago said we were heading into inflation, and now says we should spend billions to head off deflation?

Who said 6 months ago high prices were due to selfish interests, without naming them, and now says low prices and unemployment are due to the same selfish interests, still without naming them?

Who said 6 months ago selfish interests were promoting inflation and high prices—and now says the same selfish interests want a depression, unemployment, and low prices?

Shame on you, Mr. Truman.

Quit playing politics.

You can't fool the people all the time.

I have given you an analysis of the President's economic message to the people so you might see how inconsistent and how unreasonable your present administration in Washington is.

You might as well make up your mind that we have again gone back to the old New Deal philosophy of tax, spend, and elect.

Mr. Truman, in his speech, reminded me of a spoiled boy who, regardless of what happens to him, always blames someone else.

These same selfish spenders have controlled the administration and the Congress of the United States for 16 years—with the exception of the two most prosperous years—1947 and 1948 when the Republicans controlled the Congress.

They should be men enough to stand up and admit their failures because they have had full and complete control over the economic life of this Nation for those 16 years and they have full and complete control over it today.

When things are going well they say: "Yes, we planned it that way."

The minute things get a little tough, they want to blame nameless people.

If I may be so bold as to offer advice to the President, my suggestion would be:

Quit blaming nameless people for his own shortcomings.

Stand on his own two feet and the record of his administration.

I know people are getting sick and tired of hearing alibis from those who have run us in debt to the tune of $252,000,000,000—particularly since the only promise held forth for the future is an ever-increasing tax burden and a never-to-be-balanced national budget.

I see my time is up.

This is HOMER CAPEHART saying good-bye until next week.

The Fellow Defenders—Psychopathology of Confused Liberals

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of my colleagues to the following article by Norbert Muhlen which appeared in the New Leader of July 2, 1949:

THE FELLOW DEFENDERS—PSYCHOPATHOLOGY OF CONFUSED LIBERALS

(By Norbert Muhlen)

In the year of Lenin's birth, the Communist fellow traveler and his place in the plot of revolution were described with precise prophecy by Dostoevsky, in his novel, The Possessed.

"Our party," the madman Verkhovensky, underground organizer of the great upheaval, said 80 years ago, "our party does not consist only of those who commit murder and arson, fire off pistols in the traditional fashion, or bite colonels. * * * Among officials and literary men we have lots, lots, and they don't know it themselves. * * * Do you know how many we shall catch by little, ready-made ideas?"

The Possessed of 1949 may still secretly boast of a similar success. Among professional people, professors, Protestant clergymen, among artists, actors, authors, and millionaires the Communists still have lots who themselves don't know that they are being "had," and that the Communist mind-catchers processed great, noble ideas into little, ready-made ideas in order to catch them. On a point of fact, the bona fide fellow traveler (to be sharply distinguished from the secret party member with or without membership card) can be recognized by his sincere, stubborn refusal to admit that the Communists manipulate, and exclusively benefit from, his political behavior.

With the recent change in Soviet-American relations, with the increasing determination of the American public to resist Moscow after it had been seduced and tricked into submission to Moscow, with the new image of communism prevalent in this country, there was bound to evolve a new type of unwitting American auxiliaries of the Communist secret battalion. Actually, the fellow traveler of 1949 seems somewhat different from the fellow traveler of the previous era which ended between 1946 and 1947, and the Communists are using him in different ways for new objectives.

The traditional fellow traveler was caught by his discontent with one or several features of democracy, by his will to change, by his enthusiasm for social improvements; the Communists took control of his political actions by inconspicuous and elaborate techniques, and exploited, in ways which were not always easily discernible, him and his socially desirable ends as means for their own, quite different, dictatorial ends. This was the era of Communist penetration, advance, and conquest in this country.

In the present era, however, the Communists, being forced to defend their positions against American resistance, must protect their agents at home and their power abroad against American countermeasures. While the traditional fellow traveler has been a secret instrument and objective of Communist advance, the new one is mainly used as an open weapon of Communist defense.

While he once defended his cooperation with the Communists for a great many objectively good causes, he now has to defend the Communists themselves in the name of good causes—of peace and civil liberties. For the sake of peace he has to oppose American resistance to Soviet violence and warmongering abroad, and for the sake of liberty he has to defend the right of Communists to conspire against, and spy on, the American Republic.

To put him into this role, to organize him into that part of American public opinion which opposes the present policies, to create the sixth column of voluntary non-Communist defenders of the Communist fifth column, the Communists had to twist his mind into a new turn. Different from the traditional fellow traveler who saw in the Soviet Union a successful social experiment, and in the native Communists a group of efficient radical progressives, the new fellow traveler is not so sure about both points, and he may even admit his dislike for both; what he has to believe and proclaim now is that neither the Soviet Union nor the American Communists are a threat to this country, and that they have a right to act the way they do, while we have no right to oppose them, even if we dislike them.

To borrow a mot coined years ago by Claire Booth Luce, both of them are "Commybuts"; after affirming that he was not a Communist, the old fellow traveler used to add: "But the Soviet Union is a great step forward, and the Communists are fine people," while now he prefers to explain: "But we endanger world peace if we don't give in to the Soviet Union, and we endanger our democracy if we won't let our Communists alone."

Apparently there is a paradox in the fact that people sincerely believing in peace and liberty criticize every lawful, democratic, peaceful measure in defense of peace and liberty; and this paradox cannot be explained by surface reasons, such as lack of intelligence and honesty. We may assume that those Nobel prize winners of peace, literature, medicine, and physics, those eminent teachers of psychology, law, and mathematics, those great pianists and painters who sponsor the Cultural Cominform Congresses, who sign telegrams of welcome to the sacrilegious heresiarch of Canterbury, who become ward heelers for Mr. Wallace, who, in short, have turned into full-time fellow travelers, are not just "politically naive," as is sometimes explained with a shrug of the shoulders. They are as intelligent—politically and otherwise—as the great mass of Americans who have learned the truth about communism through those human events which are, as Mr. Churchill recently reminded us, better teachers than are mere words. If the fellow traveler seems unable to grasp the meaning of the headlines, it must have causes above and behind his rational intellectual capacities.

Neither can the apparent paradox be explained by blaming the new fellow traveler's attitude on self-seeking calculations and moral baseness. In some cases it may be true that there are advantages for, say, musicians or ballet dancers to exhibit the same fellow traveling opinions as their mighty newspaper critic who happens to go all out for the party line. In a few other cases a fellow traveler may believe in the possibility of an ultimate victory of communism and want to play safe while risking little; but the majority of the new fellow travelers are hardly motivated by opportunism, as so many actually had been in the previous years when among numerous, and especially intellectual groups, fellow traveling had been the right—and rewarding—thing to do.

The strange contradictions of the fellow defender, as we should like to call the new fellow traveler, have deeper roots. In many cases, they are the products of a conflict, an insecurity, an anxiety which has been mobilized by and for Communist propaganda, and which leads to a rather clear-cut case of a political neurosis which we may understand like mental disturbances of a more personal character.

"The liberals always have more guilt feelings than other people," Dr. Margaret Mead, an American anthropologist, remarked at the World Congress for Mental Health in London, in August 1948. "The reason is that the liberals are the defenders of the minority rights per se, and therefore take every curtailment of these rights more seriously than other people, whether these other people might think these curtailments to be necessary or not." This feeling of guilt, latently existent in every liberal believer in peace and justice, is the psychological basis from which the Communists can proceed to the production of their fellow defenders.

To mobilize the conflict in the minds of the fellow defenders, they must lead them into the belief that their noble political principles are violated by the American treatment of communism; they have to see American resistance as a persecution of the Communist minority and a militaristic provocation of the Soviet power—in other words, offenses against the rigid principles of liberalism and pacifism.

It is an old political truism, stated by Edmund Burke, that principles which are utterly inflexible in all cases are bound to prove impotent and self-stultifying. "Let us be clear about one thing", explained Mr. Max Lerner (in 1940, it is true), "ideals and ethics are important in politics as norms, but they are scarcely effective as techniques." This in his introduction to the works of Machiavelli, who himself had set down in his last Dis-

course: "A republic that desires to maintain her liberties needs daily fresh precautions. In a great republic, there are constantly evils occurring requiring remedies which must be efficacious in proportion to the importance of the occasion."

Oliver Wendell Holmes gave, in a famous opinion in the year 1919, the formula as to when the freedom of opinion may be constitutionally curtailed: "The question in every case is," he wrote, "whether the words used are used in such circumstances and are of such a nature as to create a clear and present danger that they will bring about the substantive evils that Congress has a right to prevent. It is a question of proximity and degree." This formula, in its wise and very American pragmatism, outlined the limits within which the principles of liberty and peace might be adjusted to the reality principle of self-preservation without damage to these political principles themselves; there is no general prescription, no all-around recipe valid in and for every case, but—just as in the life of individuals—a healthy society finds its way to preserve itself as well as its political conscience, as this country has shown in the last 3 years.

Whoever read the reports of the Canadian spy case or the revelations of Soviet undercover work in this country must be aware of the fact that disloyal officials are able to bring about the "clear and present danger" against which the Government must protect itself by investigating its employees and eventually firing those who seem sufficiently "suspect." Whoever followed the accounts of Soviet aggressions and their technique in latter years, whoever knows the blueprints for world conquest designed and used by the Comintern and the Moscow leaders, whoever heard a radio commentator report on the violent advances of the Soviets in Europe and Asia must be aware that, if unchecked, the Soviet power will create the "clear and present danger" of war, against which this country must defend itself by building up its power to resist.

In contrast to genuine pacifists who believe, and always have believed, that no danger whatsoever could justify a war, and that armed preparedness always attracts war, and in contrast to sincere liberals who defend everybody whose civil rights they believe infringed upon, the fellow traveler defends only the Communists and opposes armaments only when directed against the Soviets. He did not protest when Nazis or alleged pro-Nazis were curbed in this country; nor did he ask for an understanding with the Third Reich, or for Mr. Roosevelt to travel to Berchtesgarten and to "settle his differences" with Hitler; as a matter of fact, he was in heartfelt agreement with every measure against Hitler Germany which curtailed the Bill of Rights or which meant war, and this significant difference in his attitude proves that it is not a particularly rigid conscience but his distorted estimation of the Soviet realities which makes him a defender of the Communists. This difference is the test of the fellow defender as a product of Soviet propaganda.

While there is today at least as much evidence of concentration camps, persecutions, suppression of every liberty, militarization, and mass killings in Soviet Russia as there was known abroad about the same things in Hitler Germany, the fellow defender refuses to accept it fully, and prefers to accept the words, signs, symbols, and appeals of Soviet advertising which, the realities to the contrary notwithstanding, seem to him close to his own way of thinking. He sees the Communists as prodigal brothers rather than mortal enemies.

There is often an element of personal experience in this attitude: after cooperating with the Communists in progressive and anti-Fascist causes and committees, he is reluctant to break every sentimental tie with them, just because their comrades in this country advocate treason, or because their party in Hungary or in Bulgaria murders dissenters. "We don't know the whole story," he is likely to acquiesce. "After all, there is an immense difference between the Communists and the Nazis."

He seeks doggedly for reasons—rationalizations of deeper, purely emotional feelings, as a psychoanalyst would immediately (and correctly) suspect—to show that, if all is said and done, the Brown Fascists were much worse than the Red Fascists. He might have personal reasons to feel more threatened by the former than by the latter; and he might have a certain feeling of identification with the Communists. Their propaganda has linked him closely to themselves, making him believe that he will be the next victim. Here again, we see a victory of Communist advertising over American realities; despite the lack of evidence that Communist opinion has been suppressed or that liberals unjustly accused of being Communists have been wronged, he is caught by the Communist scare appeal.

To quiet his doubts about the realities and to appease his critical powers, the Communists have developed for his use a technique of distortion based on the formula that the mote equals the beam, the mote being of course in the eyes of America. By a sort of conditioned reflex, mentions of Soviet faults are immediately associated, and thus crossed out by mentions of American faults; their size, their context, and the chance to correct them, those coefficients are eliminated. Just as the hyprocrite suffers from a blackout of self-criticism, the fellow defender, an inverted hypocrite, suffers from the enjoyment of his chronically fact blind, badly inflated bad conscience.

He is, like Prof. Theodore Brameld, a sponsor and defender of the Waldorf Parade, unable to make up his mind between American and Communist positions, methods, goals; he resents the "oversimplified conclusion that we are faced with a black-or-white, either-or choice." As if this choice had not been created by what is called Marxism-Leninism-Stalinism and its Moscow practitioners, he blames those Americans who have chosen to defend the democratic "or" rather than the dictatorial "either" for their "destructive attacks."

The fellow defenders, the third sex of contemporary politics, turn their feelings of fear, confusion, and guilt into aggressiveness against self-evident facts which, were they not distorted by Communist advertising claims, would cut off their argument at once. With the Soviets attacking and this country resisting, so-called neutrality of liberals means support of the Soviets.

Our analysis shows that it is not legitimate concern for liberal and pacifist principles which makes the fellow-defender protest against our policies, but his distorted, unrealistic image of the Communists, his emotional unwillingness to see them for what experience and evidence show them to be. Since the majority of the country has recovered from this somewhat hysterical blindness to the Soviet facts, the propaganda of Soviet harmlessness would have little chance to affect larger groups. Therefore, defenders must seem concerned with the preservation of allegedly threatened civil liberties and allegedly endangered peaceful relations to mobilize the national bad conscience which can be disturbed more easily than the national faculty of rational perception.

While it is certain that the number and influence of American fellow travelers have considerably decreased since the war and first postwar years, probably to less than half of their previous strength, their potential influence should not be underestimated. They represent a morbid self-criticism which, in times of strain, might prove infectious. If, according to Gunnar Myrdal, the American dilemma consists in the inability to live up to the high moral precepts on which the Republic is founded, the democratic dilemma may show itself in occasional difficulties to uphold peace and liberty in defense against their mortal enemies. The fellow defender, cultivated by Communist propaganda on the soil of democracy and its discontents, will be a relatively lonely figure as long as the democratic dilemma exists not as a real fact, but only in his imagination.

Moses Clears the Bulrushes

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1949

Mr. LATHAM. Mr. Speaker, back in 1940 many of the Members of the House had the pleasure of visiting the world's fair in my home county of Queens in New York City.

When the fair was closed, almost all of the buildings, which were temporary, were torn down, leaving in their place an unattractive swamp area, overgrown with bulrushes.

I believe you will all be interested to know that under the skillful hand and keen vision of the master builder of America, Robert Moses, the world's fairgrounds will be made into an attractive park and playground, with botanical gardens, stadium, baseball diamonds, perhaps a zoo, and other recreational facilities for the benefit of the people of New York City.

Mr. Speaker, under leave to extend my remarks, I include the following editorial on the subject, dated July 13, 1949, from the Long Island Daily Press, one of the leading public-spirited newspapers in America:

FLUSHING MEADOW

Something in the Moses tradition of park development is going to emerge from Flushing Meadow one of these days. The park commissioner who gave us Jones Beach, Cunningham and Alley Pond Parks, among others, has big plans for what once was one of the most gigantically outlandish ash and garbage dumps the city has ever seen.

The World Fair 9 years ago started the ball rolling toward a realization of Commissioner Moses' plans for a Flushing Meadow Park which would be not only one of the largest in the city but one of the most complete.

Had the war not intervened, it is probable that Flushing Meadow today would be much further along toward development into what the commissioner has envisioned for it. Save for some areas around its margin, it is not even very much to look at now, much less to use for recreational purposes.

The commissioner's hope now is that Flushing Meadow Park can come into full use within 5 years through a series of annual appropriations to carry out his plans step by step. Because the commissioner has had a way of getting what he wanted, that is a hopeful augury for a complete Flushing Meadow Park in fewer years than hitherto has seemed possible.

The Moses blueprint focuses first attention on the section of the 1,200-acre tract

north of Horace Harding Boulevard where the city building, now the United Nations' temporary meeting place, will be restored to use as a skating rink.

At the northern end of the tract the commissioner plans to retain a 2,500-car parking field and to add baseball, softball, and football fields, tennis courts, and a stadium. (Let's hope the stadium is large enough to accommodate a crowd of thousands.)

The area around the world fair's gardens on parade, which has become the Queens Botanical Gardens, also is to be landscaped and will have playgrounds, baseball diamonds, and parking facilities.

The other end of the tract—south of Horace Harding Boulevard where the fair's aquacade provides public bathing facilities—the commissioner plans to turn into a picnic area overlooking Meadow Lake.

Commissioner Moses has yet to accede to suggestions from Queens that space be made available for an arts and crafts center and a children's museum, possibly in the New Jersey Building which is used in part now as a police station. Nor has he changed his mind, publicly, at least, about the prospective location of a zoo he plans for Queens.

Every time it mentions the Queens Zoo project, the park department states it will be in Forest Park. A zoo may be some time away, but when the department gets down to the actual task of establishing one, Flushing Meadow Park would seem to be by far the more suitable location.

For one thing, it would be more easily reached there from all parts of the borough. For another, Flushing Meadow, being largely undeveloped now, would lend itself more readily to spacious zoo planning than Forest Park, where the development is all but complete.

An arts and crafts center and a zoo would be attractive additions to Flushing Meadow Park. Together with the facilities officially proposed, they would make that area without any question one of the finest public parks in the city if not in the entire Nation.

Statement of Economists' National Committee on Monetary Policy in Support of H. R. 3262

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 14, 1949

Mr. REED of New York. Mr. Speaker, it is encouraging to know that outstanding economists throughout the country are in favor of establishing a sound gold-coin monetary standard and system in this country.

There will be no stabilization of economic affairs either here or abroad until such a standard is adopted and maintained.

Under leave to extend my remarks, I am inserting a statement made by the Economists' National Committee on Monetary Policy, which has recommended the enactment of H. R. 3262, which I introduced in the House on March 7, 1949:

FORTY-FIVE MEMBERS RECOMMEND ENACTMENT OF THE REED BILL, H. R. 3262, DESIGNED TO PROVIDE THE UNITED STATES WITH A GOLD-COIN MONETARY STANDARD AND SYSTEM

We, the undersigned, members of the Economists' National Committee on Monetary Policy, recommend enactment of the Reed bill, H. R. 3262, for the following reasons:

1. Restoration of a gold-coin monetary standard in the United States would reestablish integrity in the promises to pay issued by the Treasury and Federal Reserve banks. Most of the paper money of the United States carries promises to pay which, under present laws, are not, and cannot be, honored. Statements on some of these notes as to the nature of the security underlying them are not in accordance with fact. No nation, if it can avoid doing so, should permit its treasury and banks to issue and circulate such promises. Our country can and should avoid this practice.

2. A circulation of an irredeemable paper money permits and invites a much freer and less responsible issuance of circulating media than would be possible if these promises to pay were redeemable in gold on demand. Profligate Government spending and depreciation of the Nation's currency in terms of goods and services are natural consequences of the issuance of such a currency.

3. Restoration of a gold-coin monetary standard and system would return to the people a high degree of direct control over the Government's use and abuse of the people's purse. Under our system of irredeemable currency, the people's purse is at the mercy of pressure groups to which the majority of Congress have been yielding since such a currency makes it easy for Congress to spend the people's money as demanded by such groups.

4. Restoration of a gold-coin monetary standard and the return to the people of their proper control over the use of their public purse should provide them with a potent weapon against socialization and regimentation by their Government.

5. Restoration of a currency characterized by integrity in the promises to pay should, insofar as any currency can do so, inspire confidence and encourage saving, investment, production, employment, and trade.

6. The free flow of gold, silver, and our other money across our international boundaries should enable private ingenuity once more to go where it will and can, when it will, in search for goods, markets, and services with the consequence that foreign trade should expand and other nations should, sooner than otherwise would be the case, be able to develop their trade, obtain more gold and silver, reestablish redeemable currencies, and increase their production and wealth.

7. The monetary stock of the United States is ample in ratio and amounts to permit reestablishment of a redeemable currency.

8. Resumption should be at the established rate of $35 per fine ounce of gold. This standard has been maintained at our Treasury and Federal Reserve banks since January 31, 1934. Fixity is a basic requisite of good monetary standard, and there is no valid reason why the weight of our standard gold dollar should be altered.

J.; Russell Weisman, Western Reserve University; Nathaniel R. Whitney, the Procter & Gamble Co., Cincinnati; Max Winkler, Bernard, Winkler & Co., New York City.

[1] Thinks bullion redemption would be adequate.

[2] Would prefer deferment of effective date.

[3] Prefers gold bullion to gold-coin standard.

THE REED BILL

A bill to restore the right of American citizens to freely own gold and gold coins; to return control over the public purse to the people; to restrain further deterioration of our currency; to enable holders of paper money to redeem it in gold coin on demand; to establish and maintain a domestic gold coin standard; and for other purposes

Be it enacted, etc., That this act may be cited as the "Gold Standard Act of 1949."

SEC. 2. The standard monetary unit of the United States of America shall be the gold dollar of fifteen and five twenty-firsts grains nine-tenths fine. Gold coins of not less than $10 denomination as the Secretary of the Treasury finds desirable shall be minted and issued upon demand.

SEC. 3. Nothing in this act shall be construed to change the size, weight, or fineness of the present lawful silver coins.

SEC. 4. Standard gold coin and gold certificates shall be full legal tender.

SEC. 5. All other money of the United States shall be maintained on a parity with the standard gold dollar by freedom of exchanges at par with standard gold.

SEC. 6. Standard gold bullion and coin as well as gold certificates shall be lawful money for reserves against deposits in Federal Reserve banks and in the 5 percent redemption fund against Federal Reserve notes.

SEC. 7. Standard gold bullion and coin as well as gold certificates shall count as part of the minimum reserve of 25 percent to be held by Federal Reserve banks against their Federal Reserve notes in actual circulation.

SEC. 8. All legally issued Treasury currency, except (a) fractional silver and minor coins as provided in section 9, and (b) bank notes and Treasury notes in the process of retirement, shall have the quality of full legal tender. Specifically, the following shall have the quality of full legal tender: Gold coin and gold certificates, silver dollars and silver certificates, and United States notes.

SEC. 9. Fractional silver coins shall be legal tender only up to $10. Five-cent pieces shall be legal tender only up to 25 cents.

SEC. 10. Federal Reserve notes shall be receivable for all debts, public and private, but they may not be counted as reserves against other notes or deposits of issuing banks.

SEC. 11. All provisions of law authorizing the President to alter the size, weight, or fineness of gold and silver coins are hereby repealed. The mint charges for assaying and coining gold and silver, limits of tolerance, and the alloys in gold and silver coins shall be those in effect in 1932.

SEC. 12. That part of section 43 of the act of May 12, 1933, as amended by Public Resolution No. 10, approved June 5, 1933, providing that all coins and currencies of the United States shall be full legal tender, is hereby repealed.

SEC. 13. The act of June 12, 1945 (59 Stat. 237), is hereby amended to provide that all Treasury currency, except that in process of retirement, shall be counted along with gold and gold certificates, as part of the lawful money for reserves against deposits in Federal Reserve banks. Specifically, all silver and minor coins, silver certificates, and United States notes shall be added to gold and gold certificates as part of the money that is lawful for reserves in Federal Reserve banks against their deposits.

SEC. 14. The Gold Reserve Act of 1934 (48 Stat. 337) is hereby repealed.

SEC. 15. This act shall take effect June 30, 1950.

Compulsory Isolationism

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1949

Mr. O'HARA of Minnesota. Mr. Speaker, I submit that an article by Felix Morley in his weekly analysis for the American citizen, Human Events, issue of July 13, 1949, is an analysis of such importance that it merits the consideration of every Member of Congress and every citizen. The article follows:

COMPULSORY ISOLATIONISM

(By Felix Morley)

The British decision to embargo private purchases from the United States, and to develop barter treaties outside the dollar area, on the Nazi pattern, is bitterly ironical. After subjection to an intense and protracted campaign asserting the heinous character of isolationism, the American people suddenly find themselves more isolated than ever before. They can no longer even sell their goods freely to British colonies lying just off the American coast.

This shocking development comes at a time when it is increasingly obvious that not a single objective of our foreign policy during the past 4 years has been attained. The whole grandiose structure has simply collapsed, with officials of the Department of State reduced to a frantic scrabbling amid the ruins. An instance was when Secretary Acheson recently said, off the record, that unless we toss $150,000,000 more to southern Korea, it will go Communist in 2 or 3 months.

So it is not surprising that disillusionment is increasingly apparent—from Maine to California. The Atlantic Charter seems a sardonic memory. The reciprocal trade agreements program sounds like a bad joke. There is no faith in the United Nations; no confidence in the Marshall plan; no enthusiasm for the North Atlantic Treaty and rather less than no trust in the pending military-assistance program.

Indeed it is possible to believe that the long-suffering taxpayer is at last about to turn, at least sufficiently to repudiate this latest political panacea of arming western Europe, along with point four as the administration's latest economic nostrum.

It will be extremely significant if British policy, rather than that of Soviet Russia, serves to bring the American people to their senses. For while everyone knows that communism and capitalism will not mix, we have somehow been sold on the idea that British and American interests are inseparable and, in all fundamentals, identical.

This assumption is now being refuted by the British themselves. What they have done is merely to demonstrate that in an emergency self-preservation is the first law of nature. But there is also almost an element of contempt in the British decision to increase imports of cereals from Soviet Russia, simultaneously with the imposition of a license system limiting export of American grains to British territory.

The effrontery is sharpened by synchronizing this barter arrangement with the Senate debate on the North Atlantic Treaty. For article 2 of this alliance, directed against Russia, says piously:

"The Parties * * * will seek to eliminate conflict in their international economic policies and will encourage economic collaboration between any or all of them."

II

With the pathetic frustration of our postwar global planning there is now more than a little danger of a developing Anglophobia. We have seen how readily our commentators could turn from an actual deference toward "good old Joe" Stalin, to picturing him as Public Enemy Number one. A similar emotional volte face toward the present British Government is not at all impossible.

Therefore it should be emphasized that the British National Socialists, like the Russian Communists, have done nothing which could not easily have been foreseen by an intelligent officialdom in Washington. What human events has proved itself able to anticipate was certainly not too deeply veiled for the discernment of our presumably well-informed and certainly well-financed diplomacy.

The British Labor Government has now been in power for exactly 4 years—since July 26, 1945. During that period it has moved steadily to restrict individual freedom, in order to make Britain a completely socialized State. There has been no deception and no concealment about this policy. On the contrary, the imaginary virtues of an essentially isolationist economy have been stridently proclaimed.

Moreover, for a full generation before the Socialists assumed power in Britain, they were preparing their present program and announcing it to the world. If Americans failed to realize their objectives, the present political leadership in London is certainly not at fault.

Finally, every careful student of British history must have realized that the dominant political theory in England, ever since the Norman conquest, has been that of class government. There was no fundamental alteration in this theory when representatives of the wage earners achieved the political power which earlier had been wielded by feudal barons, by court and established church, by great landlords or—in time—by the rising manufacturing class. No new principle, of European federation or more effective international cooperation, was established when the representatives of organized labor began to change Great Britain into a national socialist state. The underlying theory of British Government is still wholly alien to that of our Constitution.
